

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

ENTERED, according to Act of Congress, in the year 1867, by
D. APPLETON AND COMPANY,
In the Clerk's Office of the District Court of the United States for the Southern District
of New York.

MAR 9 1900

P R E F A C E .

IF the close of an internal war forms the most critical moment in the career of a nation, especially when that war has involved the nature and existence of the institutions of a country, then there can be no period so important to the people of the United States as that of the years which intervene until a final settlement of all difficulties with the Southern States. This period is the more highly important here, as it includes circumstances without a parallel in the previous history of mankind. The sudden emancipation of four millions of slaves of another race of men, their immediate investment with civil rights, their rapid elevation to the dignity and power of coequals in the Government with their former masters, is a problem full of intense interest in every step of its solution. In this view the present volume of the *ANNUAL CYCLOPÆDIA* contains all the measures proposed or adopted in Congress for the reconstruction of the Union ; the reports and debates on those measures ; the views of the Executive department of the Government ; the conflict of opinion between the President and Congress, and the respective measures adopted by each ; the change in the condition of the people of the Southern States, arising from their new civil and political relations, together with all those events which illustrate the history of this national crisis.

Scarcely less important were the events in Europe, which have so changed the political aspect of the western portion of that continent, and forebode momentous results in the future. The difficulties between Austria, Italy, and Prussia, are explained in these pages, with the details of their negotiations, and the military operations in that short and decisive war, accompanied by topographical and military maps and illustrations. The destruction of the old German Union by the secession of Prussia, and other States, and the formation of a northern confederation under her control and consolidation, resulting in placing her among the great powers of Europe, are fully narrated.

The details of the internal affairs of the United States embrace the financial condition of the Government; with the practical operation of its systems of taxation; its currency; debt; the banks; commerce and agriculture; the proceedings in the Southern States to reorganize their civil and social affairs; the position and rights allowed to the freedmen, with the practical operation of the Freedmen's Bureau; the various political conventions of the year, both national and State; the acts of State Legislatures; the results of elections; the progress of educational and charitable institutions under the care of the State governments; the debts and resources of the States, and all those facts which serve to show their growth and development.

The intercourse of the United States with foreign nations, as presented in its diplomatic correspondence, is noticed, and the civil, military, and commercial history of all the states of Europe and South America, and the more important kingdoms of Asia, with some countries of Africa, is fully brought up.

The progress and peculiar features and effective mode of treatment of those scourges known as the Asiatic Cholera and Cattle Disease, are carefully described.

The advance in the various branches of physical science, with the new applications to useful purposes which have been developed, have been extensively described.

Geographical explorations were earnestly continued in all quarters of the globe, and the discoveries which have followed are fully presented.

The record of Literature is fully as important as that of any previous year, and the works published have been extensively noticed under the various classes to which they belong.

Nearly all the religious denominations of the country, with an account of their branches, membership, views on political affairs, and the progress of distinctive opinions, from their official sources, are carefully noticed.

A brief tribute has been paid to the memory of deceased persons of note in every department of society.

All important documents, messages, orders, treaties, constitutions, and letters from official persons, have been inserted entire.

THE
ANNUAL CYCLOPÆDIA.

A

ABYSSINIA, a kingdom or empire in Eastern Africa. On account of our little acquaintance with this country, the statements on its area and population widely differ. Brehm's *Geographisches Jahrbuch* (vol. i., 1866), one of the best authorities on population, puts down the area at 7,450 geographical square miles and the population at 3,000,000. Dr. Küppell (*Reise in Abessinien*, 1831-'33, Frankfort, 1838) estimates the population in the territory from 12° to 16° north latitude, and from 37° to 40° east longitude, at not more than 500,000 inhabitants; and in the remainder of Abyssinia, comprising the western provinces of Quara, Madasha, and Agov, and the southern provinces of Gudjam, Damot, Amhara, and Begemeder, at 1,000,000, thus giving to the whole of Abyssinia (with the exception of Shoa) a population of 1,500,000. The province of Shoa has, according to the missionary Dr. Krapf, one of the best writers on this country ("Travels, Researches, and Missionary Labors in Eastern Africa," London, 1860), about 1,000,000 inhabitants. These statements, taken together, and the natural increase, indicate a population of about 3,000,000. The same estimate is made by the Roman Catholic bishop Massaja, who for many years lived among the Gallas (*Annales de la Propagation de la Foi*, January, 1865). According to the missionary Isenberg (*Abessinien*, Bonn, 1864), the population of Abyssinia, Shoa, and the country between 7° and 16° north latitude and 36° and 42° east longitude, amounts to five or six millions. The whole Ethiopian plateau, comprising Abyssinia, and the Sidama and Galla countries, has, according to Massaja, 12,000,000 of people, 9,000,000 of whom are Sidamas and Gallas. This statement agrees with that of Krapf, according to which the Gallas number from six to eight millions.

Abyssinia is ruled by emperors, who are supposed to be descended from King Solomon and

the Queen of Sheba, but until the present monarch seized the throne, their authority was merely nominal, the real power being in the hands of the governors of the provinces, who gave them a formal allegiance. The present emperor, Theodore, succeeded in 1855, and his attention was soon directed to obtaining recognition and friendly intercourse from the power which holds India, and has established itself in the neighboring stronghold of Aden. A treaty had, therefore, been made between Great Britain and Abyssinia so long ago as 1849, and it was ratified in 1852. In this treaty it was stipulated that each state should receive ambassadors from the other. The emperor, desirous to strengthen his authority, resolved to assert the rights thus assured to him: but, unfortunately, the officer who represented British interests in those regions was suddenly taken away. Mr. Plowden had been for many years English consul at Massowah; though not an accredited agent to Abyssinia, he had been intrusted with presents for the people in authority, and with these he went into the country, where he remained, taking part in a war which broke out at the accession of the present emperor, and thus ingratiated himself extremely with that potentate.

Mr. Plowden was killed in 1860, and Mr. Cameron was sent from some other Eastern post to succeed him. Mr. Cameron arrived in 1862, and shortly afterward the emperor told him that he desired to carry out the treaty made so many years before. Toward the end of 1862 he wrote an autograph letter to Queen Victoria, requesting permission to send an embassy to England. This letter reached London in February, 1863, and, for some reason or other, was left unanswered. Then came a quarrel with a missionary, Mr. Stern, who had committed the unpardonable offence of remonstrating against the flogging to death of two interpreters.

The emperor's wrath appears to have been roused at these and perhaps other causes, and within a year after he had written with his own hand to Queen Victoria, asking to be admitted into the pale of friendly intercourse, he sent a body of troops to the missionary station, seized the missionaries and Mr. Cameron himself, put them in chains, and cast them into prison, Mr. Cameron being chained continually to an Abyssinian soldier. This was done in November, 1863, and from that time to this the unhappy men have been in confinement.

With the consul were incarcerated his secretary Kerans, his servants McKelvie, Makerer, Petro, and Bardel; the missionaries Stern, Rosenthal, Flad, Steiger, and Brandeis, and the natural-history collectors Schiller and Essler. This outrage against British subjects produced the greatest excitement in England; but as the territory of the Emperor Theodore does not extend to the sea, and as the murderous climate puts the greatest obstacle to the success of an armed expedition, it was deemed best by the English Government to confine its efforts in behalf of the prisoners to diplomacy.

In the second half of the year 1865 the English Government sent Mr. Rassam, an Asiatic by birth, well known in connection with Mr. Layard's discoveries, and at that time holding the office of assistant to the British resident at Aden, on a special mission to the Abyssinian emperor. Mr. Rassam started from Massowah on the 15th of October, with forty camel-loads of presents to the emperor. In a letter from Mr. Rassam, dated February 7, 1866, it was announced that the emperor had given him a magnificent reception, and ordered the release of all the prisoners. The fact was accordingly announced in the English Parliament by Lord Clarendon. But the hope thus raised was soon to be disappointed. When Mr. Rassam and the other prisoners were just on the point of taking leave of the emperor, he and his party were put under arrest, and informed that they were to remain in the country, not as prisoners, but as "state guests," until an answer could be obtained to a second letter which the emperor was about to write to the queen. This letter was duly indited, in a style worthy of some Lusitanian monarch of old, beginning: "In the name of the Father, Son, and Holy Ghost. From God's slave and His created being, the son of David, the son of Solomon, the king of kings, Theodore," etc. The ostensible reason assigned for the detention of Mr. Rassam was to consult with him in what way the friendly relations of the English and Abyssinian monarchy might best be extended. Theodore's letter was conveyed to England by Mr. Flad, the German missionary, who was also the bearer of a letter from Mr. Rassam, in which, by desire of Theodore, he requested that English artisans might be sent to engage in the Abyssinian service. It was supposed that these men were required more as hostages than as artisans, as

the emperor dreaded that his unjustifiable conduct toward Consul Cameron and his associates would bring down upon him the vengeance of the British Government. In the mean time Consul Cameron and those who were imprisoned with him enjoyed comparative freedom; and the emperor, whose fitful and suspicious temper is his bane, renewed his friendly intercourse with Mr. Rassam and his companions, looking after their comforts personally, and endeavoring to relieve the pompous monotony of court life by taking them out on occasional shooting excursions.

On August 25th, the Rev. Mr. Stern, one of the prisoners, wrote as follows: "Our present more rigorous captivity is to be attributed to an alleged report that English, French, and Turkish troops were on their way to invade Abyssinia. Mr. Rassam protested against the veracity of this statement; nay, every one of us would have discredited the story even had it been confined to a mere military expedition. On the same day that he charged the British Government with duplicity, he also reproached me with the stale offence of having traduced his character by throwing doubts on his lineal descent from Solomon. I tendered my wonted apology for this oft-repeated crime, but his majesty said he would not pardon me till I had atoned for the sin by rendering him some service. In the evening of the same day he made fresh proffers of his friendship to Mr. Rassam, and also told Mr. Rosenthal, and particularly myself, that we should not indulge in unpleasant surmises, as he had nothing against us; and, like the rest of our fellow-prisoners, we drank his health in good *arak*, provided for that purpose from the royal distillery."

Letters from Rev. Mr. Stern and Consul Cameron, dated September 15, 1866, stated that the emperor was expected at Magdala (the place where the prisoners were kept), and that a crisis in the fate of the prisoners was approaching. Later letters (written about the beginning of October) were received by Dr. Beke, a gentleman who has long resided in Abyssinia, understands the language of the country, is personally acquainted with the *Negos* (emperor), and has taken a special interest in the liberation of the prisoners, from which it appeared that Messrs. Rosenthal and McKelvie had been allowed to remain at Gaffat; that Messrs. Kerans and McKelvie had offered their services to the emperor—those of the former having been rejected, but those of the latter accepted; and that Messrs. Bardel, Makerer, Steiger, Brandeis, Essler, and Schiller, had also entered the emperor's service. A full account of the fate of the prisoners is given by Dr. Beke, in his work, "The English Captives in Abyssinia" (London, 1866).

Interesting information on the Emperor Theodore is contained in the parliamentary papers published by the English Government. In 1855 Consul Plowden sent to the Foreign Office a report in which, after referring to the

distracted state of Abyssinia, with its chiefs generally at variance with each other, he says: "A remarkable man has now appeared, who, under the title of King Theodore, has broken the power of the great feudal chiefs; has united the whole of Northern Abyssinia under his authority, and has established tolerable tranquillity." It appears that from his earliest youth he has regarded this as his destiny. Mr. Plowden describes him as young, vigorous in all manly exercises, of a striking countenance, peculiarly polite and engaging when pleased, and mostly displaying great tact and delicacy; of untiring energy, both mental and bodily, and of boundless daring, personal and moral. His ideas and language are said to be clear and precise; hesitation is not known to him; he has neither councillors nor go-betweens. He salutes his meanest subject with courtesy, and is generous to excess, but also unsparing in punishment and terrible when his wrath is aroused. His faith is signal: "Without Christ," he says, "I am nothing; but if He has destined me to purify and reform this distracted kingdom, who shall stay me?" Mr. Plowden, who thus sketched the king's character, stated that he had made great reforms in Abyssinia; had enforced more decency of manners; was putting down trade in slaves, and removing vexatious exactions on commerce. As might be expected, he was jealous of his sovereign rights, and he objected to the establishment of an English consulate in his dominions as an innovation. "He found no such thing in the history of the institutions of Abyssinia." Mr. Plowden hinted that if he consented to the establishment of friendly relations the sea-coast and Massowah might possibly be given up to him; but though his ambition was roused at this, he feared the clause conferring jurisdiction on the consul as trenching on his prerogative, and the time for consideration was so short that he was too much startled at the proposal to accept it. The Roman Catholic mission had usurped the functions of the *Aboona* and the Abyssinian clergy, and the king feared that we should wish in like manner to usurp the political rights of the sovereign.

At the beginning of 1865 a society was organized in France by the Count de Mounier, for establishing at Halai, in Abyssinia, a commercial agency, but, on arriving in Egypt, the society dissolved. Another project of civilization had been started by the Count de Bisson, who, in a letter to the Paris journal, *La France*, stated that he had received from Theodore a concession of all the uncultivated lands of the empire, and that the *Negos* had put an armed force at his disposal for the protection of himself and his associates. In support of his assertion he quoted the following extract from the ordinance of concession: "We give to thee and concede forever all the lands which thou mayst choose and take in Abyssinia. They belong to thee. We engage by oath to defend thee and thy companions by our invincible arms; to furnish to

thee aid of every kind thou mayst stand in need of. We place, moreover, at thy disposal a body of troops, to protect thee against all, for thou art our brother, and we have faith in thy loyalty." Signed: Prince Aylo-Chooma-Mohammed-abd-Allah, melk (king), in the name of the emperor.

The emperor has for some time been engaged in war with the rulers of Tigré and Shoa, two of the principal and most civilized provinces in Southern Abyssinia. At the end of February, 1866, Devas, the lieutenant of Wágshum Góbazyé (the ruler of Tigré), was defeated in battle by Tekla Geórgis, the brother and deputy of Ras Bárian, Theodore's lieutenant; but the cholera entered the camp of the latter, destroyed a considerable number of his troops, and dispersed the rest. In May Tekla Geórgis retired into Shíré to raise a fresh army. On July 30th, according to an account furnished to the "Nice Journal" by Count Bisson, the above-mentioned "Founder of the French Colony in Abyssinia," a tremendous battle was fought between the armies of Theodore and Góbazyé at Axoum, one of the two capitals of Tigré. Theodore is said to have been at the head of 95,000 men; the forces of the insurgents are estimated to have been rather larger. The latter occupied an intrenched camp. In various of their preparations for defence Count Bisson's correspondent recognized European skill. "The English were there, in constant communication with Aden; the insurgents drew arms and supplies from that place." Two redoubts, armed with cannon, covered the extremities of the insurgents' wings, the centre was covered by *abatis*; the plain was cut up by trenches, and other obstacles were skilfully grouped, so as to render the cavalry of the assailants nearly useless; and as it composed the greater part of the army, the lancers had to dismount and act as infantry. Driving a cloud of skirmishers from one cover after another, the Abyssinians levelled the different obstacles as soon as conquered. Ten thousand men then remounted and charged the insurgent centre, driving it in. But when four times as many lancers advanced to pass through the gap thus made, the redoubts opened a cross fire on the attacking columns, inflicting heavy loss. The sharpshooters rallied, the attack was defeated, and the insurgent centre again had time to form. The 10,000 horsemen, under the orders of Telema, the general-in-chief, who had first broken the line, had pushed forward, disregarding what passed in their rear, to charge a second line of insurgents, who, profiting by the military instruction formerly given them by Count Bisson and his followers, firm as a rock, awaited the enemy kneeling, their lance-butts fixed in the ground, living *chevaux de frise*, covered with their bucklers, while, close behind them, thousands of sharpshooters poured volleys into the assailants. To complete the discomfiture of the latter, they were charged in flank by twenty squadrons. Telema cut his way out, but left half his people behind him. After

various vicissitudes, and what seems, if this account be not over-colored, to have been extremely hard fighting, the redoubt on the insurgents' left wing, after being taken and retaken five times, remained in the hands of the Abyssinians. But reinforcements reached Gôbazye, the chief of the Tigréans; his right wing had not been engaged, while almost the whole of Theodore's troops had fought and suffered grievously. Changing front to the rear, with his right for his pivot, Gôbazye presented a new line of battle, at right angles with his first position. It was seven in the evening, and the battle had begun at six in the morning. Theodore refrained from a fresh attack, remaining master of part of the battle-field, and of three pieces of artillery of English manufacture. He had the redoubt razed, the wounded removed, and that same night occupied Axoum, lately the headquarters and depot of the insurgents, who thus found themselves cut off from Massowah and from the most populous and warlike provinces that supported them. On the other hand, Theodore's position was by no means good; his rear was harassed by disaffected populations, and he had only a flank connection with his base of operations. His losses were 23,000 dead and 18,000 wounded, according to M. de Bisson's correspondent, who adds that they were due chiefly to musketry fire. "Among the Tigréan dead," he continues, "we recognized Egyptians and some English faces, especially in the fort. No doubt officers of that nation directed all the evolutions of the battle. One may guess it from the skilful defensive-offensive of the enemy." The accuracy of this account was doubted by the missionary Flad, but Dr. Beke, in a letter to the London "Times," expressed his belief that the account had a solid foundation of truth.

AFRICA. The most important event in the history of this division of the world during the past year is the great change in the Government of Egypt. The viceroy, more successful than his predecessors, obtained from the Sultan a change in the order of succession for his own line, to the exclusion of collateral branches of the family of Mehemet Ali. This first step, by which Egypt separates from the Mohammedan law, and conforms to the habits of Christian monarchies, was followed by the introduction of a constitutional form of government, the first Parliament, elected by universal suffrage, being opened in November. With regard to the Suez Canal, a convention was concluded between the Egyptian Government and the Suez Canal Company, which put an end to the difficulties that at one time seriously threatened to interfere with the progress of the work. (See EGYPT.)

The Emperor Theodore, of Abyssinia, continued the war for the aggrandizement of his empire, which he hopes will gradually be enlarged by the conquest of all the Mohammedan countries. An account of a great battle, said to have been fought on the 30th of July, between Theodore, at the head of 95,000 men,

and a still larger army of insurgents of Tigré and Shoa, two of the powerful and most civilized provinces of that country, rested on the doubtful authority of a French Count Bisson, who signs himself "Founder of the French Colony of Abyssinia." The English prisoners, according to dates up to November, 1866, still remained in captivity. (See ABYSSINIA.)

Madagascar concluded a treaty with Great Britain, the ratifications of which were exchanged on July 6, 1866. The treaty declares that British subjects in the dominions of her majesty the Queen of Madagascar shall be allowed freely to exercise and teach the Christian religion, and to erect and maintain suitable places of worship. Such places of worship, with their lands and appurtenances, shall, however, be recognized as the property of the Queen of Madagascar, who shall permit them to be applied forever to the special purposes for which they shall have been built. They shall, in the profession, exercise, and teaching of their religion, receive the protection of the queen and her officers, and shall not be prosecuted or interfered with. The Queen of Madagascar, from her friendship for her Britannic majesty, promises to grant full religious liberty to all her subjects, and not to persecute or molest any subjects or natives of Madagascar on account of their embracing or exercising the Christian religion. But should any of her subjects, professing Christianity, be found guilty of any criminal offence, the action of the law of the land shall not be interfered with. The Queen of Madagascar engages that British subjects shall, as far as lies in her power, equally with her own subjects, enjoy within her dominions full and complete protection and security for themselves and for any property which they may acquire in future, or which they may have acquired before the date of the present treaty. British subjects may freely engage in their service, in any capacity whatever, any native of Madagascar, not a slave or a soldier, who may be free from any previous engagement. The Queen of Madagascar engages to abolish trial by the ordeal of poison. If there should be a war between Great Britain and Madagascar, any prisoners who may be taken by either party shall be kindly treated, and shall be set free, either by exchange during the war, or without exchange when peace is made; and such prisoners shall not on any account be made slaves or put to death. The treaty is signed by Thomas Conolly Pakenham, Esq., British consul in Madagascar, duly authorized to that effect on the part of the British Government, and by Rainimaharavo, Sixteenth Honor, Chief Secretary of State; Andriantsitohaina, Sixteenth Honor; Ravahatrn, Chief Judge; and Rafaralahibemalo, Head of the Civilians, duly authorized to that effect on the part of the Queen of Madagascar. The Christian missionaries in Madagascar report a rapid and steady progress of Christianity and civilization.

The long war between the Basutos and the Orange Free State was closed by a treaty signed by Moshesh, the chief of the Basutos, on the 3d of April. The Free State acquired by this treaty a valuable territory, and the Free State authorities at once adopted measures to colonize the new territory. Later advices (September, 1866) stated that the settlement of the Free State frontiers was being interfered with by the Basutos, and the land commissioners were unable to mark out the new farms without a considerable escort. They had encountered threatenings and warnings on every side. The Basutos were said to be starving, and a renewal of the war was feared.

The English Cape Colony was enlarged by the annexation of Caffraria, and in June members for the Legislative Council were elected in the annexed territory in accordance with the provisions of the annexation and representation act adopted during the last session of the Cape Parliament. The third session of the third colonial Parliament was opened by Governor Wodehouse on September 6th. New government measures were announced in the form of three bills for the establishment of a new government paper currency, for the revision of the customs' import tariff, and for the imposition of an export duty.

The Cape Government took formal possession for the Home Government of the unclaimed Guano Islands at the northern extremity of the colony. Penguin harbor, the Mercury Islands, and Ichaboe, are now in the absolute possession of the British Government.

On the 26th of June, a detachment of the Fourth West India regiment, under command of Major Mackay, was ordered on an expedition against the "Maraboos," who had attacked several towns in British territory, in Western Africa. The expedition was completely successful, and on the 30th of June the last stronghold of the enemy was captured. Col. D'Arcy entered the stockade at the head of his detachment. The enemy surrendered at discretion, after sustaining a loss of three hundred in killed and wounded.

The French possessions remained at peace throughout the year, the insurrection in Algeria subsided about the close of the year 1865. The territory on the Senegal only was several times invaded by native chiefs, who were, however, without difficulty, driven beyond the French settlements.

The area of Africa, and its population, continue to be very differently estimated by the ablest geographical writers. Brehm's *Geographisches Jahrbuch* (vol. i., 1866), which is regarded as the best authority on these matters, estimates the total area of Africa at 543,570 geog. sq. miles,* and the aggregate population at 183,000,000. The following statistics are given for the several divisions and countries:

I. EASTERN AFRICA.

	Geog. sq. Miles.	Population.
Bogos.....	13	10,000
Beit Takue.....	18	8,000
Marea.....	23	16,000
Habab.....	113	68,000
Bedjuk.....	2	1,200
Mensa.....	29	17,400
Kunama.....	292	150,000
Abyssinia.....	7,450	3,000,000
Gallas, S. of Abyssinia as far as the equator.....	13,000	7,000,000
Peninsula of Somali.....	15,000	8,000,000
The territory bounded by Abyssinia and Egyptian Soudan to the north, the White Nile to the west, the equator to the south, and the country of the Gallas to the east.....	14,000	7,540,000
The territory between the equator, the Portuguese territory of Mozambique, the kingdom of Cazembe, the Lake of Tanganyika, and the Eastern Coast.....	25,000	3,500,000
Total.....	74,942	29,610,600

II. SOUTH AFRICA.

	Geog. sq. Miles.	Population.
Portuguese Possessions on the Eastern Coast.....	18,000	300,000
Cape Colony.....	4,935	297,096
British Caffraria.....	235	81,353
Natal.....	970	157,553
Caffraria (between British Caffraria and Natal).....	750	100,000
Caffraria, north of Natal.....	2,960	440,000
The Orange Free State.....	1,600	50,000
The Transvaal Republic.....	8,450	120,000
Country of the Basutos.....	700	100,000
Country of the Betchuanas.....	9,400	300,000
Country of Namaqua.....	4,700	40,000
Damara.....	2,000	20,000
Portuguese Possessions on the Western Coast (Angola, Benguela, Mossamedes).....	14,700	9,057,500
Lobale.....	200	200,000
Kibokoe.....	500	750,000
Bunda Countries.....	7,700	2,300,000
Moluwa.....	9,950	1,000,000
Kingdom of Cazembe.....	5,300	530,000
Total.....	88,080	15,843,532

III. ISLANDS IN THE INDIAN OCEAN.

	Geog. sq. Mls.	Population.
Socotra.....	80	8,000
Abd-el-Kuri.....	3	100
Zanzibar.....	29	250,000
Madagascar.....	10,927	3,000,000
Nossi Be.....	3.54	14,860
St. Marie de Madagascar.....	16.52	5,701
Comoros.....	49.4	49,000
Aroo, Cosmoledo, Ared, Gloriosa, and some adjoining smaller Islands.....	17	
Reunion.....	42.5	193,288
Mauritius and dependencies.....	83.3	322,517
Total.....	11,201.26	3,538,466

* One geographical square mile is equal to 21.21 English square miles.

IV. ISLANDS IN THE ATLANTIC OCEAN.

	Geog. sq. Miles.	Population.
Cape Verde Islands.....	77.82	89,310
St. Thomas and Principe.....	21.86	12,250
Fernando Po and Annobon.....	28.00	5,590
Ascension.....	1.8	
St. Helena.....	2.2	6,860
Tristan da Cunha.....	2.1	85
Total.....	128.08	114,045

V. THE NORTHERN COAST.

	Geog. sq. Miles.	Population.
Morocco.....	12,200	2,750,000
Algeria.....	12,150	2,999,124
Tunis.....	2,150	600,000
Tripoli.....	16,200	750,000
Egypt.....	31,000	7,465,000
Total.....	73,700	14,564,124
Sahara.....	114,600	4,000,000

VI. MOHAMMEDAN KINGDOMS OF CENTRAL SOUDAN.

	Geog. sq. Miles.	Population.
Darfoor.....	5,000	5,000,000
Vadai.....	4,730	5,000,000
Baghirmi.....	2,660	1,500,000
Bornoo.....	2,420	5,000,000
Sokota and Adamaus.....	7,960	12,000,000
Gando.....	8,880	5,800,000
Massina.....	8,880	4,500,000
Fellatah kingdoms together.....	14,870	22,800,000
Total.....	44,850	61,100,000

VII. THE TERRITORY OF WESTERN SOUDAN.

	Geog. sq. Miles.	Population.
Yorooba.....	2,350	8,000,000
Egbah (capital Abbeokoota)....		100,000
Dahomey.....	188	150,000
Ashantee (with the tributary Provinces and the Gold Coast)	8,447	4,500,000
Liberia.....	450	250,000
French Senegambia.....		145,800
Portuguese Possessions in Sen- egambia.....	1,687	1,095
Dutch Colonies on the Coast of Guinea.....	500	120,000
Sierra Leone.....	22	41,806
Tombo.....	2,040	
Mossi.....	1,550	
Independent portion of Gurma..	880	
Total.....	13,114	8,308,701

VIII. EQUATORIAL TERRITORY.

	Geog. sq. Miles.	Population.
Territory of the Shilluk.....	526	500,000
" " Nuer.....	920	400,000
" " Bor.....	40	10,000

Unknown negro countries on both sides of the equator.....	70,000	42,000,000
Total.....	71,564	42,918,000

AFRICAN METHODIST EPISCOPAL CHURCH. (See METHODISTS.)

AGRICULTURE. The year 1866 was not a very favorable one for agricultural productions. The spring and early summer were cold and backward, and after a short period of intense heat in July, there was, throughout the latter part of that month, the whole of August, and the early part of September, a more frequent and copious rainfall than usual, accompanied by a low temperature, with frost in many sections on September 21st. The long rain and early frost injured the Indian-corn crop in many sections, and caused the wheat to *grow* after being stacked. In the region of the Ohio River and its tributaries a destructive flood, about the middle of September, injured and in many counties nearly ruined the crops. This flood was the result of the excessive rains which, for seventy-five days, had fallen almost constantly. Other sections were also visited by floods, but not with such destructive effect.

Of the cereals, the *wheat* crop was estimated by the Agricultural Department at 160,000,000 bushels for the States east of the Rocky Mountains, of which 143,000,000 was the product of the twenty-two Northern States (of which statistics were given in 1865), about 5,500,000 bushels less than the previous year in those States, a decrease which was supposed to be fully made up by the superior quality of the grain in 1866. The crop of the eleven Southern States was nearly 17,000,000 bushels, a little less than one-half that of those States in 1859, the latest date in which there has been any complete return of their crops.

The yield of wheat on the Pacific coast is increasing rapidly. The California crop alone is estimated at over 14,000,000 bushels, of which, it is said, 12,000,000 bushels will be exported. Oregon and Washington Territory, and Nevada and Utah also produce some wheat. The entire crop of the country may safely be put down at 180,000,000 bushels, or fully five bushels to each inhabitant.

The *rye* crop varies but little from year to year. It is not a very important crop, and during 1866, aside from the Pacific States, where but little is grown, is estimated at 21,029,950 bushels.

The *barley* crop is also very nearly stationary. The crop, exclusive of the Pacific States, in 1866 was 11,465,653 bushels, while that of 1859 was 11,146,695 bushels. Only 110,773 bushels are reported as given in the eleven Southern States in 1866.

The *oat* crop is said to have been the largest ever grown in this country. The estimate for 1866 is 271,712,695 bushels, an increase of a little more than one hundred millions of bushels since 1860. This increase is almost universal, Wisconsin being the only Northern State reporting less than last year, and the yield of the Southern States being nearly or quite up to the amount of 1860. This large aggregate does not include the crop in the Pacific States.

The *hay* crop was not equal to last year; in the Northern States east of the Mississippi it was about one-fifth less; the Trans-Mississippi States and the South report a fair amount. It does not vary much from 21,000,000 tons.

The *corn* crop is put down as 880,000,000 bushels, of which 185,000,000 bushels are credited to the eleven States not hitherto reported, against 274,000,000 bushels in 1859. The decrease in the Northern States from the crop of 1865 is about 25,000,000 bushels, and the decrease in quality is equivalent to 75,000,000 bushels, making an aggregate decrease of feeding value, as compared with the great crop of 1865, of about 100,000,000 bushels. As, however, the crop of 1865 was an excessive one, 22.7 per cent. above the average, this reduction only brings the crop of 1866 to about a fair average, or a little above it.

The *cotton* crop was estimated from the best data, at the close of December, at 1,750,000 bales of 400 pounds each. As the actual bales are now nearly 500 pounds each, this would be equivalent to a million and a half of such bales. The cotton-planters had expected, early in the season, a much larger crop; but owing to bad seed, ignorance on the part of many of the best method of cultivation, a very wet spring followed by a dry early summer, and heavy, drenching rains in August and September, and over extensive sections the ravages of the cotton or army worm, the crop was less than half what was expected. In Louisiana there was added extensive flooding of the cotton-lands from the breaking of the levees. Of the Sea Island or long-staple cotton, the quantity raised is about 20,000 bales, less than half the average before the war.

It is hardly probable that this crop will ever again reach the production of 1860, 4,664,417 bales, or if it should, that so large a portion will ever be exported as was of that crop. There are several causes which will prevent this. Among these are, the deterioration of the soil in much of the cotton-growing region, which, unless cultivated for a time in other crops, and restored to its fertility by abundant manure or seeding down to clover, and ploughing in that crop, will not yield one-fourth as much as it would eight or ten years ago. Then there will be a lack of efficient laborers for the cotton-fields; the negroes, no longer compelled to labor in them will, in many cases, prefer mechanical employment, and labor less severe than that of the cotton-field in hoeing and picking time, and other crops, fruits, vines, the silk culture, etc., etc., will give a better return, for less labor, than cotton. If, however, under higher and more efficient cultivation, the exceptional crop of 1860 should be reached or surpassed, there would be a far larger proportion of it consumed at home than in any of the years before the war, not only from the increase of cotton manufacturing at the North, but from the tendencies of a free and enterprising people to manufacture their raw material largely in the Southern

States. The production of yarns and of the coarser qualities of cotton goods is already, in spite of the many difficulties it has to encounter, rapidly increasing in the South.

But to return to the crop statistics of 1866. The *potato* crop, always an important one, was throughout most of the Northern and some of the Southern States a full average; in some of them, as in Maine, New Hampshire, Connecticut, and Pennsylvania (all States yielding largely of this crop), it was from 10 to 20 per cent. in advance of last year, and in Texas it was unusually large and fine in quality. The only States in which the crop was seriously below the average, were South Carolina, Louisiana, Missouri, and Wisconsin. The crop of 1859 was 110,571,201 bushels, and until the present year there has been no return which included the eleven Southern States. The crop in twenty-two Northern States east of the Rocky Mountains was, in 1863, 98,965,198 bushels; in 1864, 96,532,029 bushels; and in 1865, 101,032,095 bushels. The production of the omitted States in 1860 was about 8,000,000 of bushels, so that the entire crop of 1866 could not have varied materially from that of 1859.

The *tobacco* crop was about eleven-twelfths of an average crop, and in the twenty-two States reported in 1865 it was in advance of that crop, which however was not a large one. In Kentucky and Tennessee it was above the average; in Virginia slightly and in Missouri materially below the average, and as these four are the States of largest production, it early became evident that the figures of the crop of 1859, 429,390,771 lbs., would not be reached. The Agricultural Department estimate the crop of 1866 at 350,000,000 lbs. We have elsewhere (*see TOBACCO*) given a full account of the culture of this crop, which is one of great importance to our commerce.

Buckwheat was a fair average crop, about 18,000,000 of bushels.

Sorghum, though affected in some districts by the heavy rains and the premature frost of September 22d, was about nine-tenths of an average crop, being smallest in the extreme northern and southern tiers of States, while in the middle tier and in Texas it was above the average. The crop has increased rapidly within the past five or six years.

The amount of domestic live stock in the United States is a matter of great interest not only to the farmer but to all our population; for upon it depends the supply of meat for our tables, as well as of draught cattle for locomotion, the transportation of produce and freight, and the operations of the farmer. Until near the close of 1866 it has not been possible to determine with any considerable accuracy the aggregate number of horses, mules, cattle, sheep, and hogs in the United States. War had made such extraordinary destruction of horses and mules, and the great armies had consumed and destroyed such quantities of beef and pork, that the census of 1860 afforded but a poor

AGRICULTURE.

guide to the speculations on this topic in which the agricultural papers indulged. It was not difficult to approximate nearly to the numbers of live stock in the Northern States east of the Rocky Mountains, and this was attempted from year to year; but the data in regard to the Pacific States were small, and for estimates of the numbers in the Southern States, entirely wanting.

During the summer and autumn of 1866, however, sufficient returns were obtained from the Southern States to enable us to make a very close estimate for the whole country. We give in the foregoing table the numbers of live stock for each of the States and Territories this side the Rocky Mountains, and the estimates

of the Agricultural Department for the whole country, premising that the latter may be too large in horses and mules.

It is a matter of interest to compare these returns with those of the principal countries of Europe at a recent date. We have no very recent statistics of the number of horses in the European states, and the war of 1866 would render them inaccurate, if we had. About 300,000 is to be deducted from the number of cattle reported in the United Kingdom, and 75,000 from those in Holland for loss from cattle plague. The following table gives the number of cattle, sheep, and swine, at the dates mentioned, in the several nationalities of Europe:

COUNTRIES.	Date of returns of live stock.	Population according to latest returns.	CATTLE.				
			Cows.	Other Cattle	Total.	Sheep.	Swine.

ALABAMA. The recess taken by the Legislature of Alabama, in December, 1865, closed on January 15, 1866. Upon the reassembling of this body, the Governor laid before the members a brief message congratulating them that, during their recess, the Provisional Governor had been relieved, and his authority was exercised by the Governor elect. He recapitulated the condition of the State debt, urged the importance of a law staying judicial proceedings in the collection of debts, the necessity of making the system of education uniform by allowing the proceeds of land-sales to be used in any county without regard to the location of the land sold, called their attention to the great destitution of the people in the northern part of the State, and the immediate necessity of an efficient military organization. He also returned, without his signature, a bill to regulate contracts with freedmen, on the ground that the general laws on contracts were adequate. The Legislature passed a large number of bills chiefly devoted to local affairs; also one to provide for the payment of the land-tax levied by Congress in August, 1861; another, requiring the State banks to resume payment on April 1, 1868. In the Senate, on February 5th, the following resolution was adopted:

Whereas, There is reason to apprehend that unfriendly representations at Washington and in the

Northern States of the Union, of the disposition of the people of Alabama toward the Government at Washington, will operate injuriously upon the condition of our people, and postpone a restoration of the State, in consequence of a misapprehension, upon the part of the Federal authorities, of the disposition of the people for the full and complete establishment of order: Therefore,

Resolved (the House of Representatives concurring), That a committee of five be appointed by the presiding officers of each House to inquire, so far as may be, into the dispositions of the people of the different counties in the matter referred to, and report the result of their investigations by resolution or otherwise.

An act was passed authorizing the issue of twenty-year bonds for the payment of arrears of interest on the State debt; also another, to provide, at the State expense, artificial limbs for every maimed indigent person, a citizen or resident of the State in 1861.

The views of the Legislature on the relation of the State to the Federal Union were expressed by the unanimous adoption, on February 22d, by both Houses, of the following report and resolution, presented by a joint committee:

When the cause, for which the people of Alabama have endured sacrifices without parallel in history, was lost by the surrender of her heroic armies, the result was accepted as final and conclusive. Although compelled, by the verdict of the sword, to abandon an institution which was so thoroughly interwoven with every thread of her social fabric, that

it could not be suddenly torn asunder without leaving everywhere deep and painful wounds, the surrender has been made without a murmur. Alabama turned once more to the Government against which she had been arrayed in arms, and in solemn convention obliterated from her records the ordinance of secession, and, as far as in her power, retraced her steps to the point of her departure. Additional guaranties of sincerity were required at her hands, and the General Assembly responded to the call of the President of the United States, by ratifying the Constitutional Amendment prohibiting slavery within her borders forever, and, by legislative enactment, securing protection to the freedman in all his personal rights, and opening the courts of the State in his behalf. Having thus cheerfully complied with all the conditions demanded as a prerequisite for restoration to her rights as a State in the Union, the people of Alabama waited anxiously, yet happily, for the meeting of Congress, and the admission of her Representatives.

Prostrated and impoverished, as she has been, by the war—with her fields devastated and her homes laid waste—and with her relations to a large class of her population radically changed—the people came up manfully to the duties of the hour, and with implicit reliance upon the magnanimity and good faith of the Northern people and the General Government—endeavored to adapt themselves as best they could to this new condition, and were rapidly advancing in the pursuits of peace. But it became, ere long, painfully evident that unknown persons were busily disseminating reports prejudicial to the honor and welfare of our people.

Kindly sympathy is manifested by the whites, with few exceptions, toward the freedmen, and their new relations to each other are being gradually adjusted in a manner satisfactory to both. Contracts have been made for labor, upon just and equitable terms, and the freedmen are generally at work. Nothing more is apparently now required for the restoration of law and order in our midst than the withdrawal of Federal bayonets from the State.

Believing, then, as your committee must, from the evidences before them, that the falsehoods propagated in the North and in Congress are the offspring of deliberate malice and design, and circulated only for the basest political purposes, it remains only for us, as the representatives of the people, to denounce the authors as wilful calumniators and slanderers, and to solemnly protest against their statements being received and accepted as the truth.

In conclusion, your committee feel this to be the proper occasion for a renewed expression of the sentiments which pervade the public heart toward the President of the United States and his policy. The following resolutions, similar in language and purport to those recently passed by the Legislature of the old Commonwealth of Virginia, are respectfully submitted, with the recommendation that they be adopted, and that a copy be transmitted to his excellency President Johnson, with the accompanying report.

W. GARRET,

Chairman of Com. on the part of the Senate.

JOSHUA MORSE,

Chairman on the part of the House.

Joint Resolutions of the General Assembly of the State of Alabama on the state of the Union.

Resolved by the Senate and House of Representatives of the State of Alabama, in General Assembly convened, That the people of Alabama, and their representatives here assembled, cordially approve the policy pursued by Andrew Johnson, President of the United States, in the reorganization of the Union. We accept the result of the late contest, and do not desire to renew what has been so conclusively determined; nor do we mean to permit any one subject to our control to attempt its renewal, or to violate any of our obligations to the United States Government. We mean to coöperate in the wise, firm, and just

policy adopted by the President, with all the energy and power we can devote to that object.

2. That the above declaration expresses the sentiments and purposes of our people, and we denounce the efforts of those who represent our views and intentions to be different, as cruel and criminal assaults on our character and our interests. It is one of the misfortunes of our present political condition that we have among us persons whose interests are temporarily promoted by such false representations; but we rely on the intelligence and integrity of those who wield the power of the United States Government for our safeguard against such malignant influences.

3. That involuntary servitude, except for crime, is abolished, and ought not to be reestablished, and that the negro race among us should be treated with justice, humanity, and good faith, and every means that the wisdom of the Legislature can devise should be used to make them useful and intelligent members of society.

4. That Alabama will not voluntarily consent to change the adjustment of political power, as fixed by the Constitution of the United States, and to constrain her to do so in her present prostrate and helpless condition, with no voice in the councils of the nation, would be an unjustifiable breach of faith; and that her earnest thanks are due to the President for the firm stand he has taken against amendments of the Constitution, forced through in the present condition of affairs.

A stay law was also passed at this session, applicable to suits brought since May 1, 1865, to mortgages and deeds of trust, with power of sale when the mortgagor or trustee is in possession. Its operation was so to delay proceedings as to postpone execution, except on debts due the State, for two years, and then to give the party one year longer in which to pay off the debt in three equal instalments. A new penal code was also adopted at this session, making no distinction on account of color, abolishing whipping and branding, and substituting "hard labor." Under the authority of the Legislature, the Governor, on February 12, 1866, issued a proclamation, granting pardon and amnesty to all persons who had been, or were liable to be, indicted for offences against the State, committed between April 13, 1861, and July 20, 1865, the crimes of rape and murder excepted. The session closed about February 20th, by an adjournment to the annual session. This commenced on November 12th ensuing. The measures previously devised to improve the finances of the State had been very successful. Temporary loans had been contracted and paid, and State bonds had been hypothecated, instead of being sold below par, and ample funds thus secured. This, however, added to the debt \$363,572, making, on November 12th, as follows:

Original bonded debt, partly extended	\$2,445,000
Amount of funded interest on the 5 and 6 per cent. bonds.....	687,990
Eight per cent. bonds sold for supplies and transportation.....	48,500
Eight per cent. bonds advanced to Insane Hospital.....	5,000
Total present bonded debt.....	\$4,186,490
To which add amount of loan due, including interest and commission....	\$363,572 23
Total.....	\$4,550,062 23

Brought forward.....	\$4,550,062 22
Should the U. S. agree to accept the 7 per cent. bonds for the real estate tax, amount thereof would be added	\$529,333 33

This would make the total bonded debt of the State.....	\$5,079,395 55
---	----------------

The effect of the stay law passed at the previous session had been to stimulate creditors to commence suits, so as to secure themselves all the advantages which the law could afford. The constitutionality of the act was also tested in the Supreme Court, and a decision rendered which placed such a construction on the law as to greatly diminish the time for carrying judgments into effect. The law, therefore, did not accomplish all that was anticipated.

Only two of the State banks took advantage of the act to reduce and consolidate their stock. The Bank of Mobile reduced its stock from a million and a half to seven hundred and fifty thousand dollars, and the Southern Bank of Alabama from a million to two hundred and fifty thousand. The capital stock of the other banks, it was believed, had been so reduced by the effects of the war, that they would be unable again to resume business. More than one-half the capital stock of the banks was drawn out by the State during the war.

The tax of three cents per pound on cotton, ordered to be levied by the Federal Congress, operated in an oppressive manner upon the productive labor of the State. A bale of cotton weighing five hundred pounds was taxed fifteen dollars; to this was added the income-tax of five per cent., which, under the estimates of the year, amounted to an additional five dollars on the five hundred pounds.

The public institutions of the State are recovering from the effects of the war. The number of insane persons in the State is estimated at seven hundred. A hospital for this class of persons, established at an expense of \$300,000, is in successful operation. The number of patients, near the close of the year, was about seventy-five, although the institution could accommodate three hundred and fifty. An institution for the deaf and dumb is also in successful operation. The arrears due to it from the State have been paid. The number of convicts in the penitentiary increased during the year from fifty-one to one hundred and fifty-eight, of whom thirty-eight were white, and one hundred and twenty colored persons. A large proportion of the colored were sent to the penitentiary from cities and large towns, whither the negroes, on becoming free, flocked in great numbers. The reconstruction of a building for the State University has been commenced, by means of a loan of seventy thousand dollars granted by the State. The common-school system has not yet recovered from the derangement caused by the war. The schools have been suspended for two years, and the public sympathy in them has greatly declined. The interest due to the fund for two years from the State has not been paid. Land

grants were made by the Federal Congress to aid in the construction of various railroads in the State. The war prevented the companies from taking advantage of these grants, and the time within which they were to be secured expired in June, 1866. All the roads in the State are suffering from the effects of the war. No one has been able to recommence the work of construction which was going on when hostilities commenced.

The Legislature at this session elected John A. Winston a Senator to Congress. He had been elected Governor of the State in 1855 and 1857, and was one of the Douglass presidential electors in 1860. In the House, on December 1st, a bill was introduced to extend the privilege of suffrage to all male persons, and thereby establishing qualified negro suffrage. It was regarded as a measure calmly and carefully to be considered, although laid upon the table—yeas 69, nays 19.

In February, 1860, an act was passed to appoint a commissioner to revise the code of the State. The appointment of Turner Reaves was made, and the work of revision commenced, but in December, 1861, it was ordered to be suspended until the close of the war. In May, 1866, the commissioner resigned, and Chief Justice A. J. Walker was appointed to complete the revision. His report was sent to the Legislature on November 15th. The work of revision embraced the statutes enacted during the previous fifteen years, which were condensed and arranged in their proper places, with some other important features. It was approved by a committee of the Legislature, and adopted. In the Senate a series of resolutions were offered, providing for the reference to the people of the Constitutional Amendment proposed by Congress. These were reported upon unfavorably by a committee, and the subject laid over. The Governor, in his annual message, opposed the amendment, saying:

For reasons such as these, I am decidedly of the opinion that this amendment should not be ratified. The first section embodies a principle which I regard as dangerous to the liberties of the people of the whole country. That principle is as applicable to New York and Massachusetts as to Alabama. The second section proposes a change in a feature of our Government which has never been complained of before. The question of representation has never been a source of trouble or inconvenience. It contributed in no way to the recent troubles of the country, and a change in it cannot be legitimately claimed as forming any part of the results of the war. The third section would bring no possible good to the represented States, while it would reduce those that are unrepresented to utter anarchy and ruin.

We are sincerely desirous for a complete restoration of the Union. We want conciliation, harmony, and national tranquillity. We feel that we have given every evidence which human action can furnish, of an honest purpose to conform in good faith to the condition of things surrounding us. Alabama is to-day as true to the Constitution and laws of the General Government as any State in the Union. Under the internal revenue law, and the tax on cotton, the people of this State are now paying revenue to the General Government at the rate of nearly ten millions

of dollars a year. In the enactment of these laws we had no voice. This amendment was proposed when nearly one-third of the States were unrepresented, and all of its harsh features are aimed directly at the States thus excluded. The ratification of such an amendment, proposed under such circumstances, cannot, in any possible view, accomplish any good to the country, and might bring upon it irretrievable disaster.

At a later day the views of the Governor relative to this amendment were changed, and on December 6th he addressed a message to both Houses in its favor. He expresses apprehension of the future, saying:

There is an unmistakable purpose on the part of those who control the National Legislature to enforce at all hazards their own terms of restoration. The measures they propose threaten to at once reverse our progress toward the establishment of that permanent tranquillity which is so much desired by all. To do so is to immediately augment the distress which now exists, and inaugurate confusion, the end of which no human prescience can foresee.

To-day the cardinal principle of restoration seems to be favorable action upon the proposed amendment to the Constitution, which I transmitted to you in my annual message.

Upon the merits of the amendment my views are already known. They are founded upon principle, and are unchanged. The necessity of the case, I am now constrained to think, is different. We should look our true condition full in the face.

The amendment was finally rejected by an overwhelming majority in both Houses. The amount of the Federal tax of 1861, assigned to Alabama, was \$529,318. Nothing had been collected at the close of the year.

The amount of destitution in the State exceeded that of any other Southern State, and continued through the year. Supplies were furnished liberally by the Federal Government; charitable associations and private individuals made large contributions, and the State granted all the assistance practicable, notwithstanding which the supply fell short. During the eleven months ending September 18, 1866, the Federal Government issued 3,789,788 rations, which was an average of 11,500 rations per day. The number of persons receiving supplies averaged monthly 21,700. The whites exceeded the blacks two to one. On February 23, 1866, the Legislature authorized the Governor to dispose of six per cent. bonds to the amount of \$500,000, for the benefit of indigent families. Sufficient provision had not been made for the payment of the bonds, and they were unsalable. The Governor says:

"In consequence of the inability to use these bonds, it was not in the power of the State to extend that amount of relief to our suffering people which was desired. In some counties the destitution was so extreme, that I authorized the judges of probate, in conjunction with two other reliable citizens, to purchase corn on the State's credit, pledging payment on the 1st of January next. The amount authorized for each of such counties was one thousand bushels. In addition to this, I found it necessary to draw funds from the treasury to pay for the transportation, and other incidental expenses.

"In the month of June last I made a visit to the Northwest, with a view, if possible, of purchasing supplies on the State account. I there learned, as before observed, that the six per cent. bonds authorized were unavailable. It was ascertained, however, that the eight per cent. bonds could be used for the purpose. In view, therefore, of the necessity of the case, I deemed it a duty to appropriate a portion of them to the purchase of supplies. Accordingly, a lot of corn was purchased, brought to the State, and distributed. The corn was bought at a low rate, and the banks of St. Louis purchased readily, and at par, a sufficient amount of bonds to pay therefor. The amount of bonds used in this way, including payment for transportation, was \$48,500. The corn thus obtained was distributed in such localities, and in such quantities, as were deemed most suitable, and afforded much relief, which would not otherwise have been found."

The hope was indulged that the crop of 1866 would save the people from any further destitution. But this unfortunately was not the case. The season was exceedingly unfavorable, and the crop short. In the opinion of the Commissioner for the Destitute, not half enough grain was raised to sustain the inhabitants. The opinion was confirmed by the reports of probate judges. The War Department, therefore, authorized General Swayne, the Federal commander, to distribute, during the winter months of 1866-'67, supplies to the value of \$120,000. This money was applied to the purchase of corn and bacon, as likely to be much more useful than the regular rations heretofore issued.

A census of the State was taken in 1866, the returns of which were nearly completed during the year. The results, as compared with the census of 1860, are shown in the following table.

It will be seen by an examination of these returns, that the effect of the war has been to neutralize the increase from all sources which, for the ten years previous, have been about 25 per cent. White and black fare apparently alike, although perhaps a disproportionate decrease among the blacks has been compensated by importations from time to time in order to avoid the converging theatre of the war. The census of white males in Alabama, which in 1860 gave an aggregate of 270,271, in 1866 presents a decrease of 9,267. The total of black males, in 1860, was returned at 217,766, and has diminished in the interval 3,523; about one-half the ratio of the former. The movement of freed people to the towns is shown by a marked percentage of increase in the counties of Mobile (25), Montgomery (23), and Dallas (Selma) (13), with a proportionate decrease in other counties. A northward movement of the freedmen into Tennessee is shown in the returns from Northern Alabama. The citizens of Randolph claim that their county sent 3,000 men to help the armies of the Union.

The legislation of the State relative to freedmen has steadily improved since the close of the war. When the Legislature assembled in November, 1865, there was developed a strong party in favor of securing the unpaid labor of slavery, but without admitting the obligations of maintenance which that system imposed. The measures taken for this object failed through the vigilance of the Freedmen's Bureau, and the cooperation of the Governor with his veto. But at the close of the session, in the spring of 1866, a vagrant law was in force, which provided chain-gangs and the county jail for whoever should loiter at work, or desert a labor-contract. At the same time the stay law was so framed as to postpone for a long period the collection of wages. At the subse-

quent session in November, 1866, the Governor in his message called attention to the subject, saying:

In reference to contracts with freedmen, there have been some exceptional instances of bad faith, which are strongly suggestive of the necessity of legal remedy. These exceptions are where employers of freedmen have, by capacious unreasonableness, sought and even created pretexts for finding fault with their employes, and discharging them without pay, alleging a violation of contract on the part of the freedmen. The only remedy left the freedman is a suit for his wages, and this is so tardy as to be scarcely worth pursuing. For such injustice as this, a remedy should be provided. It could be found in a law which would authorize a summary and an effective mode of enforcing payment for labor of the character under consideration. I respectfully invite your attention to this subject.

The right to testify in courts, in certain cases, was extended to the freedmen at the session of 1865-'66, and experience has demonstrated that the law was productive of good results. Colored persons were permitted to testify in cases where they were interested and where there was every inducement for false swearing which may be reasonably supposed to influence witnesses. But even with these strong temptations to commit perjury, the testimony of freedmen has been found valuable in the ascertainment of truth, and the Governor recommended that all restrictions should be removed. A steadfast cooperation has existed between the Bureau for the Freedmen and the Governor, and the results have been a growing kindness between the white and black races, an increased fairness in the application of the laws, with prospective changes of a most useful tendency. He also recommended that a portion of the taxes derived from freedmen should be applied to the education of their children and the support of the indigent, aged, and infirm of that population.

A case, involving the validity of the acts of the Legislature after secession came before the Supreme Court of the State, and was decided on January 23, 1867. An act, passed on November 9, 1861, authorized executors to invest in bonds of the Confederate States or of Alabama. The court unanimously sustained the validity of the government of Alabama as a *de facto* government during the war, and the authority of the Legislature to pass such an act.

In the Circuit Court of Butler County a motion was made to dismiss a suit on the ground that the original writ, when issued, was not stamped as required by the U. S. Revenue Law. In opposition to the motion, it was urged that the act did not apply to this case, for the reason that, when the writ was issued, the State of Alabama was under the exclusive control, possession, and dominion of, and owed allegiance to the then existing Confederate States Government.

Judge J. K. Henry decided that for the time being the sovereignty of the United States was suspended, and the laws of the United States could no longer be enforced in Alabama, or be obligatory upon the inhabitants who remained and submitted to the existing power. These inhabitants passed under a temporary allegiance to the then existing government, and were bound by such laws and such only as for the time being it chose to recognize and impose. The ordinance of 1865, annulling the ordinance of secession of 1861, clearly refers to the present and not to the past, in the declaration that "the same" (*i. e.* the ordinance of secession) "*be and is hereby declared null and void.*" Not that it was null and void from the beginning, but that it be *now* declared null and void. Analogous cases often arise in the ordinary legislation of the country. When an act is repealed, the language commonly used is, "That the same be and is repealed;" yet no

one understands this language as declaring that the act repealed was void or repealed from the beginning.

The subsequent surrender and destruction of the Confederate States authority, and the complete restoration of the United States authority, could not change the character of the previous state of things, so far as this question is concerned. The writ having been issued before the authority of the United States was reestablished, he was of opinion that the plaintiff could not be required to place a stamp upon the process.

ALLEN, HENRY WATKINS, ex-Governor of Louisiana, a brigadier-general in the Confederate Army, born in Prince Edward County, Va., April 29, 1820; died in the city of Mexico, April 22, 1866. He was the fourth son of Dr. Thomas Allen, a medical practitioner of some distinction, and when quite young removed with his father to Lexington, Mo. After spending some time in school, he was induced to enter a store in the position of under clerk, but having an unconquerable dislike for mercantile life, his father consented to his enrolment among the students of Marion College, Mo. Remaining here two years, some dissatisfaction with the parental authority induced him to leave and enter at once upon a more independent career. He ran away from college, and making his way to the little village of Grand Gulf, Miss., obtained the position of teacher in the family of a wealthy planter, and afterward opened a large school. Subsequently he devoted his whole attention to the study of law, was licensed to practise, and had already become quite successful as a lawyer, when in 1842 President Houston called for volunteers to aid Texas against Mexico. Having inherited a military taste, young Allen was not long in deciding to offer his services; he raised a company, and proceeded to the scene of conflict, where he acquitted himself well, and upon the termination of his engagement his command was ordered to rendezvous at Egypt, on the Colorado, where they were honorably discharged. Returning to Grand Gulf, he resumed the practice of his profession, married, and in 1846 was elected to the Legislature of Mississippi. A few years later, upon the death of his wife, he removed to Tensas Parish, La., and afterward to his estate in West Baton Rouge, where, in 1853, he was elected to the Legislature. The following year he quitted his estate, and entered the Cambridge University as a student of law, and spent some time in reviewing his studies. In 1859, attracted by the Italian war, he went to Europe, but arrived too late for a personal share in the struggle. He spent some time in travel, the incidents of which tour were gathered up in a volume, entitled the "Travels of a Sugar-Planter." During his absence he was reelected to the Legislature. He took a prominent position in that body, was an earnest, eloquent speaker, and well qualified for leadership. In his politics he was a Whig until the election of Mr. Buchanan when he became a

Democrat. Upon the outbreak of the war, Mr. Allen joined the Delta Rifles as a volunteer, and upon his promotion as lieutenant-colonel of the Fourth Louisiana was stationed for some months at Ship Island. Subsequently he was made colonel, and appointed military governor of Jackson. His first actual engagement was in the battle of Shiloh, where he commanded his favorite regiment, and fought gallantly, even after receiving a severe wound in the face. He was afterward ordered to Vicksburg, where he did efficient service in preparing the fortifications, sometimes directly under the fire of the Union army. At the battle of Baton Rouge, Colonel Allen commanded a brigade, and, while making a fearful charge, his horse was struck by a shell, killing him instantly, and the scattering shot passing through both legs of his rider, stretched him helpless upon the field, from which he was borne in an almost dying state. The amputation of one leg was advised, but owing to his entreaties it was, after a long period of suffering, finally spared. While lingering with his painful wounds he received the appointment of president of the military court at Jackson, Miss., also that of major-general of the militia of Louisiana, both of which he declined. In September, 1864, he was appointed brigadier-general, and ordered to report to the Trans-Mississippi Department, and had hardly entered upon his duties when he was almost unanimously elected Governor of Louisiana. He accepted the office, and at once gave himself up warmly and passionately to its duties. He was eminently fitted for the position, and was cheered and sustained by the devotion of the people. One of his first efforts was for the improvement of the State finances. For this purpose he arranged with General E. Kirby Smith, then commanding the Trans-Mississippi Department, to have the cotton tax due the Confederate Government paid in kind, and established, without cost to the State, the export of the cotton, which the State received for taxes, through Texas to the Mexican frontier, and the return by the same route of such articles of medicine, clothing, and necessity as could not otherwise be obtained, which were sold to the people at moderate prices, and distributed gratuitously to the very poor. He also instituted and encouraged manufactures for the production of articles of prime necessity in the State. He most carefully enforced all the laws, especially those forbidding the distillation of alcoholic liquors from grain and sugar-cane, and did all in his power for the suppression of drunkenness and other vices, and by his frugal management was enabled to devote large sums to public charities. His devotion to the interests of all classes speedily won the confidence and affection of the people, and the results of his wise, efficient, and beneficent administration were felt throughout the whole Trans-Mississippi Department, and gave him almost arbitrary power. At the close of the war, Governor Allen was strongly urged by his friends to leave the country, and feeling that by

remaining he could be of no further use to the State, he took up his residence in Mexico. Here he established an English paper, "The Mexican Times," laboring faithfully and zealously as the sole editor for eight months. But his career was drawing to a close. Upon the advice of his physician, he was making arrangements to go to Paris, and submit to a surgical operation, when his general health indicated immediate danger, and ere he could mature his plans, the end had come. A volume, entitled "Recollections of Henry W. Allen," prepared by Mrs. Sarah A. Dorsey, was published in New York City early in 1867.

AMALGAMATION. The art of extracting precious metals from their ores by amalgamation, has made considerable progress within the last few years, especially since the discovery of rich gold and silver mines in the Territories of Nevada, Montana, Idaho, and others. The amalgamation of free gold from quartz is a simple process, and has become of great importance in the gold mines (now systematically conducted) in California. The auriferous quartz, after being extracted from the mine, undergoes the process of milling, which consists in the reduction of the same to an impalpable powder, that is generally performed by a stamp-mill, and a subsequent treatment with mercury in various ways. It is really in the details where many improvements have been proposed, several of which are actually worth mentioning, and have contributed much to reduce considerably the expenses of "milling." To give an idea of the cost of treating quartz by milling, it may be stated that it ranges from \$0.67 to \$8.31 per ton, with a product of gold varying between \$5 and \$80 per ton. The profits resulting from this process in these California mines range from \$0.97 to \$56.40 per ton.

Many complaints have been made with regard to the great loss of gold by the amalgamation, since the practical results obtained have been so variable and unsatisfactory, amounting in many cases to less than half the gold in the ore. One of the most important discoveries, effecting a better and more thorough amalgamation, has been made by Prof. Henry Wurtz, of New York, and patented by him in this and other countries, in 1864. In order to explain the merits of this invention, we refer here to the remarks made by Prof. B. Silliman at the session of the National Academy of Science, held in Washington during January, 1866, of which the following is an extract:

It is well known to metallurgists that the amalgamation of gold is often attended with peculiar difficulties, and that in the best-conducted operations on the large scale there is always a considerable, often a large loss, of the precious metal. Samples of waste or "tailings" collected by myself at various amalgamation works in Grass Valley, California, a place noted above most others for the great success which has attended amalgamation of gold, proved on assay to contain in the quartz waste over thirty dollars to the ton, and in the sulphides over fifty dollars to the ton—showing a loss nearly equal to the average amount saved in that district. One of the most cau-

tious and experienced metallurgists of California, at one time connected with the Geological Commission of that State, informed me that by his own determinations the saving in a large number of cases was barely 30 per cent. of the gross contents of the ore, as shown by careful assays, both of the ore and the waste.

The causes of this large loss are various, among which may be mentioned imperfect processes, insufficient comminution of the ore, and the difficulty of bringing the gold into contact with the mercury. In an ore containing one ounce of gold to the ton of quartz or waste, the ratio is as one to thirty-two thousand (1 to 32,000), or less than one-fourth of one grain in one pound of stuff.

It is, however, well known to all who are conversant with gold amalgamation, that the mercury often appears perfectly indifferent to the gold even when brought in contact with it, failing to amalgamate it. This indifference may be sometimes traced to a minute portion of grease, which effectually checks amalgamation, but it is quite as often due to some other and less obvious cause, baffling often the skill of the best amalgamators, and resulting in a ruinous loss of the precious metal.

Numerous inventions have been devised to save this loss, and avoid the causes which involve it, but until lately with very indifferent success. One of the most promising, viz., the use of mercurial vapor, has proved itself on trial in the large way a failure, and the problem has remained, in a great measure, unsolved.

Early in 1864 Prof. Henry Wurtz communicated to me in conversation his conviction, as the result of preliminary experiments, that the use of a minute portion of the metal sodium would impart to mercury the power of amalgamating with gold readily under any of the adverse conditions which had thus far proved a serious drawback to the practice of this art. Leaving soon afterward for California, I have had no opportunity, until within a few months past, of acquainting myself with Mr. Wurtz's plans.

Prof. Silliman also explained some experiments made to illustrate the remarkable properties imparted to mercury by sodium, and discovered by Prof. Wurtz. He says:

1. Shake up in a test-tube a small quantity of mercury (say half an ounce) with a moderately strong solution of sulphate of iron. The mercury is presently reduced to the condition of a thick mud, being so completely granulated (floured) as to resist all efforts to restore it to its proper condition, and retaining this condition almost indefinitely. Drop now a minute particle of sodium amalgam into it, when instantly the whole is restored to its fluid state, and subsequent efforts to reproduce the granular condition are futile if the least trace of sodium remains.

2. Bring a particle of placer gold or gold from quartz into contact with a little clean mercury in its ordinary condition. It will be seen to push the gold before it as it rolls about, and refuse to amalgamate with the gold, even when beneath its surface. In fact, there appears to be a sort of active repulsion between the two metals.

3. Bring the same particle of gold in contact with mercury having a minute portion of the sodium amalgam dissolved in it, when immediately the gold is completely enfolded by the mercury and disappears under its surface.

The description of the discovery, as given by the inventor, shows, that it consists in imparting to quicksilver greatly enhanced adhesion, attraction, or affinity for other metals and for its own substance, by adding to it a minute quantity of one of the highly electro-positive metals, such as sodium, potassium, etc. A minute quantity of these metals, dissolved in

quicksilver, communicates to it a greatly enhanced power of adhering to metals, and particularly to those which, like gold and silver, lie toward the negative end of the electrochemical scale. This power of adhesion, in the case of these two metals, is so great, that the resistance, which I have found their surfaces, when in the native state, usually oppose to amalgamation (a resistance which is much greater and more general than has hitherto been recognized, and which is due to causes as yet undiscovered, or at least uninvestigated), is instantly overcome, whether their particles be coarse, fine, or even impalpable. Even an artificial coating of oil or grease (which is such an enemy to amalgamation that the smoke of the miner's lamp is pronounced highly detrimental in gold and silver mines) forms no obstacle to immediate amalgamation by this magnetic quicksilver. The atoms of the mercury are, as it would seem, put into a polar condition by a minute particle of one of those metals which range themselves toward the electro-positive end of the scale; so that its affinity for the more electro-negative metals is so greatly exalted that it seizes upon, and is absorbed by their surfaces instantaneously.

The practical results obtained by using sodium amalgam, are highly satisfactory and surpass any other method. Although comparatively new, this process is now introduced into almost every gold district, according to the reports in many scientific or mining journals.

The amalgamation of auriferous iron pyrites, such as are found especially in Colorado and Montana, is much more difficult and requires a very careful preparation of the ore, previous to its contact with mercury. The first question to consider, is the state in which the gold occurs in the pyrites—whether as metal or as a sulphuret. Most writers on the subject accept the first, and if this be correct, the gold must be in exceedingly fine particles, which have to be disclosed and freed, before mercury can act upon them. The ore, therefore, must be very finely pulverized, and to do this, several new machines were invented and tried with more or less success. But, notwithstanding this theory, the amalgamation of raw pyrites, however finely powdered, is so incomplete, that in many cases not over 20 per cent. of the metal is obtained. It was found, that the ore needed to be desulphurized previous to its amalgamation, to gain a reasonable percentage of the precious metal. This process has been and still is of immense importance for Colorado, where fuel is rather scarce, and the attention of metallurgists has been especially directed to find a method which requires little fuel. One much in practise, is the apparatus of Keith, in which the ore is blown as a fine dust through a tubular vessel, being heated by the flame of some fuel, brought in contact with the ore. It is reported, that this method has given excellent results. Compared with the amalgamation of the raw ore, it undoubtedly has, but it is not

easy to be seen how a complete roasting can be effected by it. Probably the most successful apparatus or furnace for roasting, will be the so-called Terrace furnace, substantially a rectangular prismatic room, with a large number of shelves of fire-clay arranged in such a manner that the ore will fall from one to the two underneath and so on, until it reaches the lower part of the furnace, from whence it is removed. The furnace is heated first by a temporary hearth, but the combustion of the sulphur produces afterwards enough heat to keep the ore constantly in a temperature fit to expel the sulphur from the same. Another method has been proposed, and we believe with much success. It is the invention of Mr. Monnier, and consists in calcining the ore in reverberatory furnaces with an addition of sulphate of soda. The whole is calcined at a low temperature, and during the operation the sulphurets of iron and copper are at first oxidized, but partly changed into sulphates during the last hours of the calcination. These sulphates can be leached out, and, so far as the copper is concerned, it can be won by a precipitation with metallic iron. The remaining ore, after the lixiviation of all soluble salts, is chiefly composed of peroxide of iron and the gangue or quartzose substances which were in the ore; the whole containing the gold well disclosed and ready for the attack of the quicksilver. An advantage in this process is the small quantity of fuel needed, and more especially the soft state of every particle of peroxide of iron, which allows an easy access of the mercury to the most minute parts.

In many mines the vein-matrix is composed of quartz, which has both free metallic gold, and auriferous pyrites. In such cases the ore is often treated with mercury in the raw state, or it is at least passed over copper plates, which are alloyed or amalgamated, and retain all the free particles of gold, after which the ore is calcined and amalgamated.

Should the ore have too much copper pyrites and zinc-blende or galena mixed with the quartz and iron pyrites, it becomes often too difficult and expensive to apply amalgamation, and the treatment by smelting is preferable.

The great improvements in desulphurizing pyrites, by which so great quantities of gold are saved, have given an impulse to an active and profitable mining system in several of the Territories, especially in Colorado.

A peculiar method of amalgamation for gold ores has lately been put in practice by a Mr. Wykoff, which he calls the "chloride of sodium" process. The machinery used consists of a wooden cylinder, combined with a shaking-table, with the ordinary mechanical appliances for working them. The process itself is as follows: Two hundred pounds of finely-crushed ore is put into the cylinder or amalgamator, with about one hundred pounds of mercury and sixty gallons of water, to which three per cent. of salt is added. The cylinder is then set

in motion, rocking forward and backward, while steam is introduced by means of a tube, and in about eight minutes the water boils, and the mercury permeates the entire mass. After so working for forty-five minutes, a stream of cold water is let in, which suddenly cools the mass and precipitates the mercury. The gate at the end of the cylinder is then opened and a stream of water run through the cylinder, until it comes clear, when the gate is closed and a new charge is put in. The shaking-tables are merely to collect small particles of metal, which may have been thrown from the cylinder by the force of the water. Mr. Wykoff claims to be very successful with his method, and to save in this way nearly all the gold contained in the ore.

The amalgamation of silver ores is much more complicated, and requires more skill and experience for a successful and economical treatment than the gold ores. In order to explain the theory of this process, it is deemed necessary to remark, first, that the silver ores which are subjected to this treatment are generally sulphurets, arseniates, and antimonates of silver, or compounds of these bodies. The older theory was, and is yet accepted by many authorities, that these sulphurets, when brought together with common salt (chloride of sodium) and sulphate of copper, under proper conditions, are changed into chloride of silver, and that the subsequent contact with mercury would decompose these chlorides into metallic silver, which forms an alloy with the quicksilver, while another part of the latter takes up the second atoms of chlorine, and forms proto-chloride of mercury, or calomel, which is lost. Another theory is that of Mr. Bowring, who endeavors to prove that the dento-chloride of copper, produced by chemical action from common salt and sulphate of copper, is changed, in contact with mercury, into a proto-chloride, and the latter, under the influence of atmospheric air, to oxo-chloride of copper, which, in its turn, gives a part of its oxygen to the sulphurets of silver, producing metallic silver, and leaving again proto-chloride of copper and sulphuric acid as products of decomposition. It will thus be seen how many chemical actions come into play in these processes, and how imperfectly they are understood yet. It may be said that during the last few years many experiments were made to improve the amalgamation of silver ores, especially in Nevada, where, amongst a great deal of quackery and absurdity, several inventions of some merit were introduced.

Under nearly all circumstances it is necessary to roast the ore, previous to its further treatment, with an addition of salt (chloride of sodium). An exception to this rule forms the method introduced by a Mr. Smith, who amalgamates with but few chemical agents, except common salt, the sulphurets of silver, found in the Comstock Lode, and some other mines. The apparatus he uses is known under the name

of Wheeler's or Hepburn's pan, and it appears that it is principally the friction between the iron parts of the apparatus and the ore which, in this process, causes a decomposition of the silver ore, and its fitness to form an alloy with the mercury. It ought to be remarked, however, that the presence of much antimony or arsenic in the ore is greatly objectionable, and that in such cases the ore has to be previously calcined. With ordinary care, the percentage of silver extracted from the ore varies between 70 and 80 per cent., compared with the yield of the assay, and it cannot be overlooked that this system is of great importance in a country where fuel is so scarce as in Nevada.

The chemicals which are more or less used in the mills in Nevada are numerous; they are employed, with the exception of the common salt, in a state of solution. We give a list of the more important ones:

1. Sulphate of copper (bluestone). Out of a solution of this salt metallic copper is precipitated, when in contact with iron. The freed copper forms an alloy with the quicksilver amalgam, which is again decomposed by sulphide of silver, through electro-chemical action, producing silver amalgam, and probably sulphide of copper.

2. Sulphate of iron (copperas).

3. Bisulphate of soda. This salt gives up one atom of its acid, and is reduced to a neutral salt.

4. Alum.

5. Sulphuric acid. The acid is used in a diluted state, and appears to act directly on sulphides of silver, which may be seen by the development of sulphuretted hydrogen gas, immediately after the application of the acid.

6. Chloride of sodium (common salt). It does not act directly on the sulphides of silver, but must be first decomposed by some agency before its chlorine can act on the ore.

7. Proto and deuto-chloride of copper. These salts act similar to the sulphate of copper.

These and many other substances are used with or without success in the Nevada mills. An untold number of experiments have been made, many patents issued for so-called new processes, while some "inventors" kept their method strictly secret; but to the present day no treatment has been discovered for amalgamating such complicated silver ores, which would give all the silver contained therein, and more especially under such difficult circumstances as prevail in Nevada.

It leads us too far, considering the space for this article, to describe the different systems of amalgamators, and it could hardly be done without figures. But it may be interesting to give a short description of the *modus operandi* followed in the process of amalgamation. In some pans, chemicals and raw ore are used; in other cases, the ore is first roasted, and often no chemicals are resorted to. In the first case, some water is first put in the pan and finely-pulverized ore, enough to give a certain consistency to the mass, which is of much importance,

as too much fluidity will cause the settling of the sand and prevent a uniform division of the mercury, while, on the contrary, the particles of ore cannot change their places quick enough, and prolong, therefore, the operation. The pan being filled in this manner, the quicksilver is added in quantities of thirty to eighty pounds, and, if salt is to be used, it may be done so immediately, while all other chemicals are only applied a little afterward. The temperature is kept, as near as possible, uniform, and near the boiling-point of water. The number of revolutions of the agitator is from ten to fifteen per minute, but they can be increased without inconvenience. The operation is finished in about three or four hours; at that time the mass is diluted with water, and after half an hour tapped carefully in an adjoining vat, where such traces of amalgam are separated as might have gone with the fluid mass. The great quantity of amalgam now on the bottom of the pan remains, and acts on a new portion of ore until it has become sufficiently solid, when it is removed and pressed through a filter of leather or strong linen cloth. As already remarked, the pans known as "Wheeler's" and "Hepburn's" seem to give the most favorable results, in consequence of their peculiar construction. It is believed that they give a better percentage than other pans, and some estimate the difference as much as ten per cent. The actual loss of mercury has not yet been accurately ascertained, or if so, has not been made public.

A Hepburn pan of ordinary size can treat about four tons of ore in twenty-four hours, and requires two and a half horse-power.

The amalgam, after being pressed, is distilled in retorts, generally made of cast iron, four feet long, eleven inches wide, and nine inches high. The same is connected with a condensing apparatus, which is kept cool by water, and in which the vapors of mercury are condensed and liquefied.

It may be interesting to finish our remarks about amalgamation, with a description of this process as applied to so-called speiss and black-copper, the first being a product from treating arsenical and antimonial ores, also containing silver, nickel, and copper—the other (black-copper), an impure metal from mixed copper ores containing 80% copper, and remainder iron, sulphur, lead, and antimony, besides some silver. These classes of ores and products are not yet known well in this country, but there can be no doubt that the amalgamation or humid extraction of the precious metals from these substances, will have to be resorted to, with the increased development of the mineral resources.

The following methods are practised in the Stephanshütte, in Hungary. Black-copper, after being granulated and ground fine by stampers and arrastras, is mixed with 10% common salt, and calcined in a double calcining furnace, with a low, slowly increasing heat during ten hours. The silver is thus converted into a

chloride, and the sulphuric and antimonial salts decomposed to a great extent.

The amalgamation is performed in barrels, where the powdered copper is mixed with a quantity of saline water, some more salt, and for every 1500 lbs. substance about 100 copper balls. If much free acid is in the mass, quicklime is added for neutralization. After some revolutions, quicksilver is added, and then the casks revolved for eighteen hours, after which the usual way is to wash the amalgam and treat it further. The amalgamation of the "speiss" is performed in nearly the same manner, with additions of crude lime to the charge.

AMERICA. The great task which, during the year 1866, occupied the attention of the Government and people of the United States, was the work of reconstruction. It soon became apparent that the views of the President and the majority of Congress on the subject widely differed. The latter embodied its views in the Civil Rights and Freedmen's Bureau Bills and in a new Constitutional Amendment. The President expressed his disagreement with the amendment, and vetoed the two bills, both of which were, however, passed over his veto by Congress, and declared to be laws. The Thirty-ninth Congress, during its first session, admitted Tennessee, after its Legislature had ratified the Constitutional Amendment. The elections, held during the year, resulted in every Northern State, and in West Virginia and Missouri, in favor of the Republican party, while in Maryland and Kentucky the conservative opposition was triumphant. The late secession States, with the exception of Tennessee, were unanimous in rejecting the Constitutional Amendment. (See UNITED STATES.)

British America was greatly excited by invasions of the Fenians, which, however, were, without great difficulty, suppressed. In order to carry through the Confederation scheme, delegates from all the provinces went to England to confer with the Home Government, and it was understood that a bill concerning the projected Confederation would be laid before the Imperial Parliament early in 1867. (See BRITISH AMERICA.)

France, for purposes of her own, resolved to withdraw from Mexico the French forces in three detachments, the first to take place in November, 1866, and the last in November, 1867. The failure of the French Government to withdraw the first detachment at the time caused it to make then the necessary preparations for recalling all the troops by March, 1867. In consequence of this new turn of the war, the Liberals made rapid progress in the repossession of the country. Maximilian, at first, intended to abdicate, but subsequently resolved to fight for his crown at the head of the Conservatives and Church party. A new split arose, however, among the Liberals. Gen. Ortega disputing the claim of Juarez to the presidency after the expiration of his legal term. (See MEXICO.)

The war of Spain against the republics of Chili and Peru continued throughout the year. The Spanish fleet bombarded the port of Valparaiso, inflicting considerable damage, and subsequently the port of Callao, where they were repulsed. Their strength then seems to have been spent, for they refrained from committing any further hostilities. The alliance between Chili and Peru was joined by the republics of Bolivia and Ecuador, while the United States of Colombia, and other states of South and Central America, declined it. The allied republics expelled all the Spanish residents from their territories. (See BOLIVIA, CHILI, ECUADOR, PERU, SPAIN.)

On the Atlantic side of South America, Paraguay bravely defended herself against the united forces of Brazil, the Argentine Republic, and Uruguay. Toward the close of the year the armies of the Argentine Republic and Uruguay were withdrawn, and it was believed that the alliance was at an end. The Presidents of both the allied republics were threatened with dangers at home, and Paraguay was expecting aid from Bolivia. (See ARGENTINE REPUBLIC, BOLIVIA, BRAZIL, PARAGUAY, URUGUAY.)

The successful laying of the Atlantic cable brought North America into telegraphic communication with the Old World. This communication remained free from interruption throughout the year. The rapid progress of the Russo-American telegraph will soon give new guaranties for the permanency of this communication.

The total population of America exceeds at present 80,000,000, of whom about 48,000,000 belong to North America and Mexico, 2,500,000 to Central America, 8,970,000 to the West Indies, and 26,000,000 to South America.

ANGLICAN CHURCHES. The general statistics of the Protestant Episcopal Church in the United States in 1866 were, according to the "Church Almanac" for 1867, as follows:

Dioceses	34
Bishops	44
Priests and Deacons	2,486
Whole number of Clergy	2,580
Parishes	2,305
Ordinations—Deacons	98
“ Priests	86
Candidates for Orders	226
Churches consecrated	88
Baptisms—Infants	23,974
“ Adults	6,527
“ Not stated	808
Confirmations	19,296
Communicants—Added	14,138
“ Present number	161,224
Marriages	9,900
Burials	16,828
Sunday-School Teachers	17,570
“ “ Scholars	157,813
Contributions	\$3,051,669.64

The following table exhibits the number of clergymen, parishes, communicants, teachers and scholars of Sunday-schools, and the amount of missionary and charitable contributions for each diocese:

DIOCESES.	Clergy.	Parishes.	COMMUNICANTS.		SUNDAY-SCHOOLS.		Missionary and Charitable Contributions.

The movement for a reunion of the Southern dioceses with the General Convention of the Protestant Episcopal Church of the United States, which began at the close of the year 1865, made rapid progress after the beginning of the year 1866. The diocesan convention of Alabama voted in favor of reunion in January, those of South Carolina and Florida in February, and those of Virginia, Mississippi, and Louisiana in May, thus completing the restoration of the national unity of the Church. In most of the diocesan conventions the vote was unanimous in favor of reunion; a notable opposition being made only in that of Virginia, in which fifty-four clerical and thirty-six lay delegates voted in the affirmative, and seven clergymen and eleven laymen in the negative. The bishops of the dioceses notified the presiding bishop of the Church in the United States of the fact, and the president bishop in his turn officially announced to the Church the consummation of the reunion. Bishop Wilmer, of Alabama, who had been elected and consecrated while the Southern dioceses formed a separate organization, complied on January 31st with the conditions provided for his recognition by the triennial General Convention of 1865, namely: first, that he should transmit in writing (to be signed by him in the presence of three bishops of the Church) to the presiding

bishop of the House of Bishops, the promise of conformity comprised in the office for the consecration of bishops; and, secondly, that he should also transmit to the said presiding bishop the letters of his consecration, or, in default of the existence of such letters, other sufficient evidence as to the fact of his consecration, and the bishops by whom it was done, and the other persons by whom it was witnessed. The presiding bishop thereupon officially announced that the necessary regulations having been fulfilled, "the acceptance and recognition of the Right Rev. Richard Hooker Wilmer, D. D., as the Bishop of Alabama, is now complete."

The annual meeting of the Board of Missions was held in October, in Providence. The receipts of the domestic committee for general purposes amounted to \$54,645, and those of the foreign committee to \$71,000. The "American and Church Missionary Society" held its seventh anniversary at New York, in October. The society employed during the past year 38 missionaries, of whom 12 were new appointments, and 24 recommissioned; seven resigned. The receipts were \$56,412.38, and the expenditures \$54,227.62. The balance on hand October 1, 1866, was \$2,184.76. It was resolved at the anniversary meeting that "a committee of five be appointed to confer with the Evangelical Educational Committee, already existing.

with power, in connection with them, to organize a General Educational Society." The nineteenth anniversary of the Evangelical Knowledge Society was likewise held in New York in October. The annual report set forth that the new works published by the society amounted to 2,497 pages. The treasurer's report announced that the receipts for the past year amounted to \$40,998.32, and the expenditures to \$39,596.31, leaving a balance of \$1,402.01.

The Church of England continued to be greatly agitated by the case of Dr. Colenso, who, in the latter months of the year 1865, returned to his diocese of Natal. The Bishop of Capetown, as Metropolitan of the Anglican Church in North Africa, had offered to Colenso to have the sentence of deposition, which had been passed upon him by a synod of the South African bishops in 1865, revised either by the Archbishop of Canterbury, or by the bishops of the United Church of England and Ireland, or by such bishops of the Anglican communion throughout the British empire as could be assembled in London for the hearing of his case. As Colenso refused to avail himself of this offer, the metropolitan issued a formal sentence of excommunication, reading as follows:

In the name of our Lord Jesus Christ, We, Robert, by Divine permission, Metropolitan of the Church in the province of Capetown, in accordance with the decision of the bishops of the province, in synod assembled, do hereby, it being our office and our grief to do so, by the authority of Christ committed unto us, pass upon John William Colenso, D. D., the sentence of the greater excommunication, thereby separating him from the communion of the Church of Christ so long as he shall obstinately and impudently persist in his heresy, and claim to exercise the office of a bishop within the province of Capetown. And we do hereby make known to the faithful in Christ that, being thus excluded from all communion with the Church, he is, according to our Lord's command, and in conformity with the provisions of the Thirty-third of the Articles of Religion, "to be taken of the whole multitude of the faithful, as a heathen man and publican." (Matt. xviii. 17, 18.)

Given under our hand and seal this 16th day of December, in the year of our Lord 1865.

R. CAPE TOWN.

The Metropolitan of Capetown notified the Anglican bishops of Great Britain, the British colonies, and the United States of this step. In England some of the bishops disapproved of the measure, while, as far as is known, those of the British colonies and the United States were unanimous in sanctioning it. From the senior bishop of the Protestant Episcopal Church in the United States the following reply was received:

BURLINGTON, VT., May 4, 1866.

To the Most Reverend Robert Gray, D. D., Lord Bishop of Capetown, and Metropolitan:

MY DEAR LORD BISHOP: Your official statement of the greater excommunication formally pronounced by you on John William Colenso, D. D., late Bishop of Natal, and addressed to me as the senior bishop of the Protestant Episcopal Church in the United States, has been received and placed on record.

On my own part, this painful and afflictive work of discipline is perfectly approved, as an act of solemn and imperative duty to the Church of God, and to

her divine Head and Master, the Lord Jesus Christ. And I cannot doubt that it is equally approved by all my brethren, whose sympathy and confidence in the firmness and fidelity of your whole course were so unanimously declared in the resolution passed at our last General Convention.

With my earnest prayer that the Holy Spirit of grace and consolation may guide and prosper all your arduous labors, and mercifully overrule this strange and mournful defection to the greater glory of the Redeemer, and the confirmation of His Church's absolute faith in the sacred Scriptures as the unerring Word of God, I remain, my dear Lord Bishop, with high regard, your friend and brother in Christ,

[L. S.] JOHN H. HOPKINS,

Presiding Bishop of the Protestant Episcopal Church in the United States.

At the session of the convocation of Canterbury, which began on May 1, 1866, the Archbishop of Canterbury announced that he had received letters from the Bishop of Capetown and the Dean of Maritzburg, asking in substance the following questions: 1. Whether the Church of England hold communion with Dr. Colenso, and the heretical church which he is seeking to establish at Natal, or whether it is in communion with the orthodox bishops who, in synod, declared him to be *ipso facto* excommunicated. 2. Whether the acceptance of a new bishop on the part of the diocese of Natal, while Bishop Colenso still retains the letters-patent of the crown, would, in any way, sever the diocese from the mother Church of England. 3. Supposing the reply to the last question to be that they would not in any way be severed, what are the proper steps for the diocese to take to obtain a new bishop? The discussion of these questions showed that the bishops were any thing but agreed. The Bishop of Oxford wished all the three questions to be answered in a manly and hearty manner, while the Bishops of St. Asaph, Llandaff, St. David's, Lincoln, Ely, and Peterborough, were opposed to immediate action. In the session, beginning June 26th, the discussion of the case was resumed. The Bishop of Oxford moved to reply, in answer to the first question submitted to the convocation, that the Church did not hold communion with Dr. Colenso, and that it did hold communion with the orthodox bishops of South Africa. A majority of the bishops were, however, opposed to committing themselves on the first part of the resolution, and by five against four votes adopted an amendment, declaring that they held communion with the Bishop of Capetown, and those bishops who with him declared Dr. Colenso to be *ipso facto* excommunicated. The lower house gave to this amendment a unanimous consent. In reply to the second question, the Bishop of Oxford moved the following declaration: "That as it has been decided, on appeal to the highest judicial court in this kingdom, on the one hand, that the Church in the province of Natal, in communion with the United Church of England and Ireland, is in the eye of the law a mere voluntary association; and, on the other hand, as the letters-patent do not profess to confer spiritual power, and have been declared by the court to convey no episcopal jurisdic-

tion, it is the judgment of this house that the acceptance of a new bishop does not impair the connection or alter the relations existing between the members of the Church in the province of Natal and the Church of England, provided: 1. That the bishop be canonically consecrated according to the use of the Church of England. 2. That there be no invasion of the title of the Bishop of Natal conveyed by her majesty's letters-patent."

As regards the third question (the proper measures to be taken to secure the election of a new bishop), the Bishop of Oxford proposed that the House of Bishops should recommend: 1. That an instrument should be prepared declaratory of the doctrine and discipline of the Church of South Africa, which every priest and deacon appointed to any office should be required to subscribe. 2. That a godly and well-learned man should be chosen, with the consent of the communicants of the Church, to be the bishop. 3. That the person so selected should be presented for consecration either to the Archbishop of Canterbury or to the bishops of the Church in South Africa, as might be hereafter deemed most advisable. The Bishops of London, St. Davids, and others declared themselves opposed to the appointment of a new bishop, but after being submitted to some verbal alterations, the first resolution of the Bishop of Oxford was carried by six to four. The second resolution was also agreed to. The lower house assented to both resolutions. Notwithstanding these proceedings against him, Colenso continued to perform his episcopal functions in his diocese. Of the seventeen clergymen of the diocese, only one sided with him; but, on the other hand, the secular authorities of the colony gave him all the support that was in their power. Colenso also obtained, in October, a decision in his favor by the Master of the Rolls (Lord Romilly), who decided that the trustees of the Colonial Bishopric's Fund were obliged to pay to Dr. Colenso the arrears of his salary which they had deemed themselves authorized to cut off. But about the same time when this decision was rendered, the majority of the clergy and laity of Natal took the last step for a complete severance of their ecclesiastical connection with Colenso. On October 25th a meeting was held of the clergy of the diocese of Natal, to consider the replies sent out by the English convocation to the queries forwarded through the metropolitan, in 1865, from the Church in Natal, and, in accordance with the advice tendered, to elect a bishop for the vacant see. Fourteen clergymen and about fifty communicants were present. The two clerical supporters of Colenso were present, but not allowed to vote. A letter was read from the Bishop of Capetown, urging them to elect a new bishop, and, as regards the mode of election, giving this advice: "The clergy elect; communicants assent. They alone have to do with the matter. All communicants have a right, I apprehend, according to the customs of the primitive Church, to express their

assent, if they so will." The Bishop of Grahams-town wrote "to express his general concurrence in the views as to the election of a bishop contained in the metropolitan's letter to the dean." The discussions extended over two days. The final result was that the clergy present were evenly divided, seven voting for the election of the Rev. William Butler, Vicar of Wantage (of the diocese of Oxford), as bishop, and seven voting against such election, holding such a course to be illegal, and opposed to the advice of the convocation. Dean Green gave his casting vote in favor of the election. Twenty-eight laymen also voted for it. The dean then pronounced that the Rev. William Butler had been duly elected. The congregation of St. John's Church, Pinetown, held a meeting, repudiated this election, ejected their incumbent, the Rev. James Walton, for the part he had taken in it, and then called upon Dr. Colenso to appoint a new minister. On October 30th, a meeting of the supporters of Dr. Colenso was also held at the cathedral, to protest against the election, at which about 200 persons were present. A protest, the adoption of which was moved by the Colonial Secretary, and seconded by the Secretary for Native Affairs, was unanimously agreed to. The protest declared that the clergy and laity concerned in the election had, by that act of legislation, renounced the queen's supremacy, and forfeited their membership of the Church of England. Dr. Colenso, on his part, contended that all persons taking part in conventicles or private meetings to consult on any matter or course impeaching the doctrine of the Church of England or of the Book of Common Prayer, or of any part of the government or discipline now established in the Church of England, were *ipso facto* excommunicated, in terms of the 75th canon of the Church, and that Dean Green and his supporters were therefore excommunicated by their own act in electing a bishop without her majesty's authority. The English Government instructed the officers of the crown in the colony to observe a strict neutrality in the controversy.

Another controversy in the Church of England, which, during the past year, obtained a great importance, was that of the ritualistic changes in the worship of the Church. A number of clergymen had for some time past introduced into their churches practices for which they claimed both the authority of the Anglican Church of former centuries and of the ancient Christian Church, but which by another party were viewed as "a deviation from law and long-established usage, and as disturbing the peace and impairing the efficiency of the Church, and as disquieting the minds of many devout members of the Anglican communion." Some of the opponents of "ritualism" were of opinion that the Book of Common Prayer, in its present form, gave some encouragement to the ritualists, and they desired the appointment of a commission by the Government "for the revision of the Liturgy." To this scheme

the Archbishop of Canterbury declared his determined opposition, and Earl Russell (in reply to Lord Ebury, February 12th) stated that the Government, "anxious to promote peace and good-will, and not to open the way to discord," had, after communicating with the Archbishop of Canterbury, declined to propose the forming of a commission. The friends of "church ornaments" had accordingly (February 8d) presented a memorial to the Archbishop of Canterbury, signed by 86,008 communicants, of whom 24,133 were laymen, and 2,970 clergy of the Church of England, against any alterations being made in the Book of Common Prayer respecting the "ornaments of the Church, and of the ministers thereof;" and the mode and manner of performing divine service "according to the use of the Church of England."

The archbishop, in his reply, while repeating his declaration that he would never consent to any alteration in any part of the Book of Common Prayer without the full concurrence of convocation, at the same time declared his decided opposition to many of the ritualistic innovations. The lower house of convocation, at its session in February, after a long and animated discussion, agreed to the following resolution: "That this house, recognizing the evils which may arise from an excess of ritualism, deprecates, nevertheless, any attempt to avert those possible evils by the introduction of changes in the prayer book; that in coming to these resolutions the house by no means intends to express approval of any alteration from church order not included in the expression 'excess of ritualism.' That this resolution (the first paragraph) be communicated to their lordships of the upper house, with a humble request that they take the subject into their consideration, and adopt such measures as they shall see fit, in conjunction with the house, for clearing the doubts and allaying the anxiety that exists upon it." The bishops, in return, desired the lower house to appoint a committee of inquiry. The report of this committee was made by its chairman, Dr. Goodwin, Dean of Ely, in July. The report gives a history of the ritualistic usages which the party tries to introduce, and deprecates any attempt at a judicial settlement of the question of ritualism, urging moderation on both sides. The report of the committee was adopted by a vote of 88 to 9.

The monastery of the "English Order of St. Benedict," at Norwich, was dissolved in consequence of the long absence of its founder, the Rev. Mr. Lyne ("Father Ignatius"), and from want of support. Mr. Lyne, toward the close of the year, received an appointment as a curate in the diocese of London. A monastery of the "Third Order of St. Benedict" was still in existence at the close of the year, at Bristol.

The efforts for bringing on a closer union between the Anglican churches on the one hand, and other religious denominations possessed of an apostolical succession on the other,

were actively pursued. The societies chiefly instrumental in pursuing these efforts on the part of the Anglican churches are the "English Church Union," the "Association for the Promotion of the Unity of Christendom," and the "Eastern Church Association." The latter confined its efforts to the Eastern Churches, while the two former have a more general tendency, and in particular keep in view the establishment of closer relations with the Roman Catholic Church. An interesting correspondence between a number of Anglican clergymen and Cardinal Patrizi took place in the latter months of the year 1865, but was only made public in 1866. The letter of the Anglican clergymen (written in Latin) was signed by 198 "deacons, canons, parish priests, and other priests," and addressed to "the Most Eminent and Reverend Father in Christ, the Lord Cardinal Patrizi." As regards the relation of the Anglican Church to that of Rome, the writers say: "Whatever may have been less perfect in the faith of the flock, in Divine worship and in ecclesiastical discipline, we have improved beyond our hope; and, not to be forgetful of other things, we have shown an amount of good-will toward the venerable Church of Rome, which has rendered us suspected in the eyes of some." The cardinal, in his reply, which is dated November 8, 1865, salutes the writers as "Worthy and Very Dear Sirs," and he assures them that their letter has inspired the "sacred congregation with a most pleasing hope." But he declines to admit their claims to the name "Catholic," and describes their condition as an "inherited state of separation." He concludes with the hope that they will "no longer hesitate to throw themselves into the bosom of that Church which, from the Apostolic See through the succession of its bishops, while heretics have barked in vain, has attained the pinnacle." The views of Dr. Pusey, concerning a union between the Churches of England and Rome (*see ANNUAL CYCLOPEDIA for 1865, p. 26*), were supported by the "English Church Union," of which society Dr. Pusey has become a member. At a discussion on the subject, Dr. Pusey stated that as the basis of such a union he proposed "the decrees of the Council of Trent and the Thirty-nine Articles, both documents being properly explained." As regards the movements for a closer intercommunion between the Eastern and the Anglican Churches, the Convocation of Canterbury was requested by the Russo-Greek committee of the lower house, for an enlargement of their powers. They were appointed originally "to communicate with the committee appointed at the general convention of the Protestant Episcopal Church in the United States as to intercommunion with the Russo-Greek Church, and to communicate the result to convocation." They now requested permission to consider the question of "intercommunion with the Oriental churches generally;" and the request was granted. The "Eastern Church Association"

published in 1866 its first annual report. The principles of the association are thus stated in the report: "To establish such relations between the two communions as shall enable the laity and clergy of either to join in the sacraments and offices of the other, without forfeiting the communion of their own church; secondly, that any overtures toward such an object should be made, if possible, in coöperation with those churches with which the Church of England is in communion; and thirdly, that such overtures, whenever made, should be extended to the other Eastern Patriarchates, and not confined to the Russo-Greek Church. The association numbers two hundred and eighty members, and among its patrons are English, Scotch, Colonial, American, and Eastern bishops. (On the results of the Society's labors in the East, see the article "EASTERN CHURCHES.") A number of the Anglican friends of this movement regarded the Eastern Churches as right in rejecting the addition of *filioque* (the procession of the Holy Spirit from the Father "and the Son" to the Athanasian Creed, and one of them (Rev. J. Ouseley) publicly declared that he had abandoned the Anglican communion office, and the *filioque* too, for at least the last two years. A priest, claiming to be an Eastern bishop (Rev. Julius Ferretta), who made his appearance in England, met with a cordial reception on the part of a number of Anglican clergymen. (See EASTERN CHURCHES.) Some advance was also made in 1866 toward a closer intercommunion with the Episcopal Lutheran Churches of the Scandinavian countries. (See LUTHERAN CHURCH.) An important step toward effecting a closer union between the Established Church of Great Britain and Ireland on the one hand, and the Scottish Episcopal Church on the other, was a declaration made by the Archbishop of Canterbury at the laying of the foundation-stone of a cathedral at Inverness, Scotland, in October, 1866, that the Scottish Episcopal Church is the only true representative of the Church of England in Scotland, and that the prelates of the Church of England pretend to exercise no jurisdiction over clergymen in Scotland.

The House of Bishops of the Convocation of Canterbury, took, in 1866, for the first time, decided steps for an increase of the number of bishops. The Bishop of Oxford presented the unanimous request of a committee appointed to consider "as to the best mode of providing assistance for bishops in the event of illness, or old age, or the like, rendering them unable to discharge the duties of their office, and needing some assistance in the performance of the same." The committee considered the appointment of coadjutor bishops *cum successionem*, would be undesirable, being not suited to the Church of England. But, on the other hand, they considered it very desirable to bring into active operation the act of Henry VIII., which empowers the nomination of suffragan bishops to different posts in England, who might render

every assistance that might be required. The committee were of opinion that in most cases the expense of those suffragan bishops could be met by their holding important posts, such as deaneries and canonries, in connection with the Church. Any legislation for the settlement by law of any expense upon those bishops to whom the assistance was rendered, was deemed inexpedient. The committee also recommended that an attempt should be made, through the Archbishop of Canterbury, to sweep away any difficulties which have existed in regard to the matter. As regards the appointment of suffragan bishops, the bishop is to nominate two, and the crown to select one of these. On motion of the Bishop of Oxford, seconded by the Bishop of London, the report of the committee was adopted.

The sixty-seventh annual meeting of the English Church Society was held May 1st, at Exeter Hall. From the report, it appeared that the total ordinary income amounted to £146,208 1s. 9d.; total ordinary expenditure, £144,558 17s. 4d.; surplus, £1,649 4s. 5d. The local funds raised in the missions and expended there upon the operations of the society, but independent of the general fund, were not included in the above figures, amounted to £20,000. The society has at present 148 missionary stations, 278 clergymen, 21 European laymen, 9 European female teachers (exclusive of missionaries' wives), and 2,122 native and country-born catechists and teachers of all classes, not sent from home. The number of communicants in 1860 was 19,828; 1861, 21,064; 1862, 21,261; 1863, 18,110; 1864, 18,124; 1865, 14,155. These figures did not include the New Zealand mission, the returns from which had not been received on account of the disturbed state of the colony. The society has withdrawn from seventy-seven stations, chiefly added to parochial establishments in the West Indies or transferred to the native church in Sierra Leone, containing ten native clergy, 4,356 communicants, and 12,866 scholars. The annual meeting of the Society for the Propagation of the Gospel in Foreign Parts, was held April 26th. The income of the society for 1865 was £94,957 11s. 3d.; and the expenditure for the same period was in British North America, £22,120; in the West Indies, £1,328; in South Africa, £11,000; in the rest of Africa, £1,460; in Asia, £31,372, and in Australia and New-Zealand, £6,271. The English "Church Congress" for 1866 was held at York, and both the archbishops of England took an active part in its proceedings.

The archbishops and bishops of the United Church of England and Ireland, in 1866, gave their assent to the establishment of a lay diaconate, the persons composing it to be set apart by episcopal authority, to act in all cases under the direction of the parochial clergy, and to be designated as "readers." They are to be publicly appointed after an examination by a bishop, but not to be set apart by the imposition of hands as in the case of bishops, priests, and

deacons. They are to minister in outlying districts, but will not have authority to administer the holy communion—that part of the church service being taken on stated days by the parochial clergy. The “readers” are not to be addressed as “reverend,” but they are to wear the surplice in their ministrations. At the first annual meeting of the “Association of Lay Helpers,” in the diocese of London, about fifty persons were present.

ANHALT, a duchy in Germany. Area, 1,017 Engl. square miles. Population, in 1864, 193,046. Capital, Dessau, with 16,306 inhabitants. In the German war, in 1866, Anhalt sided with Prussia, and after the conclusion of the war it joined the North German confederation.

ARGENTINE REPUBLIC. President (from October 12, 1862, to October 11, 1868), Bartolomé Mitre; Vice-President, Marcos Paz. Minister of the United States at Buenos Ayres, General Alexander Asboth, appointed in October, 1866.

The area of the republic is estimated at 38,830 geographical (or about 825,000 English) square miles. Exclusive of this territory the Argentine Government claims Patagonia, which is generally connected with Chili, and the whole of the Gran Chaco, parts of which are generally counted with the territory of Bolivia and Paraguay. The population of the republic in 1857, and, according to Martin de Moussy*, in 1863, was as follows:

	Population in 1857.	Population in 1863.
Buenos Ayres.....	(Not counted)	350,000
Entre Rios.....	79,232	107,000
Corrientes and Missions..	55,447	90,000
Santa Fé.....	41,261	45,000
Cordoba.....	137,079	150,000
Santiago del Estero.....	77,575	90,000
Tucuman.....	84,136	100,000
Salta.....	(Not counted)	80,000
Jujuy.....	85,189 (†)	40,000
Catamarca.....	56,000 (†)	80,000
La Rioja.....	34,431 (†)	40,000
San Juan.....	(Not counted)	70,000
Mendoza.....	47,473	50,000
San Luis.....	37,602	45,000
Indian territory in the North.....	10,000
Indian territory in the South.....	80,000
Total.....	1,377,000

The war which the Argentine Republic (in common with Brazil and Uruguay) has for some time been carrying on against Paraguay, continued throughout the year. (See PARAGUAY.) In some provinces, especially those bordering

upon Paraguay and Bolivia, great dissatisfaction with the continuance of the triple alliance and the war was expressed, and repeated attempts were made at stirring up civil war and a separation of some of the northern provinces from the Argentine Confederation. Most of these attempts were easily suppressed; but the latest reports from Buenos Ayres stated that, in December, the insurrection in Mendoza was becoming more serious, the chief having upward of three thousand men at his command, and being evidently supported by Chili. In Catamarca the insurrection was also reported still to hold the Government. The sympathy of Chili, Peru, and Bolivia with the Paraguayans threatened the friendly relations which had hitherto existed between these republics and the Argentine Confederation, and toward the close of the year fears were entertained of an invasion of Argentine territory by a Bolivian army. (See BOLIVIA.) The Argentine Government took, however, occasion from the bombardment of Valparaiso by the Spanish fleet, to protest against this act as contrary to the principles of international law.

Notwithstanding the continuance of the war which taxed the strength of the government to the utmost, the republic is at present making greater progress than during the previous peace. On September 11th the Western Railroad was opened ten leagues farther, to the town of Chiviledy. This finishes one hundred and ten miles of railroad westward from Buenos Ayres. This railroad traverses a fine country, and already has a great business. It is owned by the government. In the same month two American gentlemen, Messrs. Hopkins and Cary, obtained a charter from Congress for a telegraph from Buenos Ayres to Chili. In October the submarine cable which connects the cities of Buenos Ayres and Montevideo was successfully laid. It lies on the bed of the river, between Buenos Ayres and Colonia, a distance of twenty-six miles. The works on the Argentine Central Railroad, from Rosario to Cordoba, were suspended in November, 1866, on account of the tardiness of the government in making out the titles to the public lands granted to the company. For every twenty leagues of railroad there was to be a transfer of title to the granted lands, and the company having finished the railroad about twice that distance, needed the land, on which to base the issue of bonds. But though the materials for the entire railroad had all arrived, or were *en route* from Europe, yet there was this obstacle to the work. This road, when finished, will be the grandest road south of the equator, sweeping for two hundred and fifty miles through a region of great fertility.

On December 10th a convention to reform the constitution of the republic met at Santa Fé, in a kind of general caucus. On the 11th it had a preliminary meeting, and on the 12th they proposed amendments, discussed them, voted on them, and adjourned. The

* Martin de Moussy, the author of the great work, *Description de la Confédération Argentine* (tom. III., Paris, 1864), is called by Page (in his work, “La Plata,” London, 1859) “an eminent scientific man,” and his work is recommended by Sir Woodbine Parish, who himself is the author of the best-known book on the La Plata States, to all who desire to have the latest and most accurate information on the subject. M. de Moussy has carefully compared all the censuses and estimates of population, and his statements are universally accepted as those most entitled to credit.
† Census of 1856. ‡ Census of 1854.

only point of amendment intended was to give the permission to Congress to levy duties on exports. This has been done heretofore, but the period has expired within which the constitution permitted it. The vote stood 22 to 19. All the provinces were represented in proportion to their representation in Congress. Among other reforms aimed at is a reorganization of the common-school system. A commission was, in 1866, engaged in examining the various systems in the world, with reference to thorough and radical reforms. It was regarded as likely that the school system of the United States would be adopted.

The estimate for the wool-clip for the year 1866 is one hundred millions of pounds. The export duty on wool, hides, bones, tallow, etc., produces about three millions of silver dollars per annum. This tax is designed chiefly to pay interest and for the reduction of the public debt. As the amount of exports doubles every four years, this export duty must soon lift the nation out of debt.

The government imitated the policy of that of the United States in issuing treasury notes, bearing interest, for payment of government dues, and to be received in payment of custom-house duties. They represent silver dollars, and are of the denominations of \$5, \$10, \$20, \$50, and \$100.

Immigration for 1865 to the Argentine Confederation foots up to two thousand five hundred and forty. This does not include those who came by steamer, neither does it except those who left the country for foreign parts, of whom there have been many. The greatest progress immigration has made is in the province of Santa Fé, where the first colonial settlements began ten years ago, and where now over five hundred and fifty foreign families are settled. In the Gran Chaco a California colony has been established, which is doing very well, and already has a great many acres in grain. The Argentine Government look upon this colony as one of great hope and promise.

In consequence of the foreign immigration, Protestant churches and schools are being established in a number of places. The most numerous Protestant body in the country is the Protestant Episcopal Church. From the latest report of the superintendent of the Methodist mission, Rev. Dr. Goodfellow, dated October 10, 1866, we gather the following intelligence: In the city of Buenos Ayres the Methodist congregation has 92 members, 44 probationers; total, 136; 90 scholars in Sunday-school, and 19 officers and teachers. In Buenos Ayres circuit there are 6 regular preaching-places, and 1 occasional, with 11 members and 9 probationers. In Rosario the Sunday school has about 20 scholars, and the day school 40. The settlement of Californians on the border of the Indian territory would soon be visited by a missionary. Esperanza has a Protestant population of 500 souls, mostly Germans. The government has agreed to aid the Protestant school with \$25 Bolivian

currency per month, about \$20 silver. San Carlos has about 300 Protestant persons, and the Methodist mission has a church, school, and parsonage. In Villa de Urquiza there are about 200 Protestants, mostly German, with a school taught by the Methodist missionary. In Cordova a Sunday-school has been established.

ARKANSAS. The government of the State of Arkansas continued during the year as it had been organized in 1864, with the exception of the resignation of the Lieutenant-Governor. An election was held, on the first Monday of August, for the choice of an Auditor, Treasurer, Supreme Court Judges, and members of the Legislature. The total vote given for Auditor was 34,407, which was divided among three candidates as follows: Miller, Union, 15,241; Fagan, Union, 12,690; Berry, Republican, 6,476. Cunningham was chosen Treasurer; and — Clendenin and — Walker, Judges of the Supreme Court. Twenty-five Union members were chosen to the Senate, and seventy-nine members to the House, of whom five were Republicans. All persons were allowed to vote who were free white male citizens of the United States, and had attained the age of twenty-one years, and had been citizens of the State during the last previous six months, without taking a test oath or any other preliminary oath whatever. The Legislature had attempted to require a test oath to be taken by all voters in the State, as a prerequisite to their right to exercise the elective franchise. Under this authority Governor Murphy in his first proclamations stated that no one could be allowed to vote until he had taken the oath. But in December, 1865, the Supreme Court of the State declared the law to be unconstitutional, and all oaths were abandoned.

The Legislature assembled at Little Rock, on November 5th. It was the first session, in which all parts of the State were represented, that had been held since the reorganization in 1864. Its acts were confined almost entirely to local interests. It accepted the lands donated by Congress for agricultural colleges; located an institution for the blind at Arkadelphia, with an appropriation for its support; and previous to its recess, near the close of the year, inaugurated measures for the remission of taxes for the years from 1861 to 1865; to rebuild the court-houses and jails burned down; to repeal the stay law; to define the rights of persons of color; to provide for the support of wounded and disabled soldiers, and the indigent children of deceased soldiers, whether in the Northern or Southern service; to provide for the payment of debts in instalments; to bestow civil rights on mulattoes and negroes, except the right of intermarrying with whites, of voting, serving on juries, mingling in public schools with whites, and doing militia duty; to regulate the labor system; to encourage immigration, etc., etc. In the House, on November 16th, a resolution was offered, setting forth that President Johnson was entitled to and would receive the support

and gratitude of the people of Arkansas, in pursuing the policy exhibited in his official acts, and standing between the citizens and the unholy legislation of radical majorities. A motion to lay on the table was lost—yeas, 17; nays, 55. It was referred to the Committee on Federal Relations.

On December 8th the following resolution was offered:

That this General Assembly, and the people of the State of Arkansas, tender our gratitude to General Jefferson Davis, for the noble and patriotic manner in which he conducted the affairs of our government, while President of the Confederacy; and that we assure him of our most earnest and heart-felt sympathy while with unexampled fortitude he endures in Northern prisons unparalleled suffering as a martyr to liberty; and that although we may strive to forget the wrongs unjustly heaped upon him, yet his name is and ever shall be enshrined in every true Southern heart. May he outlive his persecution, to comfort his family, honor his country, and adorn the world!

It was referred to the Committee on Federal Relations.

On December 10th the following was offered, and referred to the same committee:

Resolved, by the General Assembly of the State of Arkansas, That to calm the troubled waters of our political atmosphere, we ratify the Constitutional Amendment of the Constitution of the United States, as recommended by his excellency Governor Murphy.

The views of the Legislature on various public questions were expressed in the reports of committees, and the debates. On December 19th the Committee on Federal Relations in the Senate reported the following resolution relative to the Constitutional Amendment proposed by Congress:

Resolved, That the General Assembly of the State of Arkansas declines to ratify the amendment, adding article fourteen to the Constitution of the United States, as proposed by joint resolution of Congress.

The reasons urged by the committee in support of their recommendation were as follows:

1. It is not known, nor can it be, to the State of Arkansas, that the proposed amendment was ever acted upon by a Congress of such a character as is provided for by the Constitution, inasmuch as nearly one-third of the States were refused representation in the Congress which acted upon this amendment.
2. This proposed amendment was never submitted to the President for his sanction, as it should have been, according to the very letter of that Constitution under which Congress exists, and which it has sought to amend.
3. The great and enormous power sought to be conferred on Congress by the amendment, by giving to that body authority to enforce by appropriate legislation the provisions of the first article of said amendment, would, in effect, take from the States all control over their local and domestic concerns, and virtually abolish the States.
4. The second section seems, to the committee, an effort to force negro suffrage upon the States; and whether intended or not, it leaves the power to bring this about, whether the States consent or not; and the committee are of the opinion that every State Legislature should shrink from ever permitting the possibility of such a calamity.
5. The third section, as an act of disfranchisement

which would embrace many of our best and wisest citizens, must, of necessity, be rejected by the people of Arkansas.

The committee say that they have particularly remarked one peculiar feature in the first section of the proposed amendment; that is, the portion which declares, "nor shall any State deprive any person of life, liberty, or property without due process of law." "This is almost identical in language with the fifth amendment to the Constitution, and if this provision already in existence will not secure the object designed, what assurance have we, that a similar one will not be disregarded." They decline to recommend it on the further grounds that it imposes new and additional obligations on the people not contemplated or intended when the general amnesty was proclaimed, on May 29, 1865. They say: "The people of Arkansas have accepted and performed all the conditions of the surrender and general amnesty, and with wonderful unanimity have accepted the results of the war, and according to all law are entitled to all their rights as guaranteed by the Constitution, and to be restored to the Union as before the war. They have submitted in good faith, with an earnest desire to make the United States a common country, to be cherished in our hearts and defended by our arms.

"We cannot tell what may be in store for this State. She and others may be forced to take this amendment, and even harsher terms; but as valuable as restoration may be, the people of Arkansas can never agree to purchase it at such a sacrifice of principle, dignity, and self-respect as is demanded in the adoption of this proposed amendment. We had better bear our troubles, trials, and deprivations, and even wrongs, in dignified silence, than commit an act of disgrace, if not annihilation, such as would result from the adoption of this amendment by the Legislature."

No action was taken by the Legislature relative to the passage of this amendment previous to the recess at the close of the year. But a commission, to be sent to Washington, was provided for, which was to consist of the President of the Senate and three members of that body, seven members of the House, and three citizens, not members of the Legislature, to be appointed by Governor Murphy. The Governor declined to appoint. The object of the commission was to confer with the Federal Government respecting their mutual relations. This commission was in part induced by the assembling in convention at Fort Smith of citizens calling themselves "Loyalists," who addressed a memorial to Congress for the removal of the existing State government, by the passage of an "enabling act," authorizing them to form a new State government.

On November 23d the following resolution was offered in the House, and passed unanimously. Subsequently it was concurred in by the Senate:

Be it resolved by the General Assembly of the State of Arkansas, That a joint committee, to be composed of the separate Committees on Federal Relations, of the Senate and House of Representatives, is hereby created, with instructions to prepare and report to each House a memorial to the President and Congress of the United States, setting forth the true position of the State of Arkansas, and the spirit and wishes of the people thereof, with regard to the restoration of the Union in all its parts; and the measures which might be most efficient in restoring a condition of harmony; and the coöperation of all the States in the promotion of the national prosperity in a manner consistent with the honor and dignity of the citizens of the respective States.

The reasons urged for the adoption of the resolution were stated to be a conviction that the people of the Northern States had been deceived by misrepresentations made to them as to the opinions of the people of the Southern States, and the motives which dictated their actions: whereas justice to the people of Arkansas and their posterity demanded that the truths of history should be known. The present Legislature was the first official body convened for four years which represented all parts of the State. Every shade of political opinion had an opportunity to represent itself through a free election, and in the resolution they resolved to appeal to the better judgment of the American people.

The views of the Legislature respecting the action of the State in her legislative capacity during the war, and indirectly her relations to the Union, were expressed in connection with some questions arising out of certain land sales by her agents during the war. The question presented was, to what extent the present constitution of the State repudiates or makes null and void the action of the authorities between May 1, 1861, the day on which the State seceded, and the adoption of the present constitution. The Judiciary Committee made a majority and a minority report. The former took the ground that the Legislature itself had acknowledged the present constitution as the supreme organic law of the State, by assembling in obedience to its commands. This constitution declared the entire action of the convention of 1861 to be null and void, and never binding, nor any action of the State under its authority. But it provided that this declaration should not be so construed as to affect the rights of individuals, change county boundaries, invalidate the acts of justices of the peace, conveyances, marriages, etc. The words "rights of individuals" were too vague, indefinite, and ambiguous to mean any thing specially, and must be regarded as inoperative and void; therefore, with the exceptions specifically named, all actions of the State done under the authority of the convention of 1861 must be treated as null and void, and this included sales of land.

The minority report admitted the present constitution to be the supreme organic law of the State, and asserted that the same rules of interpretation and construction were applicable to it as to any other constitution of the State for the purpose of ascertaining its mean-

ing and effect. It then submitted the following propositions:

1. That the Constitution of the United States, and all laws made in pursuance thereof, and all treaties, are the supreme law of the land, any thing in the constitution or laws of any State to the contrary, notwithstanding.

2. That the people of this State have now, and always have had, the exclusive right, as a free people, of governing themselves, and of exercising and enjoying every power, jurisdiction, and right pertaining to a State which was and is not delegated to the United States.

3. That aside from the fact that the end and object of all government, especially in the United States, is the safety of the people and the preservation of property, and that, by tacit reservation of the people, the State has, in exercising the powers of government by the consent of the people, either in convention assembled or by ordinary legislation, no power to ruin the one or destroy the other; that the Bill of Rights, in every constitution of the State, has declared, that no man shall be imprisoned or dis seized of his freehold, liberties, or privileges, or in any way deprived of his life, liberty, or property, but by the judgment of his peers or the laws of the land; and that no *ex post facto* laws, or law, impairing the obligation of contracts, shall ever be made in this State.

4. That the conventions of 1861 and 1864, being both conventions of the people, were equal in power and authority. That while the latter had the power and authority to declare that the entire action of the former was not, from the time of the adoption of the latter, binding and obligatory, and that all the action of the State, of whatever character, under the authority of the convention of 1861, was no longer binding, but null and void from the time of the adoption of the constitution of 1864, saving the exceptions therein stated; yet the convention of 1864 had no power to declare that acts done under said convention of 1861 and its constitution relating to internal government and police regulations in the State, and not relating to the powers delegated to the national Government; never were binding and obligatory upon the people of this State, but void *ab initio*. This character of *ex post facto* and retrospective ordinances and legislation is beyond even the power of a convention; for if an act be done under a law, even a convention cannot undo it. The past cannot be recalled by the most absolute power. And by maintaining that the convention of 1864 did do this, would be, in effect, declaring a *hiatus* in the government of the State from 1861 to 1864, during which there was no civil authority whatever; whereas, it appears not to have been so considered by said convention of 1864, for they recite the object of their convening to be, among other things, to "continue ourselves as a free and independent State."

5. That the ordinance of secession of the convention of 1861, and all other actions of said convention and the State under its authority, in contravention of or in conflict with the Constitution, constitutional laws, and treaties of the United States and the delegated powers of the General Government were null and void and inoperative *ab initio*. This would be so, aside from any declaration to that effect in the constitution of 1864.

6. That all parts of the constitution are to be reconciled with each other and the general subject, and therefore the proviso "that this ordinance shall not be so construed as to affect the rights of individuals," from the public history of the country at the time of its adoption, the manifest object in view and general purview of the ordinance, was intended to protect the rights of individuals in all internal municipal laws and police regulations of the State, which were not void *ab initio* by reason of conflict with the delegated powers and just authority of the United States, and which were rendered null and

void from and after the adoption of said constitution of 1864. And as conclusive that some meaning was attached to this proviso, and that the convention were desirous of preventing a more extended construction of this proviso, whereby the State might become bound to individuals, they further provided, "that no debt or liability of the State of Arkansas incurred by the action of said convention or of the Legislature, or any department of the government under the authority of either, shall ever be recognized as obligatory." But to give to those words the extended meaning of which they would be susceptible in other connections, would lead to the absurdity contended for by the majority report, which the minority are of the opinion would be contrary to the manifest intent of said convention, as gathered from the whole instrument.

7. "How legitimate rights can be acquired under authority declared to be illegal and void," can be conceived by recurring to the fundamental principle that the past cannot be recalled by the most absolute powers; that all the acts of the State, relative to her internal municipal laws and police regulations, were valid, and were only rendered invalid, saving the exceptions named, from the adoption of said constitution of 1864. Were this not the case, if another civil war should arise, persons entertaining different views might succeed, and again declare that the present constitution and all acts done under it were, and ever had been, null and void.

In accordance with these views, the minority believe that all sales of lands of the United States and of the lands of persons, on account of their allegiance thereto, were at all times, and are now, by the Constitution of the United States and the constitution of 1864, null and void. No legislation can protect the supposed interests of persons in the purchase of the same; but that the State ought to be bound by her action in selling lands, which, prior to, and on the 6th of May, 1861, belonged to her, and that suitable legislation could and ought to be made, to protect the interests of persons interested therein.

In the Senate, the minority report was substituted for the majority and adopted—yeas 16, nays 6.

The election of a Senator to Congress for the long term, and another for a short term, occasioned by the resignation of William M. Fishbeck, commenced in each House under the recent act of Congress on November 20th. Neither House was able to agree upon a Senator, and both met in joint convention on the 24th, when John T. Jones was elected for the short term. No choice was made for the long term. A joint convention was again held on the 26th, without success; but on the 27th, Andrew Hunter was chosen, who had been for the last twenty-five years an itinerant minister of the Methodist Church.

The recommendation of the Governor relative to public schools was promptly responded to by the Legislature. A bill was introduced providing for the support of these schools by levying a special tax of one-fifth of one per cent. on all taxable property belonging to white citizens, and admitting to the benefit of the schools all white children between the ages of six and eighteen years. Special officers were to be appointed to administer the system.

The present debt of the State was created entirely on account of the banks, and on January 1, 1860, amounted to \$3,182,968. Of this sum \$2,097,145 is secured by a mortgage upon

188,110 acres of the best and most valuable lands in the State. The remaining sum of \$1,085,823 is a total loss to the State. The entire debt, with interest, on December 31, 1866, was \$3,575,121. No measures were adopted during the year for the liquidation of this debt. It was suggested to the Legislature to issue twenty-year bonds, and to provide for their payment by a sinking-fund. This would put an annual burden on the State of \$254,000; while her present revenue was estimated at \$500,000. The internal resources of the State can hardly be exaggerated. Eight rivers, all navigable to a greater or less extent, and with numerous tributaries navigable at certain seasons, flow through the State to the Mississippi, and contribute to a fertility and diversity of soil unsurpassed. In Northern Arkansas all the grains, such as wheat, oats, rye, barley, and corn are grown with great success, and the apple, the pear, the peach, the quince, and the grape, and all species of the melon thrive most abundantly. South of, and along the Arkansas River, which cuts the State into two nearly equal parts from northwest to southeast, all these fruits are grown equally as well; and others of a more tropical nature, as the fig and apricot, are easily produced. Cotton is nevertheless the great staple of the State. The uplands produce from 800 to 1,200 pounds of seed cotton per acre. On the river bottoms the increase is still larger. Timber on the uplands is abundant and consists of black, white, red, and post oaks, hickory, yellow pine, dogwood, and maple, while on the margins of the little streams are the walnut, beech, elm, and yam. Coal has already been found and surveyed in twelve counties, and in those farthest from the great coal-basin east of the Mississippi. In other minerals the State is very rich.

The Governor, in his message to the Legislature, in November, speaks of a proscriptive party spirit, which had shown itself in portions of the State so violent as to threaten an appeal to arms. No facts were stated, and the press urged the Legislature to call upon him for more specific information, declaring an utter ignorance of the facts upon which his remarks were based. That body, soon after its organization, directed a select committee to consider so much of the message as referred "to the development of a proscriptive party spirit," and to extend the field of investigation so as to inquire in what manner the freedmen were treated in the State. The only disturbance known at the time of the elections occurred in Washington County. There an armed party of about one hundred men interfered and broke up certain of the political appointments of their opponents. Between the friends of the measures of Congress who were desirous of inaugurating a Territorial Government in the State, and who appear to be few in number, and the more active of their opponents who sustain the President, a warm political feeling may have existed. The commanding officer at Fort Smith,

General Edwards, under date of October 7th, writes: "Union men are just as safe in this State as anywhere else. We have not our proportional part of lawlessness in comparison with other States. There are but few instances of violence being committed on political considerations, and where these have occurred the wrongs have been committed as much by one party as the other." Active efforts were made to induce capitalists and laborers to become citizens of the State, and assurances were given that persons of all shades of political opinions were as safe in person and property within the State as they could be anywhere. Measures were taken to improve and extend the various railroads in operation, as conducive to public prosperity; it is believed that in a few years the State will be traversed by them in every direction.

The public sentiment of the State had become favorably changed with regard to the freedmen, and measures for their education and general improvement were advocated in the most influential quarters. The passage of laws securing to all the equal protection of person and property, was a proposition universally approved. Few, however, could at present be found who would consent to make them full citizens of the State, and as such, entitled to an equality of all rights. It was apprehended that the embarrassments arising in the State from a scarcity of labor would tend to increase in subsequent years, in consequence of the rapid disappearance of the negro.

ARMINIAN CHURCHES. (See EASTERN CHURCHES.)

ARMY OF THE UNITED STATES. By a communication from the War Department, in response to a resolution adopted by the House of Representatives, it was shown that on January 9, 1866, the Army, both regular and volunteer, comprised 152,611 officers and men, organized and distributed as follows:

	Off'rs.	Enlisted men.	Aggr'to.
Troops, volunteer service (white).....	2,264	55,826	57,590
Troops, volunteer service (colored).....	2,398	63,873	65,766
Troops, regular service....	1,124	25,468	26,587
General staff and retired officers, regular Army....	621	621
General and staff officers, volunteer service.....	1,018	1,018
1st battalion Veteran Reserve Corps, not attached to companies.....	609	609
2d battalion Veteran Reserve Corps.....	12	448	460
Signal Corps.....	16	58	74
Total.....	8,057	144,668	152,725
Deduct officers of the regular army in volunteer service.....	114	114
Grand total Army of the U. S., Jan. 9, 1866.....	7,943	144,668	152,611

This force was the residue of the great army of 1,084,064 men in the national service on May 1, 1865. The work of disbanding the volunteer troops remaining in the service was actively continued during 1866, and at the close of the year but 11,043 men, white and colored, of this once famous and popular arm were left. The following table, showing the number of volunteers in the Army at different periods of the year, illustrates the process of reduction:

January 9.....	123,356
January 20.....	115,342
February 15.....	81,612
March 10.....	66,177
May 1.....	47,282
June 30.....	23,894
November 1.....	11,043

Thus, in eighteen months from the cessation of hostilities, 1,023,021 men were disbanded and transported to their homes. Seven-eighths of this force were discharged previous to January 1, 1866, and the whole number could easily have been disposed of within a year of the termination of the war, had it not been deemed necessary to retain a considerable force of volunteers in the service pending the reorganization of the regular army. So soon as the latter shall be placed upon a permanent footing, it is not likely that a single volunteer soldier will be found in the Army.

During the first session of the Thirty-ninth Congress, two important bills were introduced, regulating the military peace establishment of the United States, one of which originated in the Senate, and the other in the House of Representatives. The former, known as Senator Wilson's bill, provided for five regiments of artillery, six of cavalry, and thirty-seven of infantry; the latter, which was drawn up by Mr. Schenck, of the House of Representatives, differed from the former principally in making the infantry force comprise fifty regiments, of which ten were to be formed from the Veteran Reserve Corps. It also aimed at appointing regimental adjutants, quartermasters, and commissaries, and of filling original vacancies in the lower grades of officers, from among those who had been officers or soldiers of the volunteers; favored promotion by seniority in several departments of the Army; and was considered to do injustice to officers of the regular service. The Senate bill passed the body in which it originated early in the session, but made no further progress, the House adhering tenaciously to its own bill. As it was feared that between the rival projects no bill whatever would be passed, which under existing circumstances would have proved detrimental to the interests of the country, Gen. Grant was induced to send the following communication to the Secretary of War, recommending the Senate bill, which, on May 17th, was laid before Congress by the President:

HEADQUARTERS ARMY OF THE UNITED STATES,
WASHINGTON, D. C. May 16, 1866.
Hon. E. M. Stanton, Secretary of War:
SIR: In view of the long delay, in the lower House

of Congress, in agreeing upon a plan of reorganization of the Army suitable to our present requirements, and the urgent necessity for early action, I am induced to present the matter to you officially, and to ask the attention of Congress to it, believing that when they have the matter fairly before them, they will do what should be done speedily.

At the present time settlements are springing up with unusual rapidity in the district of country between the Missouri River and the Pacific Ocean, where heretofore the Indians were left in undisputed possession. Emigrants are pushing to those settlements and to the gold-fields of the Rocky Mountains by every available highway. The people flocking to those regions are citizens of the United States and entitled to the protection of the Government. They are developing the resources of the country to its great advantage, thus making it our interest as well as our duty to give them military protection. This makes a much greater force west of the Mississippi necessary than was ever heretofore required.

A small military force is required in all the States lately in rebellion, and it cannot be foreseen that this force will not be required for some time to come. It is to be hoped that this force will not be necessary to enforce the laws, either State or national. But the difference of sentiment engendered by the great war which has raged for four years, will make the presence of a military force necessary to give a feeling of security to the people; all classes disposed to obey the laws of the country will feel this alike.

To maintain order, the Government has been compelled to retain volunteers. All white volunteers have become dissatisfied, and claim that the contract with them has been violated, by retaining them after the war was over. By reason of dissatisfaction they are no longer of use, and might as well be discharged at once.

The colored volunteer has equal right to claim his discharge, but as yet he has not done so. How long will existing laws authorize the retention of this force, even if they are content to remain?

The United States Senate passed promptly a bill for the reorganization of the Army which, in my opinion, is as free from objection as any great measure could possibly be, and it would supply the minimum requisite force. It gives but a few thousand additional men over the present organization, but gives a large number of additional batteries and companies. The public service, guarding routes of travel over the plains, and giving protection to the Southern States, demands the occupation of a great number of posts.

For many of them a small company is just as efficient as one with more men in it would be. The bill before Congress, or the one that has passed the Senate, gives increased number of rank and file of each company. It is an exceedingly appropriate measure in this particular, for it provides for the increase when occasion requires more men. The company is the smallest unit of an organization that can be used without materially injuring discipline and efficiency.

The belief that Congress would act promptly on this matter, if their attention were called to it, has induced me to respectfully ask your attention to it. If you agree with me in this matter, I would also ask, if you deem it proper, that this, with such indorsement as you may be pleased to make, be laid before Congress through the Speaker of the House.

Very respectfully, your obedient servant,
U. S. GRANT, Lieutenant-General.

Finally, at a late hour of the session, a committee of conference was appointed to reconcile the differences between the two bills. The chief struggle was with regard to the number of Veteran Reserve regiments to be incorporated in the army. Mr. Schenck having yielded

this point, the committee agreed upon the Senate bill, with some amendments, which immediately passed both Houses almost unanimously, and on July 28, 1866, became a law. Its main features may be thus recapitulated: The peace establishment of the country will consist of five regiments of artillery, ten of cavalry, and forty-five of infantry. The artillery regiments are to have the same organization as was prescribed by law for the fifth regiment of that arm in 1861. The cavalry regiments are to consist of the six previously in the service, of twelve companies each, with four new regiments, similarly organized, of which two are to be composed of colored men; the original vacancies in the grades of first and second lieutenant to be filled by selection from among the officers and soldiers of volunteer cavalry, and two-thirds of the original vacancies in the higher grades from officers of volunteer cavalry, and one-third from officers of the regular Army, all of whom have served two years in the field during the war, and been distinguished for capacity and good conduct. The President is authorized, at his discretion, to arm and drill any portion of the cavalry force as infantry or dismounted cavalry. The forty-five regiments of infantry are to consist of the first ten regiments, of ten companies each, now in the service; of twenty-seven regiments, of ten companies each, to be formed by adding two companies to each battalion of the remaining nine three-battalion regiments; and of eight new regiments, of ten companies each, four of which are to be composed of colored men, and four to be called the Veteran Reserve Corps. Original vacancies in the grade of first and second lieutenants are to be filled by selection from among the officers and soldiers of volunteers; and of those occurring in the higher grades, half are to be filled from officers of volunteers, and half from officers of the regular Army, all of whom must have served two years during the war, and been distinguished for capacity and good conduct. The Veteran Reserve Corps are to be officered by appointment from officers and soldiers of volunteers or the regular Army, who have been wounded in the service, but are nevertheless competent for garrison or similar duty. All persons receiving appointment in any branch of the service must have previously passed a satisfactory examination before a board of officers, convened under the direction of the Secretary of War, and such appointments are to be without regard to previous rank. Persons who have served in any capacity under the Confederate Government are precluded from holding any office or position in the Army of the United States. The infantry companies are to have a maximum strength of one hundred men, and a minimum strength of fifty men, and the organization, with respect to officers, will be similar to that of the first ten regiments of infantry in the service. The number of bands in the army is reduced to fifteen, to be assigned to brigades in time of war, and in time of peace to

assembled brigades, or to forts or posts at which the largest number of troops shall be ordinarily stationed. Enlistments into the cavalry must be for the term of five years, and into the artillery and infantry for three years, and recruits may be enlisted into the Veteran Reserve Corps from men who have been wounded in the military service of the country, provided they are found to be fitted for garrison or other light duty, to which, when enlisted, they are to be assigned. The general officers of the Army are to comprise one general, one lieutenant-general, five major-generals, and ten brigadier-generals, who are entitled to the same pay, emoluments, and staff as heretofore provided by law.

The military establishment of the country, as reorganized by the act of July 28, 1866, will thus consist of ten regiments, or one hundred and twenty companies, of cavalry, five regiments, or sixty companies, of artillery, and forty-five regiments, or four hundred and fifty companies, of infantry. Should all the companies be filled to their maximum strength of one hundred men, the army would comprise a total of nearly 76,000 men, rank and file, of all arms, who may be thus classed:

Artillery.....	7,000
Cavalry.....	14,000
Infantry.....	55,000
Total.....	76,000

The present strength of companies has been fixed at sixty-four privates for artillery, cavalry, and infantry, and one hundred and twenty-two privates for light batteries of artillery, making an aggregate strength of 54,302 men. From the annual report of the Secretary of War, it appears that at the close of 1866, the two new white regiments of cavalry were recruited, or nearly recruited, and that, of the fifty-four companies required to convert into regiments the single battalions of the nine three-battalion regiments, authorized by the act of 1861, forty-eight had been completed and sent to their regiments. The four Veteran Reserve regiments were on active duty, and measures had been taken to recruit the colored regiments from the colored volunteers still in the service. During the war the volunteer service was so much more popular than the regular Army, that it was found impossible to fill up the ranks of the latter to the extent authorized by law. Soon after the general disbandment of volunteers commenced, in the summer of 1865, recruiting for the regulars became more successful, and since the passage of the act of July 28, 1866, has proceeded so satisfactorily that there seems no reason to doubt that the maximum strength of 54,302 men, now fixed upon, will be reached before the summer of 1867. The whole subject of recruiting for the regular Army, and disbanding volunteers, is by law placed under the supervision of the Adjutant-General's office. By the report of this officer it appears that from October 1, 1865, to October 1, 1866, 36,674 recruits

were enlisted for the regular Army, and that at the latter date its strength was 38,545 men. This is exclusive of one thousand Indian scouts, authorized by the act of July 28, 1866, of whom six hundred have been assigned to Lieut.-General Sherman, for his Division of the Missouri, two hundred to Maj.-General Halleck for the Division of the Pacific, and two hundred to Maj.-General Sheridan for the Department of the Gulf. As soon as the ranks of the Army are well filled, it is intended to place restrictions upon the recruiting service, in order to diminish the number of men received, so that it will correspond to the number required to keep up the strength of the regiments as they become reduced by casualties or other causes. This will be done by raising the standard of qualifications as to height, age, etc., which will at the same time improve the *personnel* of the army.

The following table gives the commanding officers of the new regiments of cavalry, infantry, and Veteran Reserve Corps, so far as appointed at the close of 1866:

No. of Reg't.	Description.	Colonels.
7th..	Cavalry.....	Andrew J. Smith.
8th..	"	John I. Gregg.
9th..	" (col'd)....	Edward Hatch.
10th..	"	Benjamin H. Grierson.
11th..	Infantry.....	Wm. S. Ketchum.
12th..	"	C. C. Augur.
13th..	"	Isaac V. D. Reeve.
14th..	"	Charles C. Lovell.
15th..	"	Oliver Shepherd.
16th..	"	Caleb C. Sibley.
17th..	"	S. P. Heintzelman.
18th..	"	H. V. Carrington.
19th..	"	Samuel K. Dawson.
20th..	"	Frederick Steele.
21st..	"	George Stoneman.
22d..	"	David S. Stanley.
23d..	"	Jefferson C. Davis.
24th..	"	A. C. Gillem.
25th..	"	Gordon Granger.
26th..	"	J. J. Reynolds.
27th..	"	John E. Smith.
28th..	"	Charles H. Smith.
29th..	"	O. B. Wilcox.
30th..	"	John D. Stevenson.
31st..	"	P. R. de Trobriand.
32d..	"	Thos. L. Crittenden.
33d..	"	Thos. H. Rogers.
34th..	"	A. V. Kautz (Lieut.-Col.).
35th..	"	Charles Griffin.
36th..	"	John Gibbon.
37th..	"	George W. Getty.
38th..	" (col'd)....	Wm. B. Hazen.
39th..	"	Joseph A. Mower.
40th..	"	Nelson A. Mills.
41st..	"	Geo. W. Schofield (Major).
42d..	" (Vet. Res.)..	Daniel E. Sickles.
43d..	"	John C. Robinson.
44th..	"	Thos. G. Pitcher.
45th..	"	Wager Swayne.

By General Orders, No. 95, the two additional regiments of cavalry composed of white men, are to be known as the 7th and 8th, and those composed of colored men as the 9th and 10th. The ten regiments of infantry in the service at the commencement of the war retain their old designations. The first battalions of

the nine three-battalion regiments, organized in 1861, retain the designation of the regiments to which they belonged, and under the new organization will be known as the 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, and 19th regiments of infantry. The second battalions of the three-battalion regiments become respectively the 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, and 28th regiments of infantry; and the third battalions the 29th, 30th, 31st, 32d, 33d, 34th, 35th, 36th, and 37th regiments of infantry. The four regiments to be composed of colored men will be designated the 38th, 39th, 40th, and 41st regiments of infantry. The remaining four regiments will be designated the 42d, 43d, 44th, and 45th regiments of infantry, Veteran Reserve Corps, and will be regarded as a distinct organization, in which promotions will be regulated accordingly.

In the following table will be found a list of the several military departments into which the country has been divided, with the troops assigned to each:

1. The Department of the East, Major-General George G. Meade to command, to embrace the New England States, New York, New Jersey, Pennsylvania, and Fort Delaware. Headquarters at Philadelphia. First regiment of artillery, 10 companies; Third regiment of artillery, 10 companies; Fourth regiment of artillery, 3 companies; Fourth regiment of infantry, 7 companies; Fourth-second regiment of infantry, 10 companies.

2. The Department of the Lakes, Brigadier and Brevet Major General Joseph Hooker to command, to embrace the States of Ohio, Michigan, Indiana, Illinois, and Wisconsin. Headquarters at Detroit. Fourth regiment of artillery, 1 light battery; Fourth regiment of infantry, 3 companies; Forty-third regiment of infantry, Veteran Reserves, 10 companies.

3. The Department of Washington, Brigadier and Brevet Major General E. R. S. Canby to command, to embrace the District of Columbia, Alexandria and Fairfax Counties, Virginia, and the States of Maryland and Delaware, except Fort Delaware. Headquarters at Washington. Fifth regiment of cavalry, 3 companies; Fourth regiment of artillery, 7 companies; Twelfth regiment of infantry, 10 companies; Thirtieth regiment of infantry, 10 companies; Fortieth regiment of infantry, recruiting in Washington; Forty-fourth regiment of infantry, Veteran Reserves, 10 companies.

4. The Department of the Potomac, Brigadier and Brevet Major General John M. Schofield to command, to embrace the States of Virginia, except Alexandria and Fairfax Counties, and West Virginia. Headquarters at Richmond. Fifth regiment of cavalry, 1 company; Fifth regiment of artillery, 1 light battery and 4 companies; Eleventh regiment of infantry, 10 companies; Twentieth regiment of infantry, 10 companies; Twenty-first regiment of infantry, 10 companies; Twenty-ninth regiment of infantry, 10 companies.

5. The Department of the South, Major-General Daniel E. Sickles to command, to embrace the States of North and South Carolina. Headquarters at Charleston. Fifth regiment of cavalry, 4 companies; Third regiment of artillery, 1 light battery; Sixth regiment of infantry, 10 companies; Eighth regiment of infantry, 10 companies.

6. The Department of the Tennessee, Major-General George H. Thomas to command, to embrace the States of Kentucky, Tennessee, Georgia, Alabama, and Mississippi. Headquarters at Louisville. Fifth regiment of cavalry, 4 companies; Second regiment of infantry, 10 companies; Fifteenth regiment of infantry, 10 companies; Sixteenth regiment of infantry, 10 companies; Twenty-fourth regiment of infantry, 10 companies; Twenty-fifth regiment of infantry, 10 companies; Thirty-third regiment of infantry, 10 companies; Thirty-fourth regiment of infantry, 10 companies; Forty-fifth regiment of infantry, Veteran Reserves, 10 companies.

7. The Department of the Gulf, Major-General Philip H. Sheridan to command, to embrace the States of Florida, Louisiana, and Texas. Headquarters at New Orleans. Fourth regiment of cavalry, 12 companies; Sixth regiment of cavalry, 12 companies; Ninth regiment of cavalry, 12 companies; First regiment of artillery, 2 light batteries; Fifth regiment of artillery, 6 companies; First regiment of infantry, 10 companies; Seventh regiment of infantry, 10 companies; Seventeenth regiment of infantry, 10 companies; Twenty-sixth regiment of infantry, 10 companies; Thirty-fifth regiment of infantry, 10 companies; Thirty-ninth regiment of infantry, 10 companies; Forty-first regiment of infantry, 10 companies.

8. The Department of the Arkansas, Brigadier and Brevet Major General E. O. C. Ord to command, to embrace the State of Arkansas and Indian Territory west. Headquarters at Little Rock. Fifth regiment of artillery, 1 light battery; Nineteenth regiment of infantry, 10 companies; Twenty-eighth regiment of infantry, 10 companies; Thirty-seventh regiment of infantry, 10 companies.

9. The Department of the Missouri, Major-General Winfield S. Hancock to command, to embrace the States of Missouri and Kansas, and the Territories of Colorado and New Mexico. Headquarters at Fort Leavenworth. Second regiment of cavalry, 2 companies; Third regiment of cavalry, 12 companies; Seventh regiment of cavalry, 12 companies; Fourth regiment of artillery, 1 light battery; Third regiment of infantry, 10 companies; Fifth regiment of infantry, 10 companies; Tenth regiment of cavalry, 12 companies; Thirty-eighth regiment of infantry, 10 companies.

10. The Department of the Platte, Brigadier and Brevet Major General Philip St. George Cooke to command, to embrace the State of Iowa, the Territories of Nebraska and Utah, so much of Dakota as lies west of the

104th meridian, and so much of Montana as lies contiguous to the new road from Fort Laramie to Virginia City, Montana. Headquarters at Omaha. Second regiment of cavalry, 10 companies; Third regiment of artillery, 1 light battery; Thirteenth regiment of infantry, 10 companies; Eighteenth regiment of infantry, 10 companies; Twenty-seventh regiment of infantry, 10 companies; Thirty-sixth regiment of infantry, 10 companies.

11. The Department of Dakota, Brigadier and Brevet Major General A. H. Terry to command, to embrace the State of Minnesota and all the Territories of Dakota and Montana not embraced in the Department of the Platte. Headquarters at Fort Snelling. Tenth regiment of infantry, 10 companies; Twenty-second regiment of infantry, 10 companies; Thirty-first regiment of infantry, 10 companies.

12. The Department of California, Brigadier and Brevet Major General Irvin McDowell to command, to embrace the States of California and Nevada, and the Territory of Arizona. Headquarters at San Francisco. First regiment of cavalry, 8 companies; Eighth regiment of cavalry, 12 companies; Second regiment of artillery, 2 light batteries and 6 companies; Ninth regiment of infantry, 10 companies; Fourteenth regiment of infantry, 10 companies; Thirty-second regiment of infantry, 10 companies.

13. The Department of the Columbia, Major-General Frederick Steele to command, to embrace the State of Oregon and the Territories of Washington and Idaho. Headquarters at Portland. First regiment of cavalry, 4 companies; Second regiment of artillery, 4 companies; Twenty-third regiment of infantry, 10 companies.

The Departments of the Arkansas, the Missouri, the Platte, and Dakota constitute the Military Division of the Missouri, of which Lieutenant-General W. T. Sherman has command, with headquarters at St. Louis, Missouri. The Departments of California and the Columbia, constitute the Military Division of the Pacific, of which Major-General H. W. Halleck has command, with headquarters at San Francisco.

The fifteen military bands provided for by the act of July 28, 1866, have been assigned as follows: West Point, New York; Fort Columbus, New York harbor; Fort Adams, Rhode Island; Richmond, Virginia; Charleston, South Carolina; Louisville, Kentucky; Nashville, Tennessee; Jefferson Barracks, Missouri; Fort Leavenworth, Kansas; Little Rock, Arkansas; New Orleans, Louisiana; San Antonio, Texas; Harbor of San Francisco, California; Fort Vancouver, Washington Territory; Fort Monroe, Va.

The Thirty-ninth Congress passed an act reviving the grade of "General of the Army of the United States," to be filled, by appointment by the President, "from among those officers in the military service of the United States most distinguished for courage, skill, and ability." It was also provided that whenever,

after such appointment, the office should become vacant, the act should cease to be in force. The President nominated for General, Lieutenant-General Grant, and to fill the vacant lieutenant-generalship, Major-General W. T. Sherman. Both nominations were promptly confirmed by the Senate toward the close of the first session.

The principal movements of troops during the year have been in Texas, on the Mexican and Canadian frontiers, and in the Territories. General Grant, in his annual report, states that "it has been deemed necessary to keep a military force in all the lately rebellious States, to insure the execution of law, and to protect life and property against the acts of those who, as yet, will acknowledge no law but force. This class has proved to be much smaller than could have been expected after such a conflict. It has, however, been sufficiently formidable to justify the course which has been pursued." Military movements have also been directed with a view to the protection of emigrants, on their way to the more distant Territories, against attacks by hostile Indians, which have somewhat diminished with the expiration of the rebellion. But with a frontier constantly extending and encroaching upon the hunting-grounds of the Indian, hostilities must frequently occur. To meet these, and to protect the emigrant on his way to the mountain Territories, General Grant reports that troops have been distributed over a wide area of the western frontier. Few places are occupied by more than two, and many by but a single company. During the summer of 1866, inspections were made by Generals Sherman, Pope, Ingalls, Sackett, and Babcock, with a view to determine the proper places to occupy for the protection of travel and settlements, and the most economical method of furnishing supplies. In the course of 1867 permanent buildings will have to be erected on these sites.

The total estimate of the Secretary of War for military appropriations for the fiscal year ending June 30, 1868, is \$25,205,669.60, which is less by \$8,608,792.23 than the appropriation required for the previous year.

The disbursements of the Paymaster-General during the fiscal year ending June 30, 1866, were \$259,874,317, of which \$248,943,313 were paid to disbanded volunteers, and \$10,431,004 to the Army and the Military Academy. In back and extra pay and in bounties the Department disbursed \$7,662,736, and on Treasury certificates for arrears to dead soldiers, etc., \$16,189,247. Among the charges entailed upon the Department were those growing out of an act passed by the Thirty-ninth Congress, giving three months' pay proper to all officers of volunteers who were in the service on March 3, 1865, and whose resignations were presented and accepted, or who were mustered out at their own request, or otherwise honorably discharged from the service after April 9, 1865. The pay proper of a colonel of infantry is \$95, of a

lieutenant-colonel \$80, major \$70, captain \$60, first lieutenant \$50, second lieutenant \$45 per month. The financial summary of the pay department exhibits—

A balance on hand at the beginning of the fiscal year.....	\$120,107,999 32
Received from Treasury and other sources during the year.....	168,426,228 97
Total.....	\$288,533,228 29

Accounted for as follows:

Disbursements to Army and Military Academy.....	\$10,431,004 42
Disbursements to volunteers.....	248,943,313 36
Unissued requisitions in Treasury.....	10,750,000 00
In hands of paymasters, June 30.....	13,408,910 51
Total.....	\$283,533,228 29

The total disbursements of each class during the fiscal year are as follows:

To troops on muster out.....	\$205,272,824 00
To troops in service.....	30,250,010 00
To referred claims.....	7,662,736 00
To payment of Treasury certificates.....	16,189,247 00
Total.....	\$259,374,817 00

The estimated appropriations of the pay department amount to \$17,728,560 for pay of the Army for the next fiscal year.

Early in the first session of the last Congress a bill was introduced to pay a bounty to the volunteers of 1861 and 1862 equal to the highest bounty paid to the volunteers of 1863 and 1864, equalizing the bounty according to the time of service; to pay three-months men a bounty of \$100, deducting from said bounty any sum heretofore paid; and to pay \$33.33 to the one-year men, to complete the payment of the \$100 promised them. As the sum required for this equalization of bounties would, at a moderate computation, considerably exceed \$300,000,000, which, in the then embarrassed financial condition of the country, could be ill-spared from the national Treasury, the project was strenuously opposed, and failed to become a law in the shape in which it was originally proposed. Its friends succeeded, however, in engraving it, in a very modified form, upon the Civil Appropriation Bill, in which connection it was passed by Congress on the last day of the session. The sections of the bill relating to bounties enact that every soldier who enlisted after the 19th of April, 1861, for a period not less than three years, and who, after having served his time of enlistment, has been honorably discharged, and who has received, or is entitled to receive, from the United States, under existing laws, a bounty of one hundred dollars, and no more; and every such soldier honorably discharged on account of wounds, and the widow, minor children, or parents of such soldiers who died in service, or from disease or wounds contracted in the service in the line of duty, shall be paid an additional bounty of one hundred dollars. The soldiers who enlisted

for two years, and who are entitled to a Government bounty of fifty dollars, under existing laws, are to get, under the like conditions, an additional bounty of fifty dollars. Although doubts were entertained whether, in consequence of defective wording of these sections, the legislation respecting the equalization of bounties was not inoperative, a board of officers was appointed by the War Department to prepare rules and regulations for the payment of the authorized bounties. But up to October 20, 1866, no payments of the extra bounty had been made. The Paymaster-General says that the muster and pay rolls, "already much worn and defaced, would be reduced to illegible shreds before a tithe of the cases arising under this law could be disposed of, if taken up separately." It is therefore proposed to classify the claims filed, by regiments and battalions. This plan, though imposing delay at the outset, will prove in the end the quickest and best. The payment, however, will not begin till the six months' limitation has passed. The disbursements will amount to nearly \$80,000,000, about a third of the sum contemplated by the original bill, and will be divided among upward of a million persons. To the same board the subject of bounties to colored soldiers was also referred, with a view to provide additional checks against the demands of fraudulent assignees, to secure the bounty to the rightful claimants, and to protect the Treasury against frauds.

The grand aggregate of individuals on the pension-rolls of the United States was, on June 30, 1866, 126,722, of whom 123,577 were army invalids or their widows or other representatives. Nearly ninety per cent. of this number, comprising all classes of pensioners, have arisen out of the late war. The remainder now on the rolls, but rapidly dropping away, are from the War of 1812, the Mexican War, and the various Indian wars. But one Revolutionary pensioner now remains, Samuel Downing, of Edinburgh, Saratoga County, N. Y., who was a native of, and enlisted from New Hampshire, and is now over a hundred years old. There are, however, still on the pension-rolls 981 widows of revolutionary soldiers, of whom only two were married previous to the termination of the War of Independence. The aggregate of annual pension money due for the fiscal year ending June 30, 1866, was \$11,674,474.18. The Commissioner of Pensions says: "In view of the large number of applications which continues to be received, on account of casualties in the late war, it is manifest that the aggregate annual amount of pensions will continue to swell for some years to come." He also says that the \$11,674,474.31 requisite to pay the 126,722 now on the rolls will, for the fiscal year, ending June 30, 1867, be increased to a sum exceeding \$33,000,000. This is owing partly to the law of last session increasing the rate of pension. The estimated amount requisite to pay pensions the next fiscal year is more

than one-third of the entire sum paid for pensions from the beginning of the Government up to the fiscal year ending after the war began, which was \$90,668,521.06. In that fiscal year the amount was \$790,384.76. The number of bounty land warrants issued from time to time amounts to hundreds of thousands in number; but counting them at \$1.25 per acre, the entire quantity of land so granted, the commissioner says, does not exceed \$83,000,000.

By the act of July 28, 1866, the Bureau of Military Justice is made to consist of one judge-advocate-general and one assistant judge-advocate-general, with ten judge-advocates, to be selected from among those in office when the act was passed, and to discharge their appropriate duties until the Secretary of War shall decide that their services can be dispensed with. During the past year 8,148 records of courts-martial and military commissions were received, reviewed, and filed in this bureau, and 4,008 special reports made as to the regularity of judicial proceedings, the pardon of military offenders, etc., including letters of instruction upon military law and practice to judge-advocates and reviewing officers. The business of the bureau, which reached its minimum about the time of the adoption of the new Army act, has since very much increased. "The fact," says the Secretary of War, "that, in a large number of important cases commanders of departments and armies are not authorized to execute sentences in time of peace, and that such cases can no longer be summarily disposed of without a reference to the Executive, will also require from the bureau a very considerable number of reports which heretofore have not been called for. Its aggregate will, it is thought, not be reduced in proportion to the reduction of the military force." The new Army act provided for the discontinuance of the Provost-Marshal-General's Bureau on August 28, 1866. The records of its offices in the various States are to be transferred to the Adjutant-General's office in Washington, to which, also, the settlement of the undetermined questions and unfinished business pertaining to the bureau has been referred. From various causes arising out of the unsettled state of the Army, there was a large number of desertions at the close of the war. To check this evil, recruiting officers were instructed to apprehend and send to military posts for trial all deserters who could be found in the vicinity of their stations, and lists were sent from companies, with a description of deserters, to facilitate their arrest. The number apprehended under this system from February 1, 1866, to October 1, 1866, is 1,029. As an inducement to return to their duty, the President published an offer of pardon to all who would report themselves at a military post by the 15th of August, 1866. Three hundred and fourteen availed themselves of this act of clemency.

Under the new Army organization the quar-

termaster's department of the Army consists of one quartermaster-general, six assistant quartermasters-general, ten deputy quartermasters-general, fifteen quartermasters, and forty-four assistant-quartermasters. The duties formerly devolving upon this department have been so much curtailed since the conclusion of the war, that no further appropriations for its support are needed for the next fiscal year, the balances now available and the sums received and to be received from the sale of material being deemed sufficient. Among the items realized by the sale of material since May, 1865, may be enumerated the following:

Horses and mules.....	\$15,269,075
Barracks, hospitals, and other buildings..	447,573
Clothing	902,770
Transports, steamers, and barges.....	1,152,545
Railroad equipment, cash sales.....	3,466,739
" credit sales.....	7,444,073

No change has been made by the act of July 28, 1866, in the organization of the subsistence department of the Army. A joint resolution of July 25, 1866, made it the duty of this department to pay commutation of rations to those United States soldiers who had been held as prisoners of war. The total amount disbursed by the department during the last fiscal year was \$7,518,872.54, and the amount disbursed during the fiscal years of the war was:

From July 1, 1861, to June 30, 1862..	\$48,799,521 14
From July 1, 1862, to June 30, 1863..	69,537,542 73
From July 1, 1863, to June 30, 1864..	98,666,913 50
From July 1, 1864, to June 30, 1865..	144,782,969 41
From July 1, 1865, to June 30, 1866..	7,518,872 54

Total amount.....\$369,805,864 37

From available balances and sums received from the sale of subsistence stores, the department is amply provided for the fiscal year, ending June 30, 1867, and will need no further appropriation.

The medical department under the new Army organization consists of one surgeon-general, one assistant surgeon-general, one chief medical purveyor, and four assistant medical purveyors, sixty surgeons, one hundred and fifty assistant surgeons, and five medical storekeepers. The funds at the disposal of the department during the fiscal year, ending June 30, 1866, were \$5,386,064.24, of which \$1,161,181.24 were the balance of unexpended appropriations for the preceding year, and \$4,044,261.59 were derived from the sale of old or surplus medical and hospital property, leaving a balance in the treasury for the next fiscal year of \$2,546,457.14. The reduction of the Army has enabled the department to dispense with the system of general hospitals, hospital transports and trains, ambulance corps, and also a number of purveying depots. There were, at the close of the year, one hundred and eighty-seven post hospitals in operation, with a capacity of ten thousand eight hundred and eighty-one beds. The contraction of the business of the department is forcibly illustrated by the fact that of 64,438 patients

remaining in general hospitals, June 30, 1865, and admitted during the year following, on the 30th of June, 1866, only ninety-seven remained under treatment. One hundred and seventeen surgeons and assistant surgeons of volunteers, and 1,733 acting assistant surgeons, have been mastered out during the year, and but 264 of the latter grade remained in July last; a corresponding diminution has been made of hospital stewards. Of the 98 applicants for positions in the army medical staff in September, 1865, only 19 passed.

An important part of the business of the year has been the selection and distribution of artificial limbs for maimed soldiers. Twenty-three models have been approved, and 6,410 limbs, of all kinds, have been given out. About one thousand are still to be supplied. In consequence of many instances of fraud, it is recommended that hereafter the applicant shall receive the established money value of the limb instead of, as at present, an order upon the manufacturer. During the past year the Government has paid great attention to soldiers' graves and cemeteries. The former have been carefully tended, and the occupant's name and rank put at the head of each grave as well as on the records of the cemetery. At first this was done on wooden head-boards; but Government, with a view to make the head-boards more lasting, has recently ordered them to be constructed of iron. Forty-one national military cemeteries have been established, and into these had already been gathered, on June 30, 1866, the remains of 104,526 Union soldiers. The sites for ten additional cemeteries have been selected, and the work upon them is now in course of vigorous prosecution. It is estimated that the national cemeteries will be required to receive the remains of 249,397 soldiers. The average cost of the removals and reinterments already accomplished is reported at \$9.75, amounting in the aggregate to \$1,144,791, and an additional expenditure of \$1,609,224 will probably be needed. The alphabetical registers of the dead filed in the office of the Medical Department contain the names of 250,000 white soldiers, and 20,000 colored soldiers.

The sanitary measures taken by the Medical Department in 1866 in anticipation of the cholera becoming epidemic in the United States, including a rigid military quarantine on the Southern Atlantic coast, proved exceedingly timely and beneficial, and the general health of the army was excellent. The average mean strength of the white soldiers for the year was 100,133, and the proportion of deaths from all causes to that of cases treated was one to every 52; the average mean strength of colored troops for the year was 53,541, and among them the proportion of cases taken sick was greater than with the white troops, and the deaths one in 29 of the cases treated. This result would seem to indicate a greater power of resistance to disease in white than in colored troops, though the data may not be sufficient to justify a gen-

eral conclusion on the subject. The casualties in the regular and volunteer medical staff during the war, number 336; of these, 29 were killed in battle; 12 by accident; 10 died of wounds; 4 in Confederate prisons; 7 of yellow fever; 8 of cholera; 271 of other diseases. During the war, also, 35 medical officers were wounded in battle.

The Surgeon-General announces in his annual report that the first volume of the "Medical and Surgical History of the War" is nearly ready for publication. In connection with this work is a large and valuable pathological museum, which is to be classified and suitably arranged in a building in Washington specially appropriated for its reception.

Under the new organization the Engineer Corps consists of one chief of engineers, six colonels, twelve lieutenant-colonels, twenty-four majors, thirty captains, and twenty-six first and ten second lieutenants; and the five companies of engineer soldiers previously prescribed by law now constitute a battalion, officered by officers of suitable rank detailed from the corps of engineers. The greater part of the corps during the last year were engaged in the supervision of the defensive works in progress throughout the country, the remainder being employed on detached duty, as commanders of departments, staff officers, etc. At Willett's Point, N. Y., and Jefferson Barracks, Mo., two principal depots of engineer supplies have been established, where the most valuable material remaining over from the war has been collected for future emergencies.

The new Army bill makes no change in the number of officers and enlisted men in the Ordnance Department. The officers are one brigadier-general, three colonels, four lieutenant-colonels, ten majors, twenty captains, sixteen first and ten second lieutenants, besides thirteen ordnance storekeepers. The operations of the department at arsenals are now limited to the construction of wrought-iron sea-coast gun-carriages, and such ordnance supplies as are needed for immediate use; the preservation of serviceable stores left on hand at the close of the war, and the completion of new buildings. Fire-proof workshops have been completed at Watervliet, Frankfort, and Alleghany Arsenals, and powder magazines at St. Louis, Washington, and Benicia, and others are to be commenced in the spring of 1867. All the Southern arsenals have been reoccupied by the department, except the Harper's Ferry armory, and the arsenals in North Carolina, Florida, and Arkansas. The Chief of Ordnance is of the opinion that it is not advisable to rebuild the armory at Harper's Ferry or the North Carolina arsenal, both of which were destroyed by fire, and the sale of both is recommended. The construction of the armory at Rock Island, Ill., is to be commenced as soon as good titles to the property have been acquired. From January 1, 1861, to June 30, 1866, the Ordnance Department provided 7,892 cannon, 11,787 artillery carriages, 4,022,130 small-arms, 2,862,546

complete sets of accoutrements for infantry and cavalry, 539,544 complete sets of cavalry-horse equipments, 28,164 sets of horse-artillery harness, 1,022,176,474 cartridges for small-arms, 1,220,555,435 percussion caps, 2,862,177 rounds of fixed artillery ammunition, 14,507,682 cannon primers and fuses, 12,875,294 pounds of artillery projectiles, 26,440,054 pounds of gunpowder, 6,395,152 pounds of nitre, and 90,416,295 pounds of lead. In addition to these, there were immense quantities of parts provided for repairing and making good articles damaged, lost, or destroyed in the service. The fiscal resources of the Ordnance Bureau for the year amounted to \$35,801,062.56, and the expenditures to \$16,551,677.58, leaving a balance of \$18,749,385.18, of which \$18,043,804.28 were undrawn balances in the Treasury, and \$705,580.90 were to the credit of disbursing officers in the Government depositories on June 30, 1866. The estimated appropriation required by the Ordnance Office, including only such objects as require early attention, is \$1,593,242.

The experience acquired in the late war with respect to the most available pattern of small-arms, applicable for general use in the Army, was wholly in favor of breech-loading arms, as opposed to the old muzzle-loaders; and early in 1866 a board of officers was appointed to examine the following questions, and make recommendations thereon:

1. What form and calibre of breech-loading arm should be adopted as a model for future construction of muskets for infantry?
2. What form and calibre should be adopted as a model for future construction of carbines for cavalry?
3. What form of breech-loading arm should be adopted as a model for changes of muskets already constructed to breech-loading muskets?

The board met on March 10th, and, during the next two months and a half, carefully tested over sixty different rifles and muskets, no one of which, it was decided, ought to be recommended for adoption by the Government. This conclusion was arrived at chiefly in view of the large number of excellent muzzle-loading muskets already in store, and of the comparatively slight changes necessary to transform these into effective breech-loaders. The plan of alteration submitted by Colonel H. Berdan was therefore recommended. This gives the stable breech-pin, secures the piece against premature discharge, and involves only a slight change of our present pattern of arms. The change of machinery necessary to make new arms on this plan is also so slight, that the board is of opinion that there can be no justification of an entire change of model, and the great expense thereby entailed, until some further improvement shall be devised, producing more decided advantages than any of the arms yet presented. They also find that the 45-inch-calibre ball has given the best results as to accuracy, penetration, and range, and recommend that all rifle-musket and single-loading carbines used in military service, be fitted for the same cartridge.

The board is disposed to arm the cavalry with the magazine carbine; but as this arm is doubtless capable of further improvements, delay is recommended in adopting definitively any pattern for future construction. Should new carbines be previously needed, it is recommended that the Spencer carbine be used. General Dyer, Chief of Ordnance, through whom the report of the board was directed to be made, objected to the use of the 45-inch-calibre balls, on the ground that they had not been proved superior to those of 50-inch calibre, and that the Army is already furnished with a large number of the latter. He also recommended that the different plans for the alteration of the Springfield musket should first be tried in the hands of troops. In forwarding the report to the War Department, General Grant indorsed his first recommendation, but not his second. The conversion of the old Springfield muskets into breech-loaders, proposed by the board, was approved by the Department, and orders were at once given for the preparation of the necessary machinery. The work proceeded so rapidly, that at the close of the year enough breech-loaders were on hand to supply the cavalry and mounted and light infantry. As an offensive arm, this altered musket is much better in all respects than the much-vaunted Prussian needle-gun, whose achievements have inaugurated so remarkable a change in modern warfare. In the Springfield armory two sets of workmen, alternating day and night, as during the war, are now employed in altering the old muskets to breech-loaders.

During 1866, the power and endurance of the 8-inch and 12-inch cast-iron rifle-cannon have also been subjected to practical tests, and the experiments will be continued. The Ordnance returns for three consecutive years, including a period of active service and ordinary repairs, show an average duration of five years for cavalry carbines, of four years for cavalry pistols, sabres, and accoutrements, of seven years for infantry muskets, and of six years for infantry accoutrements.

During the last five years considerable changes have been made and are still making in the armament of the permanent defensive works of the country, by substituting cannon of larger calibre and wrought-iron carriages for the lighter guns and wooden gun-carriages formerly in use. Construction has been suspended upon some of the unfinished works, pending the completion of experiments having in view the use of iron shields or armor for the protection of guns and gunners.

Finally, in view of any possible emergency, the Secretary of War reports that the "stock of clothing, equipage, quartermaster, subsistence, hospital, and Ordnance stores, arms, ammunition, and field artillery is sufficient for the immediate equipment of large armies. The disbanded troops stand ready to respond to the national call, and, with our vast means of transportation and rapid organization, developed dur-

ing the war, they can be organized, armed, equipped, and concentrated at whatever point military emergency may require. While, therefore, the war expenses have been reduced to the footing of a moderate and economical peace establishment, the national military strength remains unimpaired and in condition to be promptly put forth."

The Military Academy at West Point is now separated from the Engineer Corps, of which it formerly constituted a part. The standard of qualifications for admission has been raised, and appointments to cadetships must hereafter be made a year previous to the date of admission. The report of the Board of Visitors for 1866 shows that the examinations have been creditably conducted, and that the discipline of the Academy is good. The board recommend that the number of cadets be increased from two hundred and ninety-two to four hundred; that the cadets, on graduation, be required to serve at least two years in regiments of the line before entering the Engineer or other staff corps of the Army; and that the standard of qualification be raised by some form of competitive examination. At the last examination the corps of cadets numbered 228, and a class of 49 was graduated.

The act of July 28, 1866, authorized the President, "for the purpose of promoting knowledge of military science among the young men of the United States," to detail officers of experience to act as professors in institutions of learning having upward of 150 male students. It does not appear from the Secretary of War's report that application has yet been made by any college or university for the services of such officers. Provision is also made in the act of July 28th for the instruction of enlisted men at any post, garrison, or permanent camp, in the common English branches of education, and especially in the history of the United States. Another section directs that "a code of regulations for the government of the Army, and of the militia in actual service, which shall embrace all necessary orders and forms of a general character for the performance of all duties incumbent upon officers and men in the military service, including rules for the government of courts-martial," shall be prepared and presented to the Thirty-ninth Congress at its second session.

By direction of the Secretary of War, a board of officers, consisting of Brevet Colonel H. B. Clitz, 6th U. S. Infantry; Brevet Major-General R. B. Ayres, 28th U. S. Infantry; Brevet Colonel H. M. Blach, 7th U. S. Infantry; Captain J. J. Van Horn, 8th U. S. Infantry, Recorder, was assembled at West Point, N. Y., on the 25th of June, for the purpose of recommending such changes in authorized infantry tactics as shall make them simple and complete, or the adoption of any new system that may be presented to it, if such change be deemed advisable.

The board was to examine and report on

any system of infantry tactics that might be presented to it, and the superintendent of the Military Academy was to give it facilities for testing with the battalion of cadets the value of any system. Besides the system of General Casey, necessarily before the board, two others were presented: one by Brigadier-General Wm. H. Morris, late U. S. Volunteers; the other by Brevet Major-General Emory Upton, U. S. Army. The system prepared by General Upton is entirely new, and substitutes wheeling by fours for the facings of other tactics. Among the features that distinguish it from all other systems are, that it simplifies all the movements, and requires less instruction on the part of enlisted men; that it ignores inversions, gives greatly increased mobility to large bodies of troops, doubles the number of ways of passing troops from the order in column to the order in battle, and presents always the front rank in front; that it is equally adapted to wooded and open country; that it presents a new formation for infantry in single rank—a formation eminently adapted to the intelligence of the American soldier, and to breech-loading fire-arms, fast being introduced into all armies; that it enables a skirmish line to be promptly doubled, either for offensive or defensive purposes. The system embraces complete instruction for the soldier, skirmishers, battalion, brigade, division, and corps, and is in one volume, containing about one-half the number of pages in the three volumes of the present system.

General Casey's, or the authorized system, which was before the board, is based upon the French tactics, or is almost literally a copy of them. A modification of this was offered by General Morris; but they reported favorably upon the above system of General Upton, and, by the order of the President, it has become the authorized tactics for the Army and the militia.

ASIA. The progress of the Russians in Central Asia continued without interruption, and another important tract of land in Independent Toorkistan, with the large cities of Tashkend and Khojend, was annexed. The detailed accounts of the Russian operations widely differed, as they were received either from Russian or British sources, but the annexation of the above two cities, with a large territory, seems to be the permanent result of the year 1866. The tribes of Central Asia were again reported to have invoked British aid against Russia. (*See RUSSIA.*)

In China, rebel movements disturbed the peace of the empire throughout the whole year, and in the latter months the Mohammedan rebels were reported to be in possession of the whole province of Kansuh. Piracy in the Chinese waters continued to make the greatest ravages upon commercial vessels, and the joint operations of the Chinese and British fleets were unable to subdue it. The relations of China to foreign powers remained friendly, and a new port was opened in the northern part of the

empire. In the Corea, a dependency of China, two French bishops and seven priests were massacred—an outrage which led to a French expedition against that country. The Chinese Government repudiated all responsibility for the action of the Coreans, and made no objection to the French expedition. (*See CHINA and COREA.*)

The relation of Japan to foreigners becomes more and more friendly. The treaties concluded with the chief foreign nations remained in force, and further provisions in favor of foreign commerce were secured by a new treaty concluded between American, English, French, Dutch, and Japanese plenipotentiaries on June 25th. A civil war broke out between the Tycoon and one of the princes, before the termination of which the Tycoon died. (*See JAPAN.*)

British India remained free from disturbances, the difficulty with Bhootan being fully settled in February. But the country suffered from a terrible famine, which carried off a very large number of people. On the western border of India civil broils continued in Afghanistan throughout the year, and in Farther India a revolution broke out in Burmah, which, however, was unsuccessful. (*See INDIA and BURMAH.*)

The "Geographical Year-book" of Dr. Brehm for 1866 (*Geographisches Jahrbuch*, Gotha, 1866, pp. 53 to 70) gives the following statements on the area and population of the several territories of Asia:

	Geog. sq. Miles.*	Inhabitants.
Russian Dominions.....	273,881	9,327,966
Turkish Dominions.....	31,608	16,050,000
Arabia.....	48,260	4,000,000
Persia.....	26,450	5,000,000
Affghanistan and Herat.....	12,160	4,000,000
Beloochistan.....	7,800	2,000,000
Toorkistan.....	80,124	7,870,000
China and dependencies.....	147,447	477,500,000
Japan.....	7,027	35,000,000
India (incl. of British dominions in Farther India).....	73,573	187,694,323
Ceylon.....	1,662	1,919,487
Farther India.....	35,824	21,100,000
East India Islands.....	37,598	27,164,723
Total of Asia.....	732,414	798,635,504

ASTRONOMICAL PHENOMENA AND PROGRESS. The march of astronomical discovery during the year 1866 has not lagged behind that of the other great departments of science. To chemistry, astronomy is especially indebted; for there is scarcely a discovery made in the domain of the former science which does not, or may not, contribute to the solution of some of the enigmas which still abound in the latter. The spectrum analysis, the original function of which was to determine the presence or absence of the earthy elements in the chemist's laboratory, is now the familiar guest of the astronomer in his watchings through the night, and discloses to him what all his

improved telescopes had hitherto not availed to show, the constitution of the sun, and the stars, and the comets, and enables him even to hazard a guess at the material nature of the far-away nebulae. The application of this new and powerful instrument to astronomical investigation has given rise to many brilliant speculations, which may have to be discarded hereafter, but it has also added many facts to our knowledge of the heavenly bodies. Just in proportion as the spectrum apparatus is improved from year to year—and there can be no doubt that improvements will continue to be made indefinitely in a field of inquiry so practical—the burden of mystery which rests upon astronomy will be lifted; and so we may go on from one discovery to another, until the splendid thought uttered by Mr. Grove, in his address at the last annual meeting of the British Association, may be realized. He said: "We, this evening assembled, ephemera that we are, have learned by transmitted labor, to weigh as in a balance other worlds larger and heavier than our own, to know the length of their days and years, to measure their enormous distance from us and from each other, to detect and accurately ascertain the influence they have on the movements of our world and on each other, and to discover the substances of which they are composed. May we not fairly hope that similar methods of research to those which have taught us so much, may give our race further information, until problems relating not only to remote worlds, but possibly to organic and sentient beings which may inhabit them; problems, which it might now seem wildly visionary to enunciate, may be solved by progressive improvements in the modes of applying observation and experiment, induction and deduction?"

The public interest in astronomy has been more than usually stimulated this year by the occurrence of two wonderful phenomena: the sudden apparition and disappearance of a star, perhaps not inferior in size and splendor to our own sun; and the great meteoric shower of November (*see METEORS*). Events of this kind have a favorable effect upon the science of astronomy, because they tend to popularize it, and to make the great body of the people more willing to contribute the necessary funds for the erection and support of first-class astronomical observatories. It is not improbable that, before many years, every important city in the Union will have an observatory equal to that recently established by the liberality of the citizens of Chicago.

The Temporary or Variable Star in Corona.—The most remarkable astronomical event of the year was the appearance of a temporary or variable star in the constellation of the Crown, less than a degree distant from ϵ Coronæ in a S. E. direction. It was seen at the Washington Observatory on the night of May 12th, when its size was that of a star of the 2d magnitude. Its lustre was a pure soft white. On the fol-

* One geographical square mile equal to 21.21 English square miles.

lowing night it had apparently sunk from the 2d to the 8d magnitude. On the night of the 14th of May it was studied at the Cambridge Observatory, and was then reported to be of about the 8d magnitude. By the 19th its brilliancy had decreased by nearly two magnitudes, and it was then very near the limit of visibility to the naked eye. On the 20th it was no longer perceptible to the unaided vision, but could easily be seen through an opera-glass. The star had dwindled to the 9th magnitude by the 9th of June. The following was the table of magnitudes as estimated by Mr. B. A. Gould, of Cambridge (*American Journal of Science*, xlii., 124):

DATE.	Time of Obs'n.	Mag.
May 14.....	11 h.	2.9
May 15.....	9	3.5
May 19.....	9	5.3
May 19.....	13	5.9
May 20.....	9½	6.3
May 24.....	9½	7.8
May 25.....	10	8.9
May 31.....	10	8.9
June 9.....	10	9.0

One observer in Philadelphia says that he saw on the 23d of September, 1865, a brilliant star in Corona, not laid down in the maps. It was reported to have been seen in London, Canada West, about May 1st, when its brilliancy was about equal to that of ϵ Corona, or between the 3d and 4th degrees of magnitude. It was seen in Ireland and England on the 12th of May, and in France on the 13th. The descriptions of the star given by all the foreign observers at that time agree with those of the various observers in this country. On the 16th of May it was observed and subjected to the spectrum analysis by William Huggins, F. R. S., and W. A. Miller, Prof. of Chemistry in King's College, London, whose applications of that new power to the solution of some astronomical problems have been among the most valuable scientific results of the year. At that time the magnitude of the new star was below the 8d. In the telescope it appeared to be enveloped in a faint nebulous haze, which extended to a considerable distance and faded away at the boundary. A comparative examination of neighboring stars showed that nebulosity really existed about it. Its spectrum was unlike that of any other celestial body thus far examined. The light was compound, and had apparently emanated from two sources. The principal spectrum was analogous to that of the sun, evidently formed by the light of an incandescent solid or liquid photosphere, which has suffered absorption by vapors of an envelope cooler than itself. The second spectrum consisted of a few bright lines indicating that the light by which it was formed was emitted by matter in the state of luminous gas. To the eye the star appeared nearly white; but as it flickered there was seen an occasional preponderance of yellow or blue. The lines of the second spectrum indicated that

the gas consisted chiefly of hydrogen. Observations were also taken on several successive evenings, during which the continuous spectrum diminished in brightness more rapidly than the gaseous spectrum. Messrs. Huggins and Miller suggest, as their explanation of these brilliant phenomena, that, in consequence of some vast convulsion, larger quantities of gas were evolved from the star, that the hydrogen present was burning in combination with some other elements, and that the flaming gas had heated to vivid incandescence the solid matter of the photosphere. As the hydrogen was consumed, the phenomena would diminish in intensity and the star rapidly wane. The results of the observations of Messrs. Huggins and Miller were confirmed by those of Messrs. Stone and Carpenter, at the Royal Observatory, on the night of May 19th.

Humboldt, in his "Cosmos," gives the following list of temporary stars, which are recorded in history, with variable degrees of certainty as to items:

134 B. C.,	in Scorpio.
123 A. D.,	in Ophiuchus.
173 "	in Centauron.
369 "	"
386 "	in Sagittarius.
389 "	in Aquilla.
393 "	in Scorpio.
827 "	in Scorpio.
945 "	between Cepheus and Cassiopeia
1012 "	in Aries.
1203 "	in Scorpio.
1230 "	in Ophiuchus.
1264 "	between Cepheus and Cassiopeia.
1572 "	in Cassiopeia.
1578 "	"
1584 "	in Scorpio.
1600 "	in Cygnus.
1604 "	in Ophiuchus.
1609 "	"
1670 "	in Vulpes.
1843 "	in Ophiuchus.

The majority of these stars shone with great splendor when first seen. Only three of the known variable stars, according to Humboldt, have been less than the 1st magnitude at the height of their brilliancy. The star of 389 A. D. was for three weeks as bright as Venus, and then rapidly disappeared from view. That of 1572 was seen at mid-day on November 11th, and no longer visible in the following March. It was as bright as Sirius, and reached the lustre of Jupiter. The star of October, 1604, also exhibited great splendor. The stars of 393, 827, 1208, and 1609, are considered one and the same; and a reappearance is predicted in 2014-'5. The periods of visibility of these stars differ greatly. That of 389 was three weeks; of 827 four months; and of 1012 three months. Tycho Brahe's star in Cassiopeia (1572) shone for 17 months. Kepler's star in Cygnus was visible 21 years before it totally disappeared. It was seen again (as a star in the same position) in 1655, and was then of the 3d magnitude.

The star of 1866 appears to be identified with No. 2,765 of Argelander's ν ue + 26° marked

In a recent essay, M. Chacornan expresses the opinion that the sun is a liquid incandescent mass, surrounded by a dense and imperfectly transparent atmosphere. In this atmosphere the solar vapors, raised by evaporation from the liquid nucleus, ascend till acted upon by the cold of the celestial spaces, when they are converted into luminous crystals. He attributes the spots to the engulfment of vast areas of these photospheric crystals, which lose their brightness as they sink. Another observer speaks of "several roundish, isolated portions of luminous matters (having the appearance of icebergs floating in a black sea) in the centre of an umbra."

During the year ending August 1, 1866, 282 negatives of the sun were taken in 168 days by the heliograph at Kew. The areas of the spots and penumbra were accurately measured, and the heliometric latitude and longitude calculated.

Father Secchi has completed the reduction of magnetic observations made during the years 1859-'65, and of sun-spots during the same period. The results show the reciprocal influence of periodic variations of spots and of amplitudes of the daily magnetic oscillations:

Year.	Days of observation of spots.	Number groups observed.	Daily variation of magnetic declination.	Variation of the horizontal intensity.
1859.....	164	257	Div. 8.105	Div. 9.53
1860.....	122	251	8.025	9.59
1861.....	124	269	7.011	9.42
1862.....	49	103	6.572	9.08
1863.....	126	105	5.579	9.31
1864.....	100	97	6.121	9.18
1865.....	181	86	5.547	9.00

It will be observed that the minimum of spots corresponds to the minimum of magnetic variations.

Spectra of some of the Fixed Stars, the Moon, and Planets.—Messrs. Huggins and Miller have spent much time during the past two and a quarter years studying the spectra of the fixed stars. Very few nights were favorable for observations, owing to the ever-changing want of homogeneity in the earth's atmosphere. The light of bright stars is very feeble when subjected to the large dispersion necessary to give certainty and value to the comparison of the dark lines of stellar spectra with the bright lines of terrestrial matter. For the purpose of these examinations, Messrs. Huggins and Miller made great improvements in the apparatus employed, bringing it to a point of perfection hitherto unknown. About fifty stars were examined by them, but their principal efforts were concentrated upon three or four of the brightest, the spectra of which are as rich in lines as the sun. The few really fine nights which are available whilst a star is well situated for such observations in respect of altitude and

sun-setting, make the complete investigation of a star the work of some years.

Aldebaran (α Tauri)—a pale-red star—is strong in the orange, red, and green lines. Nine of its spectra are coincident with certain lines in the sun-spectrum, indicating the presence of sodium, magnesium, hydrogen, calcium, iron, bismuth, tellurium, antimony, mercury. No coincidence was observed with nitrogen, cobalt, tin, lead, cadmium, lithium, and barium.

α Orionis (Betelgeux)—an orange-tinted star—shows strong groups of lines, especially red, green, and blue. The lines are coincident with those of sodium, magnesium, calcium, iron, and bismuth.

β Pegasi—of a fine yellow color—reveals the presence of sodium, magnesium, and perhaps barium. The absence of hydrogen lines in this star and also α Orionis, is an observation of considerable interest.

The spectrum of the brilliant white star Sirius is intense, but owing to its low altitude, the observation of the finer lines was rendered difficult by motions of the earth's atmosphere. Sodium, magnesium, hydrogen, and probably iron lines, were found. The hydrogen lines were strong. The white star, α Lyra, strongly resembles Sirius through the spectroscope. The spectra of Capella, a white star, and Arcturus (red), are analogous to the sun. In the last-named star the sodium line was ascertained beyond a doubt. In Pollux, coincidences were remarked with the sodium, magnesium, and probably the iron lines. Sodium lines are discovered in α Cygni and Procyon.

In the moon, no other strong lines are visible than those of the solar spectrum, when the sun has a considerable altitude. The quantity of light from different parts of the moon is very different, but the lines of the spectrum are in every case the same. The result of these examinations is wholly negative as to the existence of any lunar atmosphere.

Lines of orange and red are discovered in the spectrum of Jupiter, which are attributed to the modification of solar light before reaching our atmosphere, and are therefore due probably to absorption by the atmosphere of Jupiter. On one night, the moon and Jupiter being near each other, the opportunity was seized to compare them directly with each other, and these lines were the only perceptible difference observed between the two bodies. Similar bands in the orange and red are seen in Saturn.

In Mars no lines were detected in the red, like those in Jupiter and Saturn, with the exception of two or three strong lines in the extreme red. The spectrum of Venus is of great beauty, corresponding with that of the sun.

Comets.—Comet 1, 1866, was an oval nebulous mass, surrounding a very minute and not very bright nucleus, which possessed no sensible magnitude in the telescope. The light of the coma was different from that of the minute nucleus. The latter was self-luminous,

and the matter of which it consisted was evidently in the state of ignited gas. The coma probably shone by reflected solar light—the spectrum of the light of the coma differing entirely from that characterizing the light emitted by the nucleus. The prism gives no information whether the matter forming the coma be solid, liquid, or gaseous, though terrestrial phenomena would suggest that the parts of a comet, which are bright by reflecting the sun's light, are probably in the condition of fog or cloud. The nitrogen line is the only one detected in the nucleus. We must wait for a comet of sufficient splendor to permit the satisfactory prismatic examination of its physical state during various changes of its perihelion passage.

Father Secchi, at Rome, in January, 1866, made a spectrum analysis of Tempel's comet, and found the light monochromatic (green), similar to that of the nebula in Orion. The monochromatic condition of the light he attributes to a molecular constitution different from that which forms the planets and stars. He infers that not all the light which comes from the comet is reflected from the sun, or, if it is so, that it suffers a singular sort of absorption. The spectrum of the comet exhibited three principal lines on a faintly-shaded ground. The latter is probably due to light reflected from the sun; the residue, the light of the comet itself.

Influence of the Tidal Wave on the Moon's Motion.—Mr. Adams and M. Delaunay, have shown by their recent investigations that the change in the eccentricity of the earth's orbit accounts for only about one-half of the secular acceleration of the moon's motion, viz., about six seconds in a century. Prof. Harrison suggests that the other half might be accounted for simply by assuming that the length of the sidereal day has increased by merely .01197 of a second in the course of 2,000 years. M. Delaunay subsequently showed that the retarding effect of the tidal wave, originally pointed out by M. Mayer, twenty years ago, sufficed to account for the increase required in the length of the day. He concluded that the six seconds of acceleration resulting from the change of eccentricity in the earth's orbit are real, but that the other six seconds are only apparent. At a still later date M. Delaunay admitted that the tides produce a real acceleration of the moon's motion. In a paper, published in the "Philosophical Magazine" last August, by Mr. Croll (the second on that subject by the author), he offered the following considerations to show that the solar wave must diminish the earth's motion around the common centre of gravity of the earth and moon, and must therefore accelerate the angular motion of the moon. Suppose the rotation of the earth to be reduced to that of the moon, viz., once a month. In that case the earth would always present the same side to the moon. The lunar wave would of course exist

the same as at present, but would remain stationary on the earth's surface. The solar wave would also exist the same as it does now, but would move round the earth once a month, instead of once in twenty-four hours as at present. However slow the motion, a considerable amount of heat would be generated by friction. The source from which the energy lost in the form of heat would be derived, would evidently be the rotation of the earth round the common centre of gravity; for it is to this source that the motion of the water is due. Now the effects which would take place under these circumstances do actually take place under the present order of things. The two sets of effects caused by the lunar and the solar waves do not interfere with each other; consequently the solar wave must be slowly consuming the *vis viva* of the earth's rotation round the common centre of gravity. It is this *vis viva* which keeps the earth and moon separate from each other. As the *vis viva* is consumed, the two must approach each other, and thus the angular motion of the moon be accelerated. The solar wave does not consume the *vis viva* of the moon's motion around the common centre, but only that of the earth. Since the earth is gradually approaching nearer to the moon in consequence of the consumption of centrifugal force, which keeps it separate from that orb, the moon must therefore be moving with all its original *vis viva* in an orbit which is gradually becoming less and less, and the period of its revolution is consequently diminishing in length. According to M. Croll's calculation, it is therefore merely a question of time—though the possible date of the catastrophe is incalculably remote—when the earth and moon shall come together.

The Zodiacal Light.—M. Liandier, in the *Comptes Rendus*, says that he has watched the zodiacal light for several years, during the evenings of February and March. In 1866 he observed it from the 19th of January to the 5th of May. He reports that it has the shape of a perfect cone, varying in luminosity and color from a dull gray to a silver white, its changing aspect probably being caused by the condition of our atmosphere. In February the summit of the cone reached Pleiades, and the Twins in May. Between January and May he found it to follow the zodiacal movements of the sun. M. Liandier believes the luminous cone to be a fragment of an immense atmosphere, which envelops the sun on all sides. If so, he says it may be expected to exercise an enormous pressure on the sun, with a great development of heat, and, if local variations occur, may explain the phenomena of sun-spots, through the reduction of temperature that would follow its diminished pressure.

Nebulæ.—About sixty nebulae, examined by Mr. Huggins during the past year, reveal a spectrum of one, two, or three bright lines. Their elements cannot be determined, and the material of the nebulae is supposed to be luminous

gas. The light of three nebulae was compared with that of a sperm candle burning 158 grs. an hour, with the following result: the estimation being made in the brightest part of the nebulae:

Intensity of nebula, No. 4,628, I.H.V.—.....	1/100
Intensity of annular nebula in Lyra.....	1/100
Intensity of dumb bell nebula.....	1/100

The nebulae which have thus far been examined may be divided into two great groups; one giving bright lines with a faint spectrum background, the other giving apparently a continuous spectrum. The nebula in the sword-handle of Orion exhibits three bright lines; and in Lord Rosse's telescope reveals a large number of very minute red stars, which do not furnish a visible spectrum. The bluish-green matter of this nebulae has not yet been resolved. The question arises: Are all the unresolved nebulae gaseous, and those which give a continuous spectrum clusters of stars? Half of the nebulae which give a continuous spectrum have been resolved, while of the gaseous nebulae none have certainly been resolved.

The Force which prolongs the Heat and Light of the Sun and other Fixed Stars.—Prof. Ennis, in his interesting treatise on the "Origin of the Stars," propounds the following theory of the force which has given so prolonged a duration to the light and heat of the sun: That the chemical force now active in the sun is the conversion or conservation of the atomic force of repulsion which once held the solar system in a nebulous condition—that condition being one of inconceivable rarity. This atomic force must have been inconceivably great, and, being indestructible, must still exist. In fact, it is now, and has long been, passing off as light and heat through conversion into chemical forces. But why suppose that the original repulsive force is converted into light and heat through chemical agencies, rather than through electricity or some other means? The answer is—because the present action in the sun, and in the fixed stars, and the former action in our earth, all strongly indicate chemical action. This force now operates in the sun and other fixed stars by three methods.

First. There are reasons to believe, from the nature of matter, that the materials in the sun may possibly give out more heat than those in our earth. On this planet one substance gives out more heat than another of equal weight; as, for instance, a pound of hydrogen produces more than four times the heat of a pound of carbon. Between other elements there are similar differences. Chemical diversities seem endless in number, and immeasurable in extent. Every star, so far as yet known, has a different set of fixed lines in the spectrum, although there are certain resemblances between them. It may, therefore, be concluded that each star has, in part at least, its peculiar modifications of matter called simple elements. The peculiar elements of the sun may differ from ours in heat-producing power as much as ours differ from one another in den-

sity, and this is as 256,700 (hydrogen) to 1 (platinum). The assumption that the materials of the sun can give out no more heat, pound per pound, than the materials of the earth, is therefore unfounded.

Second. The conditions for producing heat in the vast laboratory of the sun, are different from those with which we are familiar on this earth. Combustion, with us, is always between a gaseous body and another which may be either gaseous, liquid, or solid; while in the sun the chief combustion takes place between liquid materials, for the liquid body of the sun is the hottest. Pressure exercises an important influence on combustion; and the pressure of the atmosphere of the sun must be inconceivably great considering the height of the atmosphere and the powerful attraction of the sun; but even that is as nothing compared with the pressure in the liquid body of the sun, many thousand miles down. The force of chemical attraction which impels atoms to unite in collision, thereby causing heat, may be in some way more powerful in the sun than on the earth. The ether or ethers around the sun may contribute to the production of heat.

Third. New combustibles may now be preparing in the sun from materials which have already been burned. According to the nebular theory, what we call the simple elements are mere modifications of one general fundamental matter. These modifications have arisen during the process of condensation, and must still be forming in the sun, because the sun is eight times less dense than is required by the law of density in the solar system, and will continue to form until its fires are burned out, and its due density is reached. Our "simple elements" may be not only compounds but double compounds, or compounds that are the result of hundreds or thousands of compoundings. In this way there must have been, at different periods, entirely different sets of elements in the sun. After one set had combined, producing light and heat by the combination, the resulting compound products may have again combined, with the same effect of light and heat, and so on in a continuous line of changes until the sun has attained its proper density, its fires are extinguished, and it becomes a "lost star," like the earth and the other members of the solar system.

With regard to the ultimate identity of suns, planets, and moons, Prof. Ennis says: "We are really treading on a fixed star. Here we have an opportunity of leisurely observing how a fixed star appears after its light has gone out. As in a forest we note the progress of the oak, from the acorn to the tall tree, some just rising from the ground, others vigorous in the sapling growth, and others whose trunks are populated with mosses and lichens, and whose branches are alive with birds, so we can see like stages of progress among the heavenly bodies, our earth included. Some are glowing with the fervor of most intense heat; others, like our

earth, are cooled on their surfaces, and with only volcanoes to tell of their molten history; and others, like our moon, are still further on in their history, where even volcanic energy has become cold and dead. Some are invariably bright, and others, like our sun, exhibit comparatively small dark spots on their sides. Some at each rotation have their light slightly dimmed with spots; others again are dimmed more and more, and still others have at each rotation their light entirely hid. At last we behold others whose light goes out entirely, perhaps to be rekindled by a temporary glow, and to be called by astronomers a temporary star, and then its light is gone, dark, forever dark, not to be a dreary solitude, but in a resurrection morn to be reilluminated, like our earth, with the happy light of intellectual life and social enjoyment."

Asteroids.—The 85th asteroid has been named Io, which is also the designation of one of the satellites of Jupiter. On the 4th of January, 1866, Dr. F. Tietjen at Berlin, discovered a new asteroid (86) of the 12th magnitude, near to asteroid 85, whose place he was then engaged in determining. It has received the name of Semele. Mr. Pogson, at Madras, discovered an asteroid (87) on the 16th of May, whose magnitude he estimated at 11.5. Dr. C. H. F. Peters, at the Hamilton College Observatory, discovered on the 15th of June, No. 88, a little brighter than stars of the 12th magnitude. The last two asteroids are named respectively Sylvia and Thisbe. The 89th asteroid was discovered by M. Stephan, the director of the Marseilles Observatory, in the constellation of Capricorn. It is estimated at the 9th magnitude. On the 11th of October, Dr. Luther, of Bilk, near Düsseldorf, discovered the 90th asteroid, which is of the 11th magnitude. The discovery of the 91st asteroid at the Marseilles Observatory, reported by M. Le Verrier to the French Academy, completes the list announced for the year.

The Astro-Photometer.—Zöllner gives the following results of his recent observations with the astro-photometer.

The light of the sun, in comparison to that of the star Capella, is as 55,760,000,000 to 1, with a probable error of about 5 per cent.

The following is Zöllner's estimate of the comparative light of the sun with several of the planets:

	Prob. error.
Sun — 6,994,000,000 times Mars.....	5.8 per ct.
" 5,472,000,000 times Jupiter.....	5.7 "
" 180,980,000,000 times Saturn (with- out ring).....	5.0 "
" 8,486,000,000,000 times Uranus.....	6.0 "
" 79,620,000,000,000 times Neptune.....	5.5 "
" 619,000 times Full Moon.....	2.7 "

By comparing surfaces, the sun = 618,000 times the full moon, with a probable error of 1.6 per cent.

From the above estimates, it may be inferred that the sun, at a distance of 3.72 years way of light, would appear like Capella with a paral-

lax of 0" 874. Peters has actually found 0" 046. If the light suffers no absorption in the celestial spaces, Capella must give out much more light than the sun; and α Centauri seems to be equal to the sun.

Works and Memoirs.—Among the works and memoirs upon astronomical subjects published in this country during the present year, may be mentioned the following: *The Origin of the Stars*, by Jacob Ennis, 12mo, D. Appleton & Co.; *Memoirs of the National Academy of Sciences*, 4to, Government printing-office, Washington; *Annals of the Dudley Observatory*, vol. i.; a new edition (3d) of *Olmutz's Astronomy*, revised by E. S. Snell, LL.D., Professor of Natural Philosophy in Amherst College. At the meeting of the American Association for the Advancement of Science, at Buffalo, in August (after a suspension of meetings for five years, in consequence of the war), the following papers bearing upon astronomical topics were read: *Spots on the Sun*, by Prof. E. Loomis; on the *Period of Algol*, by the same; on *Fundamental Star Catalogues*, by Prof. T. H. Safford, of Chicago. At the August meeting of the National Academy of Sciences, John N. Stockwell read a paper on the *Secular Acceleration of the Moon's Mean Motion*; Prof. B. Pierce, on the *Origin of Solar Heat*; Prof. T. Strong, on a *New Theory of Planetary Motion*; and Lewis M. Rutherford, on *Astronomical Photography*.

AUSTRIA.* Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, Ferdinand I. (as King of Hungary and Bohemia called Ferdinand V.), on December 2, 1848. Heir apparent, Archduke Rudolph, born August 21, 1858.

In consequence of the German-Italian war, Austria lost the crown-land of Venetia, which was annexed to Italy. The cession of this province reduced the area of Austria to 239,048 English square miles, and the population to 32,578,002. Of this total population 21,521,713 are Roman Catholics; 3,586,608, Greek Catholics; 2,921,541 (non-united) Greeks; 1,218,750, Lutherans; 1,963,730, Reformed; 50,887, Unitarians; 3,944, members of other sects; 1,043,448, Israelites. As regards nationalities, the empire has now 7,877,675 Germans, 11,044,872 Northern Slavi, 8,955,882 Southern Slavi, 581,126 Western Roumanians (Italians, etc.), 2,642,953 Eastern Roumanians, 4,947,134 Magyars, 1,210,949 persons of other races.

The receipts in the budget for 1866 were estimated at 495,004,238 florins, and the expenditures at 535,148,384 florins. The public debt amounted, on January 30, 1866, to 2,831,211,195 florins. The portion reimbursable and bearing interest is represented by 720,787,485 florins; not bearing interest, 818,384,643 florins; and the portion not repayable, and bearing interest, 1,797,060,043 florins; and bearing no interest,

* For the latest commercial statistics received from Austria, and for an account of the Austrian Reichsrath, see ANNUAL CYCLOPEDIA for 1865.

99,023 florins. A sum of 125,473,744 florins is required to pay the annual interest on the public debt, which has increased since the end of December, 1863, by 234,831,693 florins.

The strength of the army on the peace and war footing was, in December, 1865, as follows:

	Peace footing.	War footing.
Infantry.....	171,428	449,788
Cavalry.....	39,183	41,903
Other troops.....	45,123	93,962
Total.....	255,733	625,653

The navy consisted, in December, 1865, of 66 steamers, with 13,580 horse-power, and 723 guns; and 51 sailing vessels, with 340 guns.

The relations between Austria and Prussia were, from the beginning of the year, most unfriendly. In a note, of February 7th, Austria declined to acknowledge the grievances expressed in a Prussian dispatch of January 26th, with regard to the Austrian administration of the duchy of Holstein, and defended its right of independent administration. In the course of March Austria began to arm, and on March 16th established a council of war in the cities of Prague, Pisek, Tabor, and Pilsen. On the same day the Austrian Government addressed a circular to the Governments of the Germanic Confederation concerning its relations with Prussia, and intimated that it would appeal to the Confederation. In reply to the remonstrances of the Prussian Government, the Austrian envoy at Berlin declared, on March 31st, that his Government had not the remotest thought of attacking Prussia, and that the emperor had no intention to act contrary to art. 11 of the Federal pact. The same assurances were repeated in a note of April 7th, and the hope was expressed that, as Austria had not taken any extraordinary military measures, Prussia would not execute the military orders that had recently been given by her. In a note of April 18th Austria declared her readiness to disarm on a fixed day (April 25th) if she could rely upon the same conduct on the part of Prussia. The Prussian Government having virtually assented to that proposition, Austria declared, in a note of April 29th, that she would disarm on the Bohemian frontier before Prussia, hoping that the armament in Italy would not be regarded as being directed against Prussia. In a second note, of the same date, Austria urged a mutual understanding in the Schleswig-Holstein question, and indicated the concessions which she was ready to make to Prussia, namely, the definite cession of the military positions of Kiel, Rendsburg, and Sonderburg; a cession of territory for the establishment of fortifications at Düppel and Alsen; the union of the duchies with the Zollverein; and the construction of a canal from the German Sea to the Baltic. It was also intimated that if Prussia should refuse to accede to these propositions, Austria would appeal to the Confederation. These propositions appearing unacceptable at Berlin, Austria again, in a note of May 4th, assured Prussia of her pacific inten-

tions, but insisted on her right of arming against Italy, in order to protect not only her own frontier, but the frontier of Germany. This note ended the diplomatic correspondence concerning the armaments, and henceforth both powers prepared for the great struggle. An invitation (May 28th) from the great neutral powers to take part in a peace conference was accepted by Austria, upon the condition, however, that from the negotiations every combination should be excluded which would tend to give to any one of the powers an aggrandizement of territory. Thus the last attempt to prevent war failed. On June 1st Austria formally appealed for a decision on the Schleswig-Holstein question to the Federal Diet. The Prussian Government having maintained, in a note of June 8d, that Austria, by the proposition made at the Federal Diet, had violated the treaty of Gastein, and thereby justified Prussia in falling back upon the provisions of the treaty of Vienna (a common occupation of the duchies), the Austrian Government, on June 9th, replied that the arrangements between Prussia and Austria could not be prejudicial to the rights of the Confederation, and that Prussia had already previously violated the treaty of Gastein (for instance, by having the question of succession decided by the crown syndics, by imposing fines based upon this decision, etc.) Hostile movements of Prussia against Saxony, Hanover, and Hesse-Cassel having begun on June 15th, the emperor on June 17th addressed a manifesto to the people of the empire, which Count Mensdorff communicated to the representatives of Austria at foreign courts. On June 18th, the first Austrian troops crossed the Prussian frontier, thus actually opening the war against Prussia and Italy, which, after the short duration of a few weeks, ended in the total defeat of Austria, and the loss of one of her richest crown-lands. The preliminaries of peace between Austria and Prussia were signed at Nicholsburg on July 26th. Between Austria and Italy an armistice was signed on August 11th. The definitive treaty of peace between Austria and Prussia was signed at Prague, on August 23d, and that between Austria and Italy at Vienna, on October 4th. (For a full history of this war, see the article GERMAN-ITALIAN WAR.)

The German provinces of Austria were greatly agitated relative to their future relations with Germany. On September 9th a meeting of the deputies of the German Diets of Austria was held at Aussee, Steiermark, to consider the measures to be adopted for determining the position of the German population of Austria, and for preserving their connection with Germany. The meeting recognized the formation of a united German party as indispensable, and that the principal of dualism, with the restriction that certain matters be recognized as common affairs and dealt with by common parliamentary treatment, was the only arrangement by which real liberty could be attained. It was further agreed that the state of

contrary, the army reorganization bill produced a new estrangement. (*See HUNGARY.*)

Of the many nationalities inhabiting Austria, none was more satisfied with the policy of the Austrian Government than the Poles of Galicia. An enthusiastic Pole, Count Goluchowski, was (in October) appointed Governor-General of Galicia, and, to the great delight of the Poles, the Provincial Diet of Galicia was, for the first time, opened in the Polish language. The Government also discontinued the publication of the official papers, published in the German language, in Oracow and Lemberg. So well were the Poles pleased with this policy, that many began to dream and talk of the restoration of Poland under an Austrian archduke. But while highly gratifying to the Poles, this policy greatly irritated the Ruthenians, another Slavic tribe in Galicia, constituting more than one-half of the population of that province, though the Poles are the ruling and controlling class. The sittings of the Galician Diet were frequently the scene of violent discussions between the two races. The Ruthenians were virtually placed by the Government under Polish control, and, notwithstanding their violent protestations, had their schools and churches handed over to Polish direction. The Poles, delighting in being able to repay, to a certain extent, to the Ruthenians what their countrymen in Russia suffered at Russian hands, have restricted the use of the Ruthenian language in the schools, and, in an address of the Galician Parliament to the emperor, asked for permission to continue, and even go further, in limiting the same. The cause of the Ruthenians is espoused with great zeal by the Russian Government and people, whose disposition toward Austria was consequently any thing but friendly.

AZEGLIO, MASSIMO TAPARELLI, Marquis D., an Italian statesman, author, and artist, born at Turin in October, 1801; died at Turin, January 15, 1866. He was descended from an ancient and noble family of Piedmont, his father holding a high position under the government, and editing the conservative paper *L'Amico d'Italia*. Young Massimo spent his first seven years in Florence, where he learned pure Italian speech and manners. In 1814, his father being appointed ambassador to Rome, he accompanied him thither, and there contracted a love for the fine arts; but his study of music and painting was interrupted by his father procuring him an appointment in a Piedmontese cavalry regiment. Here he devoted all his leisure with such intensity to scientific pursuits, that he brought on an illness which obliged him to retire from the service. After the embassy was concluded, he returned to Turin with his father, and there entered upon a course of severe and earnest study; and becoming satisfied that it was his destiny to be a painter, succeeded finally in obtaining parental permission to return to Rome and lead his artist-life, if he chose, on condition that he would expect for his full support no more than the pocket-

money he would receive in Turin; and a year had scarcely elapsed before he had made himself a name in Rome as an artist. After a residence of eight years in that city, during which he added history to the study of painting, he returned to Turin, and on the death of his father, in 1830, went to Milan for the further prosecution of his art. Here he formed an acquaintance with Alessandro Manzoni, whose daughter he married, and from this time began to make himself known in literature, his novels, *Ettore Fieramosca* (1833), and *Niccolo di Lapi* (1841), having done much to fire the national spirit of the Italians. The latter work has been praised as the best historical novel in any language. The political affairs of Italy soon occupied him exclusively; he traversed the provinces, cities, and villages, seeking to stir up the spirit of patriotism, and to conciliate the unhappy party divisions, and was everywhere received with rejoicing and acclamation. While in Florence he wrote his famous *Degli Ultimi Casi di Romagna*; in which he lashed the Papal Government, denounced the vain attempts at insurrection, and proved to the Italian princes the necessity of a national policy. After the election of Pius IX. as pope, Azeglio returned to Rome, and to his influence was ascribed the reforms with which Pius began his government. During this time he wrote much on public questions, and subsequently the whole of his political writings, collected in one volume, appeared at Turin. When Charles Albert, after the rising of Lombardy, crossed the Ticino, Azeglio left Rome with the papal troops destined to support the Italian contest. In the battle of Vicenza, where he commanded a legion, he was severely wounded while fighting at the head of his troops, and scarcely was he recovered when with his pen he courageously opposed the republican party, now intoxicated with victory. Having fought for his country, he was now called to the far more difficult task of shaping the policy which was to preserve life and liberty to Piedmont. On the opening of the Sardinian Parliament, he was chosen a member of the Chamber of Deputies, and in 1849 the young king, Victor Emanuel II., appointed him President of the Cabinet, an office he undertook solely from love to his king and his country. On the one hand, treaties were to be made with Austria, and on the other the republican elements of Piedmont—most violent in Genoa—were to be tranquillized. Azeglio succeeded in not only quelling the Genoese, but in persuading his countrymen to acquiesce in the treaty ratifying the defeat of Novara; and by skilfully temporizing with the enemies of peace without and within, he restored the kingdom to security and quiet. To him was due in a great measure the preservation of the only constitution of the many granted in 1848, and his Fabian policy was the only real hope of Italy. The press remained free in Piedmont, and the inviolability of political asylum was maintained. Patriots were attracted from

all parts of the Peninsula to Turin, and that sentiment of national unity created which, when Cavour came to relieve D'Azeglio, was made the foundation of the new Italian kingdom. In November, 1852, he left the cabinet, and for seven years remained in private life. In March, 1859, he was sent to England on a special embassy, and on his return accepted the temporary presidency of the Romagna; undertook, after the peace of Villafranca, a confidential mission to England; and afterward the post of governor of the city of Milan. Ill-health, love of art, the desire for the retirement and pursuits accordant with his tastes and habits, and some differences of opinion with his colleagues, caused him finally to withdraw from public life. He spent the greater part of his last years in that pleasant Tuscan capital which he loved so well, with no other labor to employ him but the preparation of his memoirs, which he has left only half completed. These will, no doubt, add greatly to the riches of a literature already opulent in autobiography, and will form a precious contribution to the history of the most important events of our time.

The immediate cause of the Marquis d'Azeglio's death was a fever taken by remaining too late in the season at his villa near Turin. He aggravated the disorder, after returning to the city, by writing constantly on his memoirs, but his case was not considered alarming until within a week before his death. A few days later he was visited by the Prince of Carignano and the Admiral Persano, whom he recognized, saying, "Thanks, thanks! I have been a faithful servant to the house of Savoy." Others of the great and noble from every part of Italy came to take leave of him, and, although suffering acutely, he received all graciously, and was in such perfect possession of his faculties as to be able to speak to each in the dialect of his province.

It is related that one morning, shortly before his death, he heard the rehearsal of music for a mass in a chapel near his house, and observed quietly: "They are preparing for me the music of the mass; very well! It is beautiful and well done." Among his latest words were: "*Non posso far niente per l'Italia!*" (I can do nothing more for Italy).

B

BADEN, a grand duchy in South Germany. Grand Duke Friedrich, born September 9, 1826; succeeded his father Leopold, as regent, on April 24, 1852; assumed the title of grand duke on September 5, 1856. Area, 1,712 square miles; population in 1864, 1,429,199 inhabitants (of whom 933,476 were Catholics; 472,258 members of the United Evangelical Church; 25,263 Jews). The capital, Karlsruhe, had, in 1860, 80,367 inhabitants. The receipts of the financial year 1863-'64 amounted to 18,920,463 florins, and the expenditures to 18,192,693 florins. The army, on the peace footing, is 7,908; and on the war footing, 18,402 men. The Grand Duke of Baden made special efforts to avert a civil war in Germany, and when he was unsuccessful took part, with great reluctance, in the war. Baden is one of the States which were not to form part of the North German Confederation, but were left at liberty to form a South German Confederation. At the close of the year both the government and a majority of the two Chambers expressed a desire to be received into the North German Confederation.

BADGER, Hon. GEORGE EDMUND, an American statesman, born at Newbern, N. C., April 13, 1795; died at Raleigh, N. C., May 11, 1866. He graduated at Yale College in 1813, and studied law in Raleigh, where he early became distinguished for solidity and strength in his profession. In 1816 he was elected to the State Legislature, and devoted the next four years of his life to law and legislation. From 1820 to 1825 he was Judge of the North Carolina Superior Court at Raleigh. In 1840 he was a prominent advocate of the election of

General Harrison to the Presidency, and on the accession of that officer to the chair, Mr. Badger was appointed Secretary of the Navy. On the death of President Harrison, and the separation of Mr. Tyler from the Whig party, Mr. Badger resigned, giving the veto of President Tyler on the second Bank Bill as his reason. The Whigs of North Carolina rewarded the devotion of Badger by returning him at the first opportunity to the Senate. He was elected to fill a vacancy in 1846, and in 1848 reelected for a full term. In 1853 President Fillmore nominated him as a Judge of the United States Supreme Court, but the Senate refused to confirm the nomination. At the expiration of his term of office, he retired from public life, and devoted himself wholly to his profession. In February, 1861, when the proposition to hold a convention for the purpose of seceding from the Union was submitted to the people of his State, he consented to serve as a Union candidate if the convention should be called. The proposition was, however, defeated by the people; but when in May 1861, the convention was finally called, he served in it as a representative from Wake County. He spoke ably in defence of the Union, and after the ordinance of secession was passed, was known as a member of the Conservative party. Mr. Badger was a vigorous speaker, but writing was ever irksome to him. "I will do any thing toward making speech," he would say, "but I cannot write. As a lawyer he was seldom surpassed. In debate he excelled in the precision with which he could draw a nice distinction. He was po

essed of a considerable vein of wit and humor, which, though perhaps dry and classical, was always effective, and the debates of the Senate prove that he was a man of profound research.

BALL, Rev. DYER, M. D., a Congregational clergyman and missionary of the A. B. C. F. M., born at West Boylston, Mass., June 3, 1796; died at Canton, China, March 27, 1866. When he was six years of age his family removed to Shutesbury, Mass., and during a revival of religion at Hadley, where he was temporarily residing, he became hopefully converted at the age of nineteen. His studies preparatory to the college course were pursued, in part, at Phillips Academy, and after two years at Yale College he was obliged to go South for his health. For a time he was tutor in a private family, near Charleston, S. C., and his collegiate education was not completed till 1826, when he graduated at Union College. In 1827 he was married to Miss Lucy Mills, of New Haven, Connecticut. He pursued theological studies for a time at New Haven, and afterward at Andover, and was licensed to preach in 1828, but was not ordained until 1831, at Shutesbury. In 1829 he was engaged in teaching a private school at St. Augustine, Florida; and in 1833 he was appointed an agent of the Home Missionary Society, to labor in that State. At this time, and during the whole of his ministry South, he was much engaged in labors for the good of the colored population. We next find him teaching in an academy in Charleston, S. C. In 1835, 1836, and 1837, in addition to other engagements, he pursued the study of medicine, with reference to foreign missionary work, and received the degree of M. D. from the medical institution in Charleston.

Dr. Ball is said to have been very popular and much beloved at the South, so that he was often urged to remain, and engage in evangelistic labors among the colored population. He was also eminently successful in teaching, and his financial prospects in his school were most promising, when he left it for labors as a missionary of the American Board in the far East. After coming North to go abroad, he was detained a year in consequence of the commercial crisis of that period, and during this time did something toward the acquisition of the Chinese language. He sailed, with his family and with several other missionaries, from Boston, May 25, 1838, and arrived at Singapore on the 17th of September following. For something less than two years he was stationed at Singapore, "teaching, preaching, healing the sick, and superintending the printing of Chinese books." In June, 1841, he went to Macao, for a temporary change, on account of the ill-health of Mrs. Ball, and was providentially led to remain there until April, 1843, when he removed to Hong Kong. On the 6th of June, 1844, he was called to deep affliction by the death of his excellent wife. In 1845 he removed to Canton, and on the 26th of February,

1846, he was again married, to Miss Isabella Robertson, from Scotland, then engaged in missionary labors at Canton, who was his companion for the remainder of his life, and survives him. His medical services here were of great assistance in conciliating the people. He taught a small school of boys, and continued the superintendence of printing books and tracts in Chinese, while his "Almanac" was for many years a most acceptable publication. Taking a few medicines and tracts, he would mingle with the people, first on the banks of the river and on the ferries, and then extending his visits to the villages and markets. In this way he became widely known and respected.

In February, 1854, Dr. Ball sailed, with his family, for a visit to the United States, and was absent from China until March 23, 1857, when he reached Macao on his return. His constitution was already much broken, and he was ever after infirm, and suffered much from pain as well as weakness; but it was his choice to spend his declining years in the land of his adoption, where two of his daughters, also, engaged in the missionary work; and while infirmities multiplied and pressed upon him, he still did what he could. During the last seven years of his life, when not actually confined to his couch, he would slowly work his way downstairs, totter out to his little chapel, which opened on the street, and there, seated in his arm-chair, would distribute tracts and address a few words to the passers-by, working according to his strength. Few have carried into the missionary field more energy and devotion to the work than the subject of this sketch.

BANKS. The first bank under the present law authorizing the establishment of National Banks in the United States, was organized in June, 1863. At the close of 1866 the number in active operation exceeded sixteen hundred, with an aggregate paid-up capital of over four hundred millions, owned by more than two hundred thousand stockholders. The system has won the confidence of the people, and has furnished thus far a currency of uniform value in all parts of the country. It has superseded all existing State banking institutions, and places the entire control of the currency of the country in the hands of the Federal Government. It has also proved, during its short existence, to be a most important auxiliary in the financial operations of the Treasury Department. For *Currency, Redemption, etc.*, see FINANCES U. S. The increase of national bank circulation in the United States has been as follows:

The national bank circulation, April, 1867, was	\$291,000,000
Legal tenders and small currency.....	405,000,000
Total, April, 1867.....	\$696,000,000
Deduct, on hand in the banks.....	123,000,000
Net circulation, April, 1867.....	\$573,000,000
Bank circulation, United States, January, 1862, was.....	\$138,000,000
Deduct, on hand in banks.....	25,000,000
	\$113,000,000
Increase in five years.....	\$460,000,000

BANKS OF THE UNITED STATES.

There were, on the 1st January, 1867, 1,644 banks existing under the National Bank Act of the United States; also, 297 under State laws. The combined capital of these 1,941 institutions was, at the same time, \$486,258,464. The number in each State, with the relative capital, is represented in the following tabular statement:

STATES AND TERRITORIES.	NATIONAL BANKS.		STATE BANKS.		TOTALS.	
	No. of Banks.	Capital.	No. of Banks.	Capital.	No. of Banks.	Total Capital.

THE EUROPEAN BANK MOVEMENT OF THE YEAR 1866.—*La Finance* estimates that the subscriptions in France, in 1866, amounted to 28,000,000 sterling for foreign loans and railway advances, 12,000,000 more for advances by the societies of Crédit Foncier for the improvement of real property—and a further 12,000,000 for debentures and shares in French railway and other companies: in all, therefore, a total subscription and contribution of 52,000,000 sterling, equal to 1,300,000,000 in francs.

In 1866, the rates of discount at the principal monetary centres of Europe were as follows:

At Amsterdam, the year 1866 opened with a 6 per cent. discount rate. In the 2d week of the year there was an advance to 6½ per cent., but in the 8th week there was a fall to 6, and in the 11th to 5½. In the 18th week, the rate went to 6, and in the 19th to 6½. In the 27th week of the year, it further advanced to 7, sinking, however, to 6½ in the 32d, 6 in the 33d, 5½ in the 39th, 5 in the 43d, and 4½ in the 51st week.

Berlin commenced 1866 with a discount rate of 7 per cent., which sunk to 6 in the 8th week, advancing, however, to 7 in the 16th week, and to 9 in the 19th week. In the 29th week, there was a fall to 7, in the 30th week to 6, in the 32d week to 5, in the 44th week to 4½, and in the 51st week to 4.

At Bruxelles, there were very few fluctuations. They may be summed up as follows: commencement of the year, 5 per cent., 9th week, 4; 20th week, 5; 22d week, 6; 33d week, 4; and 38th week, 3.

At Frankfort, the rather more numerous fluctuations were: commencement of the year, 6

per cent.; 2d week, 7; 8d week, 5½; 4th week, 5; 7th week, 4½; 10th week, 4; 12th week, 4½; 16th week, 5; 19th week, 6; 20th week, 7; 26th week, 6; 33d week, 5; 34th week, 4; 41st week, 4½; and 46th week, 3½.

At Hamburg, there were no fewer than thirty-one changes in the rate of discount during the past year. In the 1st quarter, the fluctuations were from 4½ to 7 per cent.; in the 2d quarter, from 5½ to 8½; in the 3d quarter, from 3½ to 6½; and in the 4th quarter, from 3½ to 4½.

At London, the year opened with a discount rate of 8 per cent., which fell to 7 in the 8th, and to 6 in the 11th week of the year. In the 18th week, the rate rose to 7; in the 19th week to 9; and in the 20th week to 10. This rate continued to the 33d week, when it sunk to 8, declining further to 7 in the 34th week, 6 in the 35th week, and 5 in the 36th week. It afterwards fell to 4½ in the 39th week, 4 in the 45th week, and 3½ in the 51st week.

At Paris, discount was kept within very moderate bounds in 1866, the year commencing with 5 per cent., from which there was a fall to 4½ in the 7th week, 4 in the 8th week, 3½ in the 12th week, 4 in the 19th week, 3½ in the 30th week, and 3 in the 35th week.

The aggregate amount of calls made by the Cornwall and Devon Mines from 1862 to 1866 amounted to £1,828,427; the dividends during the same period amounted to £751,713. The year 1864 stands foremost in the list of calls for upwards of £400,000, and during that year the dividends reached £174,907. In 1865 the calls were £331,881, and the dividends £90,596.

The annual meeting of the Baptist Benevolent Associations took place, in 1866, in Boston. The following is a brief summary of the operations of the societies and of their present condition:

1. *American Baptist Missionary Union* (established in 1814).—Receipts \$175,854.32; expenditures, \$173,494.57; balance in treasury, \$1,869.75. There was also expended from the Jubilee Fund \$15,756.78, making the total pay-

ments \$189,241.35. Missions reported the preceding year, 20. Two were transferred to the Home Mission Society, and one received from the Publication Society, making present number, 19. In the Asiatic missions are 15 stations where American missionaries reside, and about 400 out-stations; in the European missions, including France, Germany, and Sweden, at the end of 1864, there were reported not far from 1,300 stations and out-stations, and the number is constantly increasing. American missionaries connected with the Asiatic missions, including those at present in this country, in all 83: males, 40; females, 43. Native preachers and assistants, not far from 500; of whom 50 are ordained. In Europe, preachers and assistants, not far from 200. Whole number baptized in 1864, in Europe, 1,911; in Asia, 761; total, 2,672. Members at the close of 1864, not far from 36,000, leaving out about half of the Tougoo churches previously reckoned, and the Rangoon Sgau Karen Association, from which no return had been received. The President of the Society is Hon. Ira Harris, New York. On motion of the committee on finance, it was resolved to raise \$200,000 to meet the expenses of the coming year. This was rendered necessary on the assumption by the Union of the Swedish mission. The report of the committee on European missions recommended that the full amount of \$3,000 be appropriated for the purpose of building and maintaining chapels in Sweden, Germany, and France. The report was adopted.

2. *American Baptist Publication Society* (established in 1824). Total receipts for the year, \$173,821.47; expenditures, \$169,678.79; balance in treasury, \$3,642.68. There have been fifty-two new publications issued during the year. Including the annual report and *Almanac*, the aggregate number of copies of new publications issued during the year is 69,175. The new editions of former publications are as follows: of books, 227,000 copies; of tracts, 223,000. The total issues for the year have been, of books, tracts, etc., 519,175 copies, equal to 38,764,017 18mo pages; *Young Reaper*, 1,624,000 copies; *National Baptist*, 264,950 copies; making a total of 2,408,125 copies. This exceeds the issues of last year by 20,939,167 pages. The Society has printed, of books, tracts, and periodicals, since its organization, 23,112,259 copies, containing matter equal to 651,976,754 pages in 18mo. Forty-eight colporteurs have been in commission during the year.

3. *American Baptist Home Mission Society* (established in 1832).—Receipts for the year, \$137,810.16; expenditures, \$135,822.00; balance in treasury, \$1,988.40. Two hundred and sixty-five missionaries and sixty-two assistants have been under appointments since the last anniversary. One hundred and eighty-two of this number were new appointments. They have labored in thirty-seven States and Territories. There has been received for the freed-

men's fund the sum of \$21,386.21, and \$40,000 appropriated for the benefit of the class for which the fund is intended. Twenty-five white and ten colored, with sixty-two assistant missionaries, are laboring among the freedmen under the direction of the Society. The Society adopted a resolution instructing the Executive Board to continue their work among the freedmen using every facility in their power, and to give such religious instruction to colored preachers as might be deemed consistent with discretion.

4. *American and Foreign Bible Society.*—The receipts of the treasury from all sources, including small balance on hand at the commencement of the year, amount to \$40,896.40. Books printed from their own stereotype plates, by direct purchase, and by donations to the Society from other sources, full and parts of Scriptures, 21,286. Books issued from the depository, 26,379; gratuitously, for the army, navy, for freedmen, to poor churches, Sunday-schools, State prisons, etc., 22,165 copies. The committee to whom was referred the question of union with the American Baptist Publication Society, reported that they found difficulties in the way, and referred the subject back to the Board, with a recommendation for a general conference. After considerable discussion, the subject was indefinitely postponed. The committee of five, to whom was referred the question of uniting with the Bible Union, reported that it was both desirable and practicable, and such a union should take place; but on taking a vote, the proposed resolution in favor of a union of the two societies was defeated.

5. *American Baptist Free Mission Society* (established in 1843).—The twenty-second anniversary of this Society was held at Chicago, Ill. May 30, 31, 1866. Receipts for the year, \$26,042.30; expenditures, \$25,212.21; balance, \$831.09. The Board has flourishing missions in Japan, Rangoon, and Bassein, Burmah. Number of laborers among the freedmen in the Southern States, twenty-nine.

6. *The American Baptist Historical Society* (established in 1853), had added during the last year 620 volumes; cash receipts, \$399.45. The library now comprises 2,590 volumes, and 11,000 pamphlets, besides 100 volumes of portraits, views of Baptist edifices, and historical manuscripts.

7. *The French Regular Baptist Missionary Society* (established in 1863) labors among the French in Canada and the United States, by means of pastors, evangelists, the press, and the training of young men for the missionary work, and it now sustains two missionaries.

The Southern Baptist Convention met in May, at Russellville, Ky. It was the general opinion of this body that there should be no fusion between the societies of the Northern and the Southern Baptists; but that the Foreign and the Domestic Mission Boards of the Southern Baptist Convention should continue their existence as heretofore. At the beginning of the war the Foreign Board had about thirty-five mis-

sionaries in the field. This number was greatly reduced in consequence of the difficulty of transmitting funds during the war, but the work was not abandoned, and it was resolved by the convention to continue it with new zeal. The Domestic Mission Board, located in Marion, Ala., kept in the field through the war more than one hundred missionaries, and now they propose, with new vigor, to prosecute their work.

The colored Baptist churches in the Southern States organized a number of separate associations, which put themselves in communication with the Northern societies. Colored churches of nearly all the States were represented at the annual meeting of the "American Baptist (African) Missionary Convention," which in August met in Richmond. The convention thanked the Northern societies for the aid given them, and earnestly asked the continuance of their coöperation in the future.

A convention of the Baptists and "Disciples" (Campbellites) of Virginia met at Richmond, on April 24th, and continued in session until the 27th, for the purpose of discussing the feasibility of a union. Its meetings were strictly private. At the close of the convention it was resolved, at least for the present, not to publish its minutes; but Dr. W. F. Broadus and Elder J. W. Goss were requested to prepare and publish, over their own signatures, a brief address to the Baptists and Disciples of Virginia, setting forth the results of the conference. Most of the Baptist papers were decidedly opposed to the holding of the conference, and after the publication of the address by the committee, the opinion generally prevailed that no result could for the present be expected.

II. *FREE-WILL BAPTISTS.*—This denomination has a Biblical school at New Hampton, N. H.; colleges at Hillsdale, Mich., Lewiston, Maine ("Bates College"), and Wasego, Minnesota ("Northwestern College"). The "Free-will Baptist Printing Establishment," at Dover, N. H., publishes a *Quarterly Review*, the *Morning Star* (weekly), and the *Myrtle* (Sabbath-school paper, semi-monthly). In Nova Scotia, where the Free-will Baptists have been for many years divided into two branches, the two bodies, namely, the "Free Christian Baptist General Conference," and the "Free-will Baptist Quarterly Meeting," met on November 29th, at Barrington in convention, for the purpose of consolidation, and successfully accomplished their object. The united body will be called the "Free-will Baptist Conference of Nova Scotia."

According to the *Free-Will Baptist Register* for 1867 (Dover, N. H.), the statistics of this denomination were, in 1866, as shown in the following table. It will be seen there was an increase over the preceding year of twelve churches, fourteen licentiates, and two thousand one hundred and eighty-two communicants:

YEARLY MEETINGS.	No. of Q. Meets.	No. of Churches.	Communicants.

III. SEVENTH-DAY BAPTISTS.—This body numbers 7,014 members, 33 pastors, and 68 churches. By the minutes of the General Conference, held in September, at Alfred, N. Y., it appears that the churches are most numerous in New York and Wisconsin. The report of the Missionary Society shows contributions to the amount of \$2,302.42 during the past year, and an accumulating fund amounting to \$7,268.74 in the treasury. The missionary work is chiefly carried on in our own country, though the report contains a reference to foreign missionary work prosecuted with some degree of success in China, at Shanghai, and neighboring stations. This denomination maintains also a Sabbath Tract Society, and an Educational Society, under whose care the university at Alfred, in New York, is maintained.

IV. TUNKERS (German Baptists).—This denomination, which has 200 churches, 150 ministers, and 20,000 members, held its annual meeting from May 18th to May 24th, near Waynesboro, Pa. The meeting was composed of delegates from all their churches scattered throughout the United States. A correspondent in the *German Reformed Messenger* says of the meeting: "The business transactions consisted in rendering decisions on the practical questions that the times and circumstances constrained them to consider. One

question was, whether it was right to adopt the habit of voting, in order to arrive at the sense of the majority, and thus come to a decision on any subject. The question was answered in the negative, inasmuch as voting was a custom that belongs to the world. The manner in which they come to decisions is something like this: A committee of fifteen is appointed, to whom all questions must be previously handed. This committee then refers each question to a sub-committee, which sub-committee frames a decision to the particular question referred to them; being approved by the committee, both question and answer are then presented to the assembly through the president thereof, who at the same time asks their opinion. Their approval is manifested by nodding, their disapproval by shaking the head. When any signs of disapproval are manifested, discussion ensues; but yet the answer previously given stands, and the president pronounces it passed. Some of the questions thus decided at this meeting are the following: 'Shall we receive colored persons into the church, and shall we salute them with the holy kiss?' It was decided that they should be received into the church, but that all the members were to be left to their own choice and taste in regard to saluting their colored brethren, with the understanding, however, that all who refuse to do so were to be regarded as weak. One of their members out West leased a piece of ground to an agricultural society for a number of years. Was it right for him to do so? The answer was, 'No! as he thereby helps to foster the spirit of pride.'"

V. Other denominations that practise immersion are the "Anti-Mission Baptists," "Six-Principles Baptists" (18 churches, 16 ministers, 3,000 members); "Disciples" (1,500 churches, 1,000 ministers, 30,000 members); "Church of God" (Winnebrennarians). (See CHURCH OF GOD.)

VI. GREAT BRITAIN.—In Great Britain, the annual session of the Baptist Union was held on Monday, April 23d. The report stated that the labors of the Union had been proceeded with during the past year with encouraging, if not entire, satisfaction. By slow degrees a tolerably exact account of the members of the Baptist churches was obtained. Last year 1,898 churches reported 198,295 members in communion. This year 2,023 churches had made returns, and reported in all 209,773 members, being an excess over last year of 11,478. This was not to be considered as so much clear gain, as 130 churches had now reported for the first time; and as these 130 churches returned a membership of 6,505, the actual increase, as near as it could be reached, was 4,973, a number under the mark; as 400 churches, but mostly very small ones, still remain altogether unreported. Between October, 1864, and October, 1865, fifty-six new chapels were erected, supplying sittings for about 25,000 persons, at an aggregate cost of £88,787, making a total expenditure of

\$115,271 in this direction alone. Besides, 25 new churches had been originated during the year.

The annual meeting of the Baptist Missionary Society was held in London, on April 26th. The annual report stated that the receipts of the year had been £27,016, and the expenditures, £30,113.

VII. CONTINENT OF EUROPE.—The statistics of the Baptist churches on the Continent of Europe, in connection with the American Baptist Foreign Mission Society, were, in 1865, as follows:

	Churches.	Stations and Outstations.	Members.
Germany.....	63	894	11,289
Denmark.....	19	98	1,702
Holland.....	1	1	86
Switzerland.....	1	12	269
France.....	1	5	97
Poland.....	1	14	263
Russia.....	2	17	607
Total.....	88	1,041	14,218

The Baptist mission in Sweden, which had hitherto been, under the care of the American Baptist Publication Society, was, on March 1, 1866, transferred to the American Baptist Missionary Union. The churches in Sweden continue to make rapid progress, and at the close of the year 1865 there were 176 churches, with 6,606 communicants in nine associations.

VIII. ASIA.—In the Asiatic divisions of the American Baptist Missionary Union, there were, in 1865, fifteen stations where American missionaries reside, and about 400 out-stations. Of American missionaries connected with the Asiatic missions, there were 84: 41 males and 43 females. Of native preachers and assistants in these missions there were not far from 500, fifty of them being ordained ministers.

BAVARIA, a kingdom in South Germany. King Ludwig II., born August 25, 1845, succeeded his father, Maximilian II., on March 10, 1864. At the outbreak of the German-Italian war, Bavaria had an area of 28,435 square miles and 4,774,464 inhabitants. By the treaty of peace, concluded with Prussia, Bavaria ceded to Prussia 211 square miles and 32,470 inhabitants. The capital, Munich, had, in 1864, 167,064 inhabitants. The army, in time of peace, numbers 73,158 men; in time of war, 96,515; the reserve consists of 124,721 men. In the complications arising between Austria and Prussia early in 1866, the Bavarian Government endeavored to bring about a reconciliation between the two powers. When these endeavors failed, Bavaria, with most of the middle states, took side with Austria. It began to arm on April 2d, and on June 14th, plenipotentiaries of Bavaria and Austria signed the convention of Olmutz, regulating the force and the movement of the Bavarian troops in the impending war, the chief command of the contingents of South Germany, and the re-

lations of Austria and Bavaria to each other. (See GERMAN-ITALIAN WAR.) Bavaria concluded peace with Prussia on August 22d. Bavaria is one of the states of Germany not included in the North-German Confederation, but were left at liberty to form a South-German Confederation.

BEAUMONT, DE LA BONNIERE, GUSTAVE AUGUSTE DE, a French publicist, born February 6, 1802, in the Department of Sarthe; died in Paris, February 22, 1866. He was educated for the law, and was made procurator-substitute in the superior tribunal of the Seine, but lost this office after the July revolution. In 1831 he was commissioned, with Alexis de Tocqueville, to visit the United States, in order to study the penitentiary system established here; and the result of their investigations was a report, which has become a standard work on the subject, *Du Système Pénitentiaire aux États-Unis*. Upon the return of M. Beaumont to Paris, he received a place under Government, but was soon deposed, as he refused to conduct the prosecution in the scandalous process against the Baroness de Feuchères. In 1840 he was elected to the Chamber of Deputies for the Department of Sarthe, and distinguished himself as a member of the so-called dynastic opposition, favoring electoral reform in 1847. Subsequently he was appointed by General Cavaignac ambassador to England. After the Revolution of 1848 he was returned as a member of the Legislative Assembly, and here maintained the character of a sincere republican. In 1851 he was arrested and imprisoned for some time in the fortress of Mont Valérien, and on regaining his liberty, retired to his patrimonial estate, where he afterward resided. Besides his important work above mentioned, he was the author of *Marie, ou l'Esclavage aux États-Unis* (2 vols., 1835), and *L'Irlande, Sociale, Politique, et Religieuse* (2 vols., 1839). M. de Beaumont was a grandson of General Lafayette.

BECK, CHARLES, Ph. D., LL. D., formerly professor of the Latin language and literature in Harvard University, born at Heidelberg, Baden, Germany, August 19, 1798; died at Cambridge, Mass., March 19, 1866. His father, a merchant of Heidelberg, died while the subject of this sketch was still young, and his mother was subsequently married to Dr. De Wette, the eminent theologian, then professor in the University of Heidelberg, and afterward in the University of Berlin. Young Beck was educated at the latter institution, where he became an accomplished classical scholar, and entering upon the study of theology, was ordained in his native city, July, 1822, and the following year received the degree of doctor of philosophy and master of arts from the University of Tübingen. After completing his theological studies he was employed for some time as tutor at the University of Basle, Switzerland; but his republican sentiments, which in his own country had subjected him to false accusations of conspiracy against its monarchical institutions, rendering his liberty even here in danger, he was com-

pelled to seek refuge in the United States, and accordingly arrived in New York in December, 1824. Soon after he became connected, as teacher, with the Round Hill School at Northampton, Mass., until in 1830, he, in connection with two other able teachers, established a school at Phillipstown, on the Hudson, opposite West Point. In 1832 Prof. Beck was elected to the chair of Latin language and literature at Cambridge—an office which he held with entire acceptance for eighteen years—discharging its duties with unvarying fidelity, and a zeal and dignity which won the love and respect of all with whom he came in contact. Upon his retirement from the professorship he devoted himself to literary pursuits and classical studies, some of the fruits of which appeared in a work of great research, published three years since, entitled "The Manuscripts of the Satyricon of Petronius Arbiter, described and collated." In 1843 Dr. Beck was chosen a member of the American Oriental Society; in 1845 of the American Academy of Sciences, and in 1865 received the degree of LL. D. from Harvard University. He was also for two years a Representative of Cambridge in the State Legislature, and did good service in other offices of a more private character in the town and neighborhood. He was a man of large views and high public spirit, and though, more than most men, delighting in the leisure for literary pursuits, he was ready for any sacrifice which might accrue to the benefit of the city, State, or Republic he had adopted as his own. He was specially interested in the charities created by the war, the Soldiers' Fund, the Sanitary Commission, and the agencies for the care and education of the Freedmen, in whom he felt not only the common interest of humanity, but that of an American patriot.

BELGIUM, a kingdom in Europe. King Leopold II., born April 9, 1835, succeeded his father, Leopold I., on December 10, 1865. Heir apparent, Prince Leopold, born February 18, 1858. Area, 11,313 English square miles; population, according to census of 1864, 4,940,570.

The budget of 1866 (which has been voted by the Chambers) fixes the receipts at 164,043,290 francs, and the expenditures at 158,579,256 francs. Public debt on May 1, 1866, 676,749,514 francs. The Belgian army, according to the latest statement, consisted of 86,272 men. The imports in 1864, amounted to 688,878,000 francs; the exportations to 596,893,000 francs. The movement of shipping during 1863 was as follows: Arrivals, 4,130 vessels, with 794,596 tons, of which there were 863 Belgian vessels, with 87,358 tons; clearances, 4,116 vessels, with 779,223 tons. The merchant navy, on December 31, 1864, consisted of 107 vessels, together of 34,977 tons.

In March an Electoral Reform Bill was adopted by both Houses of the Legislature, which augments the number of representatives by eight, namely, two for Brussels, and one each for Antwerp, Louvain, Charleroy, Phillippeville,

Liege, and Alost; and the number of senators by four, namely, one each for Brussels, Luxembourg, Mons, and Ghent. The state elections held in June, resulted favorably to the Liberal party, increasing the ministerial majority in the Senate, which was previously eight, to twelve, and in the House of Representatives, where it was before the elections twelve, to eighteen. The new Chambers were opened on November 13th, by the king in person. The king announced that Belgium's relations with foreign powers were of a most friendly character, and said: "In the midst of the great events which have disturbed a great part of Europe, Belgium has remained calm and confident, deeply impressed with the rights and duties of neutrality. This neutrality she will continue to preserve in the future as she has done in the past, with sincerity, loyalty, and strength." The king then announced that several bills would be laid before the Chambers in reference to the abolition of imprisonment for debt, the amendment of the laws on detention of prisoners whilst under accusation, the extradition laws, the removal of the restrictions on the gold and silver manufacture of articles. The king also announced the conclusion of a treaty of amity with Japan. In reference to the recent rifle meeting at Brussels, he said: "The Tir National has furnished the Belgian militia with an opportunity of fraternizing with the militia of neighboring countries. Belgium will be happy to see renewed on her soil those peaceful contests, in which are engendered relations of mutual friendship and esteem, which the future can but extend and fortify." The king concluded his speech as follows: "To accomplish the tasks of Government I need the loyal concurrence of the Chambers. May all hearts at the commencement of this new reign remain united in love of our country and its institutions!"

On February 25th the Count of Flanders, brother of the king, received from the Legislature of Roumania (the Danubian Principalities) an offer of the crown of that country. The Belgian Minister of Foreign Affairs on the same day officially announced to all the Belgian legations and the consulate of Bucharest that the prince definitively refused this offer. In the latter months of the year, a difficulty arose with Holland, with regard to the question of the Scheldt dues. M. Rogier, the Minister of Foreign Affairs, stated in the Senate, on December 22d, that if Holland refused to recognize the rights of Belgium, the Government would refer the question to the guaranteeing powers.

BLUNT, EDMUND, an eminent hydrographer, assistant surveyor of the U. S. Coast Survey; born in Newburyport, Mass., November, 1793; died in Brooklyn, N. Y., September 2, 1866. He was a son of Edmund M. Blunt, author of the "American Coast Pilot." In early life he manifested a decided taste for practical mathematics, and, when scarcely seventeen, made the first ac-

curate survey of the harbor of New York. In 1819 and the year following, he made the first survey of the Bahama Banks, and the shoals of George and Nantucket, and in 1824 surveyed the entrance of New York harbor from Barnegat to Fire Island. In 1825 and 1826 he ran the line of levels from the river San Juan to the Pacific Ocean, for the purpose of building a canal on the Nicaragua route. From 1827 to 1830, as a private enterprise, he surveyed Long Island Sound from New York to Montauk Point, the Government up to that period having taken no steps toward developing a knowledge of the coast of the United States. On the organization of the United States Coast Survey in 1832, he was appointed assistant, holding that position up to the time of his death. In 1855 and 1856 he furnished the points to determine the exterior line of New York harbor. While on the Coast Survey, his attention was directed to the inferiority of the lights in the American light-houses, and he was the proposer and advocate of the introduction of Fresnel's system of signal-lights, which has since contributed so largely to render our light-house system the best in the world. He was also a mechanic of great inventive genius, as is evinced by the dividing-engine, built from his plan and under his direction.

BOLIVIA, a republic in South America. Provisional President, Mariano Melgarejo (since December, 1864). The frontiers of the republic not being yet regulated, the area is differently estimated from 22,500 to 39,638 geographical square miles. The population was, in 1858, estimated by J. Ondarza, a Bolivian geographer, at 1,742,352, exclusive of 245,000 savage Indians; making a total of 1,987,352. The army consists of about 2,000 men, besides the national guard. The receipts of the republic amounted, in 1864, to 2,471,000 piastres, and the expenditures to 2,435,000. The civil war, which disturbed Bolivia throughout the year 1865, was brought to a close by the decisive victory of President Melgarejo over his opponents at Viacha, near La Paz, in January, 1866. Bolivia joined the alliance of Chili and Peru against Spain, and, like her allies, expelled all the Spanish residents from her territory. When the secret triple alliance concluded, in 1865, between Brazil, the Argentine Republic, and Uruguay became known, Bolivia deemed it her right to enter an energetic protest, as the treaty assigned to both the Argentine Republic and Brazil a piece of territory which has always been claimed by Bolivia. The following are the most important portions of this protest:

OFFICE OF FOREIGN AFFAIRS (Bolivia), }
LA PAZ, July 8, 1866.

SIR: * * * It appears strange to the Bolivian Government that the high allied powers, in settling the basis as to what extent of territory they are to take from the republic of Paraguay, their common enemy, should comprise therein a large portion of Bolivia, as they actually do in the sixteenth article of said treaty, which assigns to the Argentine Confederation that vast extent of country embraced on the west bank of the Paraguay, in what is known as

the Gran Chaco, all of which is exclusively and unquestionably Bolivian by right. At the same time they recognize in a manner most offensive to the nation and Government of Bolivia a right in favor of Brazil to the possession of that strip of country comprised between the Bahia Negra and the river Jaurú, on the right bank of the aforesaid Paraguay River.

The Government of Bolivia, owing to its bounden duty to maintain and defend the dignity and integrity of the nation, cannot pass unnoticed an act of such great and such weighty consequences as this unheard-of violation of the public law of nations. But it cannot be persuaded that the governments making this treaty could have wished to present to the whole civilized world so scandalous an example as is given in these articles which sanction as just the use of force as well as usurpation.

The Government of Bolivia unhesitatingly asserts its belief that said treaty may have a false and spurious origin. Under this supposition his excellency the Provisional President of the republic, who is anxious to have official information concerning the falsity or authenticity of the said treaty, has ordered that I should address your excellency on the subject; and I hope that this request will be received as a new proof of the uninterrupted good relations that unite both governments. I take occasion, etc.,

JOSE RAYMONDO TABORGA.

To Señor JOSÉ ANTONIO SARAIVA, Minister for Foreign Affairs of the Empire of Brazil.

Bolivia maintains that her eastern limits reach to the Paraguay River, and run from the mouth of the Jaurú, through the centre of the main channel of the Paraguay in the dry season, following its course through the swamps de los Jarayes, far to the southward of the Bahia Negra (Black Lake, or Lake Negro, as our atlases call it). From the mouth of the Jaurú, the line runs directly northwest until it meets the waters of the Guaporé at a point opposite the mouth of the Sararé.

The long dispute with Chili concerning the southwestern frontier which, for twenty-three years, had threatened the peace between these republics, was settled, in 1866, by a treaty. During the past few years the conflict had assumed a very threatening aspect. Some Frenchmen had discovered that the land was rich with guano, and desired to work it; but in the disputed state of the title they could not get possession with any certainty of being able to work it long enough to realize a fair return. They, therefore, offered to lend to Bolivia three millions of dollars for the right, and furnish arms, etc., the money thus loaned to be expended in purchasing ships for the defence of the coast of Mejillones. General Santa Cruz, an enemy of Chili, was at that time Bolivia's representative at Paris, and he agreed to the transaction. The deposits were to be worked on the joint account of the French firm and Bolivia. Thus matters stood when the war with Spain broke out. Bolivia concluded to join the alliance of Chili, Peru, and Ecuador against Spain. A result of this alliance was that a treaty has been drawn up between the two countries, by which the boundary line is definitely settled at 24° south, thus dividing the disputed territory and the deposits at the same time. The French firm, Arnaud by name, agreed to advance a

loan to each of the republics of \$3,000,000, making \$6,000,000, for the privilege of working the deposits under a triple partnership, viz.: Chili, Bolivia, and the French firm, each taking a fair share of the profits. By this course of action a war was prevented between the two nations; a large loan was given to each; unity of feeling was engendered, and the danger of foreign interference prevented.

BONE-BLACK, REVIVIFICATION OF. Mr. H. Medlock, treating of this subject in a brief but very satisfactory article in the *Chemical News*, of February 17, 1865, notes the fact that the principal source of expense in a sugar refinery (see SUGAR, MANUFACTURE OF, etc.) is that of the animal charcoal; so that, to the refiner commencing with new black [some loss continually being of course involved, still] it is a great desideratum to have the means of keeping the bulk of the material in a condition of unimpaired decolorizing power.

In bone, the phosphate of lime forms a structure showing innumerable and almost microscopic cells; while the gelatine enters these, and binds the whole also into one mass. Of the whole, the gelatine constitutes about .810, the phosphate of lime .681, and the other salts .059 parts. In charring (distilling) the bone, the gelatine is decomposed, giving off volatile matters, leaving the bone finely porous, and each cell and pore lined with particles of minutely-divided carbon. Although the specific physical or chemical principle involved in the decolorizing and purifying of syrups and like liquids by bone-black is not yet clearly understood, it is, at least, known that the admirable fitness of the black for the refiner's use is to be explained by the fact of its detaining and withdrawing from the syrups, up to the point at which its capacity in this respect becomes saturated, both the materials which impart color, odor, or fermenting tendency, and also various metallic oxides and salts which such liquids contain.

When, from such absorption, the purifying capacity becomes saturated, and lost, the cause is commonly assumed to be that the carbon particles have become coated over with the albuminous and other gummy matters of the solution, and the porosity of the black thus impaired. Mr. Medlock admits this to be one cause; but, as has recently been urged by Leplay and others, he, too, regards as the principal cause the accumulation in the pores of lime (and of course its carbonate also) from the sugar solution. This view is supported by the facts that the mere repeated reburning of the bone-black, although this must remove all organic matters the latter has retained, does not completely restore its purifying power; and that, under such treatment alone, any bone-black eventually becomes worthless. Corenwinder, an eminent German chemist, has stated as axiomatic the principle that, "The decolorizing power of charcoal in sugar-refining is correlative to its power of absorbing lime." And it has been calculated that the lime—the remains of that used in treating

the cane-juice—already in the raw sugars refined in England, amounts to from 7 to 10 lbs. to the ton.

The modes that may separately be resorted to for restoring the power of bone-black, are those of—1, washing it with hot water; 2, charging with water and leaving several days to ferment; 3, washing with very dilute chlorhydric acid; 4, exposing to the slow action of air and moisture; 5, reburning, that is, heating in closed retorts, to redness. Commonly two of these modes are combined, as, by washing with water and then reburning; or, fermenting, drawing off the liquid, and then replacing it with fresh, acidulated with $\frac{1}{4}$ to $\frac{1}{2}$ per cent. of chlorhydric acid. This, and a little acetic acid formed during fermentation, dissolve out some of the retained lime; but they also attack the lime-salts of the bone, rendering the latter friable and causing waste.

Ure (*Supplement*) describes four modes of reburning bone-black; namely, 1, the common method of burning in iron pipes, in which, however, the black is liable to be unequally acted on, and the pipes to be destroyed by corrosion; 2, that of Parker, improved by Chantrell, of burning in fire-clay chambers, not liable to be corroded, and which is now coming into more general use; 3, Mr. Torr's method of burning in rotating cylinders; and, 4, that of MM. Laurens and Thomas, of reburning in a proper apparatus by superheated steam. The latter two, though expensive, both give excellent results. The authority just quoted also remarks: "To reburn charcoal, the best methods are those which most rapidly remove the water raise the temperature of each grain of charcoal to a uniform temperature (*sic*) of 700° F., and which admit of its being readily cooled without contact with the air."

Some years since it was a quite general practice to use the same black (wastage excepted for a period of six months, more or less, returning every day the portions used on the preceding, or, as often as the decolorizing power failed. At the end of such period, the charcoal was laid aside as no longer available; and latterly, it has then commonly been employed for the making of "superphosphate of lime," for fertilizing. The plan now resorted to by many refiners, is that of washing the black, as it comes from the filters, with water, then reburning, sifting out occasionally such fine dust as will to some extent necessarily result, and as the water may not have removed, and then returning again into the filters; varying this course, however, as often as may be judged necessary, with a view to freeing the black more effectually of lime, by removing the contents of the filter after use directly into "fermentation tanks, adding water acidulated with a little (about one half of one per cent.) chlorhydric acid, and allowing to ferment for seven days; then drawing out and washing, in order to remove the chloride of calcium which has resulted from action of the acid on the absorbed lime; when, finally,

the coal is returned as before, and returned to the filters. Such a method being properly carried out, there is no necessity of throwing aside the charcoal after a stated period; but its use is continued until, being gradually removed in form of fine waste, it must be replaced by new.

Lepay and Cuisinier's Process, with Steam, and Alkaline and Acid Solutions.—The authors named presented before the Academy of Sciences, Paris, on the 10th of February, 1862, a new theory of, and process for, the revivification of bone-black. They had found that the common supposition, to the effect that the black loses and again has restored within it, at the same time, its absorptive powers for *all* the different sorts of impurities, is erroneous; that such powers are not simultaneously exhausted; that, when exhausted, they can be revived in succession, and require different means; and that, in the process of reviving, the total absorbing power of the black can be increased.

Thus, the authors state that the absorption for the viscid, azotized, ammoniacal, sapid, and odorous matters in a saccharine solution is exhausted in about four hours' time [referring evidently to the case of beet juice and syrups, in which such matters abound], and is to be restored by passing a blast of steam through the charcoal in the filter, as may be done an indefinite number of times; that the absorption for free alkalies, lime, and salts, is exhausted in from 24 to 32 hours, and is to be restored by pouring on the charcoal in the filter a weak solution of chlorhydric acid, and afterward washing thoroughly with water; that, if the black were not sooner revived, the absorption for coloring matters would be lost in a period from 30 to 40 times as long as the first—a power, to aid in restoring which, a weak boiling solution of a caustic alkali [or of its carbonate, as of soda] is to be applied. All the operations indicated can be performed on the charcoal directly as it stands in the filters; or, if it be removed from them, in similar receptacles. Finding, moreover, that the *bibasic* phosphate of lime ($2 \text{ CaO}, \text{HO}, \text{PO}_3$), while it is mainly insoluble in water, possesses a much higher absorbing power for the impurities in syrups than does the *tribasic* phosphate ($3 \text{ CaO}, \text{PO}_3$) naturally present in the bone, the authors complete their process by pouring upon the charcoal in the filters a dilute solution of the *monobasic* phosphate of the same base ($\text{CaO}, 2\text{HO}, \text{PO}_3$, known also as the "biphosphate"): by reaction of the two salts thus commingled, some *bibasic* phosphate results in the coal; and, though the addition may in part have in view the restoring of absorbent power lost through the previous action of chlorhydric acid on the bone, yet it is stated that, as the actual result, the decolorizing and purifying powers of the latter are made even greater than when it was fresh, and than after any mode of merely reburning.

MM. Lepay and Cuisinier have also employed the tribasic phosphate of lime for pre-

cipitating the matters rendering syrups, etc., turbid, and that more completely than is effected with blood. The specifications for their United States patent (of the year already named) cover the use, separately or in succession as may be required, of steam, of solution of carbonate of soda, of dilute chlorhydric acid, and of the monobasic phosphate of lime; clarification with phosphates; and the collecting of the ammoniacal gases expelled from bone-black during revivification, thus incidentally also obviating their escape into the atmosphere.

Prof. Calvert's statement of the practical application of this method is briefly as follows: After escape of all the syrup from the filters, the black is washed through in them with hot water, and the viscid, ammoniacal, saline, and coloring matters are then removed, and some of them in successive parts, by—1, throwing in steam from below; 2, washing through with alkali, in a weak solution; 3, washing with a weak solution of chlorhydric acid, to dissolve out lime; 4, completing the removal of coloring matters, by washing again with alkali; and 5, adding solution of biphosphate of lime, to increase the absorbent powers of the coal. So far as objection has been raised against this process on the ground that its application is tedious, the same objection would appear more or less to hold against all revivifying processes which are in the highest degree effectual. And whether the process itself prove practicable or not, yet the highly original results at which the authors named have arrived will still possess much theoretical value. Their influence, indeed, appears to be already shown in the character of the more recently devised processes, as in that of Mr. Beanes, who would seem to have used, and in some respects improved on, certain of the ideas of MM. Lepay and Cuisinier.

Beanes's Process with Chlorhydric Acid Gas.—The statements of Mr. Medlock, already cited because of their general application, were made in connection with his account of the revivifying process of Mr. Edward Beanes, of Kilburn, England, now to be considered. The object aimed at by the latter was that of devising a plan by which the absorbed lime and carbonate of lime may be removed from the contents of the filters, without attacking the lime-salt of the bone.

In Mr. Beanes's original process, the bone-black, removed from the cylinders, dried and rendered quite hot, is then treated by throwing through the mass a current of perfectly dry chlorhydric acid gas: this is apparently absorbed, and in enormous quantities, reacting in reality with the previously absorbed lime in the black to form chloride of calcium, which is highly soluble; while, as stated, the phosphate of the bone is not attacked. Subsequently, a portion of untreated black is mixed with that so purified, the former serving to neutralize any still uncombined acid; and, the chloride of calcium being washed out, as is done in a few

hours' time, the charcoal is then reburned in the usual way. Mr. Medlock states that the decolorizing power of bone-black so treated is augmented at least 50 per cent.

The patent in this country of Mr. Beanes's process is held by the firm of Havemeyer and Elder, of Brooklyn (E. D.), New York, Mr. T. A. Havemeyer of that firm having, and partly in communication with the original inventor, introduced considerable improvements in the process as above described. The following is substantially the improved method of treatment of the bone-black now practised in the refinery of the firm named. The coal having been washed through with hot water in the filters, is then, in order to remove, or at least to render soluble, a portion of the viscid and other matters with which the grains have become coated, transferred to large tanks partly filled with water, and within which steam is thrown upward through the mass, for about an hour. Removed from these tanks, the black is then passed through the ordinary inclined cylindrical washing-machines, to wash out the matters thus far rendered soluble, and also the fine dust; the latter being caught, in the usual manner, by means of a succession of partitions forming pits in the channel in which the washings are conveyed away. From the washing-machines the black is transferred to a second set of tanks, and again steamed through, in order to dry it; and it is then burned in retorts of the ordinary form, and partly cooled. While yet quite hot, however, the black is elevated again to an upper floor, and is filled into large cylindrical iron tanks which terminate below in form of an inverted cone, and within which it is to be saturated with the chlorhydric acid gas.

The gas named is generated beneath, within a suitable cast-iron retort, by action of sulphuric acid on common salt; and in order, as is requisite, to render it perfectly dry, it is then passed through a large cylindrical "drier" filled with broken masses of chloride of calcium—a substance the avidity of which for moisture is well known. From the drier the gas is passed into the inverted-conical saturating tanks, and in each, by extending the tube far enough down, nearly to the lower or small extremity of the cone. Being at the proper time allowed to escape at this point into the hot and dry coal with which the tank has been filled, the gas rapidly spreads through and is absorbed by the coal; and when, upon trial or from experience, the portion of the coal occupying the lower part of the cone is judged to have its absorbed lime completely saturated with the chlorine of the chlorhydric acid, the mouth of the tank is opened, this portion of the coal being allowed to flow out, while a fresh portion of course descends to take the place of the former, and to receive in turn the charge of gas entering. The absorbed lime of the bone-black being thus converted into chloride of calcium, the black is then again elevated and filled

into iron cylinders, within which the chloride is to be leached out with hot water. In effecting this, steam is at first, in order to expel free chlorhydric gas and air, introduced into the filled cylinders from above, and the washer then filled with hot water, which, after a time, is allowed to run out; and these operations are several times repeated alternately, until a test of the water escaping shows that no chloride of calcium remains; after which the black is finally steamed, to expel water. The bone-black is removed from these cylinders directly to the filters, and employing anew in filtering. Besides advantages such as have been already intimated, it is claimed that the application of the general process now described necessitates less space for apparatus and materials, and involves less waste than the ordinary process by fermentation.

Disposition of Refuse Bone-black.—The turning-over of the charcoal, in the old methods, when its power is no longer restored by re-burning, for the manufacture of the so-called superphosphate of lime, has already been mentioned. Where the charcoal is not thus laid aside in bulk, the manufacture is still carried on by use of the dust screened out after re-burning. The refuse charcoal is mixed with sulphuric acid—this being in some cases also, in this country at least, the refuse from the refining of petroleum—in order, from the *tribasic* phosphate to produce the more highly phosphorated lime-salt, which is valued as a fertilizer. Thus, the spent charcoal from the cane-sugar refining in this country, and perhaps generally, is rarely if ever *directly* sought as fertilizing material. In the beet-sugar manufactories of continental Europe, however, owing to the naturally great impurity of beet-juice and syrups, and the general use of blood in refining, the charcoal becomes rapidly and so completely charged with organic matters and salts, that its value as a fertilizer may even exceed the original cost. Accordingly, from the manufactories in France it has, heretofore at least, been delivered in large quantities, being then exported to the amount, it is stated, of 120,000 tons annually, to the French colonies, as manure for the sugar crops; while, further, the Government has even appointed analytical chemists to the special duty of determining the value of the refuse charcoal for the trade.

BOURBON, MARIE AMÉLIE DE, ex-Queen of the French, widow of Louis Philippe, born in Naples, April 26, 1782, died at Claremont, Surrey, England, March 24, 1866. She was the second daughter of Ferdinand I., king of the Two Sicilies, by Marie Caroline, archduchess of Austria. With her four sisters she was carefully educated under the direction of Madame d'Ambrosio, and early displayed the germs of those amiable qualities which distinguished her in after-life. She was scarcely ten years of age when the French fleet appeared in the bay of Naples; and from that time onward, during the period of the first victories of Napoleon, the

royal family were kept in a perpetual state of anxiety and alarm. At length on the conquest of Naples, in 1798, Ferdinand and his queen fled into Sicily with their children. The Princess Marie Amélie remained at Palermo with her mother during the first Neapolitan revolution, but in 1800 the queen and her daughter went to Vienna, returning to Naples two years later. Renewed political outbreaks compelled them again to retire to Sicily, and it was during this second residence there that the princess, for the first time, met the Duke of Orleans, then, like herself, an exile from his country. In 1809 they were married at Palermo, where they resided in tranquillity and peace until 1814, when the restoration of the House of Bourbon restored the young duke to his due position in France. The duchess joined him in a few months, but the events of the Hundred Days soon compelled her to take refuge with her children in England until 1817, when she returned to Paris. From this period down to the Revolution her residence was in France, where her beauty of character and gentle piety won the esteem even of the enemies of the House of Orleans. Taking no part in political life, she devoted herself to the education of her children, and to works of charity. The Revolution of 1830 most unexpectedly placed her husband on the throne, and made her Queen of the French. Ere she had been many years in this exalted position she was called to bury, in 1839, an accomplished daughter, and in 1842 was suddenly bereaved of her eldest son, with whom perished the best security of the house of Orleans. A few years later (in 1848) she was called to strengthen and support her husband under his trials. When the king declared his determination to abdicate, she rebuked him with earnestness, pronouncing revolution a crime and abdication cowardice. "Sire," said she, "a king should never lose his crown without making an effort to defend it." Nevertheless, when she saw that resistance was of no avail, the queen subsided again into the wife, and she prepared to accompany her husband in his melancholy flight. Subsequently in the quiet seclusion of Claremont she devoted herself to the task of soothing the regrets and cheering the heart of the king until his death in 1850. She was a woman of remarkably strong affections, and had not only the entire love and respect of her own immediate family, but won the hearts of all with whom she was in any way associated. Though a strict Roman Catholic, she made no distinction on account of faith in her charities, and was held in the highest veneration by all the poor around her. In accordance with her own expressed wish, she was buried in the dress she wore on leaving France in 1848, for her long exile, and in her widow's cap in order to show "how unalterably faithful she remained to the two guiding feelings of her life—her devotion to her royal husband, and her love for her adopted country."

BRAINERD, Rev. THOMAS, D. D., an eminent Presbyterian clergyman and author, born in Central New York, June 17, 1804, died at Scranton, Pa., August 22, 1866. He was a direct descendant of Daniel Brainerd, of Puritan renown, passed most of his childhood in the vicinity of Rome, Oneida County, N. Y., and after graduating at Hamilton College, turned his attention to the study of law. Before engaging in practice, however, he discovered his true sphere in life, and entered the Theological Seminary at Andover, Mass., as a student of divinity. Here he was recognized as a student of uncommon promise. After completing his course in the seminary, he removed to Philadelphia, and placed himself under the tuition of the Rev. Dr. Patterson, for whom he also preached at times in the First Presbyterian Church of the Northern Liberties. Prompted by an ardent zeal for the extension of Christ's kingdom in the frontier States, he removed to Cincinnati, where he found a promising field of missionary labor. Here he became the assistant of the Rev. Dr. Lyman Beecher, and besides attending to his pastoral duties, edited a weekly journal, now the "Christian Herald," and assisted in editing the "Presbyterian Quarterly Review." At that time the home missionary cause was passing through a serious conflict. The newly-founded Theological Seminary, under the lead of Dr. Lyman Beecher, was involved in great trouble. Dr. Beecher, as the representative of what was called "the New School," was assailed with unrelenting opposition, and no little virulence, by the Rev. Dr. Wilson and his adherents. Throughout this season, the young editor did effective work for the truth, and made his paper a power in the land. In 1835, upon the resignation of the Rev. Dr. Ely, Mr. Brainerd was called to the charge of the Old Pine Street Church, Philadelphia, the pulpit of which he has from that time filled in the most satisfactory and successful manner. As a preacher, Dr. Brainerd was earnest and eloquent, and as a pastor, faithful and beloved by his entire people. He was of very industrious literary habits, having been a frequent contributor to the literary monthlies, and the author of numerous published sermons and tracts. Not long since he gave to the world what he modestly styled his "first book," which bore the following title: "The Life of John Brainerd, the Brother of David Brainerd, and his Successor, as Missionary to the Indians of New Jersey." This work was ably written, and created a considerable sensation in the religious and literary world.

BRANDE, WILLIAM THOMAS, D. C. L., F. R. S., etc., an English physician, chemist, lecturer, and author, born in 1786; died at Tunbridge Wells, February 11, 1866. After an education at Westminster, he was sent to Hanover, but in 1803, on the panic of Bonaparte's invasion, he returned home and entered St. George's Hospital, attending the lectures and the dissecting-rooms. In 1808 he commenced lecturing upon

chemistry, and soon after became connected with a new medical school in his town, and rapidly attained a reputation as a teacher and demonstrator of chemistry. In 1809 he was chosen Fellow of the Royal Society, and a few years later was Dr. Wollaston's successor as secretary. In 1812 he became Professor of Chemistry and Materia Medica to the Apothecaries' Company, and in 1851 was elected Master. In 1813 he was, on the recommendation of Sir Humphrey Davy, appointed Professor of Chemistry at the Royal Institution, and delivered lectures for many years in conjunction with Mr. Faraday, who was also associated with him as editor of the "Quarterly Journal of Science." In 1825 he was appointed Superintendent of the Die Department of the Mint, and some years after, Fellow and Examiner of the London University. Besides Professor Brande's famous "Manual of Chemistry," which has been translated into so many foreign languages, he was author of "Outlines of Geology," "Encyclopædia of Science and Art," republished and extensively sold in this country, and many valuable papers in English medical journals. In 1853 he received the honorary degree of D. O. L. from the University of Oxford.

BRAZIL. Emperor Pedro II., born December 2, 1825; succeeded his father, Pedro I., on April 7, 1831. The emperor has no son. His oldest daughter, Princess Isabella, was married, October 15, 1864, to the Count d'Eu, son of the Duke de Nemours, and grandson of the late King Louis Philippe of France.

A new ministry was appointed on August 6, 1866, composed as follows: Finances, Zacharias de Góes Vasconcellos, President of the Council; Interior, José Joaq Fernandes da Torres; Justice, João Lustosa da Cunha Paranaguá; Foreign Affairs, Martinho Francisco Ribeiro da Andrada; War, Angelo Moniz da Silva Ferraz; Navy, Dr. Affonso Celso de Assis Figueiredo; Public Works, Agriculture, and Commerce, Dr. Manoel Pinto de Souza Dantas.

American minister at Rio de Janeiro, J. Watson Webb (accredited October 21, 1861); Brazilian minister at Washington, J. M. N. d'Azambuja (accredited April 23, 1865).

The receipts in the year 1864-'65 amounted to 59,476,675 milreis. The budget of 1865-'66 estimates the expenditures at 67,522,980 milreis and the receipts at 52,000,000; probable deficit, 12,522,980. The internal consolidated debt amounted, on March 31, 1866, to 90,442,200 milreis; the external consolidated debt to 14,735,200 milreis.

The total force of the army amounted to 74,818 men. Of the two corps in the field, the first numbered 33,078, and the second, 15,396 men. The fleet, in 1866, consisted of 10 iron-clads, exclusive of two in course of construction, 57 other armed vessels, and 10 non-armed vessels. A law of May 13, 1864, fixes the force of the marine, for the year 1864-'65, at 3,000 men, and, if necessary, at 5,000.

The exports from 1864 to 1865 amounted to

141,068,000 milreis, and the imports to 131,594,000 milreis. The movement of shipping of the year 1863 to 1864 was as follows:

FLAG.	ARRIVALS.		CLEARANCES.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
Brazilian	374	61,604	368	45,196
Foreign.....	2,516	854,197	2,428	954,257
Total.....	2,890	915,801	2,796	1,000,053
Coasting trade (under the Brazilian flag).....	2,966	567,482	3,870	653,651

The area of Brazil is estimated at 3,000,460 English square miles. The population, according to the census of 1858, was 7,677,800. (By rectifying the statements for some of the provinces, Baril de la Hure, in his work *L'Empire du Brésil*, changed these figures into 7,755,657.) According to the official census of 1859, the population exceeded 8,000,000. The *Geographia*, published by the Senator Pompeo (Rio de Janeiro, 1864), gave the population of the empire as 10,045,000.

In November the emperor liberated the national slaves, the profits of whose labors belonged to the crown. Large numbers of the freedmen entered the Brazilian army.

A second "National Exposition" was held in 1866, which was closed on December 10th, in the presence of the imperial family. The closing address of the president of the directing committee, Conselheiro Souza Ramos, stated that the exposition opened with 18,391 products contributed by 2,127 exhibitors, to which were afterward added 1,737 products furnished by 247 contributors from Pernambuco and Ceará, thus raising the number of articles shown to 20,128, representing 2,374 exhibitors, an increase of 10,266 articles and 1,238 exhibitors over those of the exhibition of 1861, although for various reasons Matto Grosso, Goyas, Minas Geraes, Espirito Santo, and Alagoas did not forward collections. The number of visitors was 52,824, against 18,553 in 1861, and the committee remark with pride that not a single disagreeable circumstance occurred even on the most crowded days. They also pay a tribute to the great interest taken in the exposition by the imperial family, and their frequent visits to it, and careful examination of the articles exhibited.

On December 7, 1866, the following highly important decree, opening up the Amazon and other rivers, was published:

With the wish to promote the welfare of the empire, and to draw closer international relations by opening the navigation and commerce of the River Amazon and its tributaries, the River Tocantins and the River San Francisco, and having consulted with my ministers of state, I have resolved and do hereby decree as follows:

ART. 1. From the 7th of September, 1867, shall be open to the commerce of all nations, the navigation of the River Amazon as far as the frontiers of Brazil, of the River Tocantins to Cametá, of the River Tapajós to Santarem, and of the River Madeira to Manaus.

ART. 2. At the date fixed in article one, shall be also opened to foreign navigation, the River San Francisco as far as the city of Penedo.

ART. 3. The navigation of the tributaries of the Amazon, in places where only one bank belongs to Brazil, shall depend on treaties yet to be made with the States holding title to the other bank as to the respective limits of each State as well as to fiscal and police regulations.

ART. 4. The present act shall in no way alter or interfere with existing treaties of navigation and commerce with the republics of Peru and Venezuela, according to the regulations already published.

ART. 5. My ministers and secretaries of state, through their respective departments, shall attend to the arrangement of the treaties spoken of in article three, and shall issue the necessary orders and regulations for the due execution of the present decree.

Signed by the Emperor and by the Minister of Foreign Affairs, Antonio Coelho de Sa e Albuquerque.

PALACE OF RIO DE JANEIRO, Dec. 7, 1866.

The Amazon runs through the very centre of Brazil, and, unlike most, if not all, of its tributaries, it is navigable throughout its whole course of nearly 4,000 miles. It is deep, with a uniform current uninterrupted by rapids or cataracts. The tides of the Atlantic into which it flows, through an embouchure 180 miles wide, are felt 400 miles from its mouth, where the water is twenty fathoms deep, and the river more than a mile across. On its banks and on each side the interior produces maize, rice, coffee, sugar, cotton, tobacco, spices, timber, medicinal plants, horned cattle, gold, iron, and lead. The tributaries, which enter this river from the neighboring country of Bolivia were opened by the Bolivian Government to the navigation of all countries in 1853, but the value of this concession was neutralized by the then and subsequent policy of the Brazilian Government in refusing to open the Amazon. Now the Amazon is free from the frontiers of Brazil to the ocean, and a great channel for trade, population, and civilization is open to all nations. The Tocantins, which is a tributary of the Amazon, is about 1,200 miles long. Owing to rapids and cataracts, it is not navigable, except in patches, for any thing near this extent, but it runs through exceedingly fertile countries, producing most of the articles just enumerated. Owing to the natural obstacles of rapids and cataracts, the decree specifies that it is open from the sea to Cametá, which is on the left bank, and a rising city with 40,000 inhabitants; the Tapajoz to Santarem, also a growing place; and the Madeira to Manáos, a name which represents a province rather than a town. The San Francisco is the other great river opened to free navigation. It is said to resemble the Volga, the largest European river in length and the most diversified in character. It has a course of about 1,300 miles; but it is to be opened only to Penedo, which is not far in the interior, owing to the natural obstructions to navigation. But at intervals it is navigable for 200 miles at a stretch, and the current is rapid enough to carry vessels, without any other aid,

100 miles in twenty-four hours. Like the Volga, it is, in places, subject in the dry season to shallows, and in the wet to inundations, but these inundations fertilize a wide extent of country. Gold is found among its deposits. The sugar-cane thrives on its borders. It was on this river, at a place now called Salitre, that the extensive deposits of nitrate of soda were discovered, which excited so much interest in this country and in Europe about eight or nine years ago. There is said to be one valley, sixteen leagues broad by twenty leagues long, where this product is to be found in many places on the surface, and in all with little or no labor. As a superficial manure or top-dressing, nitrate of soda is of great value to agriculture, and it may be brought to this country at a cheap rate now that the river is open.

The regular session of the Brazilian Parliament was opened by the emperor on May 3d. In his speech he announced the birth of the Prince Dom Pedro, son of Princess Leopoldina and Duke August, of Saxe-Coburg Gotha. He congratulated the country on the recent victories on the Paraná, and called the attention of the members to the necessity of inquiring into financial matters. Among the most important bills adopted by both Houses and signed by the emperor, were a resolution upon the Bank of Brazil and the improvement of the circulating medium, and bills on the postponement of the elections and for an extraordinary supplemental credit for the expenses of the war. The session was closed on September 16th by a speech from the throne, which thus referred to the subjects of greatest importance for the country: "The United States of North America have given to Brazil the most complete satisfaction for the violent capture in the port of Bahia of the privateer Florida by the war-steamer Wachusett. The war to which the President of Paraguay provoked us still continuing, the Government is employing with effect the means necessary to vindicate the national honor, aided therein ever by the patriotism of all Brazilians. The hopes of a good harvest in the generality of the products of our industry fortunately are being realized. The public tranquillity has been disturbed in no part of the empire, which is due to the disposition and growing civilization of the people."

The Government of Brazil, and all classes of the people, continued to feel a deep interest in immigration, and showed a great desire to promote it. An official publication on the subject, by the Government, states: "Immigrants will find an abundance of fertile land, suitable for the culture of cotton, sugar-cane, coffee, tobacco, rice, etc. These lands are situated in the provinces of Rio Grande do Sul, Santo Catharina, Paraná, São Paulo, Espiritu Santo, and Rio de Janeiro; and each immigrant may select his own lands. As soon as the immigrant has chosen his land, it will be measured by the Government, and possession given on the price stipulated. Unoccu-

pied lands will be sold at the rate of 23, 46, 70 or 90 cents per acre, to be paid before taking possession, or sold for terms of five years, the immigrants paying six per cent. interest yearly, and receiving the title of property only after having paid for the land sold. Immigrants will enjoy under the constitution of the empire all civil rights and liberties which belong to native-born Brazilians. They will enjoy liberty of conscience in religious matters, and will not be persecuted for their religious belief. Immigrants may become naturalized citizens after two years' residence in Brazil, and will be exempt from all military duties except the national guard (militia) in the municipality. No slaves can be imported into Brazil from any country whatever. Immigration of agriculturists and mechanics is particularly desired. Good engineers are in demand in the empire. In January, 1866, an International Immigration Society was established at Rio de Janeiro for the purpose of encouraging immigration. The Brazilians hoped especially for a large increase of the immigration from the United States, but although this immigration did not altogether cease, it did not assume the dimensions which the Brazilian Government expected.*

The most complete and most accurate work on Brazil in the English language, is the new edition of "Brazil and the Brazilians," by Rev. James C. Fletcher and Rev. D. P. Kidder, D. D. (New York, 1866.) The new edition affords abundant information of the latest date in regard to the material and moral progress of Brazil.

BREMEN, a Free City in North Germany. First Burgomaster (1863-'67), Ch. F. G. Mohr. Area, 113 square miles; population, in 1864, 104,091. Receipts, in 1865, 1,819,220 thalers; expenditures, 1,757,961 thalers. Army, 760 men. Value of imports, in 1865, 77,294,373; exports, 70,879,834. The merchant navy was composed, at the close of 1864, of 294 vessels. After the German-Italian war, Bremen joined the North German Confederation.

BRIDGES. *The Hudson River Bridge at Albany.*—This bridge crosses the Hudson River at Albany, about half a mile above the old railroad ferry, or middle of the river line of the city, and forms a connecting link between the New York Central Railroad on the west, and the Hudson River, New York and Harlem, and Albany and Boston Railroads on the east. The approaches to the bridge, designed ultimately to consist of masonry and embankment, are at present temporarily built of timber trestle-work, varying in height from three to twenty feet, with timber truss bridges over Montgomery, Centre, and Water Streets, on the Albany side.

The main bridge consists of twenty spans, of

the following clear widths: three over the Albany basin of 66 feet each, four fixed spans of 172 feet each, and two draw spans of 111½ feet each, over the main channel, and one span of 71 feet, and ten spans of 66 feet each, across the flats on the east side; and stands about 30 feet clear height above ordinary summer tide level of the river.

The substructure consists of twenty-one stone piers, all resting on foundations of spruce piles, from twelve to fourteen inches in diameter, and driven from two and a half to three feet apart between centres, and generally from twenty-four to twenty-eight feet below low-water level. In preparing the foundations for the masonry, different methods were adopted in different portions of the work. In the case of the pivot pier, and the three main channel piers east of it, the site of each pier was first excavated to a depth of about twenty feet below low water, and of a length and breadth considerably greater than the intended pier, and, after the piles were driven, a strong crib of twelve-inch square timber was built around them, the sides of the cribs being kept from spreading by ties of one and one-eighth inch square iron, placed twelve feet apart in each course of timber. The crib was then sunk upon the bottom of the excavation, having been made of sufficient height to bring the top thereof within two feet of low-water level. The interior of the crib was then filled with concrete, composed of coarse gravel and hydraulic cement, and the surplus excavation around the cribs filled with loose stone up to within twelve feet of low water, to support the crib and avert any danger from scouring; the piles were then cut off level with the tops of the cribs, and the whole covered with a platform of six-inch plank, upon which the stone work was commenced. For the westernmost pier in the main channel, which is in the deepest water, no excavation was made, but the piles were cut off to a level about a foot above the bed of the river, and the masonry sunk upon them by means of a timber caisson. For each pier in the basin the piles were cut off six feet below low water, a strong platform moored over them, on which the masonry was commenced, and lowered upon the piles by means of screws. For the piers on the flats, east of the main channel, the site of each was excavated to a depth of about three feet below low water, the piles driven as for others, and cut off about one foot below low water. The excavation was then filled around and over the heads of the piles with concrete, about up to low-water line, and upon this the masonry was commenced.

The masonry of the piers and abutments is composed of the best quality of limestone of a bluish-gray color.

The stones in each course are clamped together with strong iron clamps, and each course is secured to the one next above and below by iron dowels. The shape of the ends of the piers in plan is that of a gothic pointed arch,

* Fletcher and Kidder, "Brazil," New York, 1866, give on pp. 105-106, the following description of the immigration system: "The immigrants are received at the port of Rio de Janeiro, and are then sent to the various colonies. The immigrants are sent to the colonies in small boats, and are received at the port of destination. The immigrants are then sent to the various colonies, and are received at the port of destination. The immigrants are then sent to the various colonies, and are received at the port of destination." This is a very long and tedious sentence, and it is not clear what it means.

being formed by two circular arcs of sixty degrees each. The up-stream edge or nose of each main channel pier is sloped back at an angle of about thirty degrees from the perpendicular, the better to enable them to resist, break up or turn aside masses of ice or other floating bodies. The pivot pier has guards, constructed of stone in the same manner as itself, placed up and down stream at the proper distances to receive the ends of the draw when swung open, and connected with the pivot pier by timber crib-work filled with loose stone.

Superstructure.—The superstructure, designed ultimately to be of iron, and to carry a double track, at present consists of a single-track timber bridge, all except the draw spans being on the Howe plan.

The trusses of the long spans are twenty-four feet high, and those of the short spans nine feet high. The clear width between the trusses is fifteen feet.

The draw, designed by Col. J. W. Adams, is the "arch brace plan," the peculiarity of which consists in having the main supporting braces radiate from the ends of the lower chords to different points in the length of the upper chords, thereby transmitting the weight of the bridge and load *directly* to the abutments. The ends of the draw when swinging are supported by eight chains composed of iron bars 5×1 inches, extending from the top of a central tower sixty feet high to the ends of the lower chords of the trusses.

The turn-table of the draw consists essentially of a series of seventy rollers, placed between two circular tracks, one being fastened to the masonry of a pivot pier, and the other to the under side of the bridge. The faces of the tracks, which are nine inches broad, are accurately planed, so as to present no obstacle to the movement of the rollers, which are turned true and smooth. The rollers are twelve inches in diameter, and nine inches long on the face. They are placed in the annular space between two concentric iron rings, and kept at the proper distance by radial bars, which connect the inner ring with a collar fitted to and revolving around a central pivot-pin six inches in diameter.

The Cincinnati Suspension Bridge.—This bridge was designed and built by John A. Roebling, Esq. The total length of this bridge, including the approaches from Front Street, Cincinnati, and Second Street, Covington, is 2,252 feet; length of main span from centre to centre of the towers, 1,057 feet; length of each land suspension, 281 feet; width of bridge in the clear, 36 feet; its height above low water, 100 feet; height of towers from foundation, without turrets, 200 feet; height of turrets, 80 feet; number of cables, 2; diameter of cables, 22½ inches; strands in each cable, 7; wires in each strand, 740; wires in both cables, 10,360; weight of wire, 500 tons; deflection of cables, 63 feet; strength of structure, 16,800 tons; masonry in each tower, 32,000 perches; ma-

sonry in each anchorage, 13,000 perches; total amount of masonry, 90,000 perches. Size of towers at base, 86 by 52 feet; at top 74 by 40 feet. The wrought-iron floor beams (the length of two of which makes the width of the bridge) are each 19 feet long by 5 inches wide; and there will be two joined in every five feet of the bridge—one to each suspender. The weight is 20 pounds per foot. Two iron trusses 10 feet high separate the foot road-ways, one on each side, from the carriage-ways; and flat-iron tracks, of accommodating width, are laid for wheels to run upon. The wrought-iron girders, 30 feet long and 12 inches wide, will run the entire length, under the middle of the bridge. The estimated total cost of this bridge is about \$1,750,000.

The Connecticut River Bridge.—The Connecticut River Bridge, erected on the line of the New Haven, Hartford, and Springfield Railroad, where it crosses the Connecticut River, has been replaced by an iron bridge on the same line as the old wooden structure, without interrupting the traffic of the road. The difficulty of this undertaking will be appreciated, when it is considered that twenty-two regular trains, and from two to four extra trains, pass over the bridge daily, and mostly during working hours.

The new bridge was designed and erected under the direction of James Lauria, Esq. The iron work was contracted for by William Fairbairn & Co., and the London Engineering and Iron Ship-Building Company.

The several spans were constructed from the plans by the above firms, put together with bolts, and every part fitted and adjusted before being shipped. The rivet-holes were all drilled or punched, and such parts as could be permanently put together without being too cumbersome, were riveted by machinery.

In arranging the spans of the new bridge all the old piers and abutments were made use of, with the necessary alterations and additions to bring them up to the proper height for the new girders.

In the middle of each of the 177-foot spans across the river, with the exception of the middle or channel span, a new pier was built, like the old ones, so as to divide the seven river spans of the old bridge into twelve of 88½ feet each, with one of 177 feet in the centre.

For convenience in building the new piers, a temporary track was laid inside the old bridge, supported by the lower chords, over which the stone for the lower part of the piers was hauled, and lowered to its place.

The general form of girder is that of a truss composed of rolled plate, angle and T iron. The posts or compression bars are vertical, and the ties or tension bars are at an angle of about 45° with the chords, the several parts being all firmly riveted together.

There are three distinct varieties of this general form adopted for the different lengths of spans, by which the use of bars beyond a cor-

tain size is avoided in the longer spans, as rolled bars of a much greater width than nine inches cannot be depended upon for such uniform strength and tenacity as the smaller bars.

The difference consists in the arrangement of the tie bars. In the channel span of 177 feet, the ties cross three of the panels formed by the vertical posts; in the 140 feet and 88½-foot spans they cross two panels, while in the 76½ feet span they cross but one panel.

When the ties cross three panels diagonally, as in the channel span, the truss partakes somewhat of the character of a lattice; and the principle is capable of being extended still farther for longer spans by making the ties cross four or more panels according to the length of the girder.

The work of erecting the bridge was commenced the last week in June, 1865, and progressed without interruption until the whole of the iron work was finished, on the 1st of February, 1866.

Before commencing the iron work of the several trusses, a series of blocks were laid across longitudinal timbers placed under the position to be occupied by each girder, for the purpose of supporting it during construction. These blocks were of the proper height to give the required camber to the girders, and were placed under each post. Upon these were first placed the plates of the lower chord, which were then riveted together in their proper places. Next, the posts were placed in position and riveted to the plates of the lower chord. The top chord was then put on, first the side plates and angle irons, then the horizontal plates and covers. After the plates were all riveted, the camber blocks upon which the girders were built were removed by striking the wedges upon which they rested, leaving the girders supported by the ends.

During the construction of the bridge, as soon as any part was finished and the track placed upon it, heavy trains, weighing about one ton to the foot, were run over it to test its safety. These loads were not so heavy as it was designed ultimately to subject the bridge to as a test, on account of the rest of the bridge, where the iron work was not completed, not being in a condition to bear the extra strain.

The channel span, however, was subjected to a severe test by loading it with railroad bars, in addition to a heavy train of four cars loaded with iron, with the engine and tender; in all, about 220 tons. This would be about 1½ tons to the foot. With this load the deflection of the girders was $\frac{1}{8}$ " on one side, and $\frac{3}{8}$ " on the other. When the load was removed there was a permanent deflection of only $\frac{1}{16}$ " on one side and none on the other.

The cost of the iron, delivered in New York, was \$241.55 per ton, in United States currency, \$117.18 of which was premium paid upon gold. The total cost of the iron work of the bridge erected and completed was \$277.41 per ton, or 12 $\frac{3}{4}$ cents per pound.

The Susquehanna Bridge.—This bridge, designed and executed under the direction of George A. Parker, Esq., is situated nearly one mile above the mouth of the Susquehanna River, and four miles below the head of navigation and tide-water, and has been built by the Philadelphia, Wilmington, and Baltimore Railroad Company, at an expense of nearly \$2,000,000. The engineering difficulties involved in building it were, principally, the unusual depth of water, the unstable nature of the bottom at certain points, and the more than common violence of the ice freshets peculiar to its locality. It is composed of thirteen spans, seven of 250 feet 9 inches each in the clear, east of the draw, and five of nearly the same dimensions, west of the draw.

The draw span is 175 feet long in the clear. The whole length of the superstructure of the bridge, including the draw, from abutment to abutment, is 3,273 feet 9 inches. Its height is 25 feet, and its width 22 feet 6 inches.

The piers are all of solid granite masonry, sheathed from the bottom to the height of extreme high water (eleven feet above ordinary high water) with plate iron. The masonry above water is cut to joints of one-eighth of an inch, and where exposed to lateral pressure is clamped in the courses vertically and horizontally. At the top of the sheathing the piers are eight feet wide, and their sides batter to the bottom at the rate of five-eighths of an inch to the vertical foot. They terminate at each end in triangular starlings seven feet long on the top, which have a double sheathing of wrought iron. They do not project like the ordinary ploughshare-shaped ice-breakers of American bridges, but have a concave outline at their salient edge; not being exposed to the momentum of the ice-fields moving down long planes, this modification of the ordinary form seemed necessary; as these piers have only to meet, when subjected to their greatest strain, a steady crushing pressure, resistance to which cannot be much aided by any mechanical contrivance, but which must be met in the main by simple inertia and irrefragibility. An uncommon degree of inertia (proportioned to bulk) is given to these structures by their iron sheathing, and also by the extraordinary density of the stone of which they are composed; the latter being Port Deposit granite, weighing more than one hundred and sixty-five pounds to the cubic foot. They are 35 feet 4 inches long, and 7 feet 4 inches wide at the bridge seat. The draw pier is circular, 24 feet 8 inches in diameter at the top of the iron sheathing.

The abutments are of solid masonry of the same character as that of the piers, but not incased below the water line. Above high-water line they are hollow, and contain offices and appliances necessary for the uses of the bridge and the railroad. Their upper story is of iron corresponding in architectural character with the covering of the superstructure, which the flank.

The easterly abutment and the six easterly piers rest upon pile foundations. The western abutment, and all the other piers, rest upon solid rock. The eastern abutment was built within an old embankment of earth where the water stood at about the level of the foundation piles; and the abutment on the western shore was built in water seventeen feet deep. The depth of water at the several piers is as follows: at pier one, 21 feet 2 inches, and successively 19 feet 2 inches, 38 feet 5 inches, 7 feet 5 inches, 9 feet 10 inches, 31 feet 6 inches, 30 feet 8 inches, 31 feet 4 inches, 25 feet, 22 feet, 17 feet 6 inches, and 11 feet.

Coffer-dams could not have been used upon the foundations of this bridge with any chance of success, except where the water is shallow, or rather where it is of ordinary depth, for it is nowhere of much less depth than the St. Lawrence, where it is the deepest at the site of the Victoria Bridge; nor could pneumatic piles have been used here but in exceptional cases. It would have been hazardous in the extreme also to have attempted to use the method adopted by Mr. Brunel at the Salrash Bridge. The ruder and more unscientific methods, dependent more or less upon chance for their efficacy, which are sometimes resorted to by engineers in difficult situations, were altogether unavailable here, for various reasons. The means actually employed, therefore, for effecting the under-water work were necessarily somewhat different from the ordinary, and consisted mainly in the use of portable iron caissons sunk upon prepared foundations, partly by the use of screws, and partly by means of guide piles only. Where the foundations were of piles, these were driven as far as was possible with a ram weighing 2,200 pounds, and were sawed off at a level as much below the river bed as was practicable. The sawing was effected by a very simple machine, which accurately did its work in depths of water exceeding forty-two feet, at the rate sometimes of

sixty piles per day. At one of the piers where the water was thirty-nine feet above the foundation piles, a construction wharf was built around the site in the manner shown in the accompanying drawing. The caisson of this pier was

FIG. 2.

fastened to a timber platform, four feet thick. The platform was made to move vertically within guides attached to these constructed wharves. Three arms projected from each side of the platform. Screws of three and a half inches in diameter and fifty-six feet long, secured to simple turning-gear erected upon the deck of the wharves, were passed vertically through nuts contained in these arms. Upon the screws turning horizontally, and having no other movements, the pier was made to descend, or, if required by any exigency, to move in the opposite direction. This movement is excellently well illustrated by the elevators used at hotels. The caisson was designed to be water-tight. The boiler-plate iron used was three-eighths of an inch thick from the bottom to within ten feet of the surface of the water, and elsewhere one-quarter of an inch thick.

It was made rigid by angle iron attached to the sides and ends in rows about seven feet apart. During the process of lowering, it was heavily braced inside with oak timber, to strengthen it against the pressure of the water outside, which at some points in the descent was sixteen pounds to the square inch.

The superstructure of this bridge has some peculiarities. It was originally designed to be of iron, but when the time came for its erection that material could not be procured of the requisite quality with that promptness which the emergency required, and, though with great reluctance on the part of the engineer, timber was employed as a substitute. The chords of the trusses vary in their dimen-

MODE OF SINKING PIERS AT SUSQUEHANNA BRIDGE.

FIG. 1.

sions to suit the strains imposed upon them. This variation is made necessary by the great length of the span, which could not be reduced

on account of the situation. The upper surface of the bottom chord and the lower surface of the top chord are curved therefore, in

FIG. 3.

FIG. 4.

FIG. 5.

stead of being straight, as is usual in timber bridges. The saving in dead weight is one of the least advantages of this arrangement, though that is not inconsiderable. The covering of the trusses will be of galvanized iron, having openings between the braces, as shown in the drawing. The principal braces are so wide apart as to permit a man to pass between them and within the covering from one end to the other of the bridge.

ELEVATION OF HALF SPAN, SUSQUEHANNA BRIDGE.

BRITISH NORTH AMERICA, comprising Canada, Nova Scotia, New Brunswick, Newfoundland, and Prince Edward Island. His Excellency Right Hon. Charles Stanley, Viscount Monck, Governor-General of British North America, and Captain-General and Governor-in-chief in and over the Provinces of Canada, Nova Scotia, New Brunswick, and the Island of Prince Edward, and Vice-Admiral of the same, etc. Denis Godley, Governor-General's Secretary; Lieut.-Col. Hon. Richard Monck, Military Secretary; Capt. Pemberton, 60th Rifles, aide-de-camp; Lieut.-Col. Irvine, Provincial aide-de-camp; Lieut.-Col. Bernard and Lieut.-Col. F. Cumberland, Extra Provincial aides-de-camp.

The Canadian Cabinet.—Sir N. F. Belleau, Receiver-General and Premier; Hon. A. J. Fergusson Blair, President of the Council; John A. Macdonald, Attorney-General for Upper Canada, and Minister of Militia; George E. Cartier, Attorney-General for Lower Canada; W. P. Howland, Acting Minister of Finance; William McDougall, Provincial Secretary; Thomas D'Arcy McGee, Minister of Agriculture and Immigration; A. Campbell, Commissioner of Crown Lands; W. P. Howland, Postmaster-General; J. C. Chapais, Minister of Public Works; James Cockburn, Solicitor-General for Upper Canada; Hector E. Langevin, Solicitor-General for Lower Canada.

Nova Scotia.—His Excellency Lieutenant-General Sir William Frederick Williams, of Karr, Baronet, K. C. B., Lieutenant-Governor.

New Brunswick.—His Excellency Major-General Charles Hastings Doyle, Administrator.

Newfoundland.—His Excellency George Dundas, Esq., Lieutenant-Governor.

Prince Edward Island.—His Excellency Anthony Musgrave, Esq., Lieutenant-Governor.

The Reciprocity Treaty between Canada and the United States.—This was the subject of a conference between a delegation from the Colonial Government of Canada and the Committee of Ways and Means of the United States House of Representatives, in January, 1866. The interviews took place at the Treasury Department, Washington, with the approval of Hon. Mr. McCulloch, Secretary of the Treasury. The Colonial delegates were the Hon. Messrs. Galt and Howland (Canada); Henry (Nova Scotia); and Smith (New Brunswick); and the Congressional committee, Messrs. Morrill, of Vermont; Hooper, of Massachusetts; Brooks, of New York; Garfield, of Ohio; Wentworth, of Illinois; Conkling, of New York; Moorhead, of Pennsylvania; Allison, of Iowa, and Hogan, of Missouri.

After a general discussion upon the subject of reciprocal trade, Mr. Morrill submitted, on behalf of the committee, the following list of articles which he thought should be admitted to the United States with no higher duty than the pressure of the United States internal revenue tax: Fish of all kinds; products of fish; hides, furs, skins, and tails, undressed; horns, manures; pitch, tar, turpentine; ashes; coal, firewood; plants, shrubs, and trees; fish-oil; rice, bark; gypsum, unground; burr and grind stones, unwrought; rags, except woollen, unwrought.

The articles mentioned below he thought should be made to bear a higher import duty

than the pressure of the United States internal revenue tax: Grain, flour, and breadstuffs of all kinds; animals of all kinds; fresh, salted, and smoked meats; cotton, wool, seeds, and vegetables; undried fruits, dried fruits; poultry, eggs; stone or marble, slate; butter, cheese, tallow, lard; timber and lumber of all kinds; pelts and wool; dyestuffs; flax, hemp, and tow; unmanufactured tobacco; woollen rags; burr and grind stones, wrought.

There were three other points embraced in the proposition from the House committee. First, the mutual use of the waters of Lake Michigan and the St. Lawrence. Second, the free transit of goods under bond between the two countries, and in that connection the abolition of the free ports existing in Canada. Third, the concession of the right of fishing in provincial waters.

The Hon. Mr. Galt, on behalf of the Colonial delegates, stated their objections to the proposition with frankness and ability. He thought that all the articles on the free list of the reciprocity treaty, and such others as might be agreed on, should be dealt with on the basis of imposing custom duties as heavy as the internal taxes of the United States. With reference to the fisheries and navigation, he took the ground that no new arrangements were required. As to the transit trade, he agreed that it would be desirable that the regulations for passing goods under bonds should be reduced to the form of a law, and there seemed to be no reason why a uniform system should not be adopted. With reference to the assimilation of duties between the two countries, he said that it would be the desire of the Colonial delegates to unite with the committee in making the duties upon spirits, beer, tobacco, and cognate articles affected by the excise duties upon them, such as might be determined to be the best revenue standard. As to other articles, the Colonial Government was disposed to make mutual arrangements on a satisfactory footing. Mr. Galt expressed the hope that the time would come when the policy of the United States would not be as restrictive as now. With regard to the navigation of the internal waters, it would seem to be advantageous to both sides to have the trade free. He also expressed the willingness of the Canadian authorities to assimilate their patent laws to those of the United States.

On the 6th of February, all the questions involved having been discussed at numerous sittings, the Colonial delegates rejected the American proposition as a whole, and expressed a feeling of disappointment at the unsuccessful termination of the conference. Mr. Galt stated that the Canadian Government were prepared to let the present trading facilities continue without asking for any further security from the United States, or giving any assurances on the part of Canada. The question of the fisheries they would leave, as it would be left at the termination of the treaty, to be dealt with by the several Legislatures of the United States on the one

hand, and of the British Provinces on the other, as they might please. On the subject of fisheries, Mr. Henry (representing Nova Scotia) said that it was one upon which, above all others, the population of Nova Scotia were divided in opinion, as to whether they were not the losers under the present condition of things. He considered, at all events, that to yield the right of fishing within the prescribed limits is a very large bounty given for the opening of the United States market for the single article of mackerel. Before the treaty, the duty on mackerel was about \$2 per barrel, and the United States now proposed that on condition of giving up the exclusive right of the fishing, mackerel should be admitted with no higher rate of duty than the pressure of the United States internal revenue tax; but this would amount to \$1.50 in gold, or about \$2 in currency. The question was, therefore, really on the same footing as before the treaty. Under that treaty also a good deal of cheese and butter were admitted into the United States, free; but under the proposed new tariff these would now be taxed. The people of Nova Scotia would therefore feel on all accounts that, in acceding to the proposal of the committee, they would be giving up a decided advantage without any equivalent whatever. Mr. Henry stated, as the opinion of himself and associates, that the object of the committee was apparently not merely to devise a plan for collecting revenue from the Canadian trade, but to put in force the principle of protection.

Mr. Morrill replied that the rates on the part of the United States were fixed with a view to revenue only.

After a further general conversation, the conference broke up, and, on the next day, the following memorandum, embodying the views of the delegates, was presented by them to the committee:

WASHINGTON, February 6, 1866.

Memorandum.—In reference to the memorandum received from the Committee of Ways and Means, the Provincial delegates regret to be obliged to state that the proposition therein contained, in regard to the commercial relations between the two countries, is not such as they can recommend for the adoption of their respective legislatures. The imposts which it is proposed to lay upon the productions of the British Provinces on their entry into the markets of the United States, are such as, in their opinion, will be in some cases prohibitory, and will certainly seriously interfere with the natural course of trade. The imposts are so much beyond what the delegates conceive to be an equivalent for the internal taxation of the United States, that they are reluctantly brought to the conclusion that the committee no longer desire the trade between the two countries to be carried on upon the principle of reciprocity. With the concurrence of the British minister at Washington they are, therefore, obliged respectfully to decline to enter into the engagements suggested in the memorandum, but they trust the present views of the United States may soon be so far modified as to permit of the interchange of the productions of the two countries upon a more liberal basis.

The delegates also submitted the following report to the British ambassador at Washington:

WASHINGTON, February 7, 1866.

To His Excellency Sir Frederick Bruce, K. T. B., &c.:

SIR: We have the honor to inform your excellency that the renewal of our negotiations for reciprocal trade with the United States have terminated unsuccessfully. You have been informed from time to time of our proceedings, but we propose briefly to recapitulate them.

On our arrival here, after consultation with your excellency, we addressed ourselves, with your sanction, to the Secretary of the Treasury, and we were by him put in communication with the Committee of Ways and Means of the House of Representatives. After repeated interviews with them, and on ascertaining that no renewal or extension of the existing treaty would be made by the American authorities, but that whatever was done must be by legislation, we submitted as the basis upon which we desired arrangements to be made the enclosed paper (marked A).

In reply, we received the memorandum from the committee, of which a copy is enclosed (B). And finding, after discussion, that no important modifications in their views could be obtained, and that we were required to consider their proposition as a whole, we felt ourselves under the necessity of declining it, which was done by the memorandum also enclosed (C).

It is proper to explain the grounds of our final action:

It will be observed that the most important provisions of the expiring treaty relating to the free interchange of the products of the two countries were entirely set aside, and that the duties proposed to be levied were almost prohibitory in their character. The principal object for our entering into negotiations was therefore unattainable, and we had only to consider whether the minor points were such as to make it desirable for us to enter into specific engagements.

These points are three in number.

With regard to the first—the proposed mutual use of the waters of Lake Michigan and the St. Lawrence—we considered that the present arrangements were sufficient, and that the common interests of both countries would prevent their disturbance. We were not prepared to yield the right of interference in the imposition of tolls upon our canals. We believed, moreover, that the privilege allowed the United States of navigating the waters of the St. Lawrence was very much more than an equivalent for our use of Lake Michigan.

Upon the second point—providing for the free transit of goods under bond between the two countries—we believe that in this respect, as in the former case, the interests of both countries would secure the maintenance of existing regulations. Connected with this point was the demand made for the abolition of the free ports existing in Canada, which we were not disposed to concede, especially in view of the extremely unsatisfactory position in which it was proposed to place the trade between the two countries.

On both the above points we do not desire to be understood as stating that the existing agreements should not be extended and placed on a more permanent basis, but only that, taken apart from the more important interests involved, it did not appear to us at this time necessary to deal with them exceptionally.

With reference to the third and last point—the concession of the right of fishing in provincial waters—we considered the equivalent proposed for so very valuable a right to be utterly inadequate. The admission of a few unimportant articles free, with the establishment of a scale of high duties as proposed, would not, in our opinion, have justified us in yielding this point.

While we regret this unfavorable termination of the negotiations, we are not without hope that, at an

distant day, they may be resumed with a better prospect of a satisfactory result.

We have the honor to be your excellency's most obedient servants,

A. T. GALT, Minister of Finance, Canada.
W. P. HOWLAND, Postmaster-Gen'l, Canada.
W. A. HENRY, Attorney-Gen'l, Nova Scotia.
A. J. SMITH, Attorney-Gen'l, New Brunswick.

Canadian Trade with the West Indies, Brazil, and Mexico.—When it became evident that the reciprocity treaty between the United States and Canada would be abrogated, a confederate council of trade was held in Quebec September, 1865, at the suggestion of the Imperial authorities, and a committee appointed to investigate the trade of the West Indies, Brazil, and Mexico, with a view to obtain new commercial advantages for Canada. This committee, which proceeded on its mission in December of that year, was composed as follows: From Canada, Hon. William McDougall, M. P. P., Provincial Secretary; Hon. Thomas Ryan, M. L. C.; J. W. Dunscombe, Esq., Collector of Customs for Quebec, and A. M. Delisle, Esq., Collector for Montreal; from Nova Scotia, Hon. James McDonald, M. P. P., Financial Secretary, and Hon. Isaac Levisconte, M. P. P.; from New Brunswick, William M. Smith, Esq., Collector of Customs at St. Johns; from Prince Edward Island, Hon. Wm. H. Pope, M. P. P., Colonial Secretary. The party sailed for St. Thomas, West Indies, and there divided into two; Messrs. Dunscombe, Levisconte, and Pope going to Brazil, and the others visiting the West Indies. The services of a war-steamer were placed at the disposal of the latter body by the admiralty. The commissioners were instructed to report "the nature and extent of the productions of the respective countries they visited," and particulars as to their "trade, tariffs, and all other burdens imposed upon commerce, the ordinary prices current," etc., and to offer suggestions tending to remove obstructions to the rapid increase of direct trade between British America and tropical regions.

In the West Indies, the commissioners made an agreement with the Governors of Demerara, Trinidad, the Windward Islands, the Leeward Islands, and Jamaica, that "customs, duties, and port charges on the produce and shipping of the respective colonies, should be levied solely for revenue purposes, and for the maintenance of indispensable establishments; and that the several governments will be prepared to consider, in a liberal spirit, any complaint having reference to imposts that may be preferred by another government, on the ground that such imposts are calculated to obstruct trade." They also made a conditional agreement to aid in the establishment of improved postal communication. In Brazil the commissioners hastened the throwing open of the coasting trade of the empire, and other concessions were promised, to follow, in due time, the close of the war with Paraguay. On their return, the commissioners submitted to the Provincial Parliament a report containing the desired de-

tails of information, and offered the following suggestions:

1. To establish promptly a line of steamers suitable for the carriage of mails, passengers, and freight, between Halifax, Nova Scotia, and St. Thomas, in the West Indies, touching (until the completion of the Intercolonial Railway) at Portland, in the United States, so as to insure regular semi-monthly communication between the ports mentioned.
2. To make a convention or agreement with the postal authorities of the United States for the prompt transmission of letters, etc., from Canada and the maritime Provinces, by every United States mail which leaves the ports of Boston or New York for the West Indies, Brazil, Mexico, etc., and also for the transmission through United States mails of correspondence originating in those countries.
3. To establish a weekly line of steamers between Montreal and Halifax, and to complete as soon as possible the Intercolonial Railway.
4. To procure, by reciprocal treaties or otherwise, a reduction of the duties now levied on flour, fish, lumber, pork, butter, and other staple productions of British North America, in the West Indies, and especially in Brazil and the colonies of Spain.
5. To obtain, if possible, from the Spanish and Brazilian authorities a remission of the heavy dues now chargeable on the transfer of vessels from the British to the Spanish and Brazilian flags.
6. To procure, by negotiation with the proper authorities, an assimilation of the tariffs of the British West India colonies in respect to flour, lumber, fish, and the other staple products of British North America, a measure which would greatly facilitate commercial operations, and may well be urged in view of the assimilation about to be made in the tariffs of Canada and the maritime Provinces.
7. To promote by prudent legislation, and a sound fiscal policy, the rapid development of the great natural resources of the British North American Provinces, and to preserve as far as it lies in their power, the advantage which they now possess, of being able to produce at a cheaper cost than any other country, most of the great staples which the inhabitants of the tropics must procure from Northern ports.

Fenian Disturbances.—The colonies were much agitated at times during the year by raids, actually made or expected to be made, by Fenians upon their soil. A concerted and formidable attack from that mysterious organization was anticipated on St. Patrick's day. Fourteen thousand volunteers responded to the call of the Canadian Government within twenty-four hours. The towns and villages along the frontier were strongly garrisoned. The United States authorities acted promptly to prevent an invasion across the Maine boundary. The day, which was awaited with much anxiety on both sides of the line, passed off without any hostile demonstration. The volunteers were gradually sent home. On the 1st of June, however, an invasion of Fenians really took place. A band of between 1,000 and 1,500, under General O'Neil, crossed in canal-boats near Buffalo and took possession of Fort Erie. Volunteers from various portions of Canada were hurried forward to meet them; and on the 2d of June the battle of Limestone Ridge was fought, in which nine Canadian volunteers were killed, and a large number wounded. The volunteers retreated, and the Fenians, after remaining a short time in possession of the field, fell back, and, receiving no reinforcements, for the most

part recrossed the river into the United States. A barge filled with Fenians was captured by the United States steamer Michigan, which had been stationed off Black Rock to intercept them, but they were soon afterward released. General Grant, U. S. Army, was at Buffalo at this time, on his way westward, and took steps to prevent any more Fenians crossing. Major-General Meade, U. S. Army, proceeded to Ogdensburg, and exerted himself to prevent reinforcements or arms from entering Canada from that direction. On the 7th of June the Fenians, reported from 1,000 to 1,200 strong, under General Spear, crossed the line from Franklin, Vt., to St. Armand, and proceeded to plunder the surrounding country. They were driven out on the 9th by the Canadian volunteers, and fifteen of their number captured. In the mean time, President Johnson had issued a proclamation for the maintenance of neutrality; General Sweeney and staff had been arrested by the United States authorities at St. Albans, Vt., Roberts, the Fenian President, in New York, and three Fenian colonels in Buffalo. Two car-loads of Fenians, on their way North, were put off the train at Watertown by order of General Meade. No other Fenian invasion occurred during the year. The trial of a number of Fenian prisoners took place in Toronto, in October. About half of the prisoners had already been set free, the evidence as to identity being insufficient. Two of those tried—Lynch and McMahon—were sentenced to death, but afterward respited. Other trials were held in Sweetsburg, in December. Three were sentenced to death, and three to seven months' imprisonment. The prisoners reaped the advantage of the fact that the law applying to foreign invaders was only passed on the 8th of June, and nearly all the acts of a warlike nature occurred in the two previous days. After indictment, therefore, the Governor-General instructed the crown-officer to enter a *nolle prosequi* against those indicted for acts performed on the 6th and 7th. (See FENIANS.)

The Canadian Parliament.—Early in the session acts were passed to facilitate the trial of the Fenians in Lower Canada, by extending an Upper Canada act respecting foreigners invading the country to the eastern Province, and also to facilitate arrests of any seditious persons by the suspension of the *habeas corpus* act. (The Parliament of New Brunswick also suspended that act on the first day of its session after the general election.) The indemnity asked by the Government for the unauthorized expenditures for the militia was readily voted. A proposition by the finance minister to assimilate the tariff in some respects to those of the Lower Provinces, and in other respects to that of Great Britain, was, in its principal recommendations, approved and adopted. A bill relating to education in Lower Canada, designed to secure to the Protestants of that Province necessary instruction apart from the Catholics, who were a majority in the local Legislature,

was defeated; and Mr. Galt, the finance minister, who had framed the bill, felt therefore bound to resign. With regard to the local constitutions, provision was made against altering the boundaries of counties returning English-speaking members without their own consent. The new civil code of Lower Canada was passed, and went into force on the 1st of August.

On the 15th of August, Parliament was prorogued. If the course of his address to the Governor-General on that occasion, the Speaker of the Legislative Assembly said:

Immediately upon the opening of the present session, the attention of the Legislature was directed by your excellency to the outrages which had been committed upon the soil of Canada by a lawless band of marauders, who had crossed the frontier at various points from the neighboring States, and assailed the lives and property of our peaceable citizens. The formidable aspect of this invasion had compelled your excellency, by the advice of your ministers, to call out for active service a large portion of the volunteer militia force of the Province, and to incur considerable expense in defending the frontier from aggression. No sooner had we returned from your excellency's presence, than, with an alacrity and unanimity unprecedented in the history of Parliament, the bills were passed through all their stages, conferring upon your excellency the necessary powers for dealing summarily with all those misguided persons who had been or might be hereafter concerned in the senseless movement which is known by the name of Fenianism, and empowering the Government to act with the utmost promptness in the maintenance of law and order throughout the land.

In view of the approaching change in the political condition of British North America, our attention has been seriously directed to the formation of the local governments of Upper and Lower Canada to be connected hereafter by a federative union with the maritime Provinces. Resolutions embodying the opinions of the Legislature upon this momentous question have been matured, agreed upon, and transmitted to your excellency, to be forwarded for the consideration of the Imperial Government. The gradual but decided change of public opinion in New Brunswick and Nova Scotia on behalf of a closer alliance with Canada, the favor with which the scheme of confederation has been received by the most eminent statesmen in the mother country, and the satisfaction evinced throughout these Provinces at the prospect of political union with those who are already so nearly connected with us by ties of interest and friendly intercourse, agree in encouraging the hope that we are about to enter upon a new era, wherein the British colonies in North America will become a great, powerful, and wealthy nation, clearing the closer to the parent state because of the freedom we enjoy under the beneficent rule of our beloved queen.

Lord Monck, in his speech from the throne, alluded to several of the most important events of the half year, as follows:

It must be a source of satisfaction to you to feel that the credit of the Province will be strengthened, and her commercial operations will be extended by the changes which have been made in the duties on imports, and other financial alterations tending to reduce the cost of living in Canada.

We may confidently expect that the effect of the tariff which you adopted will be to provide for the public wants without opening new sources of taxation, and to increase the available resources of the country by enlarging the markets for the industry

of the people. I am particularly gratified that you have enabled me to make provision for those who have suffered by the loss of relatives, or have been wounded during the late attack on the Province. This act is a just tribute, on your part, to the patriotism of the men upon whom devolves the defence of the Province, and will prove to the survivors that they do not serve an ungenerous or ungrateful country.

The votes for purposes of public defence are on a scale which will enable the Government to improve the efficiency of the volunteers in armament, equipment, and drill, and no exertions shall be wanting to apply your grants with effect in each of these particulars.

I rejoice that you have completed your part for the union of the colonies of British North America, and I shall not fail to transmit to the Secretary of State for the Colonies, for presentation to her majesty, your address on this subject. In bringing to a close the last session likely to be held under the act for the union of the two Canadas, I congratulate the Parliament which that law called into existence on the retrospect afforded by the events of the last quarter of a century in this Province. You can mark during the period the firm consolidation of your institutions, both political and municipal, the extended settlement of your country, and the development of your internal resources and foreign trade, the improvement and simplification of your laws, and above all the education which the adoption of the system of responsible government has afforded your statesmen in the well-tried ways of the British constitution.

Confederation.—After securing votes in favor of union and authority to go, from both Legislatures, the colonial delegates from New Brunswick and Nova Scotia left at midsummer for England to perfect the final arrangements for colonial union (Prince Edward Island and Newfoundland declining to send any), expecting the Canadian delegates to follow very shortly. But the session of Parliament was much longer than was anticipated, and during the autumn threats of renewed invasion were pretty constant. It was felt that at such a time the Governor-General and his chief advisers ought not to be absent from the country. There was, besides, a great deal of business to be transacted by the Executive Council which had fallen into arrears during the March and June panic and invasion, and there were the measures passed during the late session to be set in operation. These detained the Canadian ministers who were named delegates until November, and the Governor-General himself until December. Meanwhile the Eastern delegates were urgently calling for the presence of their Canadian colleagues, but busying themselves with doing every thing possible to forward the business of their embassy. Out of their conferences there—the premier of Prince Edward Island being also in London on other business—came an offer of a subsidy to the island to enable it to change its land tenure by purchasing proprietary rights. This was sent to the Canadian Government for its concurrence, but the latter replied that it could not concur without the consent of Parliament, which had already risen. They would, however, if found desirable on further consultation, recommend it to the favorable consideration of the first Confed-

erate Parliament. This was the only possible answer, but it was a severe disappointment, nevertheless, to the friends of confederation in Prince Edward Island. Mr. Howe, with Mr. Annand, had followed the Nova Scotian delegates to England, carrying with them a petition from the anti-confederates of that Province.

A London correspondent of *La Minerve* states that the leading men of both the great parties in England express approval of the project of confederation, and that it is understood the bill to give it effect would be taken up early in the next session of Parliament, so as to be put into operation in the Provinces in the spring.

Agitation for Annexation to the United States.

—A large meeting was held in Kingston, O. W., November 21st, at which a resolution was adopted calling upon the Canadian people to agitate for annexation to the United States. On the 25th of November the Rev. J. Allen preached in the Episcopal cathedral, to a large audience, in favor of that measure. It is stated that a strong annexation feeling exists among the people in the Canadian peninsula between Detroit and Niagara. At the Kingston meeting allusion was made to a bill presented by General Banks, in Congress, on the 2d of July, and on its second reading referred to the Committee on Foreign Affairs. The history of this bill has been thus stated:

In the closing days of March there was introduced into the House a long resolution calling on the Secretary of the Treasury for a statement of the trade of the British Provinces in 1864 and 1865, respectively, * * * "together with such information as may be in his possession calculated to assist in correctly estimating the trade resources of said Provinces and their relations to the trade and productions of the United States." The direct object of this inquiry was to bring out matter bearing upon the reciprocity treaty question; the indirect object was to give some official form to the vague and chaotic ideas afloat regarding the annexation of the Provinces.

The reply to this resolution was laid before the House a month ago. The Secretary's letter is very brief, but it encloses a document prepared, under his direction, by Mr. James W. Taylor, special agent of the Treasury Department of the Minnesota District. "The closing pages of this paper," says the Secretary, "contain some views upon the political relations of the United States and British America, upon which I am not prepared to express an opinion at this time, but to which I invite the attention of the House of Representatives."

Mr. Taylor, in concluding the first branch of his report, says: "Of the relations of the United States and British America, it is evident that both communities are equally interested in two great objects: 1. An ocean navigation from the Gulf of St. Lawrence to Lakes Superior and Michigan; and, 2. An international railroad from Halifax to the North Pacific coast, on a route central to the forests of New Brunswick, Maine, and Canada, the mineral formation of Lake Superior, the wheat-growing plains of Minnesota, and the Saskatchewan valley, and the gold districts of British Columbia." The present situation of these two great interests is then briefly considered. "The problem," he says, "of which every Northwestern State ardently seeks the solution, is such immediate construction of new or enlargement of existing canals as will pass vessels of fifteen

hundred tons' burden, without breaking bulk, from the Gulf of St. Lawrence or the harbor of New York to Chicago or Superior. At present the Superior canal is alone sufficient, as the Welland can only pass a vessel of 400 tons, and the St. Lawrence canals can pass a vessel of only 300 tons. The New York canals are of less capacity.

In this connection the report brings forward numerous figures showing the trade between Chicago and the lake country on the one hand, and the East and Europe on the other; and finally adds that experience has proved that freight charges from Chicago often cover seven-eighths of the value of a bushel of corn, and more than half the value of wheat at Liverpool. It is believed that the enlargement of the Welland and St. Lawrence canals would reduce the cost of grain transportation between the two points fully one-half.

The International Railway project is also discussed, though but briefly. Mr. Taylor believes that a St. Lawrence and Pacific road, even if aided by liberal allotments of land along its line, will require at this time a Government subsidy of at least \$100,000,000; and he does not anticipate that England would assume any material portion of such an obligation; while the Province, even if confederated on the plan somewhat agitated within the last two years, would be utterly unable to undertake such a work during this century.

This abstract brings the report down to the "political views," upon which the Secretary does not now express an opinion. They are summed up in a single sentence, as follows: "I cannot resist," says Mr. Taylor, "the conclusion that events have presented to the people and Government of the United States the opportunity—let me rather say, have devolved the duty—of interposing by an overture to the people of the English colonies on this continent, of course upon the fullest consultation with the Government of Great Britain, to unite their fortunes with the people and the Government of the United States."

This is followed by the draft of "An act for the admission of the States of Nova Scotia, New Brunswick, Canada East, and Canada West, and for the organization of the Territories of Selkirk, Saskatchewan, and Columbia." This is, word for word, the annexation bill with which the name of Gen. Banks has become connected. The Secretary's report, embodying this act, was sent to the Committee on Foreign Affairs, of which Gen. Banks is chairman. He was directed to report the bill and have it recommitted, simply to get it before the committee and the country. That action neither commits him nor his committee to the annexation project, nor to the scheme of this bill. What, now, is the scheme as developed in this bill?

It proposes twelve articles, on the adoption of which the Provinces shall become members of the Federal Union. These define the limits of the new States and Territories, fix the Congressional representation of the States till the census of 1870, convey to the United States all public property of the Provinces, bind the Government to assume and discharge their funded debt and contingent liabilities to the amount of \$85,700,000, guarantee \$10,000,000 to the Hudson Bay Company in full discharge of all claims to territory or jurisdiction, require a survey of the public lands according to our system, etc. Of course its principal feature is the internal improvement project suggested in Mr. Taylor's letter. This lies in the three following articles:

ARTICLE VII. The United States, by the construction of new canals, or the enlargement of existing canals, and by the improvement of shoals, will so aid the navigation of the St. Lawrence River and the great lakes that vessels of fifteen hundred tons' burden shall pass from the Gulf of St. Lawrence to Lakes Superior and Michigan: *Provided*, That the expenditure under this article shall not exceed \$50,000,000.

ARTICLE VIII. The United States will appropriate and pay to "the European and North American Railway Company of Maine" the sum of \$2,000,000 upon the construction

of a continuous line of railroad from Bangor, in Maine, to St. John, in New Brunswick: *Provided*, "The said European and North American Railway Company of Maine" shall release the Government of the United States from all claims held by it as assignee of the States of Maine and Massachusetts.

ARTICLE IX. To aid the construction of a railway from Truro, in Nova Scotia, to Rivière du Loup, in Canada East, and a railway from the city of Ottawa, by way of Sault St. Marie, Bayfield, and Superior, in Wisconsin, Pembina, and Fort Garry, on the Red River of the North, and the valley of the North Saskatchewan River, to some point on the Pacific Ocean north of latitude 49 degrees, the United States will grant lands along the lines of said roads to the amount of twenty sections, or 12,800 acres per mile, to be selected and sold in the manner prescribed in the act to aid the construction of the Northern Pacific Railroad, approved July 2, 1862, and acts amendatory thereof; and in addition to said grants of lands, the United States will further guarantee dividends of five per cent. upon the stock of the company or companies which may be authorized by Congress to undertake the construction of said railways: *Provided*, That such guaranty of stock shall not exceed the sum of \$80,000 per mile, and Congress shall regulate the securities for advances on account thereof.

The Red River Settlement.—The Red River settlement now contains a population of about 10,000, distributed over a territory whose radius is about sixty miles. The centre of business is at the town of Winnipeg, which is the seat of government of the Hudson Bay Company, and their headquarters; Fort Garry is also there. The settlement was represented last summer to be in a prosperous condition, the farmers being much more independent and comfortable than in the newer settled portions of Canada. Many of them cultivate 300 or 400 acres, and have 80 to 100 head of cattle and horses. All the teaming and transport business is done with carts and cattle. Over 4,000 cart-loads of English merchandise came into the Red River country by way of St. Pauls (Minn.) last summer, returning with furs as soon as loads could be obtained. Specimens of the agricultural and mineral resources of the country were sent to the Paris Exhibition. Much interest was felt throughout the settlement in the success of the confederation scheme, and a public meeting was held in Winnipeg in December, to memorialize the Imperial Government in behalf of that measure, and also to express a desire to act in unity and coöperation with the neighboring colonies of Vancouver and British Columbia to further British interests and confederation from the Atlantic to the Pacific.

The Copper-Mines of Canada.—"Hunt's Merchants' Magazine" for October, 1866, contains an account of these mines. The Bruce mines, Lake Huron, owned by the Montreal Mining Company, have yielded, since their opening, in 1847, about 9,000 tons of 18 per cent. copper. In 1861, 472 tons of 17 per cent. were taken out. The deepest working is 50 fathoms from the surface, and the number of men employed 34. The Acton mine, lot 32, range 3, had yielded, up to 1861, about 6,000 tons, averaging 17 per cent. During the first four weeks work, in 1859, about 300 tons of ore containing nearly 30 per cent., were quarried in open cuttings, and without making much impression on the quantity in sight. The ground has been worked on the general slope of the bed to the depth of about 10 fathoms. The

Upton mine, Upton, lot 51, range 20, has yielded 14 per cent. copper. The quantity of rock excavated is not stated. Bissonet mine, Upton, lot 49, range 20, exhibits a bed of 8½ feet thick, and the ore lies in disseminated masses of various sizes up to 20 inches long by 6 to 9 inches thick. It is estimated that the bed would yield from half to three-fourths of a ton of 10 per cent. ore to a fathom. In the Wickham mine, Wickham, lot 15, range 10, an experimental shaft has recently been sunk to a depth of about five fathoms, in which good bunches of ore have been met with. About 4,000 tons have been taken out, yielding 30 per cent. The Yales mine, Durham, lot 21, range 7, has been opened to a depth of from two to six fathoms, revealing good lumps of ore, mixed with calcspar and wall rock. At St. Flavie, about five leagues above the Chaudière, and two leagues from the St. Lawrence, is the Black River mine. In one spot native copper occurs in small masses; and the whole band has a striking resemblance to the upper copper-bearing series of Lake Superior. At Harvey's Hill mines, Leeds, lot 18, range 15, there occurs in a breadth of about 1,000 feet eight courses, composed chiefly of quartz, with various proportions of bitter spar, chlorite, and calcspar, carrying in parts as much as two tons of 20 per cent. ore to a fathom. The rock of the country is a talcoid mica slate. An adit level is being driven through this slate, of the length, when completed, of 220 fathoms. The number of men employed is about 50; but the quantity of ore taken out is not given. At the St. Francis mine, Cleveland, lot 25, range 12, the bed has an average thickness of three feet, and has been traced a distance of 90 fathoms. The monthly yield of ore is about 55 tons of 10 per cent. The Huntington mines at Bolton yield about 10 tons of 10 per cent. ore per fathom. The ores of all these mines are the yellow, variegated, and vitreous sulphurets, mixed in some instances with copper pyrites.

Gold Mines of Canada.—In Canada, the gold-mining operations have been principally carried on in the Chaudière division, in alluvial diggings on the Gilbert River, in the Seigniory of Rigaud Vandreuil (De Léry). About fifty men were working there at the date of the last report (June, 1866). One or two companies are about erecting mills for quartz-crushing. The gold hitherto extracted is estimated as follows:

In summer of 1863.....	\$50,000
In June, 1864.....	5,000
Year ending June, 1865.....	150,000
" " " 1866.....	100,000

The probable falling off in 1866 is explained by the prevailing excitement with regard to quartz crushing, which caused an abandonment of alluvial operations. The largest nuggets found in the Chaudière valley have been worth \$300, and most of the alluvial gold has been obtained in a limited area. In that district, and also in other parts of Canada East,

gold-bearing quartz veins have been discovered of sufficient richness to pay a handsome profit on the cost of crushing and separating.

Gold-Mines of Nova Scotia.—The productiveness of these mines appears to be permanent. They are worked under the direction of the Commissioner of Mines, and the Government reserves a royalty of three per cent. on the gross receipts. The following is the commissioner's report of the number of hands employed in the gold-mines, the tons of quartz raised and crushed, and the daily yield of gold per man employed, from 1862 to 1865 inclusive:

NUMBER OF HANDS EMPLOYED.	
	Yearly aggregate.
1865.....	212,966
1864.....	252,720
1863.....	278,624
1862.....	156,800
Total.....	895,810
	Daily average.
1865.....	500
1864.....	877
1863.....	810
1862.....	682.563
Mean.....	717.895

QUARTZ RAISED.	
	Yearly aggregate.
1865.....	50,002,500
1864.....	42,469,600
1863.....	84,150,400
1862.....	18,480,000
Total.....	140,102,500
	Daily av. per man.
1865.....	284.795
1864.....	168.050
1863.....	124.807
1862.....	86.410
Mean.....	156.482

QUARTZ CRUSHED.	
	Yearly aggregate.
1865.....	48,846,600
1864.....	42,887,686
1863.....	84,150,400
1862.....	18,480,000
Total.....	139,864,686
	Average gold 100 lb.
	Dwt. Grs.
1865.....	1 0.902
1864.....	1 22.312
1863.....	1 19.647
1862.....	1 0.790
Mean.....	22.805

DAILY YIELD OF GOLD PER MAN.			
	Dwt.	Grs.	Gold val.
1865.....	2	8.371	\$2 33
1864.....	1	14.030	1 58
1863.....	1	0.662	1 02
1862.....	..	22.385	94

It also appears from the commissioner's report that the aggregate amount of gold upon which royalty was paid in 1865 exceeded that of the preceding year by about 83 per cent., amounting to 24,687 ozs. for the former period, and 18,744 ozs. for the latter, showing an increase of 6,123 ozs. There is also an increase

of the average yield of gold to the ton of quartz of about five per cent., and a very considerable advance in the amount of the yield for each man engaged in mining. The value of gold produced in 1865 was \$509,080 (paying \$18,088 in rents and royalties); in 1864, \$400,440; in 1863, \$280,020, and in 1862, \$145,500.

The Coal-Fields of Nova Scotia.—The most important coal-fields of this province are in Cumberland County, lying in the immediate vicinity of the Bay of Mines; those upon the Gulf of St. Lawrence, of which Pictou is the centre; and those of the eastern part of Cape Breton, contiguous to the harbor of Sydney. The Cumberland coal-fields have been but slightly worked, the largest veins being some twelve miles' distance from navigable waters. At Pictou, the coal-fields lie immediately upon tide-water. One of the veins has a thickness of 36 feet, more than 26 feet of workable coal. The deposits near Sydney have been found to underlie 250 square miles, an area nearly equal to the entire workable area of the anthracite coal-fields of Pennsylvania. An excellent harbor is contiguous to them, with which the more important veins will soon be connected by railway. As soon as the necessary works can be completed, the supply from the above-mentioned mines can be made equal to any possible demand. It is estimated that 50,000,000 tons of coal can be raised from them without going below water-level. There are several other deposits in Cape Breton, which have been only slightly worked. The following statements, taken from Mr. Taylor's special report to the United States Treasury Department (from which the facts above given have been gathered) show the amount of coal raised and sent to market from Nova Scotia for ten years, up to the end of 1865:

YEARS.	Tons.	YEARS.	Tons.
1856.....	291,934	1861.....	384,548
1857.....	267,808	1862.....	393,621
1858.....	236,618	1863.....	424,325
1859.....	267,496	1864.....	500,000
1860.....	304,129	1865.....	632,854

In reference to the subject of coal-mining the chief Commissioner of Mines, Mr. Hamilton, says: "There are now 80 collieries in operation in Nova Scotia. Some of these are only barely opened, but, with one or two exceptions, works are vigorously prosecuted in all of them, and with good prospects of great and early extension at an early day. In addition to the territory of the General Mining Association, there are now 31 square miles of territory under coal-mining leases. The extent of acres under license amounts to 1,920 square miles. The spirit and activity exhibited in carrying on explorations upon the greater number of these areas under license, and the success which, in many instances, attends such explorations, indicate an early and important increase in the number of collieries in Nova Scotia."

Immigration.—The total immigration into Canada, in 1865, at all points, with an approximate estimate of the distribution of the immigrants, is reported as follows:

Landed at Quebec in 1865, 19,795 steerage passengers, of whom there remained in Canada.....	4,577
Arrived in Canada from the States, by Suspension Bridge and Detroit, as per return of Hamilton Agent, 25,748, of whom there remained in Canada.....	11,276
By steamers on Lake Ontario, from Rochester and Oswego, as per return of Toronto Agent.....	63
By steamers from Oswego and Cape St. Vincent, as per return of Kingston Agent.....	1,446
Number who reached the Ottawa Agency, as per return of Mr. Wells.....	133
By Lake Champlain to Montreal, as per return of Mr. Daley.....	624
By steamers from Portland, from 1st January to 27th April.....	610
By steamers from Portland, from 23d November to 31st December.....	164

Total remaining in Canada..... 18,958

Of which number about 16,000 appear to have settled in Upper Canada, and the remainder in Lower Canada.

Commercial.—The *Montreal Gazette* gives a comparative statement of the imports and exports from that port for the years 1865 and 1866, as follows:

YEARS.	Imports.	Exports.
1865.....	\$19,843,448	\$7,512,752
1866.....	28,793,821	8,599,030
Increase.....	\$8,949,873	\$1,806,278

The *Montreal Gazette* gives the following as the amount of produce shipped from Portland into various provincial ports since the abrogation of the reciprocity treaty up to December 31, 1866:

PORT.	Flour, bbls.	Other merchandise, tons
St. Johns, N. B.....	110,574	973
Halifax, N. S.....	36,360	226
Amherst, N. B.....	600
Annapolis, N. B.....	300
St. Stephens.....	3,720
Total.....	151,854	1,299

The *Gazette* adds that no return has yet been made of the quantity of flour shipped by way of the St. Lawrence, but 300,000 barrels is not too large an estimate for the quantity shipped to the lower Provinces from Canada direct. This would be about two-fifths of the average annual exports of Canadian flour to the United States during the time that the treaty was in force. The *Gazette* maintains that, as regards breadstuffs at least, Canada has not suffered by the abrogation of the treaty.

IMPORTS INTO CANADA FOR THE FISCAL YEAR ENDING JUNE 30, 1966.

Total.....		\$335,892

BURGESS, GEORGE, D. D., bishop of the Protestant Episcopal Church for the Diocese of Maine, an American clergyman, scholar, and poet, born in Providence, R. I., October 31, 1809; died at sea on the deck of the brig *Jane*, a few miles from the harbor of Miragoâne, Hayti, April 23, 1866. Bishop Burgess was a son of the Hon. Thomas Burgess, a judge of the Court of Common Pleas of Rhode Island, and a jurist of great learning and distinction. The early education of the future bishop was acquired in the Grammar School of Brown University in his native city, and he entered the university in 1822, when not quite thirteen years of age, graduated as valedictorian of his class in 1826, the youngest member of the class, which contained an unusual number of eminent men. He entered his father's office as a law student soon after his graduation, and continued the study of the law for three years, being, however, tutor in the university for two years of the time. Having attained the age of twenty years, he was dissatisfied with the legal profession, and his tastes as well as his religious views inclining him to the ministry, he sailed for Europe, and during the next three years studied theology at Göttingen, Bonn, Halle, Heidelberg, and Berlin. Returning to this country in the spring of 1833, he was ordained deacon by Bishop Griswold in June of that year, and the following autumn took charge of Christ Church parish, Hartford, Conn. He was ordained priest by Bishop Brownell early in 1834, and was rector of Christ Church till 1847, when, on his birthday, October 31st, he was consecrated bishop of the diocese of Maine, accepting at the same time the rectorship of Christ Church, Gardiner, Me.,

which office he held up to the time of his decease. As an author he was favorably known. Among his published poems are two academical pieces, "The Strife of Brothers," and "The Martyrdom of St. Peter and St. Paul," the centennial hymn for the hundredth anniversary of the founding of Brown University, and a metrical version of a portion of the Psalms. He had within the last three or four years prepared a new poetical translation of the Psalms, which has not been published. His principal prose works were "Pages from the Ecclesiastical History of New England," "The Last Enemy Conquering and Conquered," and a volume of sermons on "The Christian Life." He received the honorary degree of D. D. from Union College in 1847, and the same year also from his *alma mater*.

Bishop Burgess was a man of fine culture, and in some directions of elegant and profound scholarship. He was an excellent Hebrew scholar, was thoroughly versed in the classics, and surpassed by few in his familiarity with English literature. He was also well versed in history, and in ecclesiastical history was an authority. His prose writings were marked by clearness, terseness, and elegance of style. His poems were melodious, polished, and gave evidence of poetic feeling, but lack somewhat in poetic fire and inspiration. As a preacher he was not so popular as he deserved to be. This was perhaps, in part, due to the fact that, while the style and thought of his discourse were always admirable, and his delivery at times impressive, there was a lack of that kindling life and enthusiasm which powerfully engages the mind, stirs the heart, and, finally, sweeps every thing before it. As a bishop, he had charge of a great extent of territory, with but about twenty parishes widely scattered over it, and while to the severe diocesan labors thus thrown upon him were added the pastoral cares of a large parish, he performed all his duties faithfully and conscientiously, shrinking from no burden or toil, if only he might promote the cause he had at heart. In the House of Bishops he occupied a prominent position, one due more to his intellectual superiority than to any other circumstances. Of late he had been regarded as decidedly the leader of the moderate church party in that house, though considerably younger than some of the bishops of that party. His mind was so carefully disciplined, and his habits of thought so accurate and thoroughly trained, that he could be relied upon at any time for the preparation

of any important paper where accuracy and promptness were equally requisite. His character was remarkable for its symmetry. In him no faculty was dwarfed or unbalanced, but all the powers of his mind existed and acted together in entire harmony. He was not great in any one particular, yet the nice polish, and culture, and evenness everywhere apparent, alone served to point him out in the community as no common man. In him were seen an ardent imagination and high poetic fancy existing in connection with all the attributes of a pre-eminently calm, clear, judicial mind. His life was beyond reproach. His deep and unaffected piety gave color and glow to every action and modified every thought. His death was very sudden. He had sought the climate of the West Indies in the autumn of 1865, in the hope of improving his health, and obtaining relief from a troublesome throat affection. His general health had somewhat improved, but his throat was still seriously affected. He had been busy, however, in promoting an Episcopal mission in Hayti. He had turned his face homeward, was on his way from Miragoâne to Port au Prince, when he was suddenly seized with a profound paralysis, and died in a moment. "It was," says one of his friends, "less like death than like a translation."

BURMAH, a country in Farther India. In consequence of a war with England, which terminated in 1826, the provinces of Aracan, Yé, Tavoy, Mergui, and part of Martaban, were annexed to British India, to which, in 1853, Pegu and its provinces were added. In 1862 the Burmese provinces annexed to India, together embracing 90,070 English square miles, and 1,897,897 inhabitants, were erected into the province of British Burmah. The part which remained independent and now constitutes the kingdom of Burmah, contains about 190,000 English square miles, with 4,000,000 inhabitants.* It is composed of the kingdoms of Burmah and Pong, with portions of the countries inhabited by the Khyen, and the Shan countries and the Kubo valley (Munipoor) re-annexed to it by treaty with the British in 1834. The government is hereditary and despotic; the sovereign is assisted by a council of the nobility, over whom he has a kind of feudal jurisdiction, and the titles of the latter are not hereditary. The religion of the mass of the inhabitants is Buddhism. The Khyens and other wild tribes have a special idolatry of their own. In 1866 Burmah was again the scene of a revolution (the fourth since 1836), of which the Rev. Mr. Kincaid, who was for many years a prominent Baptist missionary in that country,

gives the following account: "On the 2d of August, in the afternoon, two sons of the King of Burmah, the Mengoon prince, twenty-three years old, and his brother, seventeen years old, with some forty chosen men, rushed to the palace of their uncle, who was their apparent, and murdered him, and then two half-brothers and several of the principal ministers of state, and, no doubt, every distinguished man suspected of stern, unyielding attachment to the king. Two of the king's most trusted ministers—the Pabay Mengee, and Loung Shay Mengee—appears to have been among the first who were cut down by the assassins. They were highly respected by all foreigners as well as by the natives. They were comparatively young men, and during the past fifteen years had risen step by step to the highest rank of the nobility. Two or three half-brothers of the rebel princes made their escape, and one, the Thongzai prince, had reached the Shan states, east of the capital. Several governors of distant provinces were assassinated, and so soon after the explosion in the capital that there can hardly be any doubt of a carefully laid and promptly executed plan for overthrowing the king's government. The king himself appears to have been left helpless in the palace. Very likely the men still around the king were in the secret, but, with consummate hypocrisy, pretending the greatest alarm and anxiety. The king has some thirty or thirty-five sons, and as many daughters, the larger number under twelve years old. All, or nearly all, the sons will perish by the hands of assassins. Political necessity is the excuse for such barbarous proceedings. The two young princes, who seem to be the leaders in this 'reign of terror,' are only the tools of a few ambitious men, and probably behind them, a few still more ambitious women; and among these women, the mother of the two young princes is no doubt the prime mover in this revolution. The two young princes, with a body of men, after the execution of all persons supposed to be in their way, took a steamer and went down the river. Stopping at all the principal towns, they took the governor and chief men away, replacing them by creatures of their own. It seems they halted at Mentlha, a large town and capital of a large district bordering on British Burmah. Here they took up their quarters, but dispatched the steamer with letters to Colonel Phayre, the chief commissioner of British Burmah. All or nearly all the foreigners left the capital for Rangoon, in British Burmah, and among them the English resident at the court of Ava." One of Messrs. Todd, Findlay, & Co.'s steamers with a large flat in tow, was at the city, and the foreigners succeeded in making their escape. Possibly they might have remained in safety, but it was hazardous when all government was broken up. The latest accounts received from Burmah (up to November, 1866) state that the revolution had been suppressed. British Burmah is the seat of flourishing Baptist missions (on which

* C. Ritter (*Erkunde von Asien*, vol. iv.) gave to Burmah 4,000,000 inhabitants. Capt. Yule ('A Narrative to the Court of Ava in 1855,' London, 1858) regarded this figure as too high, and he estimated the population of Burmah Proper from 24 north latitude to the frontier of the British possessions at more than 1,200,000, and that of the whole Burmese empire in the widest sense of the word, at no more than 3,600,000. More recently Dr. C. Williams ('Journal of the Asiatic Society of Bengal,' 1864, No. 4) again estimates the population at 4,000,000.—*Geogr. Jahrbuch* for 1866, p. 67.

see ANNUAL CYCLOPEDIA for 1865, page 107, and the article BAPTIST, in the present volume).

BURTON, Rev. WARREN, a Unitarian clergyman, lecturer, and author, born in Wilton, N. H., November 23, 1800; died at Salem, Mass., June 6, 1866. With no better previous advantages than a district school, he achieved by himself a preparation for college, with the occasional instructions of a parish minister who lived two miles distant, and entered Harvard College in 1817, graduating with distinction in 1821. After the usual probation of teaching, he entered the Theological School at Cambridge, where his course of study was interrupted by ill-health, and during absence from the school he preached as an evangelist, by permission of the faculty. In 1826 he completed his theological course, and was ordained as the first pastor of a new Unitarian society in East Cambridge, March 5, 1828, but resigned his charge June 7, 1829. He was not again settled, for he preferred the temporary charge of societies to an actual settlement. On the first of August, 1844, he entered on the duties of a ministry at large in Boston. This ministry ceased in the autumn of 1848, leaving on his mind the im-

pression that reform in the homes of the people was much needed. To this end, he lectured in various places until called to the ministry at large, and the chaplaincy of the prison in Worcester, on which duties he entered in April, 1849. At the close of the year he resigned the ministry, and gave himself wholly to the cause of education in the home, for the remainder of his life. He was chaplain to the State Senate in 1852, and to the House in 1858 and 1860; also to the State convention in 1853. His efforts in the cause of education were unwearied. His "District School as it Was," from its lively and spirited pictures of the wretched condition of the common school in the rural portions of New England, greatly aided in revolutionizing public sentiment and public action in rural school edifices and management. His lecture on "Scenery Showing; or, Word Painting of the Beautiful, Picturesque, and Grand in Nature," opened a new field of educational discussion and practice. He was also the author of "Helps to Education in the Homes of our Country," a volume of 868 pages, published in 1863, and containing a series of subjects of the highest practical value, discussed in a most interesting and masterly manner.

C

CALIFORNIA, one of the Pacific States of the Union, having Oregon on the north, Nevada and Arizona on the east, Lower California on the south, and the Pacific Ocean on the west. It was admitted to the Union September 9, 1850. Its actual area, long in doubt, in consequence of the disputed boundary between it and Nevada, has at last been fixed at 188,981 square miles. Its population in 1860 was 379,994, and is now estimated in round numbers at 500,000. There are forty-nine organized counties in the State. The Governor, till January, 1868, is Frederick F. Low, whose official residence is at Sacramento, the capital. His salary is \$7,000 in gold. The Legislature meets biennially, its members being chosen in the odd years, 1865, 1867, 1869, etc. There was no general election held during the year 1866. The Legislature, elected in 1865, had 32 Union Republicans and 8 Democrats in the Senate, and 61 Union Republicans, and 19 Democrats in the House. The latest general election held in the State was a special one for justice of the Supreme Court, held October 18, 1865, when Sanderson, the Republican candidate, received 33,221 votes, and Hartley, the Democratic candidate, 26,245.

Mining is still the most important interest in California, though agriculture and manufactures are gaining upon it. The mineral products of California, as well as those of the other States and Territories of the Pacific slope, have been made the subject of special investigation during the past year by the United States Government.

From the report of the special commissioner, Mr. J. Ross Browne, made in January, 1867, we gather the following items relative to California. The product of gold in the State has been decreasing for thirteen years; placer mining has fallen to a very small aggregate, and hydraulic washing for gold is less profitable and productive than formerly. The yield of the quartz-mines is slowly increasing. There are 66 quartz-mills in the State, not all of them, however, now in operation. Of these 52 are propelled by water, 11 by steam, and 3 by water and steam. The product of gold in the State in 1866, partly estimated, was set down in round numbers at \$25,000,000. Very little silver has been mined in California separately from that contained in the gold. Copper is becoming an important product of the State. The following table shows the exportation of copper ores from San Francisco since 1862:

YEAR.	To New York.	To Boston.	To Swansea.	Total Tons.
	Tons.	Tons.	Tons.	
1862.....	86	3,574	3,660
1863.....	1,337	4,208	7	5,552
1864.....	4,905	5,064	264	10,234
1865.....	4,146	9,060	2,591	17,797
1866.....	7,676	3,415	10,384	21,475

The quicksilver mines of California are known as the New Almaden mines, and have been open since 1850. In August, 1863, a period of ten years and eleven months, the total amount of ore consumed was 102,813,442 pounds, and the

produce of quicksilver 808,756 flasks, or 23,-519,834 pounds. From November, 1863, to December, 1864, the total product was 46,216 flasks, or 3,566,200 pounds, to which are to be added 720 flasks from washings. In 1865 the gross product was 47,078 flasks, or 3,604,465½ pounds, to which are to be added 116 flasks

from washings. The gross product for 1866 was 80,029 flasks. The other quicksilver mines in California did not average 1,000 flasks per month in 1866. The following is a comparative statement of the amount of quicksilver exported from California to various countries since 1859:

Borax was discovered in California in 1856, and since that time but one company has been formed for its production. About two tons of crystal are produced daily.

In agriculture the State has made considerable progress; the culture of the vine is increasing with great rapidity, and the pure wines and brandies from the Pacific coast are rapidly coming into favor in the Eastern markets. Three hundred varieties of the grape have been successfully cultivated in the State, including all the choicest varieties of wine-producing grapes in Europe; and so diversified is the surface and climate of the State, that every variety of wine which can be produced in European vineyards, from the light Rhenish wines and clarets to the heavy-bodied sherry, port, and Madeira, can be produced of better quality than in Europe, from the greater richness of the soil and dryness of the climate. The vineyards of the sierras, being mostly on a volcanic soil, rival the southern Italian and Sicilian vineyards in their production. The vine in California is not subject to the *oidium*, or grape-disease, which has proved so destructive in Europe; nor is it liable to mildew. In Europe the wine crop is a failure as often as one year out of three; in California it seldom or never fails, and the yield is uniformly much larger than that of the best years in Europe. The number of vines already set—all of which will be in full bearing in three years—is estimated at twenty-five millions. The varieties of wine exported, thus far, are *hock*, *champagne*, *port*, and *claret*; the last exported the past year for the first time. The wine-growers also export *Muscatel* and *Angelica*, which are not properly wines, though ranked as such, being made by the addition of sufficient brandy to the clarified must or unfermented wine to keep it from fermenting. These contain usually 18 or 19 per cent. of alcohol.

The wheat product of the State is large, and is constantly increasing. It comprises 34 per

cent. of the entire agricultural product of the State, and the yield per acre is astonishing. The wheat of California is especially rich in gluten, surpassing in this quality the highly-prized Southern flour. The barley crop is also large, exceeding hitherto wheat or any other grain crop, and forming 39 per cent. of the agricultural product of the State. A yield of 60 bushels to the acre is not uncommon, and in the valley of Pajaro 14,900 bushels were raised from 100 acres—an average of 149 bushels to the acre—by Mr. J. B. Hill. The root crops are enormous, and of excellent quality, as are most of the fruits.

Within the past three years, and mainly in consequence of the earnest efforts of Mr. L. M. Prevost, the attention of agriculturists has been turned to silk culture. The climate of California is admirably adapted to this crop. The *morus multicaulis* grows with great rapidity, and yields an immense quantity of leaves, and the worms feed on them with avidity. The worm is very healthy, and produces cocoons of excellent quality. Eight hundred thousand cocoons were brought into market in 1865, and it was thought that six times that quantity would be produced in 1866. Two large silk factories have been established in the State, and the Californians hope, in a very few years, to cease the importation of silk.

The *manufactures* of California are fast attaining a magnitude which, in the older States, has been reached only by many years of slow growth. Woollen manufactures take a high rank. Three million pounds of wool raised on the Pacific slope, besides considerable quantities imported, were used to supply the woollen mills of the State. The principal articles manufactured were blankets, not simply the Mexican *serapé*, but army and other blankets of great excellence. The Government ordered these largely for the army during the war, as being superior to those obtainable elsewhere. Some

cloths of excellent quality are also made. The necessities of the mining districts led at an early date to the establishment of manufactories of mining implements, and as quartz mining increased, and especially as there began to be a demand for mills of the best class to crush the quartz, and furnaces for reducing refractory silver, copper, and lead ores, machine-works were established capable of turning out quartz-crushers and stamps of the highest quality. The building of steam-engines, both stationary and locomotive, has also risen into a thriving business, and rolling-mills for the manufacture of railroad iron for the Pacific Railroad have recently been established. The manufacture of silk has commenced, and that of glass for the supply of the rapidly increasing wine trade is prospering.

The commerce of the State is attaining large dimensions. The communications with the Atlantic States are now weekly by two lines, and an active commerce is carried on with the western ports of South America, the Sandwich Islands, China, Japan, and Australia. A regular line of steamers of the first class, receiving a Government subsidy, plying to China and Japan, was established in December, 1866, and will undoubtedly be followed by other lines, and when the Pacific Railroad is completed, as it will be by 1870 or sooner, the carrying trade of Asia and the whole of the farthest East must pass through San Francisco.

The Central Pacific Railroad, the portion of the great thoroughfare which California is to build, is making rapid progress. Beginning at Sacramento, which had steam communication with San Francisco, the road was completed nearly or quite to the summit ridge of the great range, 105 miles eastward, by January 1, 1867, and the cars had been running to a point 93 miles from Sacramento since October, 1866. The summit ridge is 7,042 feet above the sea level. The gradients are better than was to have been expected. From Sacramento to Dutch Flat, 68 miles, the highest ascending grade is 105 feet to the mile, or less than one foot in 50, and the average is only 70; from Dutch Flat to Blue Cañon, 10 miles, the maximum grade allowed by Government, 116 feet to the mile, is reached several times, but the longest plane or continuous stretch of this grade is only $8\frac{1}{2}$ miles, and after Blue Cañon is passed it is never reached again. From this latter point to the summit, a distance of $26\frac{1}{2}$ miles, 95 feet to the mile is the highest grade, while the average for this distance is only 84. The tunnel which passes the summit is 1,600 feet in length, and is to be cut through solid granite. There are to be five other tunnels, but none of them will exceed 400 feet in length. The curvatures are better than on most roads over mountain-passes, the sharpest curve being one with a radius of 573 feet. It is expected that Virginia City, Nevada, will be reached by September, 1867, and Salt Lake City by January, 1870, at farthest.

California has taken a high position in its educational system. The report of Hon. John Swett, the Superintendent of Public Instruction, to the Legislature, which met in January, 1866, embraced the two years 1864 and 1865. There were, in 1865, 831 school districts in the State, an increase of 147 since 1863, and in those districts there were 947 schools and 1,155 teachers. There were in the State, in 1865, 95,067 white children between the ages of four and eighteen years, and the whole number enrolled upon the public school registers for 1865 was 50,089, an increase of 2,501 over the previous year; the average daily attendance at the public schools was 29,592 in 1865, against 24,704 in 1864, and 19,992 in 1863. The money for the support of the schools is derived from State and county taxes, a direct property tax levied in the districts, and subscriptions and tuition. The public schools are made free just as fast as the taxes will allow, and there were, in 1865, 293 schools maintained without resort to rate bills. Fully half of the pupils received their instruction free, and the average cost of tuition for the remaining half was only 25 cents per month. The amount of school money received from all sources in 1865 was \$952,930, against \$756,999 in 1864, and \$581,055 in 1863. The amount expended in building and repairing school-houses in 1865 was \$257,804, an increase of \$164,000 over the like expenses in 1863. The valuation of the public school property was \$1,200,000, and the average cost of tuition for each pupil \$10.50 for an average of seven and one-third months for the year.

Of the \$19,657,000 expended by California for all purposes from the organization of the State government up to August, 1865, nearly \$9,000,000 were expended for educational purposes. The average expenditure for each child between four and eighteen years of age in 1865, was twenty cents more than in Massachusetts. The average monthly pay of the teachers was \$74 for males and \$62 for females, an increase in the latter case of \$7.9 over 1864. The salaries of the female teachers were higher than in any other State in the Union, and almost four times as high, deducting board in each case, as in Massachusetts. There was much less difference between the wages of male and female teachers than at the East, and all the leading educators in the State took strong grounds in favor of a more general employment than at present of female teachers in the public schools, not on the ground of cheapness, but because that "to teach and train the young seems to be one of the chief missions of woman."

Aside from the public schools, there was a State normal school, and nearly twenty colleges and seminaries, with a valuation of \$1,500,000, and an attendance of about 2,000. In 1866 the law respecting the school age of children was modified, and the enumeration was made to include only children between five and fifteen years of age. This reduced the number of children of school age about 11 per cent., and the fol-

lowing results were reported in November, 1866: Total number of children between five and fifteen years of age in the State, 84,052; total number enrolled on the school register during the year, 50,173; average number belonging to public schools, 48,091; average daily attendance in public schools, 33,989. The number of pupils enrolled in the normal school was 28, of whom 88 were females and 10 males. Seventeen counties were represented. The number of pupils in the public schools of San Francisco in 1866 was 11,552, and 4,403 were returned as attending private schools. There were three high schools, seven grammar schools, and thirty-one primary schools in the city.

CAMPBELL, ALEXANDER, D. D., founder of the religious denomination called "Disciples of Christ," born in the County of Antrim, Ireland, June, 1786, died in Bethany, Va., March 4, 1866. On his father's side his ancestors were Scotch; on his mother's, French. His early education was received in Ireland, under the superintendence of his father, the Rev. Thomas Campbell, a Presbyterian clergyman, and his higher education at the University of Glasgow, Scotland. In 1809 he emigrated to the United States, and proceeding to Washington, Pa., where his father had previously settled, continued his studies with him until May, 1810, when he commenced preaching at Brush Run, near Washington, Pa. In 1812 he, together with his wife and his father's family, was immersed, to use his own expression, "into the Christian faith." In connection with his father, he formed several congregations, which united with a Baptist Association, but protested against all human creeds as a bond of union, accepting the Bible alone as the rule of faith and practice. He met with much opposition in the assertion of this principle, and in 1827 he was excluded from the fellowship of the Baptist churches. From this date his followers began to form into a separate body, and in 1833 were supposed to number at least one hundred thousand souls. In 1841 Mr. Campbell founded Bethany College in Virginia. In 1823 he commenced the publication of "The Christian Baptist and Millennial Harbinger," in which may be found a complete history of the reform to which he was so thoroughly devoted, and which periodically he continued to edit for forty years. During this time, including his debates, which he merely assisted in bringing out, and two editions of his Hymn Book, he issued from the press fifty-two volumes. He was a man of strong intellect, fine scholarship, and great logical powers.

CANDIA (or CRETE), an island belonging to the Turkish empire. The area of Candia, inclusive of the adjacent small islands, Dia, Yanioles, Elasa, Kupho-nisi, Gaidaro-nisi, Gando, Gando Pulo, Elaphonisi, Pondico-nisi, Grabusa, Azria Grabusa, Theodoro, 3,319 square miles (the smaller islands have about thirty-two). The population is estimated by Captain Spratt ("Travels and Researches in Crete," London,

1865) at about 210,000, living in about 800 villages, and the three towns of Candia, Canea (Khania), and Retimo, which towns have together a population of 85,000 inhabitants. A work on Candia, more recently published in Greece, estimates the number of villages at 1,046, and the population at 300,000.

The island of Candia, which has for about 200 years belonged to the Turkish empire, has often been the theatre of bloody attempts on the part of the people to regain their ancient independence, or become united with Greece. Another uprising of this kind occurred in the year 1866, and was not at the close of the year suppressed. The movement began in April, when representatives from all parts of the island assembled at Koutzounaria, about one hour's distance from the city of Canea, where the Governor-General of the island and the foreign consuls reside. Attended by several thousands of unarmed people, the Bishops of Sidonia and Kissamos met with the representatives of the towns of Canea and Retimo, and of the country districts, and together they drew up a petition to the Sultan, in which they confined themselves to asking for such privileges only as had been guaranteed to them by the great powers. At the same time another address was confidentially transmitted to the sovereigns of France, Great Britain, and Russia, which expressed more fully the real desires of the Cretan people. For over three months no reply whatever was made by the Turkish Government; but troops to the number of about 22,000 were gradually concentrated upon the island, and pushed forward into the interior with the design of seizing upon the strategic points. Then, on July 22, 1866, the Grand Vizier issued a letter to the Governor-General, in which the Turkish Government refused even to entertain complaints, and threatened severe penalties upon those who should continue to offer them. The Governor was directed, in case of further persistence, to attack and disperse the Cretan assemblies, and to arrest and imprison their chiefs in the fortresses.

Ismail Pacha, the Governor, forthwith issued a proclamation, in accordance with these orders. In reply, the Cretan General Assembly, then in session at Prosnoro, decided to take up arms, and on August 1st they addressed the following manifesto to the consuls of the Christian powers:

PROTEST OF THE CRETANS ON TAKING UP ARMS.

PROSNORO, August 1, 1866.

The undersigned, representatives of the Christian population of Candia, met together in a General Assembly of the Cretans, think it their duty to make you witnesses of the violence which has urged them, in spite of themselves, to take up arms for their legitimate defence. Hellenes, both in origin and language, we combated, in company with our brothers of Greece, during the whole of the war of independence, without ever having been admitted to enjoy the fruits of liberty. And yet, in assembling in this place, we had never dared to ask for any thing beyond the rights which the protecting powers had guaranteed to us by treaties and protocols; we

had only presumed to claim the privileges which the Sultan had spontaneously promised us by the *hatti-humayum*. But the Governor-General has perverted the sense of the humble request which we had presented pacifically, asking for fulfilment of sacred promises. After having let us wait three months, he has now at last obtained from the Sublime Porte a negative and menacing reply, and presents himself before us in arms to oppose force to right.

In making the consuls of the Christian powers witnesses of the above facts, we now take up arms in our own defence, and render the authorities responsible, in the eyes of the civilized world, for the consequences.

(Signed by the representatives of the Christian population of Candia.)

On the following day, August 2d, the Governor issued a counter-proclamation to the inhabitants of the island, not referring at all to the grievances of the Cretans, but simply announcing that the local authorities would disperse by force of arms any assembly they might encounter, and forbidding every villager to harbor or in any way assist or join the chiefs of the revolt. The contest now assumed the character of a religious war. The Turkish population committed the most outrageous cruelties against the Christians, and even attacked several foreign consulates, among others that of the United States, when the consuls remonstrated against the atrocities. Several foreign governments were induced by these events to order war-vessels to Candia for the protection of the foreigners and native Christians. The insurgents assembled in the mountains, especially in the district of Sphakia, in the southern part of the island, a force of about 20,000 men, and many women and children from the plains were removed there to protect them from the barbarities of the Turks. In the same month the Cretan Assembly made a direct appeal to the President of the United States, asking the intercession of the United States to obtain the intervention of the great powers. On September 2d the representatives of the several eparchies met in General Assembly at Sphakia, and published a declaration of independence from Turkey, and of annexation to Greece. This document recites the part taken by Candia in the struggle for Grecian independence in 1821-'29; the fate awarded her by the great powers; the violation by Turkey of the conditions prescribed by those powers; the several revolts of 1833, 1841, and 1858, when certain privileges were wrested from their rulers, which have never been carried into execution. It speaks of the advantages of civilized government as contrasted with the retrograde influence of the rule of the Koran. It refers to the recent respectful petition for redress, and to the insulting manner in which it had been refused. It declares that the Christian population never under Turkish rule enjoyed security for their lives, honor, or property; that they are now especially subjected to acts of violence, barbarism, and sacrilege, and are driven to the mountains for refuge or into exile. It then declares that "for all these reasons, and in accordance with the oath taken

in 1821, and with the general desire of the people for the union and independence of the whole Greek race, the General Assembly of the Cretans hereby sanctions and decrees: 1. The abolition, forever, of Turkish rule over Candia and its dependencies. 2. The annexation to Greece, their mother country, under the sceptre of his majesty the King of the Hellenes, George I. 3. The execution of the decree is confided to the courage of the brave Cretan people, to the aid of their noble compatriots, and all Philhellenes, to the powerful intervention of the great protecting and guaranteeing powers, and to the puissance of the Most High."

The Turkish Government, in the mean while, had been pressing forward reinforcements, which it drew partly from Egypt, the Viceroy of which country was reported to have offered to purchase the island from the Porte on terms similar to those on which he had previously obtained the Red Sea provinces of Souakim and Massowah. The commander of the Egyptian troops (Saim Pacha) represented himself as authorized to treat with the insurgents. The latter accordingly sent delegates, but soon found out that the Porte was not willing to abide by the stipulations Saim Pacha would make, and they accordingly recalled their delegates.

Fighting throughout the island began on September 9th. The reports of the progress of the struggle widely differed as they came from Turkish or Greek sources, but during the first weeks the Cretans appear to have gained important advantages. On the 14th of September Kirith Mustapha Pacha, having arrived in the character of imperial commissioner, issued a proclamation promising concessions to the Christians, and granting five days during which they could make their submission. He also ordered the burning of the villages and other barbarities committed by his troops to be stopped, but this order was not obeyed. On the 14th and 16th of September two regiments of Egyptian troops, under Ismail Pacha, arrived. On September 17th the Cretan Assembly published a proclamation, in which the Cretans were exhorted to reject the specious words by which this imperial commissioner tried to lure them, as they could have little to expect from "the man who, during thirty years, oppressed our country, and hung upon trees so many generous martyrs of liberty." On the 19th the Assembly issued another proclamation, enjoining upon the Cretans humane conduct toward prisoners and unarmed people, in return for Moslem barbarity. They should not be driven to retaliation, but on their side conduct the war on Christian principles, sparing the weak and defenceless. On the 22d of September the combined Turkish and Egyptian forces, numbering 20,000 men, assaulted the Cretan camp, extending from Malaxa to Keramia, and were repulsed. The next day the insurgents, having received 2,000 reinforcements, assumed the offensive, and drove the Turks on board their ships, with a loss of 3,000 prisoners. The Cretans

then attacked the heights of Keruza, which command Canea, but were repulsed. Subsequently the Turks were reinforced by the arrival of 8,000 Egyptians, seven Turkish battalions, and considerable artillery. On a renewal of the battle, the Greeks were obliged to fall back upon the mountains of Sphakia. At this period the insurrection was reported to be spreading in the eastern part of the island, and to have broken out in four districts, which had previously taken no part in it. On the 24th of September the Cretans addressed another appeal to the great powers through the resident consuls. It alludes to the robberies and murders which the Turks were constantly committing, and asks the Christian powers to afford protection to the defenceless old men, women, and children, or else to furnish vessels on which they could be transported to Greece. The barbarities, according to the testimony of the most trustworthy witnesses, were enacted to a frightful extent, especially in the provinces chiefly inhabited by the Turks. It was estimated that, by the end of September, over a thousand defenceless people had been murdered, and that in Heracleion alone more than three hundred had been massacred!

On October 5th the Turkish commissioner issued another proclamation extending the period for submission to October 10th. The Cretans, however, remained firm, and from October 9th to 12th had fought another four days' battle in the neighborhood of Canea, the result of which, according to Greek accounts, was the retreat of Mustapha Pacha. About the end of October the Turks claimed to have won a victory near Oresta, the Cretans losing 700, besides 3,000 drowned in a cave. In the beginning of November the Turks repeatedly circulated the report that all the chiefs of the insurgents had offered their submission and that the insurrection was at an end. All these reports proved, however, to be inventions, and the Cretan generals, especially Coroneos and Zimbrakakis, were vigorous in prosecuting the war, while the mountainous district of Spahkia was held out to all the defenceless people of the island as a refuge. At the same time, however, the Cretan Assembly made another appeal to the Christian powers, through their ambassadors at Constantinople, to provide protection or means of transport for the helpless population of the island. They were represented as suffering from famine, as well as exposed to outrage; for the Turks destroyed not only houses and provisions, but even agricultural implements and other means of obtaining a subsistence.

None of the incidents of the war made so profound and painful a sensation throughout the civilized world as the capture of the monastery of Arkadi. This monastery is situated in the midst of a large and fertile plain, in the eastern part of the province of Retimo, about two hours' journey from the southern coast of the island. It was built in the reign of the Emperor Heraclius, and has always been famous

for its wealth and beneficence. Its hospitality and charity have been extended to all nations and creeds alike. Every conqueror hitherto has spared it—the Spanish, the Arabs, the Venetians, and even the Janizaries. During the present insurrection it had frequently given shelter to refugees from the Turks, and was used by the Greeks as a storehouse for provisions and ammunition. On the 18th of November Mustapha Pacha arrived at the town of Retimo, and made preparations for marching upon the convent. Collecting all the troops he found there, to those brought by him from Canea, he mustered a force of sixteen thousand men, according to the Greek statement. He then sent forward Suleiman Bey to cut off communications with the Greek forces and prevent their reinforcing the convent, which they attempted to do as soon as they heard of the attack, but were held in check by these detachments of the Turkish force. After these had taken position, the Generals Ali Pacha and Ismail Pacha marched to attack the convent, and on the 21st Mustapha Pacha himself arrived and took chief command. The Turkish account says that the forces immediately engaged in the siege consisted of only 4,000 Ottoman infantry and artillery, Egyptian infantry, Cretan mounted volunteers, and Albanian light infantry. Within the monastery were about 700 persons, of whom from 250 to 300 were combatants, the remainder women and children. A surrender having been demanded and refused, on the morning of the 20th the bombardment began. In the afternoon more artillery and men were sent for, and on the 21st twenty-six heavy guns and two mortars were playing upon the doomed monastery, and the tower which defended the approach to the main building was reduced to ruins. For two days and nights an incessant cannonade was continued, at the end of which time a breach was effected, and the Turks rushed to the assault. By their own account three mines were sprung upon them as the storming party mounted the breach. One of these, they say, exploded upward with no effect. Another inward, with damage to the garrison only. The other was effective, and staggered the head of the attacking column. They admit that the attack lasted all day, and claim that five to six hundred rebels were killed, among whom were the members of the Cretan Assembly from the province, and the abbot of the monastery. They captured forty-two insurgents; and ninety women and children were found in the magazines and sent to Retimo, where they were put under the care of the Greek bishop. The Turkish loss is stated by them at fifty-eight killed and one hundred and fifty-three wounded. By the Greek account it appears that after the assaulting party entered the breach resistance was kept up by the Cretans firing from the cells which surrounded the court, until their fire-arms were disabled by incessant use, and many of the garrison were killed and wounded. The remainder then as-

sembled in the large hall, under the Superior of the convent, Father Gabriel, and resolved to blow up the buildings. The powder was deposited in the cellars, and the match was applied by Emanuel T. Oulas, a monk of twenty years of age. The explosion left one wing of the building standing, in which thirty-nine men and sixty women and children escaped with some wounds. The large and beautiful church was also left uninjured; but this the Turks subsequently plundered and burned. It is said that the wounded were slaughtered by the Turks, after applying torches to their faces to ascertain if they lived. The Greeks claim that more than two thousand Turks were killed and over one thousand wounded by the explosion, and that their army was greatly dispirited by this event. A brother-in-law of Mustapha Pacha was among the killed. The Greek accounts say that the Turks mutilated the Grecian dead in an obscene manner, and left them unburied, in consequence of which the vicinity of the convent became unapproachable on account of the stench.

In the early part of December the Cretan General Assembly issued another proclamation to the people, encouraging them not to submit, but to persevere in the struggle of independence, and holding out the hope that ships would soon arrive to carry away their women and children, and then they would only have to hold out a little longer, and the Christian nations would interfere in their behalf. "The three great protecting powers, aided by America, that friend of humanity, labor for a prompt intervention."

The Turkish Government in so far yielded to the representations made by the Christian governments, as to allow foreign ships-of-war to carry away such persons as desired to leave the island, and thousands of women and children were thus sent to Greece. The Turkish Government repeatedly endeavored to enter into negotiations with the insurgents, and was unsparing in its promises of reform, but it was unsuccessful. The military operations during the month of December were mostly confined to the western part of the island, lying beyond Canea, which is divided into two provinces, Kissamos to the northwest, and Selinos to the south. On the operations in the last week of December, the Athens correspondent of the *London Times* (in a letter dated January 3, 1867), reported as follows: "The steady advance of Mustapha Pacha is subjecting all the western part of Crete, which has hitherto been the stronghold of the insurrection, to the Ottoman arms. He has reestablished the authority of the Porte in the province of Kissamos, and is now with his army in the heart of Selinos. His knowledge of the interests as well as the feuds of the Greek Mussulmans and Greek Christians in the different provinces has retarded and modified the military operations of the Ottoman troops. He has now forced his way into Selinos and compelled the insurgents and Greek volunteers to abandon their camp at

Zurva, where they were prepared to fight a great battle, without any engagement. According to the accounts sent to Athens, 6,000 troops were collected at Zurva. On the 29th of December, the Russian frigate Grand Admiral, arrived in the Piræus with more than 1,000 refugees on board, who were embarked at Tripti, on the eastern shore of the province of Selinos, near the southwestern precipices of the Sphakian mountains. A Turkish frigate was watching the coast, and the captain called upon the Russian to observe the blockade and not communicate with the insurgents, but the Russian captain replied, that he had orders to embark the non-combatants on the coast, and the Turk then withdrew. The Greeks look upon the forcing of the blockade by the Russian frigate, not as an act of humanity only, but also as a deliberate act of intervention."

The insurrection of the Cretans had from the beginning found the most enthusiastic sympathy in Greece, and in those Turkish provinces and islands which are chiefly inhabited by Greeks. Large numbers of volunteers were flocking from Greece to Candia, being mostly transported there by the Greek steamer Paphlagonion, which made regular trips between Candia and the neighboring Greek island of Syra. Public opinion in Greece even urged the government to risk an open war in behalf of the Cretans, but thus far the Greek Government did not venture to proceed. Insurrectionary movements were attempted in Epirus, Thessaly, and several islands, for the purpose of aiding the Turks, but they had not the desired effect. (See *TURKEY*.) In Russia, public opinion was also very emphatic in expressions of sympathy, and the emperor and all the members of the imperial family forwarded their subscriptions to the committees organized for the aid of the sufferers in Candia. Equally divided was the sympathy of the liberal party throughout Europe, and stirring appeals in behalf of the insurgents were issued by Victor Hugo and Garibaldi. Of the friends of the latter, a number went as volunteers to Candia, and Garibaldi himself expressed his desire to follow them. In the United States the sympathy with the Cretans was also extensive, but it did not begin to manifest itself on a grand scale until the beginning of the year, 1867. The Governments of France and England showed more sympathy with the maintenance of the Turkish rule, than the success of the insurrection, but declared their readiness to join the other powers in urging the Turkish Government to give new guarantees for the execution of the reforms which many years ago had been promised to the Christians by the Hatti-Humayun.

CASS, Hon. Lewis, an American statesman, born at Exeter, N. H., October 9, 1782; died in Detroit, Mich., June 17, 1866. He was the eldest son of Jonathan Cass, who at the age of nineteen entered the ranks of the Continental army, and served through all the arduous campaigns of the Revolution, attaining the position

of captain. At the establishment of peace he received a commission in the army as major, and was assigned to duty under Wayne in the territory northwest of the Ohio River, his family remaining at Exeter. During this time young Lewis was attending the academy in his native town, and laying the foundations of a substantial education. In 1799 the family removed to Wilmington, Del., where Major Cass was temporarily stationed, and where the subject of this sketch obtained occupation as a teacher. The following year, having decided to locate Westward, the family travelled thither partly on foot and partly by boat, reaching Marietta, the pioneer settlement of Southern Ohio, in October. Major Cass soon removed to a tract of land granted him by the Government for his military services, situated on the Muskingum River, near Zanesville, while Lewis remained at Marietta, engaged in the study of law. In 1802 he was admitted to the bar, being but twenty years of age, and commenced the practice of his profession in Zanesville. His abilities as a jurist and pleader speedily manifested themselves, built up for him a lucrative business, and gave him a wide-spread reputation in the thinly settled district north of the Ohio. Becoming well established in his profession, in 1806 he married a Virginia lady, and shortly after entered upon his public career by taking a seat in the Ohio Legislature. Being placed on the committee instituted to inquire into the movements of Colonel Burr, his hand drafted the law which enabled the local authorities to arrest the men and boats engaged in that enterprise on their passage down the Ohio. He also drew up the address to Mr. Jefferson, embodying the views of the Ohio Legislature on the subject. In 1807 Mr. Cass was appointed marshal of the State, a position which he filled until 1813. In the war of 1812 he volunteered to join the forces at Dayton under General Hull, and was named colonel of the Third Ohio Volunteers. Colonel Cass commanded the advanced guard when the army crossed from Detroit into Canada, and drew up the proclamation addressed by the general to the inhabitants of that country on their arrival in it, and commanded also the detachment which dislodged the British forces posted at the bridge over the Aux Canards. Shortly afterward Colonel Cass was included in the capitulation which ensued on the signal defeat of the American army, and after making his report at Washington, was appointed to the Twenty-seventh regiment of infantry, and after a short interval, promoted to the rank of brigadier-general. He took part in the pursuit of General Proctor, and in the triumph at the Moravian Towns. At the close of the campaign he was left in command of Michigan, with his headquarters at Detroit, a command he exchanged for the post of Civil Governor over the same State in October, 1813. In 1814 he was associated with General Harrison in a commission to treat with the Indians, who had been hostile to the United States during the war.

The number of white inhabitants throughout the Territory was scarcely six thousand; no foot of land had been yet sold by the United States, and the interior of the Territory was a vast wilderness, affording ambush for forty thousand hostile savages. The Indian proprietorship still continued, and settlers could obtain no certain titles to their locations. No surveys had been made, no roads opened inland, and the barbarous savages, led by their powerful chief, Tecumseh, were implacable in their hatred of the whites, and terrible in their atrocities. Under these discouraging circumstances Governor Cass assumed the responsibilities of Governor, and *ex-officio* Superintendent of Indian Affairs, his jurisdiction extending over the whole Territory, and continued in the discharge of these duties for eighteen years. During this period his management of Indian affairs was conducted with the utmost wisdom and prudence. He negotiated twenty-two distinct treaties, securing the cession by the various tribes to the United States of the immense regions of the Northwest, instituted surveys, constructed roads, established military works, organized counties and townships, and, in short, created and placed in motion all the machinery of legitimate government and internal improvement and prosperity, of which we are to-day enjoying the results. In the administration of the extensive financial trusts incident to his position, Governor Cass displayed the most scrupulous honesty, never permitting even the small sum allowed him by the Government for contingent expenses to be transferred to his private account until the vouchers had been formally signed and transmitted to Washington. As yet the Northwestern regions were very imperfectly known, and at his suggestion an expedition was planned in 1820, in which he himself bore a conspicuous part. Accompanied by the celebrated geologist, Schoolcraft, and six other gentlemen, with the necessary Indian guides, they left Detroit in three bark canoes, for the exploration of the upper lakes and the head-waters of the Mississippi, and traversed 5,000 miles. The results of this and other subsequent expeditions were published in the *North American Review* in 1828-'29, and added in no slight degree to the well-earned fame of the author. In 1831, when President Jackson reconstructed his cabinet, Governor Cass was appointed Secretary of War, and cordially indorsed all the distinctive features of that administration. In the nullification troubles he occupied the high patriotic ground of his chief, and the nullifiers derived no benefit from his presence in the War Department. In 1836 Gen. Cass submitted a rather celebrated report to Congress upon our military and naval defences, embracing an elaborate *résumé* of our existing martial resources, both offensive and defensive. His recommendations were the erection of a strong chain of coast fortifications, and the building of a powerful navy. Subsequent events have established the wisdom of his suggestions.

Shortly after this, finding his health unpaired, he resigned his secretaryship, to the great regret of President Jackson.

In 1836 he accepted the appointment of minister of the United States to France, and, after dispatching some important business with that Government, he, in 1837, embarked at Marseilles for a voyage in the frigate *Constitution* to Egypt, by way of Constantinople, following the coast, and stopping at the principal ports, whence he made excursions into the interior. He was on excellent terms with Louis Philippe, of whose character he gave a friendly and favorable account in his "King, Court, and Government of France," published in 1840. The most remarkable incident of his diplomatic career occurred just at its close, in his attack on the quintuple treaty for the suppression of the slave-trade, and which resulted in his resignation in 1842. Upon his return he found his country in a state of political excitement; his name had been mentioned as a Democratic candidate for the presidency, and at the public receptions, in honor of his return, his opinions upon the important questions of the day were eagerly sought. In the Democratic National Convention of 1844, however, after repeated ballottings, James K. Polk received the nomination, and was elected to the presidency in the following November. In January, 1845, he was elected by the Legislature of Michigan to the Senate of the United States, which place he resigned on his nomination, in May, 1848, as a candidate for the presidency by the political party to which he belonged. After the election of his opponent, General Taylor, to that office, he was, in 1849, reelected to the Senate for the unexpired portion of his original term of six years. Here he wielded a powerful influence. He was a strong advocate of compromise, became the chief ally of Henry Clay, and opposed both the Southern rights dogmas and the Wilmot Proviso. The latter of these he had been instructed by the Legislature to support, but he declared in the Senate that he should resign his seat in case this direct conflict came between his duty and his principles. Originally General Cass was the most prominent candidate for the chairmanship of the Committee of Thirteen, but himself urged the appointment of Mr. Clay to that position. The passage of the resolution constituting that committee was, by the testimony of its mover, Henry Stuart Foote, chiefly due to his prompting and assistance. He supported the various measures that it originated save the Fugitive-Slave Law, on the passage of which, in the Senate, he declined to vote, though present in his seat.

Being reelected a Senator from Michigan for a second term of six years from March, 1851, he still continued a prominent Democratic candidate for the presidency, but, in 1852, as in 1844, he was unsuccessful, and Franklin Pierce was selected as a compromise among the conflicting interests as the candidate of that party. This defeat terminated General Cass's aspira-

tions for the chief magistracy, and he remained a member of the Senate until the expiration of his term. In 1857, when Mr. Buchanan entered upon his administration, General Cass accepted the position of Secretary of State. In the disunion movements that followed Mr. Lincoln's election, he was, as in 1850, a friend of compromise, sustaining especially the resolutions of his former colleague, Mr. Crittenden. He also originally in the Cabinet approved (or at least did not pronouncedly disapprove) President Buchanan's message, denying the existence of any power in the Constitution by which the General Government could coerce a State. Eight days later (December 14, 1860), however, he reasserted the Jacksonian principles of 1832-'33, and upon Mr. Buchanan's refusal to dispatch troops and supplies South, to re-enforce Major Anderson and re-provision Fort Sumter, he promptly resigned. His resignation was the closing-up of a public career of fifty-six years' duration. After that period he dwelt among his family, mingling little in society save in the exercise of the hospitalities of his own home. During the war his sympathies were always with the national arms, and the prolongation of his days to witness the ultimate triumph of the Government he considered among the greatest blessings of his life. General Cass was a man of great natural abilities, a prudent, cautious legislator, a scholar of fine attainments, of the purest integrity, temperate in all his habits, and personally popular throughout the country. As an orator, he was successful, though not famous. His speeches were always effective, whether before popular assemblies or upon the floor of the Senate, but none will ever be preserved as remarkable models of eloquence. The selection of live topics, a clear and appropriate system of argument, and animated delivery were the chief features of his oratory, and he always commanded attention in a body that daily listened to the splendid periods of Webster and the impassioned voice of Clay. His wealth was largely the result of his fortunate original investment in real estate, but the steady increase of his property in value has been also due to able management. In all enterprises of public improvements—railroads, highways, and other systems of internal development—he willingly participated, and in matters of charity, though not a miscellaneous giver, no meritorious and substantiated appeal ever failed of a response.

Besides his published works mentioned, another, entitled "History, Tradition, Languages, etc., of Indians in the United States," Mr. Cass's contributions to contemporary literature were comparatively few in number, and confined to magazine articles upon topics in regard to which he possessed peculiar source of information. They were, therefore, rather designed as vehicles of useful knowledge than as models of the essayist's art. Their style was lucid and ornate, the essential facts and statisti-

tics being presented in an attractive garb of rhetoric. In 1830 he received the degree of LL. D. from Hamilton College.

CATTLE PLAGUE, or RINDERPEST. This epizootic continued to make terrible havoc in Great Britain and some of the Continental states of Europe, till the earlier part of the autumn of 1866. It made its appearance in Ireland, but was "stamped out" there with the loss of but a few head of cattle. In Holland it raged with great severity, and occasioned heavy losses, and near the close of the year was reported as still increasing, having already caused the death of 71,000 head of cattle. It was

feared that the war in Austria and Italy, by causing the movement of great numbers of cattle to supply the army commissariats, would propagate the plague extensively; but the war was so brief, that this does not seem to have been the case. There was a severe outbreak of the plague among the bovine and cervine animals of the *Jardin d'Acclimatation* in Paris, where it was carried by two gazelles from London on the 14th of November. Thirty-five valuable animals were lost by the disease. The following table, published officially by the British Government, shows the extent of the ravages of rinderpest in Great Britain:

	Scotland.	Wales.	England.	Great Britain.
Area in acres.....	19,639,877	5,102,885	32,221,998	56,964,260
Number of cattle to 100 acres.....	4.8	11.8	10.2	8.4
Total census of cattle, March 5, 1866.....	937,401	578,186	3,270,299	4,785,886
Number of cattle died or killed to March 3, 1866.....	31,236	5,565	113,010	149,811
Total number attacked.....	49,861	8,388	198,474	253,723
Total number killed.....	6,263	1,180	77,570	85,013
Total number died.....	23,088	5,794	90,421	124,303
Total number recovered.....	10,707	1,117	21,589	33,413
Number unaccounted for.....	1,803	297	8,894	10,994
Percentage of attacks.....	4.838	1.437	5.866	5.141
Number of sheep, March 5, 1866.....	5,255,077	1,799,821	14,998,383	22,048,281
Total number farms, sheds, or places where sheep have been attacked.....	10	94	104
Number slaughtered to prevent spread of disease.....	419	419
Number attacked.....	159	6,667	6,826
Number killed.....	39	1,058	1,092
Number died.....	99	4,541	4,640
Number recovered.....	18	1,013	1,031
Number unaccounted for.....	8	60	63

In the United States there was, during the year, no invasion of rinderpest. Other epizootics, however, proved largely fatal to domestic animals. In the Western States, and particularly in Indiana and Kentucky, an epizootic disease, known as the "Texas fever," and said to have been communicated by a drove of cattle brought from Texas, proved very fatal to cattle. Its symptoms, so far as described, seem to have borne considerable resemblance to those of the rinderpest. The "hog cholera," a fatal disease, which seems to affect swine alone among the domestic animals, has occasioned the death of many thousands of hogs throughout the West. A solution of sulphate of iron (copperas), mixed with a bran-mash, is recommended by some veterinarians both as a preventive and remedy for it.

CENTRAL AMERICA. There are at present in Central America the following five independent Republics:

1. **GUATEMALA.***—President, Vincente Cerna (1865-1869). Area, 44,500 square miles. Population was estimated, in 1858, at 850,000; according to a census, taken in September, 1865,

by order of the Government, under the direction of the priest Ospina, it amounted to 1,180,000. The country is divided into the following seventeen departments: Guatemala, Sacatepec, San Marco, Chimaltenango, Suchiltepec, Escuintla, Amatitlan, Santa Rosa, Mita, Solola, Totonicapán, Gueguetenango, Quesaltenango, Chiquimula, Vera Paz, Salama, and Izabal. The capital, Guatemala, had, in 1865, 40,000 inhabitants. The public debt was estimated, in 1865, at 1,500,000 dollars. Value of imports in 1863, 727,042 dollars; in 1864, 1,414,904 dollars; of exports, in 1863, 894,712 dollars; in 1864, 1,818,516 dollars. The imports, in 1864, came chiefly from Great Britain (\$1,119,586); France (\$186,889); United States (\$45,722). Movement of shipping in 1864 (entrances and clearances); in the Atlantic ports, 53 vessels, together of 1,952 tons. In Pacific ports, 62 vessels, together of 33,312 tons (of which 29 vessels, with 25,254 tons, were from the United States).

2. **SAN SALVADOR.***—President, Fr. Dueñas (April, 1865, to April, 1869). The Legislative Assembly, which holds biennial sessions, consists of 12 Senators, and 24 Deputies. The republic is divided into 10 (formerly 8) de-

* For the names of State ministers, U. S. minister in Guatemala, and Guatemalan minister in Washington, and the best statistics of finances and the army, see ANNUAL CYCLOPEDIA for 1865.

* For other information, see ANNUAL CYCLOPEDIA for 1865.

partments: San Union, San Miguel, Usulután, San Vicente, La Paz, Ocuatlán, San Salvador, Sonsonate, Santa Anna, Chalatenango. Area, 7,500 square miles. Population about 600,000. The budget of 1866 estimates the receipts at 628,252 dollars; and expenditures at 524,329 dollars. Imports in 1865 were valued at 2,130,641 dollars; and exports at 2,306,334 (the principal articles of export are indigo, sugar, cotton, coffee, etc.) In 1865 24 American (United States) steamers entered the ports of the republic.

3. HONDURAS.*—President, José María Medina (February, 1866–February, 1870). According to the new Constitution, which was adopted in November, 1865, the Legislative Assembly consists of 11 deputies, and the Senate of 7 members. The Council of State embraces the ministers and 7 other members. Ministers, exterior and interior, Ponciano Leiva; war and finances, Saturino Bográn. Area, 33,000 square miles. Population about 350,000 inhabitants. The republic is divided into the following seven departments: Comayagua, Tegucigalpa, Choluteca, Santa Barbara, Gracias, Yoro, Olancha. The capital, Comayagua, has about 18,000 inhabitants. Minister of the United States at Comayagua, R. H. Rousseau (appointed in 1866). Receipts of the Government about 200,000; expenditures, 183,000: annual surplus, about 17,000 dollars. Value of imports (mostly from Great Britain), about 750,000; exports, 825,000 dollars. Chief port, Omoa.

4. NICARAGUA.*—President (1863–1867), Tomas Martínez. The State ministry was composed as follows: Foreign Affairs, Dr. Rosalio Cortez; Interior, Bonaventura Silva; Finances, Dr. B. Portocarrero; Instruction, Justice, and Worship, A. Silva. Area (after the reannexation of Greytown and the Mosquito Territory), 57,780 square miles. Population about 400,000. The republic is divided (according to the *Mapa de la República de Nicaragua levantada por orden del Gobierno*, par M. de Sonnenstern, 1859) into the following five departments: Rivas, Granada, Leon, Segovia, Matagalpa. Capital, Managua, with about 10,000 inhabitants.

5. COSTA RICA.*—President (1866–1869), Dr. José María Castro. Area, about 21,440 square miles. The population, according to the censuses of 1844 and 1864, was as follows:

PROVINCES.	Census of 1844.	Census of 1864.	Increase.]
San José.....	25,949	87,195	11,246
Cartago.....	19,884	23,017	3,133
Alajuela.....	10,837	27,164	16,327
Heredia.....	17,236	17,838	602
Guanacaste.....	5,193	10,425	5,232
Punta-Arenas.....	883	4,832	3,949
Total.....	79,982	120,471	40,489

The capital, San José, has about 30,000 inhabitants.

* For other information, see ANNUAL CYCLOPÆDIA for 1865.

CESARINI, Duke Sforza, a Roman nobleman, and chief of the historic house of Sforza, born at Rome in 1807, died at Pinerolo, near Turin, July 16, 1866. He early displayed much ability both in private and public life. Mild, pleasant, and unassuming in manner toward his subordinates, he was an able and faithful administrator of his extensive and diversified estates, acting for the most part as his own steward, and introducing among the rural population such improvements as considerably ameliorated the land, and at the same time took a deep interest in the education of the poorer classes. As a representative of the district of Santa Fiora, he was created deputy in the Italian Parliament in 1860; later he was raised to senatorial honors, and decorated with the "commenda" of St. Maurice and Lazarus by the king's hand. He was also selected to be the representative of the Italian Government at Viterbo during the short period when the city had proclaimed its aspirations to liberty. The late duke was a steadfast adherent to the policy of Piedmont, and therefore declined to take part in the Roman republic, when the latter, for a brief season, flourished under the auspices of Mazzini.

CHEMISTRY. The year 1866 was not distinguished by any remarkable discoveries in chemistry, or by the promulgation of any chemical theory of striking novelty or interest. It can only be said that a good degree of general progress is perceptible in the several departments of chemical science, and that its importance as a branch of popular education is more and more recognized by the public. The application, during the year, of the spectroscopic (originally intended for the examination of earthy products) to the analysis of the constituent elements of the heavenly bodies, is a pleasing illustration of the correlation of the sciences, showing how surely progress in any one department of knowledge contributes to progress in all. (See ASTRONOMICAL PHENOMENA, etc.)

In the preparation of the following *résumé* of chemical intelligence, the editor would acknowledge his indebtedness to the *American Journal of Science*, and the *Chemical News* (London).

New Elements.—A new metal was announced by MM. Meinecke and Rossler, to the French Academy, toward the end of the year. They say that it was discovered by them in the analysis of a mineral water, that it is allied to the alkaline series, and gives a sharp, dark-blue line in the spectroscopic, in a different position to that given by indium. Further particulars will be awaited with interest; but so many new elements have been announced from time to time, the claims of which have subsequently proved to be unfounded, that no general astonishment will be expressed if the expectations of MM. Meinecke and Rossler should turn out to be fallacious. As to MAGNESIUM, the new metal (new at least in the mode of its preparation upon a commercial scale), it has not filled the place in the arts for which it seemed to be especially

fitted. The cost of its production, and practical difficulties in the way of burning it, have hitherto prevented its general use for purposes of photographing by night, or as a substitute for existing methods of illumination. It has recently come into notice as a delicate reagent in chemical analysis. (*See MAGNESIUM, also INDICA, THALLIUM, and METALS.*)

A single Primary Element.—Prof. G. Hinrichs, of the Iowa State University, published in the *American Journal of Science*, vol. xlii, No. 126, his researches among the spectra of a number of the elements, taking as a basis the determinations of Plücker and Ditscheiner. The results of his investigations are as follows: He finds, for the thirteen elements considered (viz., hydrogen, oxygen, nitrogen, chlorine, bromine, iodine, mercury, sodium, magnesium, calcium, strontium, barium, iron, and, besides, four compounds), that the dark lines of the elements are equidistant throughout the spectrum, but of varying intensity, many not being observed (or observable) at all; the intervals between the observable lines are expressible as simple multiples of the equal distance indicated by all. By considering the spectra of seven elements, viz., magnesium, calcium, strontium, barium, chlorine, bromine, and iodine, he finds that the dark lines of the elements are related to the atomic dimensions, considering the elements composed of one single primary element ("Urstoff"). Prof. Hinrichs says that it is now about twelve years since he started the hypothesis of one primary matter as the element of elements, not in the shape of a physical idea, but as a physical hypothesis, making it the base of a theoretical mechanical deduction of the properties of the elements; and he now thinks that spectrum analysis has shaken the axiom of the elementary nature of the so-called chemical elements in minds formerly adverse to questioning that axiom. He hopes ultimately to prove that the unity of matter is as real as the unity of force.

A New Class of Compound Metallic Radicals.—Oxide of auro-acetylene is the name given to a new compound metallic radical obtained by M. Berthelot. It is produced from a solution of the soluble hyposulphite of soda and gold, with some ammonia, treated with acetylene, being precipitated in the form of yellow flocculi, which, when dry, detonate violently if touched with a hard body. A chromium compound, oxide of chromo-acetylene, is obtained when a solution of chromous sulphate in a mixture of sal-ammoniac and ammonia is treated with acetylene. M. Berthelot shows that allylene forms a series of compounds analogous to those formed by acetylene. He gives some interesting facts concerning the action of alkaline metals on the carbides of hydrogen. Sodium, he states, attacks acetylene when the two are gently heated, forming monosodic acetylide and setting free hydrogen. At a red heat the decomposition is more complete. Potassium, gently heated in an atmosphere of acetylene, ignites and forms an

acetylide. These acetylides are decomposed by water, acetylene being produced. Formene and acetylene do not furnish the experimenter with similar results. Allylene, however, is attacked by sodium at a gentle heat, undergoing a complete decomposition, and resolved into sodic acetylide, carbon, and hydrogen.

M. Berthelot obtains the oxide of mercuracetylene by means of a solution of red iodide of mercury in iodide of potassium, to which ammonia is added, but not sufficient to produce turbidity. The liquid introduced into a bottle filled with acetylene gradually absorbs the gas, and a glistening white precipitate is produced, resembling in appearance bimanganate of potash. This is washed with a concentrated solution of iodide of potassium. The appearance of the precipitate is then changed to a white powder, which is extremely explosive.

Later investigations have enabled the same chemist to report still other classes of radical metallic compounds. One series is obtained from C, Cu, H , which he calls cupros-acetylene, and which yields an oxide, chloride, bromide, iodide, sulphide, cyanide, and sulphite. A perfect parallelism exists between the salts of cupros-acetylene and the cuprous salts properly so called. Another set of combinations are derived from argent-acetylene, C, Ag, H . The author concludes that the new radicals are in some sort oxide of ammonium, being constituted immediately by the union of a hydride of carbon and the elements of water with simultaneous metallic substitutions. He believes that the number of these compounds will soon be increased by the introduction of various metals in the place of hydrogen in several other carbides of hydrogen. Comparing the new radicals with the organic alkalies and the metallic radicals already known, it will readily be seen that they constitute a new general class of radicals, essentially distinct from the old ones, as well by their generation as by their constitution.

A New Alcohol, in which Carbon is partially replaced by Silicon.—In the *Comptes Rendus*, lxi., 792 (*Amer. Jour. of Science*, vol. xlii., No. 126), appears an account of a successful attempt by Friedel and Crafts to replace carbon by silicon by a somewhat circuitous process in a theoretical point of view. Chlorine acts upon silicium-ethyl, $(SiC_2H_5)_4$, to form two products of substitution, monochlorinated and dichlorinated silicium-ethyl. These products cannot be separated by distillation, but, when the mixture of the two, boiling between $180^\circ C.$ and $200^\circ C.$, is heated in a closed tube with acetate of potash and alcohol, the binochlorinated compound is first attacked, while chloride of potassium is found, and the monochlorinated compound remains among the products of the action. When water is added to the contents of the tube after the action, an oily liquid separates, which is to be washed twice with water and then treated with concentrated sulphuric acid, which dissolves the acetic acid compound and the oxide of silicium-triethyl, leaving the sili-

cium-ethyl and its chlorine derivations unacted upon. The portion undissolved is to be washed, dried, and distilled. The greater part passes over at 180° – 190° , and is treated as before in a closed tube with acetate of potash and alcohol. The liquid separated by water is again treated with sulphuric acid, the solution decanted and poured into water. A liquid separates, which boils between 208° and 214° C., has a faint ethereal and acetic smell, and burns with a luminous flame, giving off white fumes of silicic acid. This liquid is derived from monochlorinated silicium-ethyl by replacing the chlorine by oxacetyl. Treated with an alcoholic solution of caustic potash, this body yields a new liquid boiling at 190° C., which is the hydrate corresponding to the acetate above described. The authors term the radical silicononyl, and compare the hydrate and acetate to the corresponding compounds of carbon and hydrogen, considering silicium to replace carbon atom for atom.

Ozone.—A paper upon the preparation of ozone and the conditions of its production was communicated by M. C. Weltzien to the *Bulletin de la Société Chimique*, May, 1866. He had obtained ozone by two processes. First, by the reaction of dry hydrochloric acid gas upon peroxide of barium contained in a tube; second, by the reaction of hydrochloric acid upon pulverized peroxide of barium mixed with sand and enclosed in a balloon. In both cases he obtained besides oxygen and chlorine some ozone recognizable by its odor; and the balloon containing the residue of its reaction retained the smell for many days. In most of the experiments, however, no ozone, but only oxygen and chlorine, are produced, probably mixed with hydrochlorous (?) acid. As to the formation of ozone in the air, during storms, he does not think that it remains long, and would regard the oxidation of silver as the only certain proof of its presence. M. Weltzien promulgates the theory that ozone is oxygen formed of two atoms; other eminent chemists regard it as denser than common oxygen; and M. Loret considers it to be a molecule formed of three atoms of oxygen, and calls it binoxide of oxygen. The bulk of opinion, certainly, is that ozone is condensed oxygen.

At the November meeting of the British Chemical Society Dr. Daubney read a paper on the same subject. The author had made experiments at Torquay in the winter months, and at Oxford in the summer months. In the former place the southwest and westerly winds were most strongly charged with ozone, and in the latter city the easterly winds brought most. The results at Torquay he considers to prove the influence of the sea in increasing the amount of ozone. The generation of ozone in the process of vegetation he regards as one of the appointed means of nature for purifying the atmosphere from pernicious organic compounds. Dr. Daubney, in his observations, used both Schonbein's paper and the

sulphate of manganese paper, but considers the first, if protected from light, to give the most reliable indications. He had no evidence upon the point whether the outbreak of epidemics could properly be ascribed to a deficiency of atmospheric ozone. In the course of the discussion which ensued, Dr. Gilbert expressed some doubts of the identity of the ozone-like emanations from growing plants, and the odorous substance produced by the slow combustion of phosphorus in moist air. In closing the discussion the President (Dr. W. A. Miller) observed, that no one doubted the existence of ozone in the atmosphere; but it must be admitted that as yet the proof was very imperfect.

Isomerism.—Berthelot has proposed a new subdivision of isomeric bodies into the following classes or general groups: 1. (*Equivalent composition.*) Substances which appear to have a purely accidental relation to each other, such as butyric acid, $C_4H_8O_2$, and dialdehyde, $(C_2H_2O)_2$. 2. (*Metamerism.*) Bodies formed by the union of two distinct principles, so that in their formulae a kind of compensation is established; as methyl-acetic ether, $C_2H_5(C_2H_3O)$, and ethylformic ether, $C_2H_5(C_2H_5O)$. 3. (*Polymerism.*) Compounds arising from the union of several molecules to form one, as amylenes, $(C_2H_5)_2$, and diamylene, $(C_2H_5)_4$. 4. (*Isomerism, properly so called.*) These are bodies that, differing in properties, retain those distinctive features in their passage through certain compounds, the properties of which result from the internal structure of the compound taken as a whole, rather than from the diversity of the components which have produced it; e. g., the essence of terebenthine and citron, the sugars, the symmetrical tartaric acids, and the two classes of ethyl-sulphates. 5. (*Physical isomerism.*) The different states of one and the same body, the diverse nature of which vanishes when the substance enters into combination. 6. (*Kenomerism.*) Two different compounds may lose by the effect of certain reagents which bring about decomposition, different groups of elements, and the remainders be identical in composition, these two derivatives, however, being yet distinct the one from the other both in physical and chemical properties. For example, alcohol, by losing two equivalents of hydrogen, is turned into aldehyde, $C_2H_5O - H_2 = C_2H_3O$. Glycol, on the other hand, by giving up two equivalents of water is converted into glycolic ether (oxide of ethylene), $C_2H_5O - H_2O = C_2H_3O$. Again, essence of terebenthine combines with hydrochloric acid under different conditions to form two distinct hydrochlorates, the monohydrochlorate, $C_{10}H_{16}HCl$, and the dihydrochlorate, $C_{10}H_{14}2HCl$. From the first the crystalline compound $C_{10}H_{14}$, camphene, is obtained, and from the latter $C_{10}H_{16}$, terpene, two hydrocarbons of very different properties.

The Source of Muscular Power.—This interesting subject, which has received much attention from chemists of late, has been thoroughly

examined by Prof. Frankland, of the Royal Institution. He starts out with the axiom that an animal, no matter how high its organization may be, can no more generate an amount of force capable of moving a grain of sand than a stone can fall upward or a locomotive drive a train without fuel. All that an animal can do is to liberate that store of force or potential energy which is locked up in its food. It is the chemical change which food suffers in the body of an animal that liberates the previously pent-up forces of that food which now make their appearance in the form of actual energy, as heat and mechanical motion. The two chief forms of force thus manifested are heat and muscular motion or mechanical work, and these have been almost universally traced to two distinct sources—the heat to the oxidation of the food, and the mechanical work to the oxidation of the muscle. This was the doctrine first promulgated by Baron Liebig, in his "Chemico-Physiological Essays." Prof. Frankland's experiments lead him to somewhat different conclusions, as follows:

1. The muscle is a machine for the conversion of potential energy into mechanical force.
2. The mechanical force of the muscles is derived chiefly, if not entirely, from the oxidation of matters contained in the blood, and not from the oxidation of the muscles themselves.
3. In man, the chief materials used for the production of muscular power are non-nitrogenous; but nitrogenous matters can also be employed for the same purpose, and hence the greatly increased evolution of nitrogen under

the influence of a flesh diet, even with no greater muscular exertion.

4. Like every other part of the body, the muscles are constantly being renewed; but this renewal is not perceptibly more rapid during great muscular activity than during comparative quiescence.

5. After the supply of sufficient albumenized matters in the food of man, to provide for the necessary renewal of the tissues, the best materials for the production both of internal and external work are non-nitrogenous matters, such as oil, fat, sugar, starch, gum, etc.

6. The non-nitrogenous matters of food, which find their way into the blood, yield up all their potential energy as actual energy; the nitrogenous matters, on the other hand, leave the body with a portion (one-seventh) of their potential energy unexpended.

7. The transformation of potential energy into muscular power is necessarily accomplished by the production of heat in the body, even when the muscular power is exerted externally. This is doubtless the chief and probably the only source of animal heat.

The limits of this article will not permit the reproduction of all the statistics and tables by which Prof. Frankland justifies his conclusions.

The following statement of the energy developed by various articles under combustion in oxygen, is specially interesting. The values, however, experimentally obtained for these articles, must be understood as the maxima, and hold good only on condition that the food is digested and passes into the blood.

The Sulphides.—M. J. Pelouze, at the session of the French Academy, in January, presented a *Memoir of the Sulphides*. He prepared pure monosulphide of sodium by passing sulphuretted

hydrogen into soap-makers' lye. The crystals were recrystallized once or twice until they were colorless and quite pure. With a solution of this salt, a weak solution of acetate and chlo-

ride of calcium, gave a distinct white precipitate; strong solutions, an abundant precipitate. A solution of sulphate of calcium also shows a cloudiness. When an excess of the calcic salt is used, no precipitate is seen, or it is instantly redissolved, whatever may be the strength of the solution. With the salts of magnesia, hydrate of magnesia is precipitated, and sulphhydrate of sulphide of sodium remains in solution. With salts of alumina and glucina, the alkaline sulphides precipitate the hydrates of alumina and glucina, sulphuretted hydrogen being set free. Sulphide of calcium cannot be obtained by precipitation, but must be made by decomposing the sulphate of lime with charcoal. This compound decomposes after long contact with water, producing lime and sulphhydrate of sulphide of calcium. Sulphide of magnesium is but little known. M. Pelouze has tried the method of Berzelius for making this sulphide, by passing sulphydric acid into a milk of magnesia until a considerable quantity of the hydrate of magnesia is dissolved. He reports that a sulphide is never formed under these circumstances, but that a sulphhydrate of sulphide of magnesium is obtained in solution, and hydrate of magnesia remains undissolved.

Some Properties of the Chloride of Sulphur.—M. Chevrier (*Chem. News*, No. 870) has reported to the French Academy the results of his investigation of the action of phosphorus on chloride of sulphur. He has succeeded in combining the substances almost entirely into chlorosulphide of phosphorus. In a large globe, of seven or eight litres' capacity, pour three equivalents of chloride of sulphur, and heat to the boiling point. Add, in small fragments, one equivalent of phosphorus. After each addition, agitate the vessel well; the result will be a yellow liquid consisting almost exclusively of chlorosulphide of phosphorus holding sulphur in solution. Distil, rejecting the small portion which comes over below 125°C ., which is the boiling point of chlorosulphide of phosphorus. The author has prepared half a litre of this body in one day. An attempt to prepare chlorosulphide of arsenic by a similar process failed—only chloride of arsenic and sulphur being produced. The author has observed a singular fact connected with the crystallization of sulphur. Toward the end of the operation, the yellow liquid, in cooling, deposits long prismatic needles of sulphur, amongst which are easily distinguished octahedra of relatively considerable volume. The prismatic sulphur is opaque; the octahedra are very brilliant. In 1848 M. Pasteur observed an analogous fact in the preparation of sulphide of carbon.

Bichloride of Carbon, or Chlorocarbon.—Dr. Simpson, in a paper read before the British Chemical Society, suggests that this new anæsthetic (discovered by M. Regnault in 1839) should have a pharmaceutical name given to it, and suggests perchloroformene, or the shorter term chlorocarbon, as sufficiently distinctive. Among the various names already bestowed on

this compound are perchlorinated chloride of methyl, perchloruretted hydrochloric ether, and perchloruretted formene. In its chemical constitution it is analogous to chloroform, with the difference that the single atom of hydrogen in chloroform is replaced in chlorocarbon by an atom of chlorine, for the relative chemical constitution of the two bodies may be stated as follows: chloroform = C_2HCl_3 ; chlorocarbon = C_2ClCl_3 . The chlorocarbon is made from chloroform by the action of chlorine upon that liquid; and chloroform may in turn be made from chlorocarbon by treating it with zinc and sulphuric acid, thus exposing it to the action of nascent hydrogen. The most common way of making chlorocarbon is by passing the vapor of bisulphide of carbon, together with chlorine, through a red-hot porcelain tube. The results are, chloride of sulphur and bichloride of carbon, and the latter is easily separated by the action of potash. It is a transparent, colorless fluid, having an ethereal and sweetish odor, not unlike chloroform. Its specific gravity is 1.56, chloroform being 1.49. It boils at 170°F ., and chloroform at 141° . The density of its vapor is 5.33; that of chloroform 4.2.

A New Variety of Phosphorus.—M. Hittorf reports to the *Ann. der Physik und Chem.*, cxvi. 195, that he has succeeded in crystallizing amorphous phosphorus, and that it takes rhomboidal forms like arsenic. He heated red phosphorus and lead in a closed vessel; the lead dissolved the phosphorus, and then deposited it in a crystallized state. The operation was conducted in a fusible green glass tube, a quarter filled with ordinary phosphorus, and the rest with lead; the air then being expelled and the tube sealed. It was then introduced into an iron muff, and the spaces filled with calcined magnesia pressed round the whole of the glass tube. After ten hours' heating, the lead was covered with brilliant flakes of metallic-looking phosphorus, the finest appearing red when held to the light. No polyhedral form could be recognized in the crystals, but the lead retained some which were isolated, by treating with nitric acid of 1.1. The crystalline powder accumulated at the bottom of the vessel was metallic phosphorus, which was then in the form of microscopic rhombohedra resembling crystals of arsenic. In this state phosphorus is a conductor of electricity. At 15.5°C . its density is 2.84. M. Hittorf classed the new modification of phosphorus in the same category with the red variety, giving to the two the generic name of metallic phosphorus which he subdivides into metallic crystallized and metallic amorphous.

Natural and Artificial Production of the Diamond.—Theories about the formation of the diamond continue to be proposed. M. Charcourtois, in a note to the French Academy, suggested that the diamond was formed in consequence of the decomposition of hydrocarbon just as free sulphur results from the decomposition of hydrosulphuretted emanations. Th

hydrogen in these cases combines with the oxygen, leaving the other element free. He recommends that persons seeking to make artificial diamonds, should imitate the processes followed by nature, which he supposes to be as follows: Submit a very slow current of marsh gas or a hydrocarbon vapor accompanied by the vapor of water to a very mild oxidizing action in a mass of sand containing traces of putrescible matter—flour, for example. The author thinks it not improbable that this process is now going on in nature, and suggests that perhaps diamond dust could be found, if one would but search for it, in the black earth that surrounds the gas-pipes where they leak under our streets.

Sulphide of carbon has been a favorite subject for experiments with persons who believe it possible to make artificial diamonds. M. Lionnet, in a note to the French Academy, claims to have actually crystallized the carbon out of that compound. He takes a sheet of platinum foil and a sheet of tin foil of rather smaller dimensions, and rolls them together loosely. The roll so made he places in a bath of sulphide of carbon. A feeble electric current is then set up, the sulphide of carbon is decomposed, the sulphur combining with the tin, and the carbon crystallizing and falling to the bottom of the vessels. The *Chemical News* adds the comment, that time is, of course, required to obtain large crystals!

Ammonium Amalgam.—The *American Journal of Science*, vol. xlii., No. 124, contains an account of experiments made by F. S. Pfeil and Henry Leffman to determine the deportment of the substitution of ammoniums with sodium amalgam. A saturated solution of chloride of trimethyl-ammonium was treated with the sodium amalgam, and a series of phenomena followed exactly identical with those which occur in the preparation of the ammonium amalgam. The swelling rapidly subsided, hydrogen gas being given off, and the liquid was found to contain trimethylamine. Saturated solutions of the chlorohydrates of aniline, conine, morphine, and quinine, and of the acetate of rosaniline, when treated with sodium amalgam, gave rise to copious evolution of hydrogen gas without turgescence. These experiments (in addition to those recorded by Dr. C. Wetherell) seem to indicate that the physical phenomena of the ammonium amalgam depend entirely upon the retention of gas-bubbles, and also that those ammonias, which in the free state are, at ordinary temperatures, either liquid or solid, produce no amalgam. It may be mentioned that a solution of chloride of ammonium in pure glycerine gives rise to an amalgam, but the turgescence is much interfered with by the viscosity of the solvent; and also that sodium amalgam when placed upon a crystal of chloride of ammonium produces no reaction until moistened with a drop of water.

Spontaneous Ignition.—A correspondent of the *Chemical News* attempts to explain the

origin of fires which occur on the premises of those who make or deal in fireworks. He remarks that mixtures of the three ingredients—nitrate of strontia (or baryta), sulphur, and chlorate of potash, if made up at once from freshly and strongly desiccated materials, are certain to take fire spontaneously within a few hours, especially if placed in a rather damp situation. The action begins with the evolution of an orange-colored gas; afterward a liquefaction is set up at several points in the mass; a hissing noise and a more rapid disengagement of gas comes on, and the composition takes fire. The addition of a small proportion of sulphuret of antimony at once prevents the occurrence of these phenomena; but, if the compounds, being damp, are placed too near the fire to dry them, spontaneous combustion will ensue, even though antimony be one of the ingredients. Compositions, to produce a purple flame, if made with black oxide of copper, are almost sure, sooner or later, to take fire of themselves, at uncertain periods, whether kept in a damp or dry place. The carbonate should be used in preference.

New Aniline Colors.—M. Paraf describes a new method of making aniline black, as follows: He prepares hydrofluosilicic acid by decomposing a mixture of fluor spar and sand with sulphuric acid. In an aqueous solution of resulting acid of the gravity 8° Be., he dissolves hydrochlorate of aniline, and such a solution, properly thickened and printed on a tissue, prepared with chlorate of potash, gives a black in the fixing. If the chlorate of potash is combined with the above, the cloth needs no special preparation. In fixing at 82° or 85° C., the following changes take place: The hydrofluosilicic acid decomposes the chlorate of potash and forms fluosilicate of potash, setting free chloric acid. A part of the chloric acid acting on the hydrochloric acid of the hydrochlorate of aniline, produces a mixture of free chlorine and some intermediate oxygen acids of chlorine, which, acting in concert with the other portion of the chloric acid on the aniline of the hydrochlorate, produces the black. The black obtained in this way may be associated with any sort of madder color, and in the subsequent processes may be treated exactly like a logwood black.

Mr. Jacobson announces the following method of obtaining an orange-colored dye from aniline. Red aniline is made in the usual way by the action of nitrate of mercury on aniline, and the residue is purified by boiling the resinous deposit and crystallizing the solution. The mother liquor of the crystals contains a large proportion of orange dye, which is isolated by means of common salt, which precipitates the other colors and leaves the orange in solution. It is afterward extracted by alcohol. It is a golden orange, readily dyeing silk and wool.

The Detection of Chlorine, Bromine, and Iodine, by means of the Spectroscope.—A. Mitscherlich (*Pogg. Annalen*, cxxv., p. 628; *Am. Jour. of Science*, vol. xli., No. 121) has suc-

ceeded in applying the spectroscope to the detection of extremely minute quantities of chlorine, bromine, and iodine, and has thus materially extended the use of the instrument. The dry solid substance to be examined is mixed with half its weight of sulphate of ammonia and one-tenth of its weight of oxide of copper. The mixture is then brought into the bulb of a glass tube, connected at one end with an apparatus for generating hydrogen, while the other end, near the bulb, is open. Hydrogen is then passed into the tube, and kindled, after which the bulb, with the substance, is heated slowly. In this manner one-fourth of one per cent. of chlorine, one-half of one per cent. of bromine, and one per cent. of iodine may be detected. The author mentions additional processes for the detection of very minute quantities of iodine and bromine, and claims that the presence of one ten-millionth of either can be ascertained by the use of the spectroscope, but he did not succeed in making satisfactory quantitative determinations. In conclusion, he states his conviction, based upon spectroscopic investigations, that iodine and nearly all the other metalloids are compound bodies.

Lime Crucibles for Great Heats.—David Forbes, F. R. S., communicates to the *Chemical News* his mode of preparing lime crucibles to withstand great heats. He takes a clay crucible of somewhat larger capacity than the desired lime one, and fills it with common lamp-black, compressing the same by stamping it well down. The centre is then cut out with a knife until a mere shell or lining of lamp-black is left firmly adhering to the sides of the crucible, and about half an inch or less in thickness according to the size of the crucible; this lining is well rubbed down with a thick glass rod until its surface takes a fine polish, and the whole cavity is then filled up with powdered caustic lime, and pressed down as before; or the lime-powder may be at once rammed down round a central core of the dimensions of the intended lime crucible. The lime lining, after heating, forms a strong and compact crucible, which is prevented from acting upon the outer one by the interposed thin lamp-black layer, and, at the end of the experiment, generally turns out as solid and compact as those made in the lathe. Similar crucibles could probably be made, lined with magnesia or alumina, as required; and perhaps black-lead crucibles, lined with powdered lime, magnesia, or alumina, might be found to answer.

Works and Papers on Chemical Subjects.—During the year there were published in this country, *A New Chemical Nomenclature*, by S. D. Tillman, Prof. of Technol., Am. Inst., N. Y.; *Chemical Tables*, by Stephen B. Sharples, S. B., Cambridge, Lever & Francis, prepared under the able supervision of Prof. Wolcott Gibbs. "The American Journal of Science," for the year, contained many highly valuable papers, among which may be named *A New Process of Elementary Analysis for the Determination of*

Carbon, Hydrogen, and Nitrogen at a Single Combustion, by C. Gilbert Wheeler (Jan.); *A New Process for the Determination of Sulphur in Organic Compounds*, by C. M. Warren (Jan.); *A New Process of Organic Elementary Analysis for Substances containing Chlorine*, by the same (Sept.); *The Spectra and Composition of the Elements*, by Prof. Gustavus Hinrichs (Nov.); *Contributions to the Chemistry of the Mineral Springs of Onondaga, N. Y.*, by Charles A. Goessman (Nov.) At the meeting of the National Academy of Sciences in January, Prof. W. Gibbs read an interesting paper on *A New General Method of Volumetric Analysis*.

CHILI, a republic in South America. President, for the term from 1861 to 1866, and re-elected for the term from 1866 to 1871, José Joaquín Pérez. The State Ministry is composed as follows: Interior and Exterior, Alvaro Covarrubias (1864); Justice, Worship, and Instruction, Fed. Errázuriz (1864); Finances, Alex. Reyes (1864); War and Navy, Col. J. Manuel Pinto (1865). Revenue of the State in 1863, 6,700,659 piastres; and in 1864, 6,654,912. The expenditures for 1864, were estimated at 8,070,368 piastres, but in reality amounted to 10,986,358 piastres. The Interior debt in 1866, amounted to 8,017,678 piastres; and the Exterior debt to £2,152,200. The army is composed of the troops levied by conscription (3,250 men at the close of March, 1865); and of the national guards, the number of whom, according to an official document, amounted in 1861 to 29,698 men, and at the close of 1865, to 85,600 men. The fleet, in 1863, consisted of four war vessels, armed with 27 guns, to which must be added the gunboat Covadonga, having three guns, captured from the Spaniards in 1863, and the steamer Antonio Varaz, armed in December, 1865, with four 150-pounders. The value of imports, in 1864, amounted to 18,867,865 piastres (from the United States, 1,638,219; Great Britain and Colonies, 8,201,638; France and Colonies, 8,946,769); and that of the exports, to 27,242,853 piastres. The number of vessels entering Chilean ports, in 1864, was 2,830, together of 1,011,702 tons. A new census of Chili was taken in April, 1866, according to which the area of Chili is 132,609 square miles; the population (inclusive of Araucanía, Patagonia, and Terra del Fuego) is 2,084,945; the foreigners resident in the country numbered 23,220; 832 of the inhabitants are from 100 to 144 years of age, and 9,685 are physically or mentally helpless.

The Spaniards, at the beginning of the year were only keeping up the blockade of the two ports of Valparaiso and Caldera, and in the course of January abandoned also Caldera. Previous to leaving the latter port they dispatched to Spain two or three of their prizes laden with ore, etc., and destroyed the rest (eight vessels) after stripping them. The commander-in-chief of the Spanish squadron issued a decree declaring all Chilean coal contraband of war, even

under protection of neutral flags, until such time as his Government might otherwise direct.

In 1866 the treaty of alliance between Chili and Peru against Spain, which had been concluded in December, 1865 (*see ANNUAL CYCLOPEDIA for 1865*), was formally proclaimed in January, 1866, and was immediately followed by a declaration of war against Peru. The squadrons of the two republics united in the vicinity of the island of Chiloe. On February 7th an engagement took place in the port San Carlos or Ancud, near the north end of the island of Chiloe, where the allied squadrons (the Merrimack, Union, America, and Covadonga) had anchored between the Spanish vessels Villa de Madrid and Blanca, which had been in search of the allied squadron, and the shore batteries. After two hours' firing, the Spaniards, finding it impossible to silence the batteries, withdrew, and after remaining a day or two more in the vicinity, returned to Valparaiso. No serious damage was suffered on either side.

The Spanish fleet, collected at Valparaiso, remained inactive until the close of March, when the most notable event in the Spanish-Chilian war, the bombardment of Valparaiso, took place. On March 16th the Chilian Government issued an order forbidding any vessel which communicated with the Spanish fleet from entering a port of Chili; but there were no efforts made to fortify any town on the coast, nor any other preparations commenced for resisting the enemy. During this lull the American Minister, General Kilpatrick, and Commodore Rodgers, commanding the squadron in the absence of Admiral Pearson at San Francisco, were occupied in an endeavor to bring about negotiations between the two belligerents for an amicable adjustment of the difficulties. Various plans were suggested to the Chilian Government and to Admiral Nuñez for a settlement, none of which were accepted by either party; the former demanding an unconditional abandonment of the war by Spain, and the latter refusing to depart from his plan of hostile operations. The interviews between Commodore Rodgers and Admiral Nuñez convinced the commodore that the admiral would sooner or later bombard the city; and, conscious of the terrible consequences which would result to human life as well as to American property from such an act, he again visited Santiago on the 19th, and proposed to the Chilian Government that the two belligerents fire a mutual salute and once more attempt to settle the matter in a friendly way. This was rejected by Mr. Covarrubias, the Minister of Foreign Affairs; and on the 20th General Kilpatrick and the commodore returned to Valparaiso, to learn, if possible, the ultimatum of the Spanish admiral. As the other members of the diplomatic corps remained entirely inactive, and an official announcement of a bombardment was daily expected, the Representatives of the United States determined to make another effort to avert, if possible, the bombardment. To that end General Kilpatrick and Com-

modore Rodgers visited, on March 21st, the Numancia, Admiral Nuñez's flagship. The latter consented to visit, on March 23d, the American flagship, Vanderbilt, and to have a full discussion of the questions between Spain and Chili. At this visit Admiral Nuñez stated that the terms upon which peace must be made, were dictated by his Government, and were in substance as follows:

1. The Chilian Government to pass a note to Admiral Nuñez, stating that Chili had no intention or wish to insult Spain in the actions complained of, and that the treaty between Chili and Spain had not been broken, but only interrupted, by the declaration of war. Chili should also deliver up the Covadonga, her armament, crew, and officers.

2. In return for this, Spain would give a note to Chili that she did not desire to humiliate Chili, or to seize any of her territory, but that she had great respect for the independence of the South American republics. She would also give up in exchange for the Covadonga and the Spanish prisoners all the prizes (twelve in number) captured in the Chilian waters, together with all Chilian prisoners.

3. A reciprocal salute of twenty-one guns to be fired, Chili firing the first gun from one of her fortresses, and some vessels of the Spanish fleet replying gun for gun. After these preliminaries Admiral Nuñez would proceed to Santiago, in the capacity of envoy extraordinary and minister plenipotentiary, for the purpose of consummating the new treaty of peace.

After making these propositions known to General Kilpatrick and Commodore Rodgers, Admiral Nuñez stated that he would wait for a reply from the Chilian Government until eight o'clock on the morning of the 27th, at which time, if there was no answer, he should commence more stringent measures. General Kilpatrick returned to Santiago on the 24th, and next morning informed Mr. Covarrubias of the result of the interview with the Spanish admiral. The Chilian Minister of Foreign Affairs, after listening to the terms proposed, stated that they could not be accepted, and that all similar propositions must be rejected. There were numerous reasons given for declining the proffered terms, the principal ones of which were that Chili could accept no peace while her sister republics, her allies, were threatened, nor could she exchange the Covadonga, a prize won in fair and open battle on the seas, for any number of merchant vessels picked up by the Spaniards in undefended ports.

Commodore De Courcy, of the English squadron, having visited Santiago for the purpose of consulting with the British minister concerning the best plan for averting the threatened destruction of Valparaiso, an informal meeting of the diplomatic corps was held at the English hotel, and it was finally decided that the foreign ministers would proceed in a body to Valparaiso and, if possible, save the city. On March 27th General Kilpatrick visited the Numancia, and informed Admiral Nuñez that the Chilian Government had declined to accept the terms mentioned by him as the basis of peace. The admiral merely remarked that he must carry out his instructions, and delivered to the general the following manifesto:

HEADQUARTERS OF HER CATHOLIC MAJESTY IN THE PACIFIC.

Manifesto to the Diplomatic Corps resident in Santiago: The memorandum addressed by his late excellency, General Pareja, to the governments of the Spanish American republics, on the 24th of last September, and the circulars of later date of his excellency Don Manuel Bermudez de Castro, Minister of State, must have well informed the corps of which your excellency is the worthy head, of the causes of the war between Spain and Chili, and doubtless must also have made manifest to it that the nature of those causes left open to Spain no other road (amends for the offences which constituted, and still constitute, these very causes, having been refused by Chili) than that of appealing to the ultimate recourse of governments to obtain them.

While the dire necessity still existed, the Government of Spain and its representatives in these waters carried away, it may be said, by the proverbial generosity of the Spanish nation—a generosity natural in a people which feels itself noble and great—desired to employ their means of coercion with all possible lenity, in the belief that the superabundant strength of these means, and the generosity with which they were employed, being appreciated at once and the same time by Chili, the amends which most justly she has owed and owes to Spain would be obtained—a justice ostensibly recognized by two of the first powers of Europe from the moment in which, in order to put in practice their good offices, they agreed with Spain upon certain conditions which demonstrate without any room for doubt whatever that justice; and according to which an end might be put to the conflict decorously for both parties. The blockade of Chili was established and carried on with so much generosity that neither neutrals nor enemies of Spain can ever fail to recognize that it was impossible to keep it in stricter limits within those imposed by the laws of war. There cannot, perhaps, be found within the annals of war up to the present date among civilized nations greater lenity or more tolerance. Perhaps, also, this lenity and this tolerance may have given rise to the belief in the mind of an enemy, which is so unfortunate as not to comprehend them, that she may with impunity refuse that which justice demanded and still demands of her. If this be the case, as every thing induces us to believe, Spain will appear on this occasion acting in accordance with the dignity of her character; history will ever say that she committed upon this occasion the error which elevates more than any thing else a country in the presence of civilized nations.

And that this opinion of the manner in which the blockade has been practised, and is being practised, is in accordance with the strictest truth, is demonstrated by the unanimity on the part of the ministers and agents of neutral nations in thus recognizing it. But it was not sufficient for Spain, assisted as she was and is by justice and by force to sustain it, to carry her moderation even to the most extreme limits. From the moment in which they were presented by France and England she accepted the good offices which both nobly tendered her, to terminate the conflict in such a manner as might leave unsullied the honor of the two countries, which could only be engaged in war by a blindness like that of Chili, punishable by the law of nations. Prior to the breaking out of hostilities, and after their commencement, there is not a single act which does not fully demonstrate the disinterestedness of the conduct of Spain, and her constant desire to reestablish peace. Evidences as respectable as irrefutable thereof are—in America that which the United States can give; in Europe, that which can also be given by the other two nations cited.

With such antecedents it is impossible for Spain to carry further her forbearance. Countries which have a consciousness of the justness of their cause, and of their power to sustain it, may sacrifice upon

the altar of that moderation, which both things impose upon them, their legitimate desire of obtaining at once, by their own hands, the amends which unjustly are denied them; but they cannot, by any means, pass the limit beyond which their power would be wounded, and a prestige sullied, which a history, each one of whose pages relates a glory, has secured for them. Spain has arrived at that limit, and it is necessary, indispensable for her, consequently, to break definitely with the Government which comprehends so badly the duties which civilization imposes upon it, in its relations with others; which interprets so illy those which that same civilization prescribes to every country in its internal government, since it does not hesitate to cause Chili to suffer the evils of a war unjust on her part; with a government in fact which fails to recognize that which the dignity of others claims. Affairs being in this situation, Spain has done what honor indicated: she notified her vessels in the Pacific to seek their allied enemies, and this instruction has been complied with, two of them having compromised themselves, nautically speaking, in regions thickly strewn with all sorts of difficulties, even greater through the uncertainty of their situation; passing where others of their size had never passed, up to the extreme point of nautical temerity, to place themselves in the view of their enemies who, situated in a point perfectly well chosen, and with obstacles which prevented touching them, only received such injury as, although considerable, could be caused by a fire at long range. But yet neither these difficulties, or yet to speak better, these continued dangers of the locality, nor the very frequent fogs which it may be said daily covered them, intimidated us; and another new expedition went in search of the enemy, who, not thinking himself sufficiently safe in the position he had occupied, had sought salvation in the numerous and narrow sinuosities, which formed not only an impassable bulwark for him who hid behind them, but also rendered it impossible to attack him with the class of vessels composing the Spanish squadron in these seas.

Consequently the impossibility of getting within gunshot of vessels which sheltered themselves behind the impassable local barriers, and the persistence of Chili in refusing the amends justly demanded of her, imposed upon Spain the painful but unavoidable duty of making her to feel all the weight of rigor to which that country exposes itself which absolutely refuses to recognize the duties imposed upon the civilized communities of the world; and in this view, and for reasons of war, the cannon of the Spanish squadron will bombard the city of Valparaiso, and any other which they think proper; an act of hostility which, although terrible, is legitimized by the irrefutable reasons already enumerated; a legitimacy which will place upon the Government of the republic all the responsibility of the damage which may be caused to neutral interests; for the placing of which in this port in safety, four days are granted, at the expiration of which, said bombardment will take place.

On board of the frigate Numancia, in the bay of Valparaiso, March 27, 1866.

C. MENDEZ NUÑEZ.

On the same day the admiral officially informed the commandant of Valparaiso that he would open fire upon the city on March 31st and requested the commandant to order that the hospitals and other buildings dedicated to charitable purposes should have some flag or signal that might distinguish them, so as to prevent them from suffering the rigors of war.

The foreign residents held a public meeting and implored the representatives of their governments for protection. On March 28th Ge

eral Kilpatrick invited the English, French, Prussian, and Italian ministers to meet at his rooms, stating in his communication: "To prevent the consummation of an act so cruel and inhuman; to prevent the total destruction of a city composed almost entirely of Europeans and Americans—a city which is to-day totally defenceless, and that through the advice of foreign representatives—I feel it my duty to call upon you to assist me. Of the present difficulties between Chili and Spain we, of course, have nothing to say; but as the representatives of enlightened nationalities we have much to say why a helpless city, not the property of either of the belligerents, should not be laid in ashes, thousands of helpless women and children driven from their homes to die amid the desert hills, and why civilization upon this coast should not be set back to an indefinite period."

The Prussian minister and the consul-general of Italy were in favor of energetic action, but the English and French ministers declared themselves opposed to the use of force, and failed to attend the meeting to which they had been invited. The efforts for bringing about a combined resistance having failed, General Kilpatrick addressed, for himself alone, a protest, in which, after acknowledging the receipt of the note of Nuñez of March 27th, and recapitulating the arguments used by Nuñez to justify the bombardment, he says:

These reasons fail to satisfy the undersigned, as they will fail to satisfy civilized nations, that his excellency the Spanish admiral is justified in resorting to a species of warfare which he himself most truly qualifies as terrible, in order to punish an enemy whom he has thus far failed to punish by legitimate modes of warfare. While belligerent rights permit a recourse to extreme measures for the carrying out of legitimate military operations, they do not include the wanton destruction of private property where no result advantageous to the lawful ends of the war can be attained. International law expressly exempts from destruction purely commercial communities such as Valparaiso, and the undersigned would beg his excellency to consider most earnestly the immense loss to neutral residents, and the impossibility of removing, within the brief term allotted to them, their household goods, chattels, and merchandise. If, however, his excellency persists in his intention to bombard the port of Valparaiso, in spite of the earnest remonstrances contained herein, it only remains for the undersigned to reiterate in the clearest manner, in the name of his government, his most solemn protest against the act, as unusual, unnecessary, and in contravention of the laws and customs of civilized nations, reserving to his government the right to take such action as it may deem proper in the premises.

During the forenoon of the 28th the foreign consuls in Valparaiso, with the exception of the English and French, waited in a body on General Kilpatrick, and formally thanked him for his efforts and those of Commodore Rodgers to bring about a peaceful adjustment of the difficulties between Spain and Chili. Several delegations of English and other foreign residents also called for the same purpose, but no further steps were taken to prevent the bom-

bardment, and all the transportation that could be brought into use was employed in removing the inhabitants and property. An energetic protest against bombardment was also signed (March 27th) by the consuls of Portugal, Prussia, Denmark, United States, Hanover, Austria, Bremen, Oldenburg, Switzerland, Colombia, Brazil, Italy, Holland, Guatemala, Sweden and Norway, Hamburg, San Salvador, and the Sandwich Islands, in which they say:

International law does not permit the bombardment of undefended places and the destruction of ports like this. It is condemned in itself, but in this particular case it will be more so, since Spain on all occasions has solemnly declared in the present war that she will always respect neutral property, and will endeavor to avoid injuries and damages of the war to neutrals. Under the shield of this promise the foreigners resident in this city have continued in their peaceful avocations, confident that Spain would faithfully comply with such solemn pledges. The port of Valparaiso, your excellency well knows, represents throughout its entire extent valuable neutral interests, and its destruction would fall almost exclusively upon subjects of powers friendly to Spain, while the country itself will scarcely feel the effects of so violent an act. The bombardment of Valparaiso may be rather considered as an act of hostility against neutral residents, since its effects will be felt by them alone.

History will certainly not present in its annals any event which can rival in horror the picture which will be presented by the bombardment of this city. It will be an act of vengeance so terrible that the civilized world will shudder with horror in contemplating it, and the reprobation of the entire world will fall upon the power which may have carried it out. The burning and destruction of Valparaiso will be the certain ruin and destruction of a flourishing city; but be your excellency well-persuaded that it will also be an eternal blot upon Spain. Valparaiso will rise from her ashes, but never will the stain be wiped away which sullies the flag of Spain, if your excellency persists in carrying out so cruel an attempt. If, notwithstanding all, your excellency carries it out, we shall find ourselves under the inevitable necessity of protesting in the most solemn manner, as in effect we do now protest, against such a proceeding, as against the interests of our constituents, reserving to our governments the right to reclaim from the government of her catholic majesty the enormous injuries which their citizens will suffer. We protest, in the face of the civilized world, against the consummation of an act which is in contradiction of the civilization of the age.

The consuls of England, France, and the Argentine Republic, united in another protest to Admiral Nuñez, reiterating the sentiments expressed in the above. A protest was also sent by Mr. Gomez, the minister of Honduras, and by the Peruvian and Bolivian Ministers. The consuls also addressed a petition to Commodore Rodgers for protection, to which the following reply was given:

March 29, 1866.

GENTLEMEN: I regret to announce that I am not able to comply with your wish to impede, with the forces under my command, the project of the Spanish government to bombard Valparaiso. My action was premised in case the other foreign powers would unite with the forces of the United States. They judging that it was not within the limits of their instructions to coöperate, and as I never have proposed to act alone, but always have said that I was

only able to move in union with them, my armed intervention cannot take place. In this unhappy juncture I wish, believe me, to do all in my power to protect the interests of neutrals, and I am satisfied that the Spanish admiral will do all in his power to spare innocent blood and the destruction of private property, employing solely the force necessary to comply literally with his instructions.

I am, sir, with much respect,

Your obedient servant,
JOHN RODGERS, Commodore.

A similar answer was given to the memorial of the American merchants and residents of Valparaiso.

On March 29th there appeared a proclamation from the President of Chili, exhorting the people to trust in the government, which would not sign any agreement dishonorable to the republic, and to moderate their just wrath.

The bombardment, as had been threatened, took place on March 31st. At nine o'clock, A. M., the first shot was fired upon the city. It proceeded from the Blanca, and was aimed at the custom warehouse. Accompanied by the cry of "Long live the queen!" the firing soon became general. For three and a quarter hours the bombardment was continued. Not an opposing shot was fired in defence of the city; not a hand was lifted in opposition to the Spanish squadron. With the means at their command, it was useless for the Chilians to resist the attack. The destruction of property was immense. The warehouses, containing millions of dollars' worth of foreign merchandise, were almost totally demolished. It is here that the bombardment affected foreigners so generally. All the public and many private buildings were completely ruined. The Hotel de la Union was fired by a red-hot shot, and all that portion of the city in its immediate vicinity was consumed by the conflagration. To complete the entire destruction of the custom warehouses, a fire broke out about 11:45 o'clock, A. M., which speedily enveloped the whole of them in flames. Nothing was spared by the enemy within range of their guns. Public property and private, hospitals and churches, wharves and their appurtenances, were each and all made an object of attack. After firing between two thousand and three thousand shot and shell point-blank into the city, the flagship Numancia gave the signal to withdraw. The last shot was fired at 12:30 o'clock, P. M. The frigates immediately got under way after the firing had ceased, and proceeded to the anchorage from whence they came in the morning. The foreign fleets resumed their old positions, and on the water every thing soon bore its usual appearance. Immediately after the firing ceased, the people on the heights rushed into the city, and strove to check the conflagration, in which they partially succeeded. Owing to the fact that nearly all the inhabitants had left the place, the number of killed and wounded was comparatively small.

Commodore Rodgers, in an official report to Secretary Welles, dated March 31st, gives the following account of his proposition to prevent the bombardment by force, in case the English should be willing to join the responsibility:

SIR: I have the honor to announce that upon my arrival in this port with the squadron under my command I called upon the English admiral, who had informed me that he intended to prevent any sudden bombardment, and would only suffer it after ample notice. To this I made no reply, but, having considered the matter, sought the occasion the next day to say that I would join him in preventing any sudden bombardment, and that I would also go as much further as he chose. I assured him that the *Monadnock* could take care of the *Numancia*; that, from target experiments I had witnessed, I was absolutely certain that in not less than thirty seconds, and not more than thirty minutes, the *Monadnock* herself, entirely unassisted, would leave only the mastsheads of the *Numancia* above water, and that our wooden vessels, English and American, could look out for the wooden vessels of the Spaniards.

I told the English admiral that his commerce was more extensive than ours, and more convenient to the coast of Spain; but as he had more to suffer in consequence of a rupture with Spain, he had also more to preserve by interference—that his interests in Chili rose to thousands, while ours were only hundreds.

The English admiral said, at first, that he would accompany me, for I plainly declared that I would not take a step without him. I said that I had no intention of becoming a cat's-paw to draw European chestnuts out of the fire, and then have the power I saved laughing at my singed paws while they enjoyed the fruits of my temerity.

The English admiral finally determined to throw the responsibility upon the English minister, who did not choose to act in the premises. English co-operation having failed, no separate action on my part was taken, as none had been proposed.

The losses sustained by the bombardment were estimated as follows: public property, \$432,500; private property, \$450,500; furniture, \$100,000; merchandise, \$9,200,000—total, \$10,183,000. The private property was said to be divided as follows: belonging to Chilenos, \$352,500; belonging to foreigners, \$9,398,000. As soon as the blockading fleet had left, a manifesto setting forth the facts connected with the investment and bombardment of Valparaiso was prepared by the consular body, to be sent home to their respective governments. The manifesto was signed by the consuls of Portugal, France, England, Hamburg, Prussia, Denmark, Belgium, Netherlands, United States, Sandwich Islands, Bremen, Oldenburg, Hanover, Brazil, Saxony, Argentine Confederation, Italy, Sweden and Norway, Austria, Salvador, Switzerland, Guatemala, Lubeck, and the Republic of Colombia. After reciting the circumstances preceding the bombardment the consuls state:

That they have done all in their power to cause the commander-general of her Catholic majesty's naval forces to desist from his purpose, reminding him that the point at issue is an entirely indefensive city; that the bombardment would prove the ruin of numberless neutral families not interested in the question between Chili and Spain, and the government of Chili would suffer damages of but comparatively small importance; that the space of four incomplete

days, and those being of the holy week, was too short a time for the end indicated; and more so, if the circumstances is taken into consideration that this city is one of more than seventy thousand souls, and that it contains enormous deposits of merchandise. That the bombardment of Valparaiso was an act contrary to the principles of humanity which regulate the conduct of civilized nations toward each other. That relying upon the humanitarian sentiments of the commander of her Catholic majesty's squadron, we had flattered ourselves that he would only make use of projectiles incapable of causing a fire in that quarter of the city toward which he might direct his shots. That we must acknowledge with pain that this hope was not realized, as the vessels of the said squadron have discharged shot of every description on the city.

The manifesto then specifies the principal acts of the squadron during the bombardment, and concludes as follows:

It is a notorious fact, witnessed by the whole population, that one of the frigates stationed in front of Planchada Street, mostly habited by French commerce, fired directly on that part of the city, and at a distance of about one hundred and fifty metres from the governor's house, at which building another vessel was directing her shots. It is equally notorious that another frigate, occupied in firing at the railroad station, situated at the extreme east of Valparaiso, fired her whole broadside on two separate occasions on the centre of the part called Almendral, distant about half a kilometre from the railway buildings, which part of the city included no government property, but contains the hospitals and charitable institutions, which were under the safeguard of the word of the commander of her Catholic majesty's squadron. It is not licit to presume that the above-mentioned commander has wished to break his word; but, as the fire of her Catholic majesty's ships was not returned from shore, and the commander of each one of the vessels could take up his position at will, and without reserve or fear of being attacked, there is no reason to suppose that the above-mentioned facts could have originated in a false movement or have had such fatal consequences. In support of this exposition it is the duty of the undersigned to mention that various projectiles struck the civil hospital. Among them a grenade, which, happily, did not explode, fell in the room where the Sisters of Mercy were collected together with the girls from the Asylum of Salvador; that the flag hoisted by the Argentine consulate-general has been traversed by a ball; that various shots have passed the site where the buildings of the French priests are situated; that the Matrix church, serving on that day as an infirmary, has suffered considerable damage, caused by various projectiles, and that all the above-mentioned buildings are situated at long distances from any State property.

On April 14th, Admiral Nufiez informed Commodore Rodgers that he had raised the blockade of Valparaiso. At the same time it was announced that the blockade of Callao, Peru, would commence on April 27th, six days from that date being allowed for neutral vessels to leave the port. (*See PERU.*) The whole Spanish fleet left the Chilean waters, and no further hostilities against Chili were committed during the remainder of the year. The efforts of France and England to mediate in the war and bring about a conclusion of peace, remained, however, fruitless.

On May 28th, the Government of Chili issued a decree, ordering all Spanish subjects to

leave the republic within thirty days, or take out naturalization papers. Subsequently this term was extended one month. Nearly all the Spaniards in the country availed themselves of the opportunity to become citizens. Most of those who preferred to leave went to Buenos Ayres.

An election for president took place on June 26th, and resulted in the reelection of President Perez, by a majority of two-thirds of the electors. The mode of conducting the election is very similar to that in the United States. One member of Congress is allowed to each twenty thousand of inhabitants, and three presidential electors are provided for each congressman. The qualifications of voters are the attainment of twenty-five years of age, the ability to read and write, and an annual income of four hundred dollars. The judges of election are appointed by the municipal bodies of the respective cities and districts in which the polls are opened, and the voting is done by ballot, at tables generally placed in the plazas and protected by soldiers. A residence in the country of five years is necessary for a foreigner to become naturalized, unless he marries in Chili, when he can take out his papers in two years.

CHINA, an empire in Eastern Asia. Emperor, Ki-Tsiang (before his accession to the throne Tsai-Sung), born in 1855; succeeded his father, Hieng-Fund, in 1861. The estimates of the area of China Proper vary from 1,294,000 to 1,548,000 English square miles; and of the area of the dependencies of China, from 8,012,000 to 8,118,000 English square miles. The population of China Proper was, in 1812, estimated at 361,993,179; in 1842, at 414,686,994; and in 1866, at 450,000,000. The population of the dependencies of China is estimated as follows: Mantchooria, 3,000,000; Mongolia, 3,000,000; Thian-Shan-nanlu and Thian-Shan-pelu, together, 1,000,000; Thibet, 11,000,000; Corea, 9,000,000; the Lien-Khieu Islands, 500,000. At the head of the department of Foreign Affairs is Prince Kong. The Chinese army, according to a recent statement (Moyer, "Recollections of Baron Gross's Embassy to China and Japan," London, 1860), consists of about 600,000 men, scattered throughout the empire. Besides, there are about 200,000 Tartars at the immediate disposition of the Government. The soldiers, when not on duty, practise some trade at their residences, so that it may be said that China has no standing army.

The relations of China with foreign countries are every day becoming more friendly, and intercourse is steadily increasing. An arrangement was made, in 1866, whereby telegrams for transmission, *via* Kiatcha, by being delivered to the Russian consulate at Tien-tsin, or the Russian telegraphic agency at Peking, can be transmitted to all parts of Europe. The telegrams will be dispatched from Peking to Kiatcha by the earliest opportunity after receipt, a messenger leaving regularly once a week.

The value of imports and exports in the open ports was, in 1865, as follows:

Ports.	Exports.	Imports.
Shanghai.....	£29,709,575	£12,227,153
Foochow.....	2,616,637	4,521,203
Canton.....	2,281,354	3,862,039
Ningpo.....	3,348,601	1,454,569
Amoy.....	2,046,033	994,129
Swatow.....	1,526,404	694,807
Tien-tsin.....	2,205,739	304,405
Chefoo.....	759,178	498,933
Hankow.....	3,308,772	4,247,302
Kinkiang.....	1,061,788	2,436,780
Chinkeang.....	1,522,603	230,276
Total.....	£50,336,684	£31,471,595

A commercial treaty was concluded with Belgium, and the ratified copies were exchanged on November 10th by Baron Kint de Roodenbock, on the part of the King of the Belgians, and Koo, acting Futai of Keangsoo, on the part of the Emperor of China; Dr. Winchester, British consul, Mr. Morel, and Messrs. Stronach of the British consular service, attending. The exchange was followed by a banquet, at which some eloquent speeches were made. Another treaty of commerce was concluded with Italy, and signed at Pekin, October 26th.

In March a convention was entered into at Pekin between the British and French ministers and the Chinese Government, whereby it will now be lawful, under certain restraints and regulations, for any person residing in one of the open ports of China to obtain from his consul a license to open a coolie emigration office. Previous to granting a license the consul will have to assure himself of the solvency and respectability of the applicant; but when the license has been granted, it cannot be withdrawn except upon sufficient grounds, and then only with the consent of the consul. The Chinese employed by the emigration agent to find him emigrants will be provided with a special license, and will be alone responsible for any actions he may commit in contravention of the laws of the empire. But rules are laid down to secure the Chinese coolie from ill-treatment, or from the chance of not being able to return to his country. No obstacles are thrown by the Chinese Government in the way of its subjects embarking for foreign countries of their own free will; but any attempt to induce them to do so otherwise than the regulations provide is strictly forbidden; and Chinese subjects are punishable by death for the offence of kidnapping men, and sending them abroad against their will.

An event of the utmost importance for the future of China and Eastern Asia in general, is the opening of the new steamship line from San Francisco to China and Japan, as now the trade of the East, that prize which all commercial nations of modern times—the Portuguese, the Spanish, the Genoese, the Dutch, and the English—have contended for through three centuries promises now to fall to the United States. The

first steamship of this line, the Colorado, sailed from San Francisco on January 1, 1867. On the day before, December 31, 1866, the event was celebrated at San Francisco by a great dinner, at which a number of Chinese merchants delivered speeches in English. The exports from San Francisco to China have hitherto been as follows:

	Treasure.	Produce, &c.	Total Exports
1856.....	\$1,555,538 18	\$286,075	\$1,841,613 13
1857.....	3,139,485 91	308,807	3,448,292 91
1859.....	3,125,291 07	250,731	3,376,022 07
1860.....	3,337,209 57	635,835	3,973,044 57
1861.....	3,525,325 42	713,841	4,239,166 43
1862.....	2,669,205 56	733,762	3,402,967 56
1863.....	4,274,085 22	1,230,043	5,504,128 22
1864.....	7,582,865 94	1,393,236	8,976,101 94
1865.....	6,943,692 74	1,388,250	8,331,942 74
1866.....	6,533,510 01	1,465,630	7,999,140 01

The exports of flour and grain have been as follows:

	Wheat, 100 lb. sacks.	Barley, sacks.	Oats, sacks.	Flour, bbls.
1861.....	21,396	784	3,227	20,445
1862.....	21,053	3,203	17,173
1863.....	135,183	2,595	52,027
1864.....	147,236	200	4,406	54,973
1865.....	133,067	2,976	1,378	31,726
1866.....	203,764	2,954	2,768	106,960

A rapid development of this trade is expected under the improved means of communication, which, at the same time, cannot fail to give a powerful impulse to the emigration of Chinese to the United States.

The foreign merchants in China begin to discover that native traders are completely supplanting foreigners at the minor ports. Availing themselves of the steamers which ply from Shanghai to all the treaty ports, native merchants come to Shanghai, as to an emporium from Chefoo and Tien-tsin, from Kinkiang and Hankow, from Chinkeang and Ningpo, purchase those articles of foreign import which their countrymen consume, and take them back with them on their return. Having thus provided themselves on equal terms with the foreign merchants, their immunity from the squeezes of a *compradore* and the heavy expenses of a foreign mercantile establishment, enable them to undersell and monopolize the trade. It is thought that in regard to most ports, the foreigner's only chance of recovering his ground appears to be to place himself on equal terms with his native competitor by acquiring the language, and thus relieving himself from the *compradore*, in whom he has now to implicitly confide, at the price of a "squeeze" of two and a half per cent. on every transaction. But for Chefoo and Tien-tsin another course has been suggested—direct importation from England of the cotton goods which form so large a portion of their trade.

Piracy continued to prevail in Chinese waters in spite of all the efforts made by the Chinese and English Governments to put it down. The

Hongkong authorities, in particular, entered upon a vigorous crusade against the pirates, and, in September, executed a noted chief, Chat-tai. An ordinance was passed enforcing the registration and examination of native craft frequenting the harbor, and the gunboats were rigorous in their search for piratical craft. This greatly exasperated the pirates, who swore that they would revenge the death of their leader on the crews. That they were in earnest they soon showed by killing the captain and several of the crew of the American vessel *Lubra*, and planning the death of all the crew. The reason why no greater progress is made in the suppression of the evil is found in the remissness of the local authorities in the Chinese ports, who cannot be induced to proceed against the pirates with vigor.

The progress made by Protestant and Catholic missions produces great dissatisfaction among a large class of the natives. In Pekin, some ill-feeling was created by the erection of a temple by the French missionaries at a spot where it could overlook the emperor's grounds. They are said, however, to have allayed his annoyance by promising not to raise it sufficiently high to overtop the palace wall. In Hoonan and the adjacent provinces a proclamation was extensively posted, denouncing at length the interference with established customs, and calling on all loyal subjects to rise and exterminate the missionaries. All foreigners are yclept "English" by Chinese who have not learned at a treaty port to distinguish between the different nationalities; so on the head of the English by name are the thunders invoked. An English writer is made to say: "We come from a 'contemptible mud-bank in the ocean, are ruled sometimes by a female and sometimes by a male, and our specific character is half man, half beast.' Allowed by the extreme kindness of the emperor to trade at Canton, we have not been satisfied, but have penetrated into every part of the empire, 'giving free course to our wild and insane imaginations.'" This sweeping denunciation having been delivered against the English—i. e., foreigners generally—the whole flood of the Chinese writer's wrath is directed against missionaries: "Those who have come to propagate religion, enticing and deluding the ignorant masses, print and circulate depraved compositions, daring, by their deceptive extravagancies, to set loose the established bonds of society, utterly regardless of all modesty. * * * Although the adherents of the religion only worship Jesus, yet, being divided into the two sects of Roman Catholics and Protestants, they are continually railing at each other. * * * Daughters in a family are not given in marriage, but retained for the disposition of the bishop, thus ignoring the matrimonial relation." A hundred other enormities are alleged against these teachers of a new creed; and, in conclusion, the "village elders" are exhorted to assemble the populations "that the offenders

may be hurled beyond the seas to take their place with the strange things of creation. * * Their country is fifteen thousand miles from China, beyond a triple ocean. How can the life or death of men be overruled at a distance of fifty thousand *le* across the ocean?"

CHOLERA, ASIATIC. This epidemic, which, before the close of the year 1865, had committed great ravages in Europe and Northern Africa, appeared in the United States during 1866, and caused great mortality in some of the Western cities. It had, indeed, appeared at the New York Quarantine on the ship *Atlanta*, in November, 1865, as stated in the *ANNUAL CYCLOPÆDIA* for 1866, and, as subsequently appeared, had caused twenty-seven deaths at the Emigrants' Hospital on Ward's Island, but there were no farther indications of its presence for several months. Before proceeding to give a detailed account of its ravages in the United States, we give the results of the deliberations of the International Cholera Conference, which, in accordance with the call of the French minister, held its sessions in Constantinople in the spring of 1866. The members of this conference were twenty-three in number, twenty-one of them being the most eminent members of the medical profession in the principal States of Europe, and the other two diplomatists, who had given long and profound consideration to the subject of cholera. Their report is too long to find a place in this volume, but it closes with the following conclusions, which contain the result of their investigations, and in which they concurred with almost entire unanimity:

1. That the Asiatic cholera, which at different times has run over the whole world, has its origin in India, where it had its birth, and where it exists permanently as an endemic.
2. That the Asiatic cholera, wherever it appears, is never spontaneously developed, and has never been observed as an endemic (care must be taken to distinguish secondary foci, more or less tenacious in their character) in any of the countries which have been enumerated (Europe, etc.), and that it has always come from abroad.
3. That there are in India certain localities, comprised principally in the valley of the Ganges, where cholera is endemic.
4. That pilgrimages are in India the most powerful of all the causes which tend to develop and propagate cholera epidemics.
5. That all these facts demonstrate conclusively that cholera is propagated by man, and with a rapidity in proportion to the activity and rapidity of his own movements.
6. That the transmissibility of Asiatic cholera is an incontestable verity, proved by facts which do not admit of any other interpretation.
7. That no fact has proved, up to the present time, that cholera can propagate itself at a distance by the atmosphere alone, whatever may be its condition; and that besides it is a law, without exception, that never has an epidemic of cholera extended from one point to another in a shorter time than was necessary for man to carry it.
8. That if all modes of conveyance from countries affected with cholera are not likely to propagate the disease, it is none the less prudent, at present, to consider all such means of conveyance as suspected.
9. That man affected with cholera is himself the principal propagating agent of this disease, and a

single cholera patient may cause the development of an epidemic.

10. That certain facts tend to prove that a single individual (with much greater reason many individuals) coming from a contaminated place, and suffering from diarrhoea, is able to cause the development of a cholera epidemic; or, in other words, that the diarrhoea called premonitory is able to transmit cholera.

11. That in almost all cases the period of incubation, that is to say, the interval between the moment when the individual may have contracted the cholera poison and the commencement of the premonitory diarrhoea, or of confirmed cholera, does not go beyond a few days; all the facts cited of a longer incubation belong to the class where the contamination may have taken place after departure from the infected place.

12. That there is no known fact which proves that cholera has been imported by living animals; but it is reasonable, nevertheless, to consider them, in certain cases, as belonging to the class of objects called susceptible.

13. That cholera can be transmitted by articles in common use coming from an infected place, and especially by those which have been used by cholera patients; and it also results from certain facts that the disease may be transported to a distance by these same articles when closely shut up from the outer air.

14. That although it is not proved by conclusive facts that the bodies of patients dying with cholera can transmit the disease, it is prudent to consider them as dangerous.

15. That maritime communications are by their nature the most dangerous; that it is they which propagate most surely cholera at a distance, and that next to them comes communication by railroad, which in a very short time may carry the disease to a great distance.

16. That great deserts are a most effectual barrier to the propagation of cholera, and the Conference believes that it is without example for this disease to be imported into Egypt or Syria, across the desert, by caravans from Mecca.

17. That all crowding together of human beings, among whom cholera has been introduced, is a favorable condition for the rapid spread of the disease—and, if this crowding exists under bad hygienic conditions, for the violence of the epidemic among them.

That in this case the rapidity of the extension of the disease is in proportion to the degree of crowding, while the violence of the epidemic is, other things being equal, so much the greater according as individuals have been little exposed to the choleraic influence or not at all; that is to say, in other words, individuals who have already been exposed to the influence of a cholera atmosphere enjoy a sort of relative and temporary immunity which counterbalances the bad effects of crowding.

Finally, in the case of a dense crowd, the more rapid its separation, so much the more rapid is the cessation of the epidemic, at least if new arrivals of unaffected persons do not furnish new aliment for the disease.

18. That the intensity of cholera on board ships crowded with men, is, in general, proportionate to the crowding, and is so much the more violent, other things being equal, if the passengers have not resided in the focus of cholera from which they started; that on crowded ships the spread of cholera epidemics is ordinarily rapid; finally, the Commission adds that the danger of importation by ships, and that of giving rise to a grave epidemic, are not entirely subordinate to the intensity, nor even to the existence of choleraic symptoms appearing during the voyage.

19. That the crowding together of people coming from a place where cholera reigns in a lazaretto, has not the effect of producing, among the people at

quarantine, a great extension of the disease; but that such a gathering is nevertheless very dangerous for the neighborhood, as it is calculated to favor the propagation of cholera.

20. That great gatherings of men (armies, fairs, pilgrimages), are one of the most certain means for the propagation of cholera; that they constitute the great epidemic foci which, whether they march after the manner of an army, or whether they are scattered, as at fairs and in pilgrimages, import the disease into the country which they traverse; that these gatherings, after having been exposed, usually in a rapid manner, to the influence of cholera, become much less susceptible to its power, and that it disappears very speedily, unless newly-arrived persons take the disease.

21. That the hygienic and other conditions which in general predispose a population to contract cholera, and consequently favor the intensity of the epidemics, are: misery, with all its consequences; overcrowding, particularly of persons in feeble health; the hot season; want of fresh air; the exhalations from a porous soil impregnated with organic matters—above all, with the dejections from cholera patients.

It appears demonstrated by experience that the discharges of cholera patients contain the generative principle of cholera; it is right to admit that drains, privies, and the contaminated waters of towns may become the agents for the propagation of this disease.

It seems to result from certain facts that the soil of a locality, once impregnated with cholera detritus, is able to retain for a considerable length of time the property of disengaging the principle of the disease, and of thus keeping up an epidemic, or even of regenerating it after it has become extinct.

22. That the immunity which certain localities enjoy, that is to say, the resistance, permanent or temporary, general or partial, opposed by these localities to the development of cholera within their limits, is a fact which does not exclude transmissibility, but which indicates that certain local conditions, not yet entirely determined, are an obstacle to the development of the disease.

The same immunity, more or less complete, and more or less durable, which the majority of persons in the midst of an infected district enjoy, an immunity which attests the individual resistance to the toxic principle, is a circumstance to which we should attach the highest importance.

In point of view of epidemic development, it is the corrective of transmissibility, and, viewed with regard to prophylaxis, it sets in operation proper means to arrest the ravages of the disease.

23. That the air is the principal vehicle of the cholera principle. The action of the cholera miasm is so much the more sure as it operates in a confined atmosphere, and near the focus of emission. It seems that it is with cholera miasm as it is with the miasm of typhus, which rapidly loses its power in the open air at a short distance from its starting point.

24. That the surrounding atmosphere is the principal vehicle of the generative agent of cholera; but the transmission of the disease by the atmosphere, in an immense majority of cases, is limited to a space very near the focus of emission.

25. That water and certain ingesta may also serve as vehicles for the introduction into the organism of the generative principle of cholera.

This granted, it follows, so to speak, necessarily, that the passages by which the toxic agent penetrates into the economy are principally the respiratory passages, and very probably also the digestive canals. As for its penetration by the skin, nothing tends to prove it.

26. That the matter of the cholera dejections being incontestably the principal receptacle of the morbid agent, it follows that every thing which is contaminated by the discharges becomes also a receptacle

from which the generative principle of cholera may be disengaged, under the influence of favorable conditions; it follows, also, that the origin of the cholera germ takes place very probably in the digestive canal, to the exclusion, perhaps, of all other parts of the system.

27. That in the open air the generative principle of cholera loses rapidly its morbid activity, and that this is the rule; but that under certain particular conditions of confinement, this activity may be preserved for an unlimited period.

28. Observation shows that the duration of the choleraic diarrhoea, called premonitory—which must not be confounded with all the diarrhoeas which exist during the time of cholera—does not extend beyond a few days.

Facts cited as exceptional do not prove that the cases of diarrhoea prolonged beyond that period belong to cholera, and are susceptible of transmitting the disease, when the individual affected has been withdrawn from all cause of contamination.

The British members of the conference, Doctors Stuart, Goodroe, and Dickson, reported from Constantinople to the Earl of Clarendon (Foreign Minister of Great Britain), under date of May 25th, and after giving a summary of the preceding conclusions, proceeded to state the following results, to which, after free conference, they had come, on the important subject of quarantine—results as applicable to the United States as to Great Britain. It may be possible that in the case of ships or passengers arriving from infected neighboring ports, the following measures might advantageously be adopted:

1. No person should be allowed to land previous to efficient inspection by medical men appointed for the duty.

2. The healthy passengers should be removed from the ship, and isolated for a period which need not exceed five days; at the end of which time they should be again inspected, and if found without choleraic symptoms should receive pratique.

3. All persons with cholera or diarrhoea at the time of arrival, or at any period of the detention, should be isolated from the rest, and removed to a separate place. Cases of diarrhoea should be retained under observation until the diarrhoea is cured, or until the medical officer in charge is satisfied, from the features of the disease, that it is not of choleraic nature.

We think that the time of observation in such cases of diarrhoea should not be less than eight days from the commencement of seclusion.

Persons having a medical certificate of being sufferers from chronic or symptomatic diarrhoea should follow the rule of the healthy, subject, however, to the discretion of the medical officer in charge.

As the time occupied in the voyage between England and the neighboring ports is short, we have not included it in the period of observation.

We further think that the complete disinfection of the effects of persons coming from contaminated places should be insisted on, and that the period of isolation of the persons should be from the time that they are separated from their suspected property.

All persons (including medical officers) employed in the Quarantine Department, who in any way come in contact with the ships, passengers, crews, or effects, that have arrived from contaminated places, should follow the same rules as the arrivals themselves.

With respect to persons detained in the sick departments of the quarantine stations, the destruction or disinfection of all articles used by them should be imperative.

The application of chemical disinfectants to the discharges, the disposal of these below the surface of the soil, if on shore, and beyond the possibility of contaminating water used for drinking purposes, are indispensable.

The above measures would require the following conditions at each quarantine station:

1. An establishment for the reception of the healthy, capable of completely isolating successive parties of arrivals in distinct classes, well separated from each other.

2. An establishment for the reception of the sick, with an isolated convalescent establishment.

Each of the above should be provided with latrines, having moving receptacles, which should be daily emptied and purified.

3. An establishment for the purification of effects.

The establishments required would certainly be large, but a small number of them placed on a few points of the coast would suffice, if all the ships carrying passengers from infected ports were made to pass through them before receiving free pratique.

We consider that islands lying at some distance from the coast would be the most desirable spots for the institution of quarantine stations. On these wooden—or, still better, iron—constructions might be rapidly raised. In summer weather isolated camps, with tents, might be formed.

In the event of islands not being available, it would be well to select some place on shore capable of complete isolation, and at a considerable distance from any inhabited quarter, or hulks moored at some distance from the land, but never within rivers. It will be observed that several ships at each station would be necessary for the efficient working of the plans proposed.

The principle of isolation, adapted to special circumstances, should, we think, be carried out within the country when the disease has found a footing on shore. We cannot too strongly urge the necessity of excluding from workhouses and general hospitals any forms of choleraic disease.

The sick poor should be cared for in special and isolated institutions.

We have based the suggestions which we have taken the liberty of submitting to your lordship upon the supposition that all the agents employed shall be of an intelligent and upright class; that they shall be specially instructed to watch attentively, and without exciting their suspicion, the persons placed under observation, and report to the medical officers every visit made by any one to the latrines. Without the aid of intelligent and trustworthy agents, it would hardly be possible to limit safely the period of observation to so short a time as above stated.

While convinced that all personal effects should be thoroughly disinfected, we do not think it necessary to extend the measure to mails or to ordinary merchandise.

The epidemic, which in Europe committed its ravages in the autumnal months of 1865, reaching its period of greatest intensity in Paris in October, and about the same time in most of the cities and towns of Western Europe, hibernated during the winter, only sporadic cases occurring, but in the spring, summer, and autumn of 1866, it appeared in many of the European states with great severity. It visited Paris twice in that time—once in the spring and again late in the summer; made great havoc in London, where the deaths, in the week ending July 28th, reached 2,600, and in that ending August 4th, 2,661, and greatly increased the mortality of the other cities of Great Britain. In Holland, during the summer, there were 6,446 cases and 8,866 deaths. In Hungary it

was said to have caused 40,000 deaths, and in the empire of Austria over 100,000. About 300 cities and districts in Europe were visited by it. In October and November it visited Amiens, where 1,000 perished in the first few days out of a population of 65,000; Antwerp, where from 40 to 50 died daily; Berlin, where there were from 50 to 80 deaths daily; Delft, where in 396 cases there were 220 deaths.

In New York, the Metropolitan Board of Health was organized in March, with extraordinary powers, and permission, by appeal to the Governor, for the exercise of almost despotic authority during the apprehended presence of

the epidemic. They immediately commenced daily sessions, and by the most energetic measures fought the progress of the disease inch by inch. New York, and the remainder of the Metropolitan District, had never been so clean, and at the first appearance of the disease in any quarter, the most thorough cleansing and disinfection were practised, and thus the disease was kept within control and at no time assumed a very formidable character. Its first appearance, as in the previous year, was in the steamships from Europe. The following table gives very fully the particulars in regard to all those which had cholera on board:

DATE OF ARRIVAL.	NAME OF VESSEL.	PORT OF DEPARTURE.	Days on Passage.	No. OF PASSENGERS.		Officers and Crew.	CASES OF CHOLERA.

There were a few isolated cases of cholera in New York in May and the early part of June, cases for the most part clearly traceable to the cholera ships at quarantine, though in some instances probably cholera morbus was mistaken for Asiatic cholera. The week ending June 16, was the first in which cholera began to be reported in the weekly mortuary records. From that time onward to October 13, when it ceased to appear in the list of causes of deaths, the following were the weekly returns of the Registrar of Vital Statistics of the number of deaths attributable to Asiatic cholera in New York City:

It is a little remarkable that the two weeks of its greatest intensity in New York (an intensity caused by its outbreak in the almshouses and workhouses of Blackwell's Island), should have corresponded so nearly with the period of its greatest intensity in London. The two weeks in which the mortality was greatest in London, as has been already stated, were those ending July 23, and August 4; the two in New York were August 4, and August 11. The epidemic on Blackwell's Island, though sharp was very short in its duration. The thorough and prompt measures which were taken for the complete disinfection and purification of all the

buildings and their attachments, drove it out effectually in about ten days.

In New York City every place where the disease appeared was thoroughly cleansed and disinfected; a careful visitation of all places suspected of being badly drained, or ventilated, or of containing the *fomites* of disease, was entered upon, and all persons who were suffering from diarrhoea or other premonitory symptoms of cholera, were supplied with preventive medicines. By never relaxing their watchfulness but battling with the disease at every step of its progress, it was so far restrained, that at no period did it assume a very alarming character. There are strong indications, however, that here as in Europe it may appear again the coming season.

In Brooklyn, owing to the inertness of the city authorities, and the obstacles thrown in the way of the action of the Board of Health, the disease was in proportion to the population more fatal than in New York. The number of deaths was between 700 and 800. In the other principal cities the deaths to December 1, 1866, were in St. Louis, 3582; Philadelphia, 884; Cincinnati, about 1200; Chicago, 978; Savannah, 231; New Orleans, 132; Richmond, 184; Vicksburg, 510; Memphis, 889; Louisville, 152; in the army stationed at Richmond, Va., 99; at Jefferson Barracks, Mo., 149; and at Tybee Island, Ga., 90. The returns to the Bureau of Statistics, Washington, D. C., from fifty-three of the principal cities and towns, and from the post commanders and hospitals of the United States Army, give the number of deaths from cholera in those cities, towns, and posts, during the four months ending December 1, 1866, as 10,805. There were in these cities about 250 deaths before August 1, the time when the statistics commence, and the deaths from cholera in places not enumerated would unquestionably swell the total number of deaths from it in the United States to fully 12,000.

It cannot be said that our knowledge of the treatment most successful in cholera has been greatly advanced during this epidemic. The disease did not excite so much terror or panic as in its previous appearances. It was satisfactorily demonstrated that preventive measures, thorough disinfection, good ventilation, the avoidance of violent excitements or of unripe and indigestible food, and the prompt treatment of even alight diarrhoea, were usually sufficient to keep it at bay. But where persons were attacked by it, it could not be said with truth that any one method of treatment possessed marked or decided advantage over all others. Of those attacked even under the most favorable circumstances, full forty per cent died, and this whether the treatment adopted were stimulants, emetics and cathartics, astringents, mercurials, or homœopathic or eclectic remedies. The internal administration of chloroform and tinct. camphor, or of either alone, was perhaps as successful as any mode of treatment. Dr. Collins, a strenuous advocate of

calomel in free doses in the disease, and the author of a work on cholera and its treatment, was one of its first victims at Cincinnati; and other prominent physicians of the different schools who had avowed their confidence in particular plans of medication, found them powerless in their own cases.

It is not to be inferred from this, however, that no medication is of any avail; such an idea has been abundantly proved false in many instances. In Memphis there were in 35 days 1174 cases, of which 826 proved fatal. Of these 551 were whites, of which 322 proved fatal; most of these were under medical treatment, but the disease was especially malignant there, and attacked to a great extent persons of irregular and intemperate habits. Six hundred and twenty-three of those attacked were negroes, living by themselves in a low, filthy, and crowded quarter of the city. These were for the most part without medical attention, and 530 of them died, or more than 84 per cent. Similar statistics from other sections of the country, are equally conclusive in regard to the extreme fatality of the disease when no medication is attempted.

CHRISTIAN CONNECTION, or CHRISTIANS (commonly pronounced Christ-ians), a religious denomination which at present numbers about 3,000 ministers, 5,000 churches, and 800,000 members. The Quadrennial United States Christian Conference met at Marshall, Michigan, on October 2, 1866. The chairman stated that each conference was entitled to as many votes as there were ordained ministers in that conference. Upon calling the roll of conference, the following were represented by delegates: Passamaquoddy—Vermont Western, 18 votes; Merrimack, 20; Rockingham, 15; York and Cumberland, 45; Strafford, 13; New York Eastern, 47; New York Central, 40; New York Western, 14; New York Northern, 11; New York Southern, 14; New Jersey, 14; Tioga River, N. Y., 25; Erie, Pa., 16; Canada, 17; Miami, Ohio, 52; Central Ohio, 29; Maumee Valley, 5; Southern Ohio, 30; Deer Creek, Ohio, 14; Eel River, Indiana, 16; Antioch and Bluffton, 42; Western Indiana, 32; Mason River, 5; Northern Illinois and Southern Wisconsin, 28; Central Illinois, 13; Spoon River, Illinois, 25; Northeastern Iowa, 29; Union, Iowa, 8; Des Moines, 28; Eastern Michigan, 17; Southeastern Michigan, 7; Central Michigan, 6; Grand River Valley, 7; Southwestern Michigan, Northern Indiana, and Western Michigan, 12; Richland Union, Wisconsin, 6; Northern Wisconsin, 12; Jacksonville, —; making in all 40 conferences. The Rev. I. C. Goff, of Illinois, was elected president. A letter expressing fraternal feelings was read from the Association of General Baptists in England, this being the first communication of the kind since 1823. The General Conference replied to this letter by a series of appropriate resolutions, and by appointing a delegate to attend the next annual meeting of

the General Baptists. A committee of three was appointed to raise funds for the establishment of a biblical school which will be located in the State of New York. The organs of the denomination, being three in number (the *Herald of Gospel Liberty*, Newburyport, Mass.; the *Gospel Herald*, and the *Sunday-School Herald*, Dayton, Ohio), were recommended to the attention of the members, and it was also resolved to establish a *Quarterly* and an *Annual Register*. The use of tobacco, in any form, and the use of intoxicating liquors, as a beverage or for sacramental purposes, was censured. The new hymn-book in use in the New England churches was recommended for general introduction. The committee on the state of the country made the following report, which was adopted:

Four years of war, in which more than half a million of human lives were sacrificed; more than a million persons maimed; uncounted multitudes wasted by disease or brutal imprisonment, or cruel starvation, in which thousands of homes, once prosperous and happy, were made the abodes of widows and orphans; in which large portions of our fairest lands were laid waste, and our commercial, social, and religious enterprises embarrassed; in which capital enough was wasted to have purchased, at Richmond prices, every slave in the land, and to have endowed all the schools and colleges in the world; thus four years of terrible war were dealt out to us as the wages of our injustice. We recognized the hand of the righteous God in these chastisements brought upon us for our complicity with the crime of human slavery. We rejoice in the favor of Him who has given victory to our arms and liberty to the enslaved. The military tribunal before which our case was forced by the enemies of our Government and their allies, having decided the physical issue of the great contest, now passes the whole question of moral right with all its responsibilities over to the proper authorities of the loyal people for final adjudication.

This convention believes that Congress and not the Executive should lay down its basis of peace, to be enforced in the reconstruction of the late rebel States. We believe that the control of the Government should be forever secured to the loyal people who came to its support and relief in its hour of peril, and that those who, in perjury and treason, inaugurated the rebellion, murdered and starved our soldiers, plundered and burned our cities, robbed our treasury and threatened our national existence, should be unconditionally excluded from the right of franchise, and required to give suitable pledges for future good behavior. We therefore declare:

1. That we favor the adoption of the Constitutional Amendment proposed by the Thirty-ninth Congress, and do hereby pledge our united influence in behalf of the loyal Congress, as against the corruption and usurpation of the Executive.
2. That we are in favor of impartial suffrage as the inalienable right of all good citizens.

The committee on colleges and schools made favorable reports on the condition of the Wolfborough Seminary in New Hampshire, Le Grand Institute in Iowa, Antioch College in Ohio, Union Christian College in Indiana, and Starkey Seminary in New York. The original platform of the denomination, namely: "That the name Christian is the only name of distinction which we take, and by which we, as a denomination, desire to be known, and the Bible as our only rule of faith and practice," was uni-

versally reaffirmed. The Executive Board of the General Conference was instructed to purchase the Western Christian Publishing Association, and strike from its name the word "Western." The same board was authorized to negotiate for the purchase of the *Herald of Gospel Liberty*, published at Newburyport, Massachusetts.*

A convention of members of this denomination in the Southern States ("Southern Christian Convention") was held at Mount Auburn, N. C., on May 2, 1866. This meeting passed a resolution requesting every family and church to make a contribution, averaging fifty cents to each member, for the establishment of a publishing concern. A publishing committee was appointed to recommence the publication of the *Christian Sun*, the organ of the Southern churches, at Suffolk, Va., and to put to press at an early day the declaration of principles and history of the church, and a new hymn-book, now being compiled. The *Christian Sun* ceased to exist soon after the commencement of hostilities. The printing establishment at Suffolk was entirely destroyed during the war, and all the funds collected for a book-concern, and deposited in the banks, were lost.

CHURCH OF GOD (also called WINEBRENNERIAN), a religious denomination organized in 1830 by the Rev. John Winebrenner. According to the belief of this denomination, there are three positive ordinances of perpetual standing in the church, viz., baptism, feet washing, and the Lord's supper; two things are essential to the validity of baptism, viz., faith and immersion; the ordinance of feet washing is obligatory upon all Christians; the Lord's supper should be often administered, to Christians only, in a sitting posture, and always in the evening. The church is divided into elderships, which meet annually. A general eldership, consisting of delegates from the annual elderships, is held every three years. The eighth triennial general eldership was held at Decatur, Illinois, on May 31, 1866, and the following days. The following elderships were represented: East Pennsylvania, West Pennsylvania, East Ohio, West Ohio, Indiana, Southern Indiana and Illinois, Iowa, German, Michigan. A. F. Shoemaker was elected speaker. A letter was read from Texas, giving a statement of the rise and progress of the Church of God in that State, the annual eldership of which State, in 1861, seceded from the general eldership on account of the anti-slavery position taken by the latter body. A motion made to recognize the Texas eldership was lost, and the letter was referred to the board of missions. The general eldership recognized Centralia College in Kansas as an institution of the church, and resolved to establish another college in Ohio, West Pennsylvania, Indiana, or Illinois. The subscription list of the weekly denominational organ, the *Church Advocate* (published at Lancaster, Pa.), was re-

* See "Minutes of the U. S. Quadrennial Christian Conference." Dayton, 1866.

ported to be 2,700, and the board of publication was conditionally authorized to publish a monthly Sunday-school paper, to commence the 1st day of January, 1867. J. F. Weishampel was authorized to publish a German paper. A series of resolutions on loyalty, against slavery, and in favor of equal rights of all men, irrespective of color, were adopted. It was "resolved that the executive board be instructed to apply to the Legislature of Ohio for an act of incorporation of the general eldership of the Church of God in North America." The next triennial meeting is to be held in Lancaster, Pa., in May, 1869. The brethren of Kansas were authorized to form themselves into an eldership, if they deem it practicable. At the annual meeting of the Texas eldership, held in 1866, a desire was expressed to reunite with the general eldership, but no definite resolutions were adopted.

CLAY, CLEMENT COMER, an American statesman, born in Halifax County, Va., December 17, 1789, died at Huntsville, Ala., September 9, 1866. He was the son of William Clay, an officer of the Revolutionary army, who after the close of the war removed with his family to Granger County, Tenn. Young Clay completed his education at the University at Knoxville, studied law, and was admitted to the bar in 1809, soon after which he removed to Huntsville, Alabama (then a territory), where he resided until his death. His legal attainments were such that he rapidly built up a good and lucrative practice, but in 1813, upon the commencement of the troubles with the Creek Indians, he volunteered as a private soldier in the army. In 1817 he was elected a member of the territorial council; two years after was appointed one of the Judges of the Circuit Court, and in 1820 Chief Justice of that Court, which position he resigned in 1823. In 1828 he was sent to the State Legislature and chosen Speaker. The following year he was elected to represent the State in the lower branch of Congress, and occupied his seat until 1835, in which year he was chosen Governor of Alabama, serving two years. Before the expiration of his term he was called to the United States Senate, where he served until the close of the extra session of 1841, when sickness in his family induced him to resign. From that time he devoted himself to the practice of his profession and lived in comparative retirement. During the war he remained quietly at home, rather as a spectator of passing scenes than taking any part in them.

CLEAVELAND, ELISHA LORR, D. D., an eminent Congregational clergyman, born at Topsfield, Essex County, Mass., April 25, 1806, died in New Haven, Conn., February 16, 1866. He was the youngest son of Dr. Nehemiah Cleaveland, a distinguished physician of Topsfield, and, until about sixteen years of age, remained at home working upon the farm and attending the common school. He then began his preparation for college at Dummer Academy, in the neighboring town of Newbury, a

well-known institution then under the care of his eldest brother. In his nineteenth year he entered Bowdoin College, where his distinguished relative, Professor Parker Cleaveland, was then in the height of his celebrity and usefulness. He graduated in 1829, and during the last year of his course was hopefully converted. From the college at Brunswick he entered the Theological Seminary at Andover, and during his third year was licensed to preach. In January, 1833, attracted by the fame of the late Dr. Taylor, he entered Yale Seminary with the intention of continuing his studies another year, but, on the second Sabbath after, he was invited to supply the pulpit of the Third Congregational Church, made vacant by the dismissal of the pastor, and was speedily chosen to the pastorate. In July of that year he was ordained, and under his wise and skilful administration the church greatly increased in numbers and power, and became finally one of the leading churches in the denomination in that city. Thoroughly conservative by the natural constitution of his mind and his early training, Dr. Cleaveland took decided ground against what were denominated the New School views of Drs. Taylor and Fitch, but his position on those questions was also compatible with dignity and courtesy toward those who differed from him in opinion, holding their friendship while discarding their theological views. When it became necessary to erect a new church edifice, he exerted himself to the utmost to raise the necessary funds, and it was mainly owing to his perseverance and indomitable energy that the enterprise succeeded. In November, 1864, Dr. Cleaveland went to Europe, and during his tour of eight months did much to explain the views of the Government with regard to the struggle in which the country was engaged, the resources of the people, and the determination to destroy slavery at all hazards. At Paris, in an assembly of Protestant pastors and delegates from all parts of France, he gave, through an interpreter, an idea of the conflict from which the nation was emerging; and subsequently at London, in the annual assembly of the English Congregational Union, he defined the Northern position with the utmost clearness, creating conviction of the success of the Union cause in the understanding of many who from ignorance or prejudice were embittered toward the North.

Returning with health and strength somewhat renewed, he resumed his work among the people of his charge, who were enjoying a high degree of prosperity as a church, when after a short and not alarming sickness he was suddenly called to his final rest. Dr. Cleaveland was a man of vigorous and comprehensive intellect, sound, practical judgment, decided executive and administrative ability, and above all possessed that active and deep-toned piety which was the key to his eminent success in his long pastorate. His only published works were some occasional sermons.

COLOMBIA*, UNITED STATES OF. A republic in South America. President (April 1, 1866, to March 31, 1868), General Tomas Cipriano Mosquera. The ministry was, in 1866, composed as follows: Interior and Foreign Affairs, Joseph M. Rojas Garrido; Finances, Francisco Agudelo; War and Navy, Rudecindo Lopez; General Treasurer, Sinforiano Hernandez. The statements about the area considerably differ, as the southwestern and eastern frontier are still subject to dispute. The Colombian Government claims altogether a territory of about 518,000 English square miles, while other statements (not giving to Colombia all the disputed territory) reduce it to 464,700. The Colombian Government claims a population of 2,794,478, not including the uncivilized Indians, whose number is estimated at 126,000. With regard to race, Mr. Samper (*Bulletin de la Société de Géogr. de Paris*, March, 1858), who puts down the whole population at 2,692,614, estimates the pure European population at 1,357,000, the descendants of Europeans and Indians at 600,000, Africans at 90,000, and all others 465,000. The imports of the ports of Panama and Colon were, in 1864, valued at \$35,000,000, and the exports at \$67,000,000.

On December 6th General Mosquera handed in his resignation as President of the republic, to the Supreme Court, giving as his reasons that his predecessor ruled the country so miserably, that he found it impossible to replenish the treasury; that the army was full of abuses, and the treasury had been robbed of upward of a million of dollars by false certificates; that the Archbishop of Bogota and other bishops were in rebellion against the executive; that the circular regarding public order had met with no respect from the Governors of the States; that, in fact, there was a general desire to disturb the public peace, and to make way with him, the general, by assassination, if necessary. It was expected that the Supreme Court would not accept the resignation.

In the latter months of the year a serious difficulty occurred between the Government of the United States of Colombia and the United States minister at Bogota, Mr. Burton. It arose out of remarks made to the Colombian Government by General Piñerez, who, in October, had been sent on a special mission to Panama. General Piñerez, in his report, thought proper, in allusion to the Americans residing there, to affirm—as he alleged on the authority of President Olarte, the Citizen President of the State of Panama—that “the only ground for fearing a revolution within the State was the cupidity and ambition of the Yankees residing in Panama.” As the report was published by the Government in its official organ, and as the Government took no notice of the remonstrance of Mr. Burton, the United States minister, the latter deemed it best to demand his passports, especially as the Colombian Secretary of For-

eign Affairs had left several official communications from him unanswered. The Colombian Government then apologized, but declined the request of Mr. Burton to submit the matter to the diplomatic corps at Bogota. At the end of the year the passport question remained unsettled.

On December 25th President Mosquera published the following decree concerning the Panama Railroad, which it was feared might become a source of great trouble:

T. C. de Mosquera, Grand General, President of the United States of Colombia, looking to the 8th and 35th article of the treaty between Colombia and the Panama Railroad Company, dated April 17, 1850, in which it is stipulated that the company shall pay to the nation five per cent. of the amount of the value of the mails passing across the Isthmus, and three per cent. of the net profits of the enterprise, and considering that in view of the interests of the nation it is necessary to have perfect cognizance of the mails, number of passengers and treasure that pass across the Isthmus, and having in consideration the eminent sovereignty the Government exercises over that part of its territory, decrees that:

1. That postmasters and captains of the ports of Colon and Panama on visiting vessels, and upon view of documents presented to them, shall accurately note: first, the total weight of the mails that are to pass across the Isthmus; second, the number of passengers; third, the amount of treasure, and fourth, the total weight of merchandise.

2. From these facts monthly returns are to be made to the Treasury Department, so that from them at the end of the year the commercial statistics may be drawn up.

The Colombian Congress, early in 1866, declined to join the alliance of Chili and Peru against Spain, but in September President Mosquera addressed a letter to the Presidents of Peru and the other republics which had taken part in the South American Congress of 1865, to appoint a time for a new meeting of the Congress for the purpose of effecting the exchange of the ratifications of the treaties concluded in 1865, and of presenting the treaty for adoption to the other republics which had not taken part in the first meeting. The new meeting, in the view of Mosquera, was to discuss the means for securing a permanent peace between all the republics, and to that end fix certain principles of international law, and especially the mutual rights of belligerents and neutrals. The proposition of President Mosquera was favorably received by all the presidents to whom it was addressed.

COLORADO. In the notice of Colorado, published in the preceding volume of this work, it was stated that on January 18, 1866, a bill was reported in the United States Senate for the admission of the Territory into the Union under the constitution adopted by her people in the autumn of 1865. Upon the subject coming up for debate, a strong opposition to the bill was manifested on the part of several Republican Senators. Mr. Sumner spoke earnestly against it, basing his objections upon the inadequacy of the population, the denial of suffrage to colored citizens under the newly adopted constitution, and upon the fact that

* For further information on the Literature, finances, army, etc., see ANNUAL CYCLOPEDIA for 1865.

large proportion of the people of the Territory were not desirous of admission to the Union. The Senate accordingly refused to order the bill to a third reading; but in the latter part of April this action was reconsidered and the bill passed that body. An amendment offered by Mr. Sumner, that the act "shall not take effect except with the fundamental condition that within the State there shall be no denial of the elective franchise, or any other right, on account of color or race, and all persons shall be equal before the law," was defeated by a large majority. The bill next went to the House of Representatives, where it also passed.

On May 15th the President returned the bill to Congress with his objections, the chief of which were that the erection of Colorado into a State was at that time unnecessary for the welfare of the people; that it was not clearly established that the people were desirous or prepared for the change, and that the population was insufficient, having decreased rather than increased during the previous year. The veto message will be found in PUBLIC DOCUMENTS.

In August an election for Delegate to Congress took place in Colorado, at which George M. Chilcott, the Republican candidate, received 3,529 votes against 3,421 thrown for A. C. Hunt, the Democratic and Administration candidate, and 46 scattering votes. The Territorial board of canvassers found a majority for Chilcott over Hunt of 108 votes, and gave a certificate of election to the former; but the Territorial Governor, Alexander Cummings, gave a certificate to Hunt, mainly on the ground that persons lately in the Confederate service had voted for Chilcott. The State Legislature elected in 1865, in anticipation of the speedy admission of Colorado into the Union, retained its organization during 1866, although without any authority to control public affairs. It was Republican in both branches. The Territorial Legislature had also a Republican majority.

An act of the Territorial Legislature passed in 1862 established the capital of Colorado at Golden City, but until 1866 the Legislature continued to meet at Denver, thus practically ignoring the law. In the latter year Governor Cummings transferred the executive department of the government to Golden City, whence, on December 10th, he transmitted his annual message to the Legislature, which assembled as usual at Denver. He stated that the mining interests, on which the prosperity of the Territory must mainly depend, were recovering from their recent depression, that the crops had been abundant, and that on every hand the immense resources of Colorado were witnessing a fresh development. "The mines," he said, "need nothing but labor to make them profitable in excess of all that has ever been claimed for them; the farmer is sure of large harvests; the climate is wonderfully healthful and invigorating, and every feature of the country invites the immigrant, and gives to his industry the

assurance of success." He recommended that branch roads should be constructed to intersect both lines of the Pacific Railroad, in order that the mineral regions lying around Denver might be reached; and that Congress should be solicited to make appropriations in aid of this object. The immigration from the East, he said, had steadily increased during 1866, and the apprehensions of an extensive Indian war, at one time prevalent, had been nearly dispelled. With regard to the proposed admission of Colorado as a State, he expressed himself as follows:

During the past year, owing to the action of the different departments of the national Government, the people have been much excited on the subject of the admission of Colorado as a State into the Union. It would be idle to attempt to conceal the fact that there are two parties to this issue in the Territory, although a strenuous effort has been made to create the impression abroad that the people were united on the question. But here, where the evidence is readily attainable, it would be equally idle to deny that the party desiring a State government forms a very small portion of the population, and is represented by those who seek personal aggrandizement and place, at the expense of the welfare of the Territory.

Governor Cummings then proceeded to declare himself opposed to the State project on three principal grounds, viz.: the illegality of the convention by which the State constitution was framed; the failure of that instrument to bestow the electoral franchise upon colored men; and the inadequacy of the population of the Territory. Means had been taken, he complained, to convey the impression that the population of Colorado amounted to between fifty and sixty thousand; but the returns of the census, authorized by the previous Legislature to be taken by the assessors of the different counties, and the correctness of which he thought could not be questioned, showed that this estimate was very far from the truth. From fourteen counties the returns were as follows:

Counties.		Counties.	
Gilpin.....	6,847	Park.....	552
Jefferson.....	1,782	El Paso.....	565
Bowlder.....	1,456	Arapahoe.....	4,145
Conejos.....	2,269	Douglas.....	542
Costilla.....	2,192	Weld.....	1,192
Las Animas.....	935	Pueblo.....	800
Fremont.....	508		
Summit.....	456	Total.....	24,331

From the four remaining counties no returns were received, and the Governor estimates the population as follows:

Counties.		Counties.	
Laramie.....	600	Lake.....	500
Clear Creek.....	1,500		
Huerfano.....	1,000	Total.....	3,600

This would give a grand aggregate of 27,931 against 34,277, as returned by the census of 1860, showing an apparent decrease of 6,346 in six years.

Other objections, alleged by Governor Cummings, against the admission of Colorado were, that the Territorial treasury was without money to begin the State government with, which

would render necessary immediately an onerous system of taxation; and that at least two-thirds of the people, from his personal observation, were averse to the project. "In whole sections," he said, "the entire population are opposed to it, with scarcely a dissenting voice, while in no portion is there any considerable degree of unanimity in its favor."

The friends of the project were, nevertheless, by no means inclined to let it slumber, and the arguments which they adduced to support their case showed not merely a decided opposition to the Governor, but an apparently unreconcilable hostility between themselves and him. At the commencement of the second session of the Thirty-ninth Congress, they presented to prominent Republican members an array of facts and figures to show the progress of Colorado in mineral wealth and population, at complete variance with the statements of Governor Cummings. The home opposition they asserted came entirely from him and the candidate to whom he had given the certificate of election as Delegate to Congress, and they denied emphatically that the Territory was declining. From the statistics furnished by them it would appear that the tax valuation had greatly increased, as also the entries of lands under the homestead and preemption laws; that the production of gold had doubled within the last year; that the assessments for internal revenue, and the receipts from the post-office, were much greater in 1866 than in 1865; that large sums had been expended in internal improvements; that the crops had been abundant; and that the pretended census was partial, one-third of the important counties not having been returned, and the count in the others being confined to the tax-payers. From the large property valuation of the Territory, and the fact that in 1866, in the midst of harvest-time, nearly 7,000 votes had been cast for an office expected to be abolished by the admission of Colorado into the Union, they inferred that the population could not be less than 50,000 or 60,000, to which immigration was constantly making large additions. Under the influence of these representations a new bill was framed by the Senate Committee on Territories at the close of 1866, with every prospect of its passage through both Houses.

During the last fiscal year, 424,930 acres were surveyed in Colorado, about one-twentieth part at the expense of settlers; and the residue at the cost of the Government. These, with previous surveys, make an aggregate of this service in Colorado of 1,622,251 acres, all on the eastern slope of the Rocky Mountains. The South Park of the Rocky Mountains contains about 850,000 acres of arable land, and the richest placer diggings. In the Middle Park the wagon-road over the range of mountains separating the agricultural regions of the western slope from the mining of the eastern has been completed, which, with the overland road, makes a passable wagon-route from Denver to Salt Lake City, a distance of 150 miles shorter

than the former route. The completion of this road to the Grand River it is believed will lead to the immediate occupation of the agricultural lands of the Middle Park, and the valleys of the Grand, White, and Bear Rivers. The Surveyor-General estimates the quantity of land under cultivation to be 100,000 acres; that one-half of the population are engaged directly or indirectly in agricultural pursuits; that the area of arable land is equal to 4,000,000 of acres; that the immigration of farmers during the last year was of a class of people consisting of permanent settlers, the farming interest keeping pace with the wants of the population, and that a large surplus of all the necessaries of life is the anticipated production of the next year.

However opinions may vary as to the population of Colorado, there seems to be no doubt that in 1866 more labor was performed in the mines, and with better results, and more discoveries of mineral wealth were made, than for several previous years. "We are unable," says the *Colorado Times* of December 18th, "to state the number of stamps employed in the Territory, or the probable amount of gold extracted so far during the year; but one thing is rendered certain, that the wealth of the mines has not yet been fairly approached in those localities where operations have been carried on since their discovery; while another thing is equally apparent from continued new developments, that the entire range of mountains which traverses Colorado contains the auriferous ore in great abundance. Indeed, the supply promises, from experiments made, to be inexhaustible, while the extent of country over which it is distributed gives room and opportunity sufficient for any number of operators." Of the variety of the mineral products of the Territory, and of the wide area over which they are distributed, some idea may be formed from the following extract from a letter from the Surveyor-General at Denver to the Commissioner of the General Land-Office, accompanying specimens of carbonate of copper, iron ore, silver, zinc ore, copper matte, fossils, and gypsum:

The copper ore is from the Pocahontas lode, near Bear Creek, and was broken off from a bowlder weighing about ten pounds. The shaft was about ten feet deep, and probably three or four hundred pounds of the same ore were exposed. The silver ore is from the Argentine district, at the head of the south fork of Clear Creek. The specimens were taken from a hill containing several tons, all similar to the specimens. The veins, from which this is taken, vary in width from a few inches to twenty-five or thirty feet, in which the seams of ore, from one inch to a foot in thickness, occur at various intervals. The rest of the vein is filled with quartz, containing in some cases as much as eight hundred dollars per ton of silver in the shape of a chloride of silver diffused through the quartz, and probably the result of the decomposition of the sulphuret ores. Other veins contain argentiferous galena, and in some pure sulphuret of silver is found, but in no very great quantities as yet.

This silver region follows the crest of the range from the head of Clear Creek southward to Mount Lincoln, and probably farther, including the mountains around the head of the Snake and Blue River

the number of veins discovered already reaching several thousand. Assays above \$100 per ton are the rule, and those below that the exception, while some veins have given an average of \$5,000 to the ton. Three furnaces are in operation at Georgetown, and two more in process of erection, but those in operation are on so small a scale that they reduce but a small percentage of the silver, although that small amount pays largely. As yet there is only a pack-trail to these mines, and the ore is brought down on mules and jacks. One furnace is in operation at Montezuma, on Snake River, for reducing argentiferous galena.

The largest piece of iron ore that I send you was found by Deputy Surveyor George E. Peirce, and is from a bed about thirty miles south of Denver. The bed or vein, which is horizontal, extends from five miles in length to about a mile in width, and forms a mountain of iron. The specular ore is from the South Park, and is in vertical veins similar to the gold veins. The magnetic ore is from near Golden City, and is in vertical veins, bedded in felspar. I have heretofore reported extensive veins of hematite ore near Golden City. Zinc, both in the form of silicate and sulphuret, is found scattered through many of the gold and silver-bearing lodes, and in one vein on Bear Creek I found no metallic ores except sulphuret of zinc.

The specimen of matte which I send you is made at the Lyons furnace, near Black Hawk. It is produced by smelting the gold-bearing sulphurets of copper, and contains all the copper, gold, and silver of the ore. It is about sixty per cent. copper, and varies from four hundred to six hundred dollars per ton in gold and silver. This matte is shipped to Swansea, in Wales, to be separated, the copper paying the expense of shipping and separating. The specimens of gypsum and of variegated limestone are from the base of the mountains west of Denver, where they both occur in unlimited quantities.

The Surveyor-General at Denver has also sent to Washington specimens of silver ore from the Anglo-Norman lode, near the headwaters of Snake River, the product of which will average \$600 of pure silver per ton. The sinking of a shaft some eighteen feet has disclosed the fact that the ore improves in character from the surface down. The Surveyor-General states that this lode is probably as rich as any in the silver district. Discoveries have also been reported by him of argentiferous galena on James Creek, between St. Vrain and North Boulder, which are important as showing a continuation of the metal-bearing veins in a direction nearly northeast from the plains. In addition to these deposits of precious ores, there is abundant evidence that large tracts are underlain by beds of bituminous coal, which have as yet been very imperfectly worked, and that oil-wells of considerable capacity exist along the base of the mountains.

With a view of bringing to public notice the great mineral resources of the Territory, Mr. George W. Maynard, an experienced miner and geologist, was, early in December, appointed by the Legislature commissioner to the Paris Exposition of 1867. The specimens, to be placed by him on exhibition, comprise no less than 3,000 pounds of gold ore, with other kinds in proportion. It has been proposed that the commissioner should procure the circulation in Europe of pamphlets, in various languages, de-

scribing the mineral, agricultural, and other resources of Colorado; and also that he should visit the principal European mines, and communicate the results of his observations to the Territorial papers.

Though situated upon the western edge of what is called the "Great American Desert," the productiveness of Colorado in grain and vegetables is in some seasons enormous. Sixty and sixty-five bushels of wheat per acre are by no means uncommon, and in 1866 as many as seventy-five bushels of corn per acre were raised on some farms. This is almost entirely due to the intelligent system of irrigation now practised in the Territory. The dry season is so uniform in duration and character, that, provided the farmer has protected himself against drought by wet ditches traversing his farm, he can look forward to harvesting full crops with a degree of security unknown in the East. The chief danger to be apprehended is from the grasshopper scourge, which, in 1865, desolated the whole Territory. One of the richest agricultural districts is that lying along the Arkansas in Southern Colorado. The crops, in 1866, were excellent, but so expensive and difficult is it to get them to market, that but a small profit accrues to the farmer. When the Pacific Railroad reaches Denver, there is little doubt that a branch road will be started southward, along the base of the mountains, toward Santa Fé. This would bring the rich farming country of the Arkansas valley into easy and cheap communication with Denver, and stimulate its agricultural productions immensely. This valley alone could supply a population of several hundred thousand with breadstuffs.

COMMERCE OF THE UNITED STATES. The fiscal year of the General Government ends on the 30th June annually; hence the statements of foreign commerce of the whole country, for the last year, embrace the period from July 1, 1865, to June 30, 1866. It is the opinion of the Secretary of the Treasury, that these figures, taken from the reports of the custom-houses, do not present the whole truth. For many years there has been a systematic undervaluation of foreign merchandise imported into the United States, and large amounts have been smuggled into the country along our extended sea-coasts and frontiers. To make up for undervaluations and smuggling, and for cost of transportation paid to foreign shipowners, twenty per cent. at least should be added to the imports, which would make the balance for the past year against the United States nearly \$100,000,000. It is evident that the balances have been largely against the United States for some years past, whatever may have been the custom-house returns. On no other ground can the fact be accounted for, that a very large amount of American bonds is now held in Europe, which are estimated as follows: United States bonds, \$350,000,000; State and municipal bonds, \$150,000,000; Railroad and other stocks and bonds, \$100,000,000; a total of \$600,000,000.

During the fiscal year ending June 30, 1866, the United States imported :

Foreign merchandise free of duty.....	\$58,801,759
Foreign merchandise paying duty.....	\$68,508,051

Total, year 1865-1866 \$427,309,810

Of foreign merchandise there was reexported :

Free of duty.....	\$1,907,157
Dutiable.....	9,434,263

Total (mixed gold and currency value)..... \$11,341,420

Which, reduced to currency value, was equal to..... \$10,263,233

Total foreign merchandise, valued (in gold)..... \$417,046,577

Imports, specie..... \$10,329,156

Of which there was reexported..... 3,400,697

Net imports, specie..... \$6,928,459

Total net imports, foreign merchandise and specie..... \$423,975,095

During the fiscal year ending June 30, 1866, the United States exported domestic merchandise, currency value, \$468,040,908, reduced to gold value..... \$333,322,085

Specie exported..... 83,643,374

Total domestic exports, valued in gold..... \$415,965,459

Apparent balance of trade, valued in gold..... \$8,009,577

The following is a summary of the total exports to foreign countries from the port of New York, for each month of the past six years:

	1861.	1862.	1863.	1864.	1865.	1866.
January	\$11,202,787	\$14,888,487	\$19,695,358	\$17,609,749	\$19,746,451	\$22,914,543
February	11,907,233	14,113,843	22,400,148	17,211,176	16,774,008	19,002,597
March	11,881,384	11,980,714	23,695,082	16,383,236	14,799,626	24,713,855
April.....	11,709,679	12,708,797	14,004,940	19,754,062	8,582,897	23,899,870
May.....	11,732,595	15,882,097	16,002,780	21,682,200	15,518,346	36,937,067
June.....	12,067,081	20,332,375	16,495,293	25,887,531	18,446,116	26,153,374
July.....	10,028,000	23,684,915	21,092,787	33,535,866	18,536,061	19,307,953
August	9,890,448	17,443,701	14,454,809	20,977,982	16,235,474	14,511,561
September	10,178,846	19,061,471	15,492,518	21,739,826	45,523,314	12,805,773
October.....	18,172,452	26,797,936	21,219,549	20,431,789	23,788,469	16,275,244
November.....	14,577,291	20,608,942	17,292,436	20,473,699	25,126,753	17,750,755
December.....	15,124,445	18,939,615	18,619,334	27,410,438	25,577,766	20,710,867
Total.....	\$143,422,141	\$216,382,843	\$220,465,034	\$263,147,554	\$238,650,281	\$254,853,254

The exports of specie through the year 1866 to the monetary disturbance in Europe and the will be seen to have been large, owing in part consequent return of United States bonds :

TOTAL EXPORTS.	1861.	1862.	1863.	1864.	1865.	1866.
Domestic produce...	\$131,235,995	\$149,179,591	\$164,249,177	\$201,855,989	\$174,247,154	\$186,655,971
Foreign " "	5,203,959	4,901,383	5,425,579	17,824,095	8,440,410	4,967,102
" free.....	2,154,947	2,853,843	1,037,212	2,142,458	938,735	706,483

Specie	4,236,250	59,487,021	49,754,066	50,825,621	80,003,683	62,556,700
Total.....	\$142,831,151	\$216,871,843	\$220,466,034	\$272,648,163	\$208,629,982	\$254,886,254

It is evident, from these figures, that the balance is against us, and, chiefly by the exportation of our Government bonds, it is being temporarily and imprudently arranged; temporarily, because a large portion of these bonds have been bought on speculation.

From various causes, the aggregate exports of New York for the calendar year of 1866 were about \$14,000,000 in value less than the year 1865, and about \$29,000,000 less than in 1864. This is in part accounted for by the resumption of the export trade of the Southern

ports in 1865 and 1866—the export of cotton alone from Southern ports being about 1,000,000 bales. If to this we were to add tobacco, naval stores, etc., we would discover one reason why we have been able to import so largely the past year without working serious disturbance to monetary affairs by reason of our foreign balances. The following statement exhibits the quarterly exports for the past six years. As the shipments of merchandise are reckoned at their market price in currency, we have given in the same connection the price of gold

EXPORTS FROM NEW YORK TO FOREIGN PORTS EXCLUSIVE OF SPECIE.

	1861.	1862.	1863.	1864.	1865.	1866.

The total foreign importations at the port of New York the last year were over \$300,000,000; those of the United States for the past fiscal year were about 472,000,000, showing that the imports of New York continue to be from two thirds to three-fourths of the whole, viz.:

FOREIGN IMPORTS AT NEW YORK.

	1862.	1863.	1864.	1865.	1866.
Dry goods.....	\$56,121,227	\$67,274,547	\$71,589,752	\$92,061,140	\$126,222,855

Specie.....	1,890,277	1,525,811	2,265,622	2,123,281	9,578,029
Total imports.....	\$174,652,317	\$187,614,577	\$218,125,760	\$224,742,419	\$306,613,184

We now give for comparison the previous years since 1851, classifying them into dutiable, free, and specie. Under the head of dutiable is included both the value entered for consumption and that entered for warehousing. The free goods run very light, as nearly all the imports now are dutiable. The imports are much in excess of former years:

FOREIGN IMPORTS AT NEW YORK.

YEAR.	Dutiable.	Free Goods.	Specie.	Total.
1851.....	\$119,592,264	\$9,719,771	\$2,049,543	\$131,361,578
1852.....	115,336,052	12,105,342	2,408,225	129,849,619

June.....	4,664,927	3,733,934	3,811,148	7,837,075	9,559,618
July.....	7,211,817	4,912,718	3,586,848	9,778,276	11,507,186
August.....	4,762,581	6,296,735	6,237,864	13,113,689	12,349,760
September.....	5,239,045	7,270,543	4,084,492	12,929,615	12,284,144
October.....	4,309,419	6,233,943	3,670,188	10,973,518	11,002,048
November.....	3,003,270	5,076,846	3,455,156	9,933,483	7,716,883
December.....	2,664,593	5,243,189	3,440,852	8,340,760	5,707,647
Total.....	\$52,334,110	\$58,886,049	\$66,958,122	\$101,764,911	\$123,115,675

The total custom receipts for the year amount to \$128,079,761, as given in above table. This is a large increase over previous years, and probably larger than it will be for years to come.

The arrival of vessels at the port of New York from foreign countries during the calendar year 1866, were 4,892, an increase of 230 beyond those of the year 1865. Of these large arrivals, 1,658 were American, or about thirty-four per cent.; the foreign were 3,234, or about sixty-six per cent. of the whole. The various nationalities were as follows:

	Steamer.	Ship.	Barke.	Briga.	Schooner.	Total.
American	185	801	851	851	470	1,658
British	881	182	441	1,081	475	2,410

The whole amount of tonnage transported on the canals of the State of New York during the last season of navigation, ascending and descending, was 5,775,220 tons, and is composed as follows:

Products of the forest	1,709,994
Products of animals	18,810
Vegetable food	1,762,531
Other agricultural products	8,319
Manufactures	502,241
Merchandise	179,573
Other articles	1,737,947
Total, year 1866	5,775,220

The value of such tonnage is as follows:

Products of the forest	\$28,754,821
Products of animals	7,877,794
Vegetable food	77,554,967
Other agricultural products	1,878,141
Manufactures	18,389,992
Merchandise	100,169,211
Other articles	87,088,718
Total, year 1866	\$270,963,576

The total movement of freight, or number of tons carried one mile during the last season of navigation, was 1,012,448,034 miles. The total movement of the several classes composing such tonnage is as follows:

Products of the forest	233,795,839
Products of animals	2,190,916
Vegetable food	475,556,914
Other agricultural products	488,500
Manufactures	42,095,838
Merchandise	40,031,747
Other articles	218,290,766
Total miles, 1866	1,012,448,034

The following statement shows the number of tons of each class of property carried on the canals during the season of navigation, in the year 1866, and on all the railroads in the State from October 1, 1865, to September 30, 1866:

Mileage on the canals	1,012,448,034
Mileage on the railroads	1,048,365,225

The mileage on the canals, or number of tons moved one mile, has increased, since 1865, 168,532,255 tons, and the mileage on the railroads has increased during the same period 181,715,685 tons. Whole amount of tolls received was \$4,436,639, which is composed as follows:

On boats and passengers	\$225,466
On products of the forest	940,668
On products of animals	10,464
On products of vegetable food	2,012,224
On other agricultural products	1,899
On manufactures	173,473
On merchandise	181,021
On other articles	436,440
Total, year 1866	\$4,436,639

The whole amount of tonnage arriving at tide-water by way of the Erie Canal, from the Western States and Canada, during the last season of navigation, was 2,235,716 tons. The whole amount of tonnage arrived at tide-water, the products of this State, during the same period, was 287,948 tons

The whole number of barrels of flour, arriving at tide-water through the canals, during the last season of navigation, was

The whole number of bushels of wheat arriving during the same period, was 7,584,166, which, turned into flour, calculating five bushels to the barrel, would make

Total in barrels

The total number of bushels of corn arriving at tide-water during the same period was 26,516,535. The whole number of boats, new and old, registered during the last year, was 485, with a tonnage of 74,630, making an average tonnage of 154. The importance of the canals in the development of the resources of the State is fully indicated by the preceding tables, as well as the necessity for their enlargement.

Comparing the season of 1865 with that of 1866, it shows an increase in revenue of \$596,684, and an increase in tonnage of 1,045,566, divided among the different classes as follows:

Products of the forest, increase.....	802,679
Vegetable food, ".....	101,284
Manufactures, ".....	90,409
Merchandise, ".....	24,910
Other articles, ".....	607,599
	1,056,881
Products of animals, decrease.....	8,481
Other agricultural products, decrease.....	2,884
	11,265
Increase	1,045,566

The marketed imports and the exports of the United States for the months of July, August, September, October, November, and December, 1866, so far as given, compare one with another as follows:

SPECIE VALUE OF DOMESTIC EXPORTS AND OF FOREIGN IMPORTS MARKETED—CONTRASTED.

MONTH.	Average price of gold in lawful money for each month.	Imports at declared specie value.				Exports at declared currency value reduced to specie, at the average price of gold for each month.			
		Warehoused.	Specie and bullion, the goods entered for consumption.	Goods previously warehoused withdrawn for consumption.	Total marketed.	Specie and bullion—specie value.	Foreign merchandise, dutiable and free—specie value.	Domestic merchandise, reduced to specie value.	Total reduced to specie value.
July, 1866.	\$1 49½	\$15,595,017	\$21,998,404	\$18,069,819	\$55,068,223	\$7,244,528	\$726,076	\$14,387,250	\$22,307,854
Aug. 1866.	1 48½	12,464,835	28,520,872	18,967,472	87,496,844	2,454,011	574,369	14,568,199	17,596,579
Sept. 1866.	1 45½	11,145,170	27,701,976	14,419,435	42,121,411	2,687,274	728,562	14,271,507	17,687,343
Oct. 1866.	1 50½	10,903,218	24,684,000	11,483,165	86,167,165	1,862,619	498,219	15,282,164	17,643,002
Nov. 1866.	1 43½	10,718,911	16,091,983	7,545,391	28,637,874	4,596,782	557,292	14,153,000	19,612,074
Dec. 1866.	1 88½	11,612,161	11,516,293	5,408,566	16,925,164	8,251,585	609,972	20,997,768	24,969,635
Total....		\$72,443,812	\$125,522,083	\$65,894,148	\$191,416,181	\$22,227,109	\$4,294,490	\$98,614,888	\$120,186,487

From these returns it appears, that while the month of September is the largest importing month, that of December is the largest exporting month of the half year. It also appears that the value of goods thrown on the market during the half year did not differ materially from the value of the total imports for the same period. This is not always the case, the two amounts differing very materially at times. During the period embraced in the above returns they compare as follows:

Imports entered for warehousing, value.....	\$72,443,812
Imports entered for consumption, value.....	125,522,083
Total imports, value.....	\$197,965,845
Imports entered for consumption, value.....	\$125,522,083
Imports withdrawn from warehouse, value.....	65,894,148
Total thrown on the market, value.....	\$191,416,181
Difference.....	\$6,549,664

During the fiscal year ending June 30, 1866, the declared value of the total imports was \$47,640,354, and the amount of customs duties received \$179,046,651. The customs duties were thus forty-one per cent. of the total imports. During the half year ending December 31, 1866, the declared value of the total imports was \$197,965,845, and the amount of customs duties received about \$87,500,000. The customs duties were thus forty-four per cent. of the total imports. These latter amounts will need some alterations, since several of the ports have yet to be heard from, both as regards

their returns of commerce and of imposts. Without making any allowance for these imperfections (the extent of which can be estimated by allowing for the respective ports which have failed to send their returns of commerce in time, and by adding about \$1,000,000 to the sum of imposts), the result indicates an increase in the percentage of the customs revenue to the total gross imports. During the half year ending December 31, 1865, the imports were \$211,805,738. For the corresponding half year just ended, they were \$197,965,845. Allowing for the returns not yet received, the amount is about the same. With the same amount of imports, then, and an increased percentage of customs receipts, the total amount of customs duties for the year ending June 30, 1867, it is anticipated, will prove to be rather over than under the official estimate for the year, which was \$160,843,774.

If there were any means of contrasting the monthly returns furnished herein with similar ones for like periods during past years, they would present an interesting indication of the course of our foreign trade; but, unfortunately, there are none. The monthly summary returns of the previous years have not always been duly received at the Department. Few, if any of them, are complete; and the great variance of their results with those of the quarter-yearly summaries, which do not distinguish between goods entered for consumption and those entered for warehousing, forbid them from being used as standards of comparison. The total

entries of imports and exports for past years, without reference to what portion of the former found their way into market, however, are available, and these, reduced to specie values, at the average yearly price of gold in lawful money for each year respectively, exhibit the following results:

FISCAL YEARS.	Total exports— specie value.	Total imports— specie value.
1860.....	\$378,189,274	\$326,683,097
1861.....	228,699,486	305,004,732
1862.....	192,127,454	189,425,112
1863.....	230,056,621	228,652,597
1864.....	209,708,167	309,874,830
1865.....	213,915,892	207,426,298
1866.....	415,965,459	423,975,036
6 months of 1867	120,186,487	197,965,845

Yet it must not be forgotten that, as stated in the annual report of the Director, the import and export summaries of several of the past years are somewhat unreliable.

Hitherto the commercial statistics of the country have been collected and arranged, or digested, very slowly. The Secretary of the Treasury now reports thus: "The Statistical Bureau, authorized by the act entitled 'An act to protect the revenue, and for other purposes,' approved July 28, 1866, was organized on the 5th day of September last, by the appointment of Mr. Alexander Delmar as Director. It is expected that, under his direction, this Bureau will be of great benefit to this Department and to the country. After putting in proper condition the numerous books relating to commerce and navigation, which have been transferred to this Bureau, the Director will prepare reliable statistics of the resources of the country, and the extent to which they are being developed. Monthly reports of imports and exports, taxes, imposts, wages, products, and markets will also be regularly prepared, and every means employed to ascertain the progress of population and industry."

The value of the produce received at New Orleans for a series of years ending August 31, is shown in the subsequent figures, while the amounts of the articles appear in the succeeding table. These results are chiefly interesting as showing the receipts before the war and at its close, although for the last two years of the war the river navigation had been comparatively uninterrupted. The receipts of 1864-'5 are those for the last year of the war, and those for 1859-'60 for the year preceding it.

1859-'60.....	\$185,211,254
1860-'61.....	155,863,564
1861-'62.....	51,510,990
1862-'63.....	29,766,454
1863-'64.....	79,223,985
1864-'65.....	
1865-'66.....	201,722,179

The receipts from the interior at New Orleans for the year ending August 31, 1866, as compared with previous years, are shown in the following table:

CONGREGATIONALISTS. The *Congregational Quarterly* for January, 1867, publishes full statistics of Congregationalism in the United States. The whole number of Congregational Churches, as reported in 1866, was 2,780; in 1865, 2,723—a gain of 57. In Canada and the provinces there were 120 churches in 1866, against 117 the year before, making a total on this Continent of 2,900 churches, against 2,840 the previous year, a gain of 60. Of these churches 243 were in Maine, 183 in New Hampshire, 191 in Vermont, 493 in Massachusetts, 23 in Rhode Island, 286 in Connecticut, 225 in New York, 166 in Ohio, 24 in Indiana, 222 in Illinois, 150 in Michigan, 158 in Wisconsin, 166 in Iowa, 60 in Pennsylvania, 96 in Canada, and the rest were scattered in smaller numbers through various States, Territories, and British Provinces. Missouri had 29 of these, against 18 last year. The total number of Congregational

ministers in the United States was 2,919, against 2,761 in 1865. In Canada and the provinces there were 90, and 86 in 1865, so that the whole number was 3,009 in 1866, and 2,888 in 1865. Of these only 862 were reported as settled pastors, while 912 were returned as acting pastors or stated supplies, and 236 were so returned that it could not be told whether they were pastors or stated supplies. Of the rest 879 were reported as not engaged in the pastoral work. Very many of these were professors in colleges and theological schools, or teachers in academies and private schools. There was also a large force connected with the several benevolent societies and general Christian enterprises in various parts of the land. The total membership of the churches within the bounds of the United States was 267,453 against 263,296 in 1865, a gain of 4,157. Adding the membership in Canada and the provinces, it stood 272,575 in 1866, and 269,062 in 1865. From seventeen States reports of benevolent contributions were received, while thirteen States and Territories made no report. The whole sum returned was \$1,024,720.87. Of this sum Massachusetts gave \$392,244.09; Connecticut, \$257,154.60; New York, \$93,130; Maine, \$49,409; New Hampshire, \$44,905; Ohio, \$41,396; Vermont, \$38,583.62, and from other States smaller sums varying from \$25,000 downward. If the whole sum given in charity in all the States and Territories were reported, it would not probably fall far short of \$1,500,000.

The American Home Missionary Society sustains a number of missionaries in the Southern States, where Congregationalism before the war was almost entirely unrepresented. From the report made by the agent of the Society, the Rev. J. E. Roy, on the Southern Missions of the Society in 1866, we glean the following facts:

The church organized in Memphis one year and a half ago by your missionary, Rev. E. T. Bliss, I found in a prosperous condition. It had already assumed the pastor's salary of \$2,000; it had a membership of forty-four, a growing congregation, and a flourishing Sabbath-school. Having promise of aid from the Congregational Union, it was raising the generous sum of \$8,000 for a house of worship, which is now in process of erection.

The church at Washington, under Rev. Dr. C. B. Bryant, Chaplain of the House, with its one hundred and twenty members—several of whom have recently been added on profession of faith—I found in a hopeful condition.

At Knoxville I found Rev. T. D. P. Stone, who has been commissioned to labor for a season at that place. At Chattanooga, a place of classic interest, with its Lookout Mountain, its Chickamauga, its Missionary Ridge, its National Cemetery, I found the field open and ready for a missionary.

At Helena, Ark., where the old churches had all become disintegrated, I found a few Congregational friends from the North desiring a minister.

At New Orleans I assisted in organizing a corporate religious society of twenty-seven male members, which elected as its president Mr. S. D. Moody, a young merchant from Boston, who seals his earnestness in the work by a subscription of five hundred dollars. Five of these members are old and influential loyal citizens. The remainder are persons from the North, settled in business. I am glad to learn

that the Congregational Union has purchased for this society the Second Presbyterian Church, which is in a fine, central, and easily accessible location.

At Savannah I took the initiative for organizing a religious society and securing a minister. Thirty business men attached their names to a paper, pledging themselves to become members of such a society, and to contribute, through it, for the support of the gospel; while twenty other persons gave assurance of sympathy and coöperation. Of the thirty gentlemen referred to, two-thirds are ex-officers of the army, settled there in business, while nearly the same proportion of the other adherents are men who have borne the same honor.

At Newbern, N. C., I found the enterprise which had been initiated by the Rev. Horace James in a flourishing condition. A corporate religious society of forty members had been organized. Rev. A. A. Ellsworth had assumed the ministerial care of the society, and was proving himself admirably adapted to the situation. The society had assumed the entire salary, only the expense of his removal having been taken from your treasury.

Richmond, with its forty thousand inhabitants, its superb water-power, its inland navigation, and its oceanic commerce, is destined to become a city of much importance. I was permitted to prepare the way there for a religious society. Twenty-five gentlemen signed a paper approving such a movement, and pledging to it the support of their personal influence and substance.

The English *Congregational Year-Book* for 1867 contains the statistics of Congregationalism in England as far as they could be ascertained up to December, 1866. The following are the most important points as presented by the *Year-Book*:

County Associations and Unions.—England, 43; Wales, 16; Scotland, 8; Ireland, 1; Colonies, 8. Total 76.

Congregational Churches.—England, 1,923; Wales, 788; Scotland, 105; Ireland 27; Channel Islands, 13; Colonies, 278. Total, 3,134. Out-stations of the Congregational churches, 1,065. Mission churches in foreign lands, 249. The number of out-stations and preaching places connected with these mission churches is not known. Stations of the Home Missionary Society, 119; Evangelistic stations of the Home Missionary Society, 60; rooms, cottages, farm-houses, in which the agents preach, 340; lay preachers in home missionary stations, 238; lay preachers in Welsh churches, 293; Evangelistic agents in Home Missionary Society, 59; native teachers in foreign missions, 700.

Vacant Churches.—England, 192; Wales, 87; Scotland, 9; Ireland, 7. Total, 295.

Theological Colleges.—England, 8; Wales, 3; Scotland, 1; Colonies, 4. Total, 16. Preparatory or missionary institutions, 5, viz.: Cotton End, Nottingham, Bristol, Bedford, Highgate. Private seminaries for theological preparation, 4. Total number of students in theological colleges: England, 196; Wales, 90; Scotland, 6. Total, 293.

Students in preparatory institutions: Cotton End, 6; Bedford, 11; Nottingham, 53; Bristol, 18; Highgate, 10. Total, 98.

Ministers in England, 1,826; Wales, 407; Scotland, 105; Ireland, 25; in the Colonies, 217; foreign lands, 202. Total 2,782.

OFFICE: UNITED STATES. The first session of the Twenty-second Congress* assembled in Washington on December 2, 1831. For the President, Messrs. Wm. P. Feltus, Secretary, and Messrs. J. C. Smith, and J. C. Smith, Jr., Clerks.

The above was sent to me by the Post
Office on 27th Nov. 1944. I am sorry that I

William of New Jersey, presented the credentials of John P. Stockton, of New Jersey, elected by the Legislature to serve for six years from March 4, 1861.

Mr. COWLEY of Pennsylvania, said: "Before the bills are administered, I beg leave to present the report of several members of the

• The following is a list of the members of the committee:

Legislature of New Jersey, protesting against the right of Mr. Stockton to take his seat here as a Senator. I do not desire to raise the question as to whether he may not be sworn, because I believe his credentials are *prima facie* sufficient for that purpose; but I desire that these papers may be laid before the Senate and referred to the Committee on the Judiciary when that committee shall be organized, in order that the prayer of the memorialists may be heard, and such order taken upon it as the Senate in their wisdom may decree."

The protest was received and laid upon the table, for future reference to the Committee on the Judiciary, and the oath was administered to Mr. Stockton.

Mr. Sumner, of Massachusetts, submitted the following concurrent resolution declaratory of the adoption of the constitutional amendment abolishing slavery, which was laid on the table and ordered to be printed:

Whereas, the Congress, by a vote of two-thirds of both Houses, did heretofore propose to the Legislatures of the several States, for ratification, an amendment to the Constitution in the following words, to wit:

"ARTICLE XIII. Sec. 1. Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

"Sec. 2. Congress shall have power to enforce this article by appropriate legislation."

And whereas, at the time when such amendment was submitted as well as since, there were sundry States which, by reason of rebellion, were without Legislatures, so that, while the submission was made in due constitutional form, it was not, as it could not be, made to all the States, but to "the Legislatures of the several States," in obedience both to the letter and spirit of the provision of the Constitution authorizing amendments, there being a less number of Legislatures of States than there were States; and *whereas*, since the Constitution expressly authorizes amendments to be made, any construction thereof which would render the making of amendments at times impossible, must violate both its letter and its spirit; and *whereas*, to require the ratification to be by States without Legislatures as well as by "the Legislatures of the States," in order to be pronounced valid, would put it in the power of a long-continued rebellion to suspend, not only the peace of the nation, but its Constitution also; and *whereas*, from the terms of the Constitution, and the nature of the case, it belongs to the two Houses of Congress to determine when such ratification is complete; and *whereas* more than three-fourths of the Legislatures to which the proposition was made have ratified such amendment: Now, therefore,

Be it resolved by the Senate (the House of Representatives concurring), That the amendment abolishing slavery has become, and is, a part of the Constitution of the United States.

Resolved, That notwithstanding the foregoing resolution, and considering the great public interest which attaches to this question, the Legislatures which have not ratified the amendment, be permitted to express their concurrence therein by the usual form of ratification, to be returned in the usual manner.

Resolved, That no one of the States, to the Legislature of which such amendment could not be submitted, by reason of its being in rebellion against the United States, and having no Legislature, be permitted to resume its relations, and have its Legislature

acknowledged, and its Senators and Representatives admitted, until its Legislature shall have first ratified such amendment in recognition of the accomplished fact.

Mr. Sumner also submitted the following resolutions, which were laid over:

Resolutions declaratory of the duty of Congress in respect to guaranties of the national security and the national faith in the rebel States.

Resolved, That, in order to provide proper guaranties for security in the future, so that peace and prosperity shall surely prevail, and the pledged faith of the nation shall be preserved, it is the first duty of Congress to take care that no State declared to be in rebellion shall be allowed to resume its relations to the Union until after the satisfactory performance of five several conditions, which conditions precedent must be submitted to a popular vote, and be sanctioned by a majority of the people of each State respectively, as follows:

1. The complete reestablishment of loyalty, as shown by an honest recognition of the unity of the Republic, and the duty of allegiance to it at all times, without mental reservation or equivocation of any kind.

2. The complete suppression of all oligarchical pretensions, and the complete enfranchisement of all citizens, so that there shall be no denial of rights on account of color or race; but justice shall be impartial, and all shall be equal before the law.

3. The rejection of the rebel debt, and at the same time the adoption, in just proportion, of the national debt and the national obligations to Union soldiers, with solemn pledges never to join in any measure, direct or indirect, for their repudiation, or in any way tending to impair the national credit.

4. The organization of an educational system for the equal benefit of all without distinction of color or race.

5. The choice of citizens for office, whether State or national, of constant and undoubted loyalty, whose conduct and conversation shall give assurance of peace and reconciliation.

Resolved, That in order to provide these essential safeguards, without which the national security and the national faith will be imperilled, States cannot be precipitated back to political power and independence; but they must wait until these conditions are in all respects fulfilled.

Mr. Sumner also submitted the following resolutions, on the duty of Congress to the Southern States, which were ordered to be printed:

Resolutions declaratory of the duty of Congress, especially in respect to loyal citizens in rebel States.

Whereas, it is provided by the Constitution that "the United States shall guarantee to every State in this Union a republican form of government;" and *whereas* there are certain States where, by reason of rebellion, there are no State governments recognized by Congress; and *whereas*, because of the failure of such States respectively to maintain State governments, it has become the duty of Congress, standing in the place of guarantor, where the principal has made a lapse, to provide governments, republican in form, for such States respectively: Now, therefore, in order to declare the duty of Congress—

1. *Resolved*, That whenever a convention is called in any of such States for the organization of a government, the following persons have a right to be represented therein, namely, the citizens of the State who have taken no part in the rebellion; especially all those whose exclusion from the ballot enabled the rest to carry the State into the rebellion, and still more especially those who became soldiers in the armies of the Union, and by their valor on the battlefield turned the tide of war and made the Union triumphant; and Congress must refuse to sanction the

proceedings of any convention composed of delegates chosen by men recently in arms against the Union, and excluding men who perilled their lives in its defence; unless its proceedings have been first approved by those hereby declared to be entitled to participate therein.

2. *Resolved*, That the Constitution of the United States being supreme over State laws and State constitutions in respect of these matters upon which it speaks, and the duty being now imposed by it on Congress to legislate for the establishment of government in such States respectively, it is hereby declared that no supposed State law or State constitution can be set up as an impediment to the national power in the discharge of this duty.

3. *Resolved*, That since, also, it has become the duty of Congress to determine what is a republican form of government, it is hereby declared that no government of a State recently in rebellion can be accepted as republican, where large masses of citizens who have been always loyal to the United States are excluded from the elective franchise, and especially where the wounded soldier of the Union, with all his kindred and race, and also the kindred of others whose bones whiten the battle-fields where they died for their country, are thrust away from the polls to give place to the very men by whose hands wounds and death were inflicted; more particularly where, as in some of those States, the result would be to disfranchise the majority of the citizens who were always loyal, and give to the oligarchical minority recently engaged in carrying on the rebellion the power to oppress the loyal majority, even to the extent of driving them from their homes and depriving them of all opportunity of livelihood.

4. *Resolved*, That in all those cases where, by reason of rebellion, there is a lapse in the State government, and it becomes the duty of Congress to provide a government for the State, no government can be accepted as "a republican form of government" where a large proportion of native-born citizens, charged with no crime and no failure of duty, is left wholly unrepresented, although compelled to pay taxes; and especially where a particular race is singled out and denied all representation, although compelled to pay taxes; more especially where such race constitutes the majority of the citizens, and where the enfranchised minority has forfeited its rights by rebellion; and more especially still where, by such exclusion, the oligarchical enemies of the Republic can practically compel it to break faith with national soldiers and national creditors to whose generosity it was indebted during a period of peril.

In the House, on the 4th, the members were called to order by the Clerk, Edward McPherson. During the call of the roll, Mr. Maynard, of Tennessee, arose to speak, when the Clerk declined to have any interruption of the call.

Mr. Morrill, of Vermont, moved that the House proceed to the election of Speaker.

Mr. Brooks, of New York, in opposition to the motion, said: "Mr. Clerk, I hope that motion will not prevail until it be settled who are members of this House—whether the honorable gentleman from Tennessee (Mr. Maynard), holding in his hand, I presume, the certificate of the Governor of that State, is entitled to be heard on his credentials or not. I trust that we shall not proceed to any revolutionary step like that without at least hearing from the honorable gentleman from Tennessee. For if Tennessee is not in the Union, and has not been in the Union, and is not a loyal State, and the

people of Tennessee are aliens and foreigners to this Union, by what right does the President of the United States usurp his place in the White House and in the capital of the country when an alien, as he must be, a foreigner, and not from a State in the Union?

"I trust there will not be such rapidity of motion as that proposed. I trust that the honorable gentleman from Tennessee will be permitted to be heard. For, if a precedent can be established by the Clerk, and he can make a rule to exclude members from the floor of this House by his mere arbitrary will, this then ceases to be a Congress, and the Clerk of the House, but a servant of the House, is omnipotent over its organization. Is not the State of Tennessee in the Union?

"And then there is a State of Virginia which the Clerk has not read; I mean the old State of Virginia, and not Western Virginia—the State over which Governor Pierpoint presides, over which he has presided, and to which position he was elected during the war, whose loyalty no man doubts, and who is as much the Governor of that State as the Governor of Pennsylvania is Governor of the State of Pennsylvania. By what right has the Virginia delegation been excluded by the Clerk of the House? I wish the Clerk would tell me. He has given no reason for such exclusion, and I should be happy to yield the floor for a moment to enable him to state why both Tennessee and Virginia have been excluded from the list he has made."

The Clerk: "With the consent of the gentleman I will state that if it be the desire of the House to have my reasons, I will give them; but I have not felt justified or called upon to give any reasons; I have acted in accordance with my views of duty, and I am willing to let the record stand."

Mr. Stevens, of Pennsylvania, said: "It is not necessary. We know all."

Mr. Brooks continued: "I know that it is known to all in one quarter, but that it is not known to many in other quarters in this House, why this exclusion has been made. The State of Louisiana was here upon the floor of the House last year, by the admission of gentlemen from that State. The record is in the Congressional Globe; and now Louisiana is excluded. A Republican House, a Republican majority, permitted two members from Louisiana upon the floor of this House to vote for its Speaker; and now the Clerk of the House assumes the responsibility of excluding the State of Louisiana. Why this subversion of all precedents, as well as this overthrow of all law?"

Mr. Washburne, of Illinois, said: "The gentleman from New York will understand that the Clerk of the last House of Representatives put the names of those two gentlemen from Louisiana upon the roll, and they did, in fact, vote for Speaker; but afterward the House refused to permit them to be sworn in as members."

Mr. Brooks further said: "But they voted for Speaker of the House, and were permitted here, as the record shows, to vote for Speaker, though the point was first made by the gentleman from Pennsylvania (Mr. Stevens), and then withdrawn."

"I do not choose longer to occupy the attention of the House, but before I sit down I propose to move, as an amendment, that the honorable gentleman from Tennessee (Mr. Maynard) be allowed to present the credentials of the members from Tennessee, and that their names be put upon the roll."

Mr. Stevens, of Pennsylvania, said: "I make the point of order that that amendment is not in order, not being germane to the original motion."

The Clerk: "The Clerk considers that a good point of order, and rules out the amendment."

Mr. Stevens: "I now call the previous question."

The demand for the previous question was then seconded, and the main question ordered and agreed to.

The House then proceeded to vote *viva voce* for Speaker, with the following result: Whole number of votes cast, 175; necessary to a choice, 88; of which Mr. Colfax received 139; Mr. Brooks, 36.

The Clerk announced that Schuyler Colfax, one of the Representatives from the State of Indiana, having received a majority of all the votes given, was duly elected Speaker; whereupon Mr. Morrill and Mr. Brooks conducted Mr. Colfax to the chair, when he addressed the House as follows:

"Gentlemen of the House of Representatives: The reassembling of Congress, marking, as it does, the procession of our national history, is always regarded with interest by the people for whom it is to legislate. But it is not unsafe to say that millions more than ever before, North, South, East, and West, are looking to the Congress which opens its session to-day, with an earnestness and solicitude unequalled on similar occasions in the past. The Thirty-eighth Congress closed its constitutional existence with the storm-cloud of war still lowering over us; and, after a nine months' absence, Congress resumes its legislative authority in these council halls, rejoicing that from shore to shore in our land there is peace.

"Its duties are as obvious as the sun's pathway in the heavens. Representing, in its two branches, the States and the people, its first and highest obligation is to guarantee to every State a republican form of government. The rebellion having overthrown constitutional State governments in many States, it is yours to mature and enact legislation which, with the concurrence of the Executive, shall establish them anew on such a basis of enduring justice as will guarantee all necessary safeguards to the people, and afford, what our Magna Charta, the Declaration of Independence, proclaims is the chief

object of government—protection to all men in their inalienable rights. The world should witness, in this great work, the most inflexible fidelity, the most earnest devotion to the principles of liberty and humanity, the truest patriotism, and the wisest statesmanship.

"Heroic men, by hundreds of thousands, have died that the Republic might live. The emblems of mourning have darkened White House and cabin alike. But the fires of civil war have melted every fetter in the land, and proved the funeral-pyre of slavery. It is for you, Representatives, to do your work as faithfully and as well as did the fearless saviors of the Union on their more dangerous arena of duty. Then we may hope to see the vacant and once abandoned seats around us gradually filling up, until this hall shall contain Representatives from every State and district; their hearts devoted to the Union for which they are to legislate, jealous of its honor, proud of its glory, watchful of its rights, and hostile to its enemies. And the stars on our banner, that paled when the States they represented arrayed themselves in arms against the nation, will shine with a more brilliant light of loyalty than ever before.

"Invoking the guidance of Him who holds the destiny of nations in the hollow of His hand, I enter again upon the duties of this trying position, with a heart filled with gratitude to you for the unusually flattering manner in which it has been bestowed, and cheered by the hope that it betokens your cordial support and assistance in all its grave responsibilities. I am now ready to take the oath of office prescribed by law."

Mr. Washburne, of Illinois, having served longest as a member of the House, was designated by the Clerk to administer to the Speaker-elect the oath prescribed by law; which was done in the following form:

I, Schuyler Colfax, do solemnly swear that I have never voluntarily borne arms against the United States since I have been a citizen thereof; that I have voluntarily given no aid, countenance, counsel, or encouragement to persons engaged in armed hostility thereto; that I have neither sought nor accepted nor attempted to exercise the functions of any office whatever, under any authority or pretended authority in hostility to the United States; that I have not yielded a voluntary support to any pretended government, authority, power, or constitution within the United States, hostile or inimical thereto. And I do further swear that, to the best of my knowledge and ability, I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God.

Mr. Wilson, of Iowa, offered the following resolution:

Resolved, That the following-named persons are hereby declared to be officers of the House of Representatives for and during the Thirty-ninth Congress, and until their successors are duly qualified: Ed-

ward McPherson, of the State of Pennsylvania, Clerk; N. G. Ordway, of the State of New Hampshire, Sergeant-at-Arms; Ira Goodenow, of the State of New York, Doorkeeper; and Josiah Given, of the State of Ohio, Postmaster.

The question was taken; and it was decided in the affirmative—yeas 138, nays 85, not voting 9.

So the resolution was adopted.

Mr. Stevens, of Pennsylvania, offered the following resolution, and called the previous question:

Resolved by the Senate and House of Representatives in Congress assembled, That a joint committee of fifteen members shall be appointed, nine of whom shall be members of the House and six members of the Senate, who shall inquire into the condition of the States which formed the so-called Confederate States of America, and report whether they or any of them are entitled to be represented in either House of Congress, with leave to report at any time by bill or otherwise; and until such report shall have been made and finally acted upon by Congress, no member shall be received into either House from any of the said so-called Confederate States; and all papers relating to the representation of the said States shall be referred to the said committee without debate.

The previous question was seconded, and the main question ordered; which was upon agreeing to the concurrent resolution, and it was decided in the affirmative.

YEAS—Messrs. Alley, Allison, Ames, Anderson, Baker, Baldwin, Banks, Barker, Baxter, Beaman, Benjamin, Bidwell, Bingham, Blow, Boutwell, Brandegee, Bromwell, Broomall, Buckland, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Culver, Darling, Davis, Dawes, De-frees, Delano, Deming, Dixon, Donnelly, Driggs, Dumont, Eckley, Eggleston, Eliot, Farnsworth, Ferry, Garfield, Grinnell, Griswold, Hale, Abner C. Lawrence, William Lawrence, Loan, Longyear, Lynch, Marston, Marvin, McClurg, McIndoe, McKee, McRuer, Mercur, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, O'Neill, Orth, Paine, Patterson, Perham, Phelps, Pike, Pomeroy, Price, William H. Randall, Raymond, Alexander H. Rice, John H. Rice, Rollins, Sawyer, Schenck, Schofield, Shellabarger, Smith, Spalding, Starr, Stevens, Stillwell, Thayer, John L. Thomas, Trowbridge, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Warner, Elihu B. Washburne, Welker, Wentworth, Whaley, Williams, James F. Wilson, Stephen F. Wilson, Windom, and Woodbridge—133.

NAYS—Messrs. Ancona, Bergen, Boyer, Brooks, Chanler, Dawson, Denison, Eldridge, Finck, Gloss-brenner, Goodyear, Grider, Aaron Harding, Hogan, James M. Humphrey, Johnson, Kerr, Le Blond, McCullough, Niblack, Nicholson, Noell, Radford, Samuel J. Randall, Ritter, Rogers, Ross, Shanklin, Sitgreaves, Strouse, Tabor, Taylor, Thornton, Trimble, Winfield, and Wright—36.

NOT VOTING—Messrs. Delos R. Ashley, James M. Ashley, Blaine, Farquhar, Harris, Edwin N. Hubbell, Jones, Marshall, Plants, Rousseau, Sloan, Francis Thomas, Voorhees, and William B. Washburn—13.

In the Senate, on December 5th, the concurrent resolution from the House on the condi-

tion of the Southern States was read, and, as objection was made to its further consideration, laid aside under the rules.

Mr. Cowan, of Pennsylvania, presented the credentials of William L. Sharkey and James Alcorn, elected Senators by the Legislature of Mississippi, which were ordered to lie on the table.

Mr. Foot, of Vermont, presented the following resolutions adopted by the Legislature of that State:

Joint resolutions in relation to the reconstruction of the States recently in rebellion against the United States.

Resolved, That it is the sense of the General Assembly of this State, that in the reconstruction of the governments of the States lately in rebellion against the Government and authority of the United States, the moral power and legal authority vested in the Federal Government should be executed, to secure equal rights, without respect to color, to all citizens residing in those States, including herein the right of elective franchise.

Resolved, That the Secretary of State is hereby instructed to transmit a copy of these resolutions to the President of the United States, to the Governors of the several States, and also a copy to each one of our Senators and Representatives in Congress, who are hereby requested to present the same to both Houses of Congress.

JOHN W. STEWART,
Speaker of the House of Representatives.
A. B. GARDNER,
President of the Senate.

In the House, on the 5th, Mr. Grinnell, of Iowa, moved to proceed to the election of Chaplain, which was agreed to.

Mr. Griswold, of New York, said: "I desire to present, for the position of Chaplain of this House, the name of Rev. C. B. Boynton, a gentleman whose qualifications and claims, were they known to this House, would, I am sure, meet with ready recognition. Mr. Boynton has recently removed to this city from Ohio. He is a Congregational clergyman, and a gentleman of splendid abilities. He is now engaged in writing a history of the American navy during the war just closed. He is in all respects a man eminently worthy to occupy the position of Chaplain of this House. With pen and voice, in the pulpit and out of the pulpit, he has, during the war, rendered the country signal and unremitting service. He has given three sons to the army, one of whom served with great distinction as colonel of an Ohio regiment. I desire to assure gentlemen of this House who may not be acquainted with Mr. Boynton that he will, if elected, make a most acceptable Chaplain. I take pleasure in presenting his name as a candidate."

Mr. O'Neill, of Pennsylvania, said: "I nominate Rev. Thomas H. Stockton, of Philadelphia. It is needless for me to say any thing in commendation of this gentleman. He was formerly the Chaplain of this House, and as such distinguished himself by his faithfulness, eloquence, and piety. He is well known throughout the country as one of its most eminent divines. He is one of the leading minis-

ters of the Methodist Protestant Church. I need not say that he is a thoroughly loyal gentleman. I hope that the House will elect him as its Chaplain."

Mr. Smith, of Kentucky, followed, saying: "I desire to place in nomination Rev. Charles B. Parsons, of Lexington, Kentucky. Following the course of gentlemen who have preceded me, I will say that Mr. Parsons is a true, devoted, loyal man, a gentleman and a Christian, and the most eloquent divine to whom I ever listened. He belongs to the Methodist Episcopal Church, in which he has rendered good service for the last twenty-five or thirty years, and during the last four years has signalized himself by his efforts on behalf of the Government of the United States.

"I hope that the House will have the liberty to give us at least one man south of Mason and Dixon's line, because north of that line there cannot be found a better, a truer, an abler, or a more eloquent man than Mr. Parsons. I may here remark that the most beautiful, most appropriate, most eloquent address delivered upon the death of President Lincoln was delivered by Mr. Parsons. If this House will but hear him preach, listen to his exhortations to do right, and follow them, the legislation of this body will redound to the interest and honor of the Republic."

Mr. Farnsworth, of Illinois, said: "I desire to nominate Rev. L. O. Matlock, of Illinois. He is a very worthy clergyman, a gentleman of most excellent character, and an eloquent speaker. He was at one time the president of a university in our State. After the breaking out of the rebellion he was chosen chaplain of a regiment, and served in that capacity for about one year, when, believing that he could serve the country, and serve, too, the soldiers with whom he was associated as well, if not better, in another capacity, he raised a company, which he took into another regiment, of which he was elected major, and commissioned as such by the Governor of Illinois. For the last two years he has been fighting the rebels, giving them hard blows in the field. He is both a praying and a fighting patriot. He has shown his loyalty where it cost a man something to be loyal—in the battle's front; and, as a soldier, he has in no instance been charged with sully the cloth of his ministerial profession. He has not thrown aside his dignity or his manhood, but comes out of the war, at its termination, pure as he went in. This loyal and eloquent minister of the gospel and soldier of the Republic I nominate for the position of Chaplain of this House."

Mr. Kelley, of Pennsylvania, said: "Mr. Speaker, I rise, with the indulgence of the House, for the purpose of seconding the nomination of Rev. Thomas H. Stockton, so eloquently represented by my colleague, Mr. O'Neill.

"Mr. Stockton will be remembered by many of the members of the present House as the Chaplain of the Thirty-seventh Congress; and

all such will remember him as one whose life, in its simplicity and purity, illustrated the religion he preached. He is a man as remarkable for his learning and eloquence as for his piety. It has been my privilege to know him for many years; and I may point, as an illustration of his power, to the prayer delivered by him at the consecration of the field at Gettysburg."

Mr. Moorhead, of Pennsylvania, said: "I rise for the purpose of nominating Rev. James Presley, of the United Presbyterian Church, for the office of Chaplain of the Thirty-ninth Congress. Mr. Presley preached in this hall last winter, and I have no doubt the old members heard him, for I know members of Congress generally attend church, and as generally attend at the Capitol. I have no doubt, then, that many of the gentlemen present will recollect the eloquent Dr. Presley who delivered an address in this hall. For loyalty, patriotism, and eloquence he is not exceeded by any man in the Union."

Mr. Stevens, of Pennsylvania, followed, saying: "I nominate Rev. James G. Butler, of the Lutheran Church. I learn he has done more good than any other man. And I will say for the Rev. Mr. Stockton, in addition to what others have already said, that he is the most eloquent man in the United States since the fall of Henry Ward Beecher."

Mr. Delano, of Ohio, said: "Mr. Speaker, let me add to the long list of nominations already before the House, by suggesting the name of Rev. J. H. C. Bonté, of Georgetown, District of Columbia, and, in pursuance of the custom in reference to these nominations, I will say that Mr. Bonté entered the service as chaplain of the Forty-second Ohio regiment, and faithfully discharged the duties of that position until his health failed. Since then he has been, in pursuance of his profession, in Iowa and at Georgetown, and I will say in one word, that if the House will come to know him as well as I do, they will find him a man of marked ability, of decided piety, and unwavering loyalty."

Mr. Price, of Iowa, said: "I nominate, as candidate for Chaplain of the House of Representatives, Rev. B. H. Nadal, of this city, and should have done so without saying a word, if the precedent had not been established of saying something as a reason why a nomination should be made and an election should take place.

"On the platform, in the pulpit, with his pen, before the commencement of the war and during its continuance, he has not failed or faltered to be the foremost on the right side, and in the right cause."

Mr. Miller, of Pennsylvania, said: "I desire, Mr. Speaker, to nominate Rev. John Walker Jackson, of Harrisburg, Pennsylvania, for Chaplain of this House. Mr. Jackson is an earnest divine of the Methodist persuasion, a loyal man, and patriot. During the four years of the war he did good service, both in and out of the pulpit, in behalf of his country. He worked in-

cessantly to encourage young men to enlist, in order to replenish our army and crush out the rebellion. He is just such a man as will reflect credit on the Thirty-ninth Congress by his election as Chaplain of this House."

Mr. Johnson, of Pennsylvania, said: "I have a nomination to make. If I were going to vote for a fighting man, I would nominate General Grant; but I do not intend to vote for a fighting man, and therefore I nominate Rev. John Chambers, of Philadelphia."

Whole number of votes cast was 168; necessary to a choice, 85; of which C. B. Boynton received 89; Thomas H. Stockton, 22; John Chambers, 15; B. H. Nadal, 14; J. G. Butler, 9; James Presley, 6; Charles B. Parsons, 5; J. H. C. Bonté, 3; L. C. Matlock, 2; John Walker Jackson, 2; Henry Slicer, 1.

Mr. Randall, of Pennsylvania, submitted the following resolution:

Resolved (as the sense of this House), That the public debt created during the late rebellion was contracted upon the faith and honor of the nation; that it is sacred and inviolate, and must and ought to be paid, principal and interest; and that any attempt to repudiate, or in any manner to impair or scale the said debt, should be universally discountenanced by the people, and promptly rejected by Congress if proposed.

The question was then taken upon agreeing to the resolution; and it was decided in the affirmative, as follows:

YEAS—Messrs. Alley, Allison, Ames, Ancona, Anderson, James M. Ashley, Baker, Baldwin, Banks, Barker, Baxter, Beaman, Benjamin, Berger, Bidwell, Bingham, Blaine, Blow, Boutwell, Boyer, Brandegee, Bromwell, Broomall, Buckland, Bundy, Chanler, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Culver, Darling, Davis, Dawes, Dawson, Defrees, Delano, Deming, Denison, Dixon, Donnelly, Driggs, Dumont, Eckley, Eggleston, Eliot, Farnsworth, Farquhar, Ferry, Finck, Garfield, Glossbrenner, Goodyear, Grinnell, Griswold, Hale, Abner C. Harding, Hart, Hayes, Henderson, Higby, Hill, Hogan, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, Demas Hubbard, John H. Hubbard, Edwin N. Hubbell, James R. Hubbell, Hulburd, James Humphrey, James M. Humphrey, Ingersoll, Jenckes, Johnson, Julian, Kasson, Kelley, Kelso, Kerr, Ketchum, Kuykendall, Laffin, Latham, George V. Lawrence, William Lawrence, Louss, Longyear, Marston, Marvin, McClurg, McCullough, McIndoe, McKee, McKuer, Mercur, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, Niblack, Nicholson, Noell, O'Neill, Orth, Paine, Patterson, Perham, Phelps, Pike, Plants, Pomeroy, Price, Radford, Samuel J. Randall, William H. Randall, Raymond, Alexander H. Rice, Rogers, Rollins, Ross, Sawyer, Schenck, Schofield, Shanklin, Sheilabarger, Sitgreaves, Sloan, Smith, Spalding, Starr, Stevens, Stillwell, Strouse, Tabor, Thayer, Francis Thomas, John L. Thomas, Thornton, Trowbridge, Upson, Burt Van Horn, Ward, Warner, Elihu B. Washburne, William B. Washburn, Welker, Wentworth, Whaley, Williams, James F. Wilson, Windom, Winfield, and Wright—162.

NAY—Mr. Trimble—1.

NOT VOTING—Messrs. Delos R. Ashley, Brooks, Eldridge, Grider, Aaron Harding, Harris, Jones, Le Blond, Lynch, Marshall, John H. Rice, Ritter, Rousseau, Taylor, Van Aernam, Robert T. Van Horn, Voorhees, Stephen F. Wilson, and Woodbridge—19.

Mr. Stevens, of Pennsylvania, introduced the following joint resolution; which was read a first and second time, and ordered to be referred to the Committee on the Judiciary:

Resolved by the Senate and House of Representatives of the United States in Congress assembled, That the following amendment to the Constitution of the United States shall be proposed, and when ratified by the Legislatures of three-fourths of the States shall be valid to all intents and purposes as part of the Constitution of the United States:

Neither the United States nor any State in the Union shall ever assume or pay any part of the debt of the so-called Confederate States of America, or of any State, contracted to carry on war with the United States.

Mr. Stevens, of Pennsylvania, also introduced the following joint resolution; which was read a first and second time, and ordered to be referred to the Committee on the Judiciary:

Resolved by the Senate and House of Representatives in Congress assembled, That the following amendment to the Constitution of the United States shall be proposed, and when ratified by the Legislatures of three-fourths of the States shall be valid to all intents and purposes as part of the Constitution of the United States:

Amend the ninth section of the first article by expunging so much thereof as says, "No tax or duty shall be laid on articles exported from any State."

Mr. Stevens also introduced the following joint resolution; which was read a first and second time, and ordered to be referred to the Committee on the Judiciary:

Resolved by the House of Representatives (the Senate concurring), That the following amendment to the Constitution of the United States shall be proposed to the several States, and when ratified by the Legislatures of three-fourths of the States shall be valid to all intents and purposes as part of the Constitution of the United States:

Representatives shall be apportioned among the States which may be within the Union according to their respective legal voters; and for this purpose none shall be named as legal voters who are not either natural-born citizens or naturalized foreigners. Congress shall provide for ascertaining the number of said voters. A true census of the legal voters shall be taken at the same time with the regular census.

Mr. Stevens also introduced the following joint resolution; which was read a first and second time, and ordered to be referred to the Committee on the Judiciary:

Resolved by the Senate and House of Representatives in Congress assembled, That the following amendment to the Constitution of the United States shall be proposed, and when ratified by the Legislatures of three-fourths of the States shall be valid to all intents and purposes as part of the Constitution of the United States:

ARTICLE XIII. All national and State laws shall be equally applicable to every citizen, and no discrimination shall be made on account of race and color.

Mr. Broomall, of Pennsylvania, introduced a joint resolution to alter the Constitution of the United States, so as to base the representation in Congress upon the number of electors, instead of the population, of the several States; which was read a first and second time, and referred to the Committee on the Judiciary.

In the House, on December 6th, Mr. Bingham, of Ohio, introduced a joint resolution providing for an amendment of the Constitution of the United States by repealing the clause forbidding the laying of taxes or duties on articles exported from any State; which was read a first and second time, and referred to the Committee on the Judiciary. Also a joint resolution providing for an amendment to the Constitution of the United States forbidding the payment or assumption by the United States or by any State of any debt which has been or may hereafter be contracted in aid of any rebellion against the United States; which was read a first and second time, and ordered to be referred to the Committee on the Judiciary. Also a joint resolution to amend the Constitution of the United States so as to empower Congress to pass all necessary and proper laws to secure to all persons in every State of the Union equal protection in their rights, life, liberty, and property; which was read a first and second time, and ordered to be referred to the Committee on the Judiciary.

Mr. Farnsworth, of Illinois, offered the following resolutions, which were laid over:

Resolved (as the sense of this House), That, as all just powers of government are derived from the consent of the governed, that cannot be regarded as a just Government which denies to a large portion of its citizens, who share both its pecuniary and military burdens, the right to express either their consent or dissent to the laws which subject them to taxation and to military duty, and which refuses them full protection in the enjoyment of their inalienable rights.

Resolved, That in imposing taxes upon the people of the United States, none are excepted therefrom on account of color; so, too, in the laws enacted by Congress for enrolling and drafting into the military service of the Government those liable to military duty, no exemption because of color has been allowed; and while we have rewarded the foreigner, who is ignorant of our language and institutions, and who has but just landed upon our shores, with the right of citizenship for a brief service in the armies of the United States, good faith, as well as impartial justice, demand of this Government that it secure to the colored soldiers of the Union their equal rights and privileges as citizens of the United States.

Resolved, That we agree with the President of the United States that "mercy without justice is a crime;" and the admitting of rebels and traitors, upon whose hands the blood of slain patriots has scarcely dried, and upon whose hearts is the damning crime of starving to death loyal men taken as prisoners in battle, to the rights of citizenship and of suffrage, while we deny those rights to the loyal black man, who fought for the Union, and who fed and protected our starving soldiers, is a fit illustration of that crime.

In the Senate, on December 11th, Mr. Cowan, of Pennsylvania, offered the following resolution, which was laid over:

Resolved, That the President of the United States be, and is hereby, requested to furnish to the Senate information of the state of that portion of the Union lately in rebellion; whether the rebellion has been suppressed and the United States put again in possession of the States in which it existed; whether the United States courts are restored, post-offices re-established, and the revenues collected; and also whether the people of those States have reorganized

their State governments, and whether they are yielding obedience to the laws and Government of the United States.

The resolution was adopted on the next day, and the President made the following answer:

WASHINGTON, D. C., December 18, 1865.

To the Senate of the United States:

In reply to the resolution adopted by the Senate on the 12th instant, I have the honor to state that the rebellion waged by a portion of the people against the properly-constituted authorities of the Government of the United States has been suppressed; that the United States are in possession of every State in which the insurrection existed; and that, as far as could be done, the courts of the United States have been restored, post-offices reestablished, and steps taken to put into effective operation the revenue laws of the country.

As the result of the measures instituted by the Executive, with the view of inducing a resumption of the functions of the States comprehended in the inquiry of the Senate, the people in North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Arkansas, and Tennessee, have reorganized their respective State governments, and "are yielding obedience to the laws and Government of the United States," with more willingness and greater promptitude than under the circumstances could reasonably have been anticipated. The proposed amendment to the Constitution, providing for the abolition of slavery forever within the limits of the country, has been ratified by each one of those States, with the exception of Mississippi, from which no official information has yet been received; and in nearly all of them measures have been adopted or are now pending, to confer upon freedmen rights and privileges which are essential to their comfort, protection, and security. In Florida and Texas the people are making commendable progress in restoring their State governments, and no doubt is entertained that they will at an early period be in a condition to resume all of their practical relations to the Federal Government.

In "that portion of the Union lately in rebellion," the aspect of affairs is more promising than, in view of all the circumstances, could well have been expected. The people throughout the entire South evince a laudable desire to renew their allegiance to the Government, and to repair the devastations of war by a prompt and cheerful return to peaceful pursuits. An abiding faith is entertained that their actions will conform to their professions, and that, in acknowledging the supremacy of the Constitution and the laws of the United States, their loyalty will be unreservedly given to the Government, whose leniency they cannot fail to appreciate, and whose fostering care will soon restore them to a condition of prosperity.

It is true that in some of the States the demoralizing effects of war are to be seen in occasional disorders; but these are local in character, not frequent in occurrence, and are rapidly disappearing as the authority of civil law is extended and sustained. Perplexing questions were naturally to be expected from the great and sudden change in the relations between the two races; but systems are gradually developing themselves under which the freedman will receive the protection to which he is justly entitled, and by means of his labor make himself a useful and independent member of the community in which he has his home. From all the information in my possession, and from that which I have recently derived from the most reliable authority, I am induced to cherish the belief that sectional animosity is surely and rapidly merging itself into a spirit of nationality, and that representation, connected with a properly-adjusted system of taxation, will result in a harmonious restoration of the relations of the States to the national Union.

The report of Carl Schurz is herewith transmitted.

CONGRESS, UNITED STATES. The first session of the Thirty-ninth Congress * assembled at Washington on December 4, 1865. (For the President's Message, see PUBLIC DOCUMENTS, ANNUAL CYCLOPEDIA, 1865.)

The Senate was called to order by the President *pro tem.*, Mr. Foster, of Connecticut, Mr.

Wright, of New Jersey, presented the credentials of John P. Stockton, of New Jersey, elected by the Legislature to serve for six years from March 4, 1865.

Mr. Cowan, of Pennsylvania, said: "Before the oaths are administered, I beg leave to present the protest of several members of the

* The following is a list of the members of Congress:

SENATE.

California—James A. McDougall, John Conness.
Connecticut—Lafayette S. Foster, James Dixon.
Delaware—George Read Riddle, Willard Saulsbury.
Illinois—Lyman Trumbull, Richard Yates.
Indiana—Henry S. Lane, Thomas A. Hendricks.
Iowa—James W. Grimes, Samuel J. Kirkwood.
Kansas—Samuel C. Pomeroy, James H. Lane.
Kentucky—Garret Davis, James Guthrie.
Maine—Lot M. Morrill, William Pitt Fessenden.
Massachusetts—Charles Sumner, Henry Wilson.
Maryland—John A. J. Creswell, Reverdy Johnson.
Michigan—Zachariah Chandler, Jacob M. Howard.
Minnesota—Alexander Ramsey, Daniel S. Norton.
Missouri—B. Gratz Brown, John B. Henderson.
Nevada—William M. Stewart, James W. Nye.
New Hampshire—Daniel Clark, Aaron H. Cragin.
New Jersey—William Wright, John P. Stockton.*
New York—Ira Harris, Edwin D. Morgan.
Ohio—John Sherman, Benjamin F. Wade.
Oregon—James W. Nesmith, George H. Williams.
Pennsylvania—Edgar Cowan, Charles R. Buckalew.
Rhode Island—William Sprague, Henry B. Anthony.
Tennessee—David D. Patterson, J. S. Fowler.
Vermont—Luke P. Poland, Solomon Foot.†
West Virginia—Peter G. Van Winkle, Waltman T. Wiley.
Wisconsin—Timothy O. Howe, James R. Doolittle.

Not admitted at this session.

Alabama—George S. Houston, Lewis E. Parsons.
Arkansas—E. Baxter, William D. Snow.
Louisiana—R. King Cutler, Michael Hahn.
Mississippi—William L. Sharkey, J. L. Alcorn.
North Carolina—John Pool, William A. Graham.
South Carolina—John L. Manning, Benjamin F. Perry.
Virginia—John C. Underwood, Joseph Segar.

HOUSE.

California—Donald C. McRuer, William Higby, John Bidwell.
Connecticut—Henry C. Deming, Samuel L. Warner, Augustus Brandagee, John H. Hubbard.
Delaware—John A. Nicholson.
Illinois—John Wentworth, John F. Farnsworth, Elihu B. Washburne, Abner C. Harding, Ebon C. Ingersoll, Burton C. Cook, H. P. H. Bromwell, Shelby M. Cullom, Lewis W. Ross, Anthony Thornton, Samuel S. Marshall, Jehu Baker, Andrew J. Kuykendall; at large, S. W. Moulton.
Indiana—William E. Niblack, Michael C. Kerr, Ralph Hill, John H. Farquhar, George W. Julian, Ebenezer Dumont, Daniel W. Voorhees,‡ Godlove S. Orth, Schuyler Colfax, Joseph H. Deftrees, Thomas N. Stillwell.
Iowa—James F. Wilson, Hiram Price, William B. Allison, Josiah B. Grinnell, John A. Kasson, Asahel W. Hubbard.
Kansas—Sidney Clarke.
Kentucky—L. S. Trimble, Barwell C. Ritter, Henry Grider, Aaron Harding, Lovell H. Rousseau, Green Clay Smith, George S. Shanklin, William H. Randall, Samuel McKee.
Maine—John Lynch, Sidney Perham, James G. Blaine, John H. Rice, Frederick A. Pike.
Maryland—Hiram McCullough, John L. Thomas, Jr., Charles E. Phelps, Francis Thomas, Benjamin G. Harris.
Massachusetts—Thomas D. Elliot, Oakes Ames, Alexander H. Rice, Samuel Hooper, John B. Alley, Nathaniel P. Banks, George S. Bontwell, John D. Baldwin, William B. Washburn, Henry L. Dawes.
Michigan—Fernando C. Beaman, Charles Upson, John W. Longyear, Thomas W. Ferry, Rowland E. Trowbridge, John F. Driggs.
Minnesota—William Windom, Ignatius Donnelly.
Missouri—John Hogan, Henry T. Blow, Thomas E.

* Seat declared vacant.

† Admitted near the close of the session.

‡ Deceased March 28, and succeeded by George F. Edmunds.

§ Seat given to Henry D. Washburn.

Noell, John R. Kelso, Joseph W. McClurg, Robert T. Van Horn, Benjamin F. Loan, John F. Benjamin, George W. Anderson.

Nevada—Delos R. Ashley.

New Hampshire—Gilman Marston, Edward H. Rollins, James W. Patterson.

New Jersey—John F. Starr, William A. Newell, Charles Sitgreaves, Andrew J. Rogers, Edwin R. V. Wright.

New York—Stephen Tabor, Tunis G. Bergen, James Humphrey, Morgan Jones, Nelson Taylor, Henry J. Raymond, John W. Chanler, James Brooks,* William A. Darling, William Radford, Charles H. Winfield, John H. Ketcham, Edwin N. Hubbell, Charles Goodyear, John A. Griswold, Robert S. Hale, Calvin T. Hulburd, James M. Marvin, Demas Hubbard, Jr., Addison H. Ladin, Roscoe Conkling, Sidney T. Holmes, Thomas T. Davis, Theodore M. Pomeroy, Daniel Morris, Giles W. Hotchkiss, Hamilton Ward, Roswell Hart, Burt Van Horn, James M. Humphrey, Henry Van Aernam.

Ohio—Benjamin Eggleston, Rutherford B. Hays, Robert C. Schenck, William Lawrence, F. C. Le Blond, Reader W. Clark, Samuel Shellabarger, James R. Hubbell, Ralph P. Buckland, James M. Ashley, Hezekiah S. Bundy, William E. Finck, Columbus Delano, Martin Welker, Tobias E. Platts, John A. Bingham, Ephraim R. Eckley, Rufus P. Spalding, James A. Garfield.

Oregon—John H. D. Henderson.

Pennsylvania—Samuel J. Randall, Charles O'Neill, Leonard Myers, William D. Kelley, M. Russell Thayer, B. Markley Boyer, John M. Broomall, Sydenham E. Ancona, Thaddeus Stevens, Myer Strouse, Philip Johnson, Charles Denison, Ulysses Mercur, George F. Miller, Adam J. Glossbrenner, William H. Kooniz, Abraham A. Barker, Stephen F. Wilson, Glenn W. Schofield, Charles Vernon Culver, John L. Dawson, James K. Moorhead, Thomas Williams, George V. Lawrence.

Rhode Island—Thomas A. Jencks, Nathan F. Dixon.

† *Tennessee*—Nathaniel G. Taylor, Horace Maynard, William B. Stokes, Edmund Cooper, William B. Campbell, S. M. Arnell, Isaac R. Hawkins, John W. Leftwich.

Vermont—Frederick E. Woodbridge, Justin S. Morrill, Portus Baxter.

West Virginia—Chester D. Hubbard, George R. Latham, Killian V. Whaley.

Wisconsin—Halbert E. Paine, Ithamar C. Sloan, Amasa Cobb, Charles A. Eldridge, Philetus Sawyer, Walter D. McIndoe.

Not admitted at this session.

Alabama—C. C. Langdon, George C. Freeman, Callen A. Battle, Joseph W. Taylor, B. T. Pope, T. J. Jackson.

Arkansas—Byers, Lorenzo Gibson, J. M. Johnson.

Florida—F. McLeod.

Georgia—Solomon Cohen, Philip Cook, Hugh Buchanan, E. G. Cabanis, J. D. Matthews, J. H. Christy, W. T. Wofford.

Louisiana—Louis St. Martin, Jacob Barker, Robert C. Wickliffe, John E. King, John S. Young.

Mississippi—A. E. Reynolds, B. A. Pinson, James T. Harrison, A. M. West, E. G. Peyton.

North Carolina—Jesse R. Stubbs, Charles C. Clark, Thomas C. Fuller, Josiah Turner, Jr., Bedford Brown, S. H. Walkup, A. H. Jones.

South Carolina—John D. Kennedy, William Aiken, Samuel McGowan, James Farrow.

Virginia—W. H. B. Custis, Lucius H. Chandler, B. Johnson Barbour, Robert Ridgway, Beverly A. Davis, Alexander H. H. Stuart, Robert Y. Conrad, Daniel H. Hoge.

Delegates from the Territories.

Arizona—John N. Goodwin.

Colorado—Allen A. Bradford.

Dakota—Walter A. Burleigh.

Idaho—E. D. Holbrook.

Montana—Samuel McLean.

Nebraska—Phineas W. Hitchcock.

New Mexico—J. Francesco Chavez.

Utah—William H. Hooper.

Washington—Arthur A. Denny.

* Seat given to William E. Dodge.

† Admitted near the close of the session.

Legislature of New Jersey, protesting against the right of Mr. Stockton to take his seat here as a Senator. I do not desire to raise the question as to whether he may not be sworn, because I believe his credentials are *prima facie* sufficient for that purpose; but I desire that these papers may be laid before the Senate and referred to the Committee on the Judiciary when that committee shall be organized, in order that the prayer of the memorialists may be heard, and such order taken upon it as the Senate in their wisdom may decree."

The protest was received and laid upon the table, for future reference to the Committee on the Judiciary, and the oath was administered to Mr. Stockton.

Mr. Sumner, of Massachusetts, submitted the following concurrent resolution declaratory of the adoption of the constitutional amendment abolishing slavery, which was laid on the table and ordered to be printed:

Whereas, the Congress, by a vote of two-thirds of both Houses, did heretofore propose to the Legislatures of the several States, for ratification, an amendment to the Constitution in the following words, to wit:

"ARTICLE XIII. Sec. 1. Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

"Sec. 2. Congress shall have power to enforce this article by appropriate legislation."

And whereas, at the time when such amendment was submitted as well as since, there were sundry States which, by reason of rebellion, were without Legislatures, so that, while the submission was made in due constitutional form, it was not, as it could not be, made to all the States, but to "the Legislatures of the several States," in obedience both to the letter and spirit of the provision of the Constitution authorizing amendments, there being a less number of Legislatures of States than there were States; and whereas, since the Constitution expressly authorizes amendments to be made, any construction thereof which would render the making of amendments at times impossible, must violate both its letter and its spirit; and whereas, to require the ratification to be by States without Legislatures as well as by "the Legislatures of the States," in order to be pronounced valid, would put it in the power of a long-continued rebellion to suspend, not only the peace of the nation, but its Constitution also; and whereas, from the terms of the Constitution, and the nature of the case, it belongs to the two Houses of Congress to determine when such ratification is complete; and whereas more than three-fourths of the Legislatures to which the proposition was made have ratified such amendment: Now, therefore,

Be it resolved by the Senate (the House of Representatives concurring), That the amendment abolishing slavery has become, and is, a part of the Constitution of the United States.

Resolved, That notwithstanding the foregoing resolution, and considering the great public interest which attaches to this question, the Legislatures which have not ratified the amendment, be permitted to express their concurrence therein by the usual form of ratification, to be returned in the usual manner.

Resolved, That no one of the States, to the Legislature of which such amendment could not be submitted, by reason of its being in rebellion against the United States, and having no Legislature, be permitted to resume its relations, and have its Legislature

acknowledged, and its Senators and Representatives admitted, until its Legislature shall have first ratified such amendment in recognition of the accomplished fact.

Mr. Sumner also submitted the following resolutions, which were laid over:

Resolutions declaratory of the duty of Congress in respect to guaranties of the national security and the national faith in the rebel States.

Resolved, That, in order to provide proper guaranties for security in the future, so that peace and prosperity shall surely prevail, and the plighted faith of the nation shall be preserved, it is the first duty of Congress to take care that no State declared to be in rebellion shall be allowed to resume its relations to the Union until after the satisfactory performance of five several conditions, which conditions precedent must be submitted to a popular vote, and be sanctioned by a majority of the people of each State respectively, as follows:

1. The complete reestablishment of loyalty, as shown by an honest recognition of the unity of the Republic, and the duty of allegiance to it at all times, without mental reservation or equivocation of any kind.

2. The complete suppression of all oligarchical pretensions, and the complete enfranchisement of all citizens, so that there shall be no denial of rights on account of color or race; but justice shall be impartial, and all shall be equal before the law.

3. The rejection of the rebel debt, and at the same time the adoption, in just proportion, of the national debt and the national obligations to Union soldiers, with solemn pledges never to join in any measure, direct or indirect, for their repudiation, or in any way tending to impair the national credit.

4. The organization of an educational system for the equal benefit of all without distinction of color or race.

5. The choice of citizens for office, whether State or national, of constant and undoubted loyalty, whose conduct and conversation shall give assurance of peace and reconciliation.

Resolved, That in order to provide these essential safeguards, without which the national security and the national faith will be imperilled, States cannot be precipitated back to political power and independence; but they must wait until these conditions are in all respects fulfilled.

Mr. Sumner also submitted the following resolutions, on the duty of Congress to the Southern States, which were ordered to be printed:

Resolutions declaratory of the duty of Congress, especially in respect to loyal citizens in rebel States.

Whereas, it is provided by the Constitution that "the United States shall guarantee to every State in this Union a republican form of government;" and whereas there are certain States where, by reason of rebellion, there are no State governments recognized by Congress; and whereas, because of the failure of such States respectively to maintain State governments, it has become the duty of Congress, standing in the place of guarantor, where the principal has made a lapse, to provide governments, republican in form, for such States respectively: Now, therefore, in order to declare the duty of Congress—

1. *Resolved*, That whenever a convention is called in any of such States for the organization of a government, the following persons have a right to be represented therein, namely, the citizens of the State who have taken no part in the rebellion; especially all those whose exclusion from the ballot enabled the rest to carry the State into the rebellion, and still more especially those who became soldiers in the armies of the Union, and by their valor on the battlefield turned the tide of war and made the Union triumphant; and Congress must refuse to sanction the

of the two Houses, given the one to the other, that until the report of this important committee shall have been presented, we will not readmit any of the rebel States either by the recognition of their Senators or of their Representatives. I think, sir, the country expects nothing less than this at our hands. I think that portion of the loyal people of the United States who have sacrificed so much of blood and treasure in the prosecution of the war, and who secured to us the signal victory which we have achieved over the rebellion, have a right to at least this assurance at our hands, that neither House of Congress will recognize as States any one of the rebel States until the event to which I have alluded.

"Sir, what is the present position and *status* of the rebel States? In my judgment they are simply conquered communities, subjugated by the arms of the United States—communities in which the right of self-government does not now exist. Why? Because they have been for the last four years hostile, to the most surprising unanimity hostile, to the authority of the United States, and have during that period been waging a bloody war against that authority. They are simply conquered communities; and we hold them, as we know well, as the world knows to-day, not by their own free will and consent as members of the Union, but solely by virtue of our superior military power, which is exerted to that effect throughout the length and breadth of the rebel States. There is in those States no rightful authority, according to my view, at this time but that of the United States, and every political act, every governmental act exercised within their limits, must necessarily be exercised and performed under the sanction and by the will of the conqueror.

"In short, sir, they are not to-day loyal States; their population are not willing to-day, if we are rightly informed, to perform peaceably, quietly, and efficiently the duties which pertain to the population of a State in the Union and of the Union; and for one, I cannot consent to recognize them, even indirectly, as entitled to be represented in either House of Congress at this time. The time has not yet come, in my judgment, to do this, and I object to the amendment for the reason that it leaves the implication—and the implication will be drawn and clearly understood by the public—that one or the other House of Congress may, whenever it sees fit, readmit Senators or Representatives from a rebel State as it sees fit, without the concurrence of the other House, and I hold it to be utterly incompetent for the Senate, under the present condition of things, and for the House of Representatives, under the same condition, to admit Senators or Representatives into Congress without the consent of both Houses and the formal recognition of the fact that hostilities have ceased and that loyalty is restored in the rebel States."

Mr. Anthony, of Rhode Island, followed in

explanation: "Supposing that this amendment might not provoke any debate, I forbore to state the purpose with which I offered it. The Senator from Michigan in his remarks has not touched the reasons why I proposed the amendment. It is from no opposition to what I understand to be the purpose of the words stricken out. That purpose I understand to be that both Houses shall act in concert in any measures which they may take for the reconstruction of the States lately in rebellion. I think that that object is eminently desirable; and not only that the two Houses shall act in concert, but that Congress shall act in concert with the Executive; that all branches of the Government shall approach this great question in a spirit of comprehensive patriotism, with confidence in each other, with a conciliatory temper toward each other, and that each branch of the Government and all persons in each branch of the Government will be ready, if necessary, to concede something of their own views in order to meet the views of those who are equally charged with the responsibility of public affairs.

"Mr. President, the words proposed to be stricken out refer to the joint committee of the two Houses of Congress, matters which the Constitution confides to each House separately. Each House is made by the Constitution the judge of the elections, returns, and qualifications of its own members. Under this resolution, I apprehend, it would be necessary to refer to this joint committee the credentials of persons claiming seats in this body, referring them not only to a committee composed in part of others than members of this body, but composed of a majority of others than members of this body. I know it may be argued that this contemplates the reference only of the question whether a State has a right to be represented, not the question whether a person claiming to represent it has a right to represent it, and perhaps that construction might obtain; but at least the resolution, as it reads, is open to a doubtful construction, and that the Senate should avoid.

"There is one other reason why I move this amendment, and that is that the resolution provides that papers shall be referred to this committee without debate. This is contrary to the practice of the Senate. The House of Representatives has found it necessary, for the orderly transaction of its business, to put limitations upon debate, hence the previous question and the hour rule; but the Senate has always resisted every proposition of this kind, and has submitted to any inconvenience rather than check free discussion."

Mr. Doolittle, of Wisconsin, objecting to the resolution, said: "In my own judgment, sir, all of these great questions, concerning reconstruction, pacification, and restoration of civil government in the Southern States, representation in this body, or any thing which concerns our Federal relations with the several States, ought

to be referred to the Committee on the Judiciary. Such has been the practice of this Government from the beginning. Great questions of constitutional law, questions concerning the relations of the Union to the States and the States to the Union, and above all, and without any exception, all questions relating to representation in this body, to its membership, have always been referred to the Judiciary Committee.

"The Judiciary Committee is constituted for the very purpose of considering such questions, and for no other purpose. From its very organization, the Senate designs to make that committee its constitutional adviser—not that its opinions are to be conclusive or controlling on the vote of any member of this body, like the opinion of the bench of judges in the House of Lords; but its members are chosen in consideration of their high professional ability, their long experience, and well-known standing as jurists, in order that their report upon constitutional questions may be entitled to the highest consideration.

"Mr. President, there is nothing in the history of the Senate, there is nothing in the constitution of this committee, which would send these great constitutional questions for advisement and consideration to any other committee than the Committee on the Judiciary. To place their consideration in the hands of a committee which is beyond the control of the Senate, is to distrust ourselves; and to vote to send their consideration to any other committee is equivalent to a vote of want of confidence in the Judiciary Committee.

"But, sir, I object to this resolution in the first place, because upon these great questions which are to go to the joint committee the Senate does not stand upon an equality with the House. This resolution provides that, of the joint committee of fifteen, nine shall be appointed by the House of Representatives, six only by the Senate, giving to the House portion of the committee a majority of three. We all know that in joint committees the members vote, not as the representatives of the two Houses, but *per capita*. The vote of a member of the committee from the House weighs precisely the same as the vote of a member of the committee from the Senate; so that to all intents and purposes, if we pass this concurrent resolution, which we cannot repeal but by the concurrence of the other House, we place the consideration of these grave questions in the hands of a committee which we cannot control, and in which we have no equal voice.

"Mr. President, another objection to the resolution as it came from the House, and a strong reason why I favor the amendment proposed by the Senator from Rhode Island, is that the resolution in its terms reaches even beyond the present Congress. Sir, have you carefully studied this language, which would seem almost to have been employed for the purpose rather of disguising its hidden meaning than of giving

full utterance to the truth? The resolution provides that, in case this committee shall for any reason make no report, or if for any reason Congress, which includes both Houses, shall not take final action thereon, the restrictive clause goes into effect as a law, and what is its provision? It provides by law that, in the happening of that contingency, that failure to act, no one of the eleven States of the United States shall send a Representative to either House of Congress. It would be binding on the Senate until repealed, beyond the present Congress; it would bind us in the next Congress and bind us in the Congress after that. It would be of perpetual binding obligation forever until repealed by act of Congress.

"Sir, what would have been thought of the joint resolution raising the Committee on the Conduct of the War if there had been contained in it a provision similar to this, which the Senator from Rhode Island moves to strike out, and which the Senator from Michigan insists shall be retained, and upon which he calls the yeas and nays of the Senate? Suppose that in that joint resolution there had been a provision declaring that until the joint Committee on the Conduct of the War should make their final report, and Congress should take final action thereon, neither House of Congress should take any action on the subject of carrying on the war, and that every paper relating to that subject should be referred to that committee without debate? Monstrous as such a proposition would have been, it might perhaps have been within the purview of the Constitution for us to adopt it; but on the subject of representation in this body, it is not within our constitutional power to delegate our power to any other body, or to any committee which we ourselves do not control.

"Mr. President, I believe that under the Constitution, upon all subjects of legislation but one, the two Houses are equal and coördinate branches of Congress. That one relates to their representation in the bodies, to their membership, that which constitutes their existence, which is essential to their life and their independence. That is confided to each House, and to each House alone, to act for itself. It judges for itself upon the elections, returns, and qualifications of its members. It judges, it admits, it punishes, it expels. It cannot share that responsibility with any other department of the Government. It can no more share it with the other House than it can share it with the Supreme Court or with the President. It is a matter over which its jurisdiction is exclusive of every other jurisdiction. It is a matter in which its decisions, right or wrong, are absolute and without appeal. Sir, in my opinion the Senate of the United States cannot give to a committee beyond its control this question of the representation in this body, without a loss of its self-respect, its dignity, its independence; without an abandonment of its constitutional duty and a surrender of its constitutional powers.

"Mr. President, there is another provision in this resolution as it stands. It not only takes from the Senate all power to act over this subject until this committee shall report and Congress shall take final action, but it declares that we shall refer every paper to the committee without debate. Yes, sir, the Senate of the United States is to be led like a lamb to the slaughter, bound hand and foot, shorn of its constitutional power, and gagged, dumb, like the sheep brought to the block! Is this the condition to which the Senator from Michigan proposes to reduce the Senate of the United States by insisting upon such a provision as that contained in the resolution as it comes from the House of Representatives?

"Mr. President, there is still a graver objection to this resolution as it stands. The provision that, 'until such report shall have been made and finally acted on by Congress, no member shall be received into either House from any of the so-called Confederate States,' is a provision which, by law, excludes those eleven States from their representation in the Union. Sir, pass that resolution as it stands, and let it receive the signature of the President, and you have accomplished what the rebellion could not accomplish, what the sacrifice of half a million men could not accomplish in warring against this Government—you have dissolved the Union by act of Congress. Sir, are we prepared to sanction that? I trust never.

"The Senator from Michigan talks about the *status* of these States. He may very properly raise the question whether they have any Legislatures that are capable of electing Senators to this body. That is a question of fact to be considered; but as to whether they are States, and States still within the Union, notwithstanding their civil form of government has been overturned by the rebellion and their Legislatures have been disorganized—that they are still States in this Union is the most sacred truth and the dearest truth to every American heart, and it will be maintained by the American people against all opposition, come from what quarter it may. Sir, the flag that now floats on the top of this Capitol bears thirty-six stars. Every star represents a State in this Union. I ask the Senator from Michigan, does that flag, as it floats there, speak the nation's truth to our people and to the world, or is it a hypocritical, haunting lie? That flag has been borne at the head of our conquering legions through the whole South, planted at Vicksburg, planted at Columbia, Savannah, Charleston, Sumter; the same old flag which came down before the rebellion at Sumter was raised up again, and it still bore the same glorious stars; 'not a star obscured,' not one.

"These people have been disorganized in their civil governments in consequence of the war; the rebels overturned civil government in the first place, and we entered with our armies and captured the rebellion; but did that destroy the States? Not at all. We entered the

States to save them, not to destroy them. Our constitutional duty is to save them, and save every one of them, and not to destroy them. The guaranty in the Constitution is a guaranty to the States, and to every one of the States, and the obligation that rests upon us is to guarantee to South Carolina a republican form of government as a State in this Union, and not as a Territory. The doctrine of the territorial condition of these States, that they are mere conquered, subjugated territories, as if we had conquered Canada or Mexico, will not stand argument for a moment. It is utterly at war with the ground on which we stand and have stood from the beginning. The ground we occupied was this: that no State nor the people of any State had any power to withdraw from the Union. They could not do it peacefully; they undertook to do it by arms; we crushed the attempt; we trampled their armies under our feet; we captured the rebellion; the States are ours; and we entered them to save, and not to destroy."

Mr. Fessenden, of Maine, said: "I have said I was in favor of this resolution when I first read it, for the reason that it looked to a purpose which I approve—calm and deliberate consideration before action; but when I came to read it over more carefully and hear the opinions of others, I came to the conclusion, for the reasons that have been given by my honorable friend from Rhode Island, that the resolution perhaps went a little too far. It was important to have a committee by which this subject should be investigated, composed of members of the two Houses, for the reason, among others, that it is very important that the two Houses should act in harmony, that one House should not take action that would be at variance with the action of the other, and that, after investigation of the subject, it would result, as I believe, from the constitution of Congress, that the two Houses would act in harmony, on the same principles, and with the same views, and neither would act hastily. Therefore the committee was important, and a committee that should be carefully chosen, as I said before, and deliberate well and advise well; and I did not conceive that a little delay, that a few weeks' time, or even a few months' time, if necessary, given to that subject, would be misspent. We had better spend a little time now than take a step to be repented of in all our after-lives and in all the future life of the Republic.

"The points to which attention has been called by the honorable mover of the amendment are precisely those to which I objected. While I approved the committee, I did not think, in the first place, that we should change the order of proceeding and the long-tried rules of the Senate, especially the one with regard to debate. It has always been open here on every subject. Every Senator was at liberty to speak as much and as long as he pleased within the rules of order upon every subject opened to de

late in the Senate. I was very unwilling that that should be changed. If the House of Representatives, for its own convenience and in order to accomplish business, finds it necessary to adopt another rule, that rule can be adopted by the House as applicable to its own proceedings, but not here; and hence I was opposed to that particular provision, and thought it unwise so far as we were concerned.

"My judgment was that every thing that was necessary could be accomplished by the mere appointment of a joint committee of the two Houses; that it was not necessary to provide that all the credentials of members should be referred to that committee. There was an apparent constitutional objection to it; and there is much force in the argument that if that should be done, and the provision retained that no action should be had until there was a report from that committee, constituted as the committee is to be, each House is putting into the hands of the other a power to control its action in a matter which, by the Constitution, is left to itself. I might have been willing even to strain a little upon that point had I conceived that there was any danger; but, sir, when we come to look at it, a committee is appointed by the ordinary rules of proceeding; every thing relating to the proper subject-matter, referred to that committee goes there; no harm would happen from a discussion in this body on that subject; it would very soon be settled, and we should avoid the apparent difficulty that arose with reference to what was our constitutional duty. I was not frightened by any idea that it was necessary now to tie up this body or that body by a joint rule which could not be altered without the assent of the other, because, on such a subject, a majority at any time will rule. If this body chooses at any time to become false to its duty, it will find a way to accomplish the wrong; and so will it be with the House of Representatives.

"If the members of that body are, as I believe they will be, firm in their convictions of right and what the good of the country requires, there is no need of putting them under the control of the Senate in order to keep them so. Hence I agree with the honorable Senator who moved this amendment that it is best to strike out that clause, and simply appoint a committee, and then if the Senate chooses to pass a rule of its own to refer all the papers on this subject, even credentials, to that committee, so be it; it will have the control of that subject: and if the House of Representatives, on the other hand, chooses to do the same thing, so be it; it will have the control of its own action, and we have accomplished the great purpose, which is to put the consideration of the question which lies at the foundation of this subject of the admission of members into the hands of a joint committee to be thoroughly consulted upon and considered. That is the only ground upon which my judgment

coincides with that of the honorable Senator from Rhode Island.

"My friend from Michigan (Mr. Howard) will allow me to say to him that I do not think the question of whether the men who may present themselves as members are fit to come in now, or whether the States of which they profess to be the representatives are fit to come in now and act with us and ought to be admitted to do so, is involved in this question at all. He has argued it as if by striking out this portion of the resolution we have settled that. By no manner of means. If it would do so, I would vote with him. We are only settling, on the contrary, that that question shall be deferred until a committee of both branches have thoroughly considered it and reported to this body: and certainly I shall go with him, as long as I believe that committee is doing its duty, in opposing action upon the subject committed to it until it is ready to enlighten us with the information it may have received and the conclusions to which it may have arrived. I say this simply to bar the inference that by this action in amending it any one who may vote for it means to say or intimate that he is ready to act upon that question now and admit anybody from any of these so-called Confederate States. Certainly I am not one of them, and yet I shall vote with the honorable Senator from Rhode Island.

"Allow me to say, sir, in closing, one thing which I may as well say now in the beginning of the session, because it is the principle which I intend shall guide my action, and I hope will guide the action of all of us. We have just gone through a state of war. While we were in it, it became necessary all around to do certain things for which perhaps no strict warrant will be found; contrary, at any rate, to previous experience. That I admit most distinctly. Sir, I defended them from the beginning. I laid down the principle that the man who, placed in a position such as the President and other officers occupied, would not, in a time of war, and when his country was in peril, put his own reputation at hazard as readily as he would any thing else in order to do his duty, was not fit for his place. I upheld many things then that perhaps I would not uphold now, because they are not necessary. The time must come when the Senate and House of Representatives, the Congress, must revert to its own original position. I do not think there will be the slightest danger; I have no apprehension of any; but if I act upon different principles now and hereafter in a state of peace, from those which I adopted and defended before, I wish everybody to understand the reason for it. In all countries, in all nations in a time of extreme peril, extreme and somewhat questionable measures are inevitable."

The amendment was agreed to.

Mr. Cowan, of Pennsylvania, moved further to amend the resolution by striking out the word "nine" in the second line and inserting

the word "six." The amendment was lost—yeas 14, nays 29.

Mr. Saulsbury, of Delaware, followed, saying: "This resolution, as it exists now, is very objectionable to my mind. It is for the appointment of a committee of the two Houses to determine and to report upon, what? The right of representation of eleven States in this body. What determines the rights of those States to representation here? Is it the views of the members of the House of Representatives? Do we stand in need of any light, however bright it may be, that may come from that distinguished quarter? Are we going to ask them to illuminate us by wisdom, and to report the fact to us whether those States are entitled to representation on this floor?"

"Mr. President, on the first day of your assemblage after the battle of Manassas you and they declared, by joint resolution, that the object for which the war was waged was for no purpose of conquest or subjugation, but it was to preserve the Union of the States and to maintain the rights, dignity, and equality of the several States unimpaired. While that war was being waged there was no action, either of this House or of the House of Representatives, declaring that when it was over the existence of those States should be ignored or their right to representation in Congress denied. Throughout the whole contest the battle-cry was "the preservation of the Union" and "the Union of the States." If there was a voice then raised that those States had ceased to have an existence in this body, it was so feeble as to be passed by and totally disregarded.

"Sir, suppose this committee should report that those States are not entitled to representation in this body, are you bound by their action? Is there not a higher law, the supreme law of the land, which says, if they be States that they shall each be entitled to two Senators on this floor? And shall a report of a joint committee of the two Houses override and overrule the fundamental law of the land? Sir, it is dangerous as a precedent, and I protest against it as a humble member of this body. If they be not States, then the object avowed for which the war was waged was false."

Mr. Doolittle added: "I feel called upon to say, in relation to this matter, that inasmuch as the Senate and House of Representatives are not put upon a footing of equality in the committee, I am constrained to vote against the resolution. As my friends around me all know, I have uniformly stated to them that I could not vote for the resolution if they were not put upon a footing of equality."

Mr. Hendricks, of Indiana, said: "I shall vote against this resolution because it refers to a joint committee a subject, which, according to my judgment, belongs exclusively to the Senate. I know that the resolution no longer provides in express terms that the Senate, pending the continuance of the investigation of this

committee, will not consider the question of credentials from these States, but in effect it amounts to that."

Mr. Trumbull, of Illinois, said: "If I understood the resolution as the Senator from Indiana does, I should certainly vote with him; but I do not so understand it as it has been amended. That was the very objection to the resolution in the form in which it came from the House of Representatives, but as it has been amended it is simply a resolution that a joint committee be raised to inquire into the condition of the States which formed the so-called Confederate States of America, and to report whether they or any of them are entitled to be represented in either House of Congress, with leave to report at any time by bill or otherwise. It is true, as the Senator says, that after having raised this committee, the Senate will not be likely to take action in regard to the admission of the Senators from any of these States until the committee shall have had a reasonable time at least to act and report; but it is very desirable that we should have joint action upon this subject. It would produce a very awkward and undesirable state of things in the mind, I doubt not, of the Senator from Indiana himself, if the House of Representatives were to admit members from one of the lately rebellious States and the Senate were to refuse to receive Senators from the same State.

"We all know that the State organizations in certain States of the Union have been usurped and overthrown. This is a fact of which we must officially take notice. There was a time when the Senator from Indiana, as well as myself, would not have thought of receiving a Senator from the Legislature or what purported to be the Legislature of South Carolina. When the people of that State, by their representatives, undertook to withdraw from the Union and set up an independent government in that State in hostility to the Union, when the body acting as a Legislature there was avowedly acting against this Government, neither he nor I would have received representatives from it. That was a usurpation which by force of arms we have put down. Now the question arises, has a State Government since been inaugurated there entitled to representation? Is not that a fair subject of inquiry? Ought we not to be satisfied upon that point? We do not make such an inquiry in reference to members that come from States which have never undertaken to deny their allegiance to the Government of the United States. Having once been admitted as States, they continue so until by some positive act they throw off their allegiance, and assume an attitude of hostility to the Government, and make war upon it; and while in that condition I know we should all object that they, of course, could not be represented in the Congress of the United States. Now, is it not a proper subject for inquiry to ascertain whether they have assumed a position in harmony with the Government; and is it not proper that that

inquiry should be made the subject of joint action?"

Mr. Dixon, of Connecticut, said: "I desire to offer a proviso by way of amendment, and I will only say that without such proviso I cannot vote for the resolution. My amendment is after the words 'bill or otherwise' to insert:

Provided, That nothing herein contained shall be so constructed as to limit, restrict, or impair the right of each House at all times to judge of the elections, returns, and qualifications of its own members.

Mr. Guthrie, of Kentucky, said: "I wish to ask the friends of this resolution if it is contemplated that this committee shall take evidence and report that evidence to the two Houses. If they are only to take what is open to every member of the Senate, the fact that the rebellion has been suppressed; the fact that the President of the United States has appointed officers to collect the taxes, and in some instances judges and other officers; that he has sent the post-office into all the States; that there have been found enough individuals loyal to the country to accept the offices; the fact that the President has issued his proclamation to all these States appointing provisional governors; that they have all elected conventions; that the conventions have rescinded the ordinances of secession; that most of them have amended their constitutions and abolished slavery, and the Legislatures of some of them have passed the amendment to the Constitution on the subject of slavery—if they are only to take these facts which are open and clear to us all, I can see no necessity for such a committee. My principal objection to the resolution is, that this committee can give us no information which we do not now possess, coupled with the fact that the loyal conservative men of the United States, North, South, East, and West, do most earnestly desire that we shall so act that there shall be no longer a doubt that we are the United States of America in full accord and harmony with each other.

"I know it has been said that the President had no authority to do these things. I read the Constitution and the laws of this country differently. He is to 'take care that the laws be faithfully executed'; he is to suppress insurrection and rebellion. The power is put in his hands, and I do not see why, when he marches into a rebel State, he has not authority to put down a rebel government and put up a government that is friendly to the United States, and in accordance with it; I do not see why he cannot do that while the war goes on, and I do not see why he may not do it after the war is over. The people in those States are at the mercy of the nation. I see no usurpation in what he has done, and if the work is well done, I, for one, am ready to accept it. Are we to send out a commission to see what the men whom he has appointed have done? It is said that they are not to be relied on; that they have been guilty of treason, and we

will not trust them. I hope that no such ideas will prevail here. I think this will be a cold shock to the warm feelings of the nation for restoration, for equal privileges, and equal rights. They were in insurrection. We have suppressed that insurrection. They are now States of the Union; and if they come here according to the laws of the States, they are entitled, in my judgment, to representation, and we have no right to refuse it. They are in a minority, and they would be in a minority even if they meant now what they felt when they raised their arms against the Government; but they do not, and of those whom they will send here to represent them, nineteen out of twenty will be just as loyal as any of us—even some of those who took up arms against us."

The question being taken by yeas and nays, on the amendment of Mr. Dixon, resulted—yeas 12, nays 31.

So the amendment was rejected.

The question on concurring in the resolution as amended being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Anthony, Brown, Chandler, Clark, Conness, Creswell, Fessenden, Foot, Foster, Grimes, Harris, Howard, Howe, Lane of Indiana, Lane of Kansas, Morgan, Morrill, Norton, Nye, Poland, Pomeroy, Ramsey, Sherman, Sprague, Stewart, Sumner, Trumbull, Van Winkle, Wade, Wiley, Williams, Wilson, and Yates—83.

NAYS—Messrs. Buckalew, Cowan, Dixon, Doolittle, Guthrie, Hendricks, Johnson, Riddle, Saulsbury, Stockton, and Wright—11.

ABSENT—Messrs. Cragin, Davis, Henderson, McDougal, and Nesmith—5.

So the resolution, as amended, was concurred in, as follows:

Resolved by the House of Representatives (the Senate concurring), That a joint committee of fifteen members shall be appointed, nine of whom shall be members of the House, and six members of the Senate, who shall inquire into the condition of the States which formed the so-called Confederate States of America, and report whether they, or any of them, are entitled to be represented in either House of Congress, with leave to report at any time by bill or otherwise.

The consideration of the amended resolution took place in the House on December 13th.

Mr. Stevens, of Pennsylvania, moved that the House concur in the amendments of the Senate. He said: "The Senate took what to them appeared to be the proper view of their prerogatives, and though they did not seem to differ with us as to the main object, the mode of getting at it with them was essential, and they very properly put the resolution in the shape they considered right.

"They have changed the form of the resolution so as not to require the assent of the President; and they have also considered that each House should determine for itself as to the reference of papers by its own action at the time. To this I see no objection, and while moving to concur, I will say now that when it is in order I shall move, or some other gentleman will move when his State is called, a resolution pre

cisely similar or very nearly similar to the provision which the Senate has stricken out, only applicable to the House alone. I merely give that notice now. I cannot move it as an amendment to this resolution, because that would send the resolution back to the other House, which is not desirable."

Mr. Raymond, of New York, said: "I wish to inquire, not being versed in the usages of the House, or its rules, whether this clause of the Constitution does not apply. It is the seventh section of the first article of the Constitution:

Every order, resolution, or vote to which the concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and before the same shall take effect, shall be approved by him, or being disapproved by him, shall be re-passed by two-thirds of the Senate and House of Representatives, according to the rules and limitations prescribed in the case of a bill.

"I do not understand how that can be evaded. It is possible that the usages of the House may dispense with it."

Mr. Stevens, of Pennsylvania, replied: "Under the usage of the House, a resolution in this form is never sent to the President, and it is not desired that this resolution should be. I know it has not been the practice heretofore to send such resolutions to the President."

The amendments of the Senate were then agreed to.

In the House on December 14th, the Speaker announced the following members of the joint committee on the part of the House: Messrs. Thaddeus Stevens of Pennsylvania, Elihu B. Washburne of Illinois, Justin S. Morrill of Vermont, Henry Grider of Kentucky, John A. Bingham of Ohio, Roscoe Conkling of New York, George S. Boutwell of Massachusetts, Henry T. Blow of Missouri, and Andrew J. Rogers of New Jersey.

In the Senate, on December 21st, the following members were announced by the President *pro tem.*: Messrs. Fessenden, Grimes, Harris, Howard, Johnson, Williams.

In the Senate, on December 19th, Mr. Anthony, of Rhode Island, offered the following:

Resolved, That until otherwise ordered, all papers presented to the Senate relating to the condition and title to representation of the so-called Confederate States, shall be referred to the joint committee upon that subject.

It was laid over until January 16th, when it was considered. A debate arose on the question whether the resolution embraced the credentials of Senators. Mr. Doolittle, of Wisconsin, moved to insert the words "except credentials," and the debate was not concluded.

In the Senate, on January 12th, Mr. Fessenden, of Maine, offered the following, which was agreed to:

Resolved by the Senate (the House of Representatives concurring), That the joint committee appointed to inquire into the condition of the States which formed the so-called Confederate States be authorized to send for persons and papers.

The same resolution was agreed to in the House on January 16th—yeas 125, nays 85.

In the Senate, on January 30th, Mr. Fessenden, of Maine, offered a joint resolution, appropriating \$10,000, or so much thereof as might be necessary for the expenses of the committee, for witnesses, travelling expenses, etc., which was passed. It subsequently passed the House on February 7th, and was approved by the President on February 10th.

In the Senate, on February 1st, Mr. Brown, of Missouri, offered the following resolution, which was agreed to:

Resolved, That the joint Committee on Reconstruction be directed to inquire into the expediency of amending the Constitution of the United States so as to declare with greater certainty the power of Congress to enforce and determine by appropriate legislation all the guaranties contained in that instrument, and more especially, first, that which recites the people, without distinguishing them by color or race, as those who are to choose Representatives; second, that which assures the citizens of each State all privileges and immunities of citizens in the several States; third, that which enjoins upon the United States the guaranty to every State in the Union of a republican form of government.

In the Senate, on February 10th, Mr. Wilson, of Massachusetts, offered the following resolution, which was agreed to:

Resolved, That the Committee on Reconstruction be directed to inquire into and report how far the States lately in rebellion, or any of them, have complied with the terms proposed by the President as conditions precedent to their resumption of practical relations with the United States, which terms and conditions were as follows, namely:

1. That the several State constitutions should be amended by the insertion of a provision abolishing slavery.
2. That the several State conventions should declare null and void the ordinances of secession and the laws and decrees of the Confederacy.
3. That the several State Legislatures should ratify the amendment to the Federal Constitution abolishing slavery.
4. That the rebel debt, State and Confederate, should be repudiated.
5. That civil rights should be secured by laws applicable alike to whites and blacks.

In the House, on December 14th, Mr. Wilson, of Iowa, offered the following resolution:

Resolved, That all papers which may be offered relative to the representation of the late so-called Confederate States of America, or either of them, shall be referred to the joint committee of fifteen without debate, and no members shall be admitted from either of said so-called States until Congress shall declare such States or either of them entitled to representation.

Numerous points of order were raised, which were overruled by the Speaker, and the resolution was adopted—yeas 107, nays 56.

On December 18th, Mr. Baker, of Illinois, offered the following preamble and resolution, which was referred to the Committee on Reconstruction:

Whereas, class rule and aristocratic principles of government have burdened well-nigh all Europe with enormous public debts and standing armies, which press as a grievous incubus on the people, absorbing

their substance, impeding their culture, and impairing their happiness; and whereas the class rule and aristocratic element of slaveholding which found a place in our Republic has proved itself, in like manner, hurtful to our people, by degrading labor and prohibiting popular education in a large section of the country; by striving to rend our Union in fragments; by causing the blood of hundreds of thousands of patriots to flow, and by compelling the people to impose on themselves a debt of European magnitude in defence of liberty, nationality, and civilization on this continent: Therefore

Resolved (as the sense of this House), That once for all we should have done with class rule and aristocracy as a privileged power before the law in this nation, no matter where or in what form they may appear; and that, in restoring the normal relations of the States lately in rebellion, it is the high and sacred duty of the Representatives of the people to proceed upon the true, as distinguished from the false, democratic principle, and to realize and secure the largest attainable liberty to the whole people of the Republic, irrespective of class or race.

On the same day, on a motion to refer the President's message to the respective committees in the House, Mr. Stevens, of Pennsylvania, expressed his views on the state of the country. After advancing reasons to prove it to be the duty of Congress to "create States and declare when they are entitled to be represented," he said:

"It is obvious from all this that the first duty of Congress is to pass a law declaring the condition of these outside or defunct States, and providing proper civil governments for them. Since the conquest they have been governed by martial law. Military rule is necessarily despotic, and ought not to exist longer than is absolutely necessary. As there are no symptoms that the people of these provinces will be prepared to participate in constitutional government for some years, I know of no arrangement so proper for them as territorial governments. There they can learn the principles of freedom, and eat the fruit of foul rebellion. Under such governments, while electing members to the Territorial Legislatures, they will necessarily mingle with those to whom Congress shall extend the right of suffrage. In Territories, Congress fixes the qualifications of electors; and I know of no better place nor better occasion for the conquered rebels and the conqueror to practise justice to all men, and accustom themselves to make and to obey equal laws.

"As these fallen rebels cannot at their option reenter the heaven which they have disturbed, the garden of Eden which they have deserted, and flaming swords are set at the gates to secure their exclusion, it becomes important to the welfare of the nation to inquire when the doors shall be reopened for their admission.

"According to my judgment they ought never to be recognized as capable of acting in the Union, or of being counted as valid States, until the Constitution shall have been so amended as to make it what its framers intended; and so as to secure perpetual ascendancy to the party of the Union; and so as to render our

republican government firm and stable forever. The first of those amendments is to change the basis of representation among the States from Federal numbers to actual voters. Now all the colored freemen in the slave States, and three-fifths of the slaves, are represented, though none of them have votes. The States have nineteen representatives of colored slaves. If the slaves are now free then they can add, for the other two-fifths thirteen more, making the slave representation thirty-two. I suppose the free blacks in those States will give at least five more, making the representation of non-voting people of color about thirty-seven. The whole number of representatives now from the slave States is seventy. Add the other two-fifths and it will be eighty-three.

"If the amendment prevails, and those States withhold the right of suffrage from persons of color, it will deduct about thirty-seven, leaving them but forty-six. With the basis unchanged, the eighty-three Southern members, with the Democrats that will in the best times be elected from the North, will always give them a majority in Congress and in the electoral college. They will at the very first election take possession of the White House and the halls of Congress. I need not depict the ruin that would follow. Assumption of the rebel debt or repudiation of the Federal debt would be sure to follow. The oppression of the freedmen; the reamendment of their State constitutions, and the reestablishment of slavery would be the inevitable result. That they would scorn and disregard their present constitutions, forced upon them in the midst of martial law, would be both natural and just. No one who has any regard for freedom of elections can look upon those governments, forced upon them in duress, with any favor. If they should grant the right of suffrage to persons of color, I think there would always be Union white men enough in the South, aided by the blacks, to divide the representation, and thus continue the Republican ascendancy. If they should refuse to thus alter their election laws, it would reduce the representatives of the late slave States to about forty-five, and render them powerless for evil. It is plain that this amendment must be consummated before the defunct States are admitted to be capable of State action, or it never can be.

"The proposed amendment to allow Congress to lay a duty on exports is precisely in the same situation. Its importance cannot well be overstated. It is very obvious that for many years the South will not pay much under our internal revenue laws. The only article on which we can raise any considerable amount is cotton. It will be grown largely at once. With ten cents a pound export duty it would be furnished cheaper to foreign markets than they could obtain it from any other part of the world. The late war has shown that. Two million bales exported, at five hundred pounds to the bale, would yield \$100,000,000. This

seems to be the chief revenue we shall ever derive from the South. Besides, it would be a protection to that amount to our domestic manufactures. Other proposed amendments—to make all laws uniform; to prohibit the assumption of the rebel debt—are of vital importance, and the only thing that can prevent the combined forces of copperheads and secessionists from legislating against the interests of the Union whenever they may obtain an accidental majority.

"But this is not all that we ought to do before these inveterate rebels are invited to participate in our legislation. We have turned, or are about to turn, loose four million slaves without a hut to shelter them, or a cent in their pockets. The infernal laws of slavery have prevented them from acquiring an education, understanding the commonest laws of contract, or of managing the ordinary business of life. This Congress is bound to provide for them until they can take care of themselves. If we do not furnish them with homesteads, and hedge them around with protective laws; if we leave them to the legislation of their late masters, we had better have left them in bondage. Their condition would be worse than that of our prisoners at Andersonville. If we fail in this great duty now, when we have the power, we shall deserve and receive the execration of history and of all future ages.

"Two things are of vital importance:

"1. So to establish a principle that none of the rebel States shall be counted in any of the amendments of the Constitution until they are duly admitted into the family of States by the law-making power of their conqueror. For more than six months the amendment of the Constitution abolishing slavery has been ratified by the Legislatures of three-fourths of the States that acted on its passage by Congress, and which had Legislatures, or which were States capable of acting, or required to act, on the question.

"I take no account of the aggregation of whitewashed rebels, who, without any legal authority, have assembled in the capitals of the late rebel States and simulated legislative bodies. Nor do I regard with any respect the cunning by-play into which they deluded the Secretary of State by frequent telegraphic announcements that 'South Carolina had adopted the amendment;' 'Alabama has adopted the amendment, being the twenty-seventh State,' etc. This was intended to delude the people, and accustomed Congress to hear repeated the names of these extinct States as if they were alive; when, in truth, they have now no more existence than the revolted cities of Latium, two-thirds of whose people were colonized and their property confiscated, and their right of citizenship withdrawn by conquering and avenging Rome.

"2. It is equally important to the stability of this Republic that it should now be solemnly decided what power can revive recreate and

reinstate these provinces into the family of States, and invest them with the rights of American citizens. It is time that Congress should assert its sovereignty, and assume something of the dignity of the Roman senate. It is fortunate that the President invites Congress to take this manly attitude. After stating, with great frankness, in his able message his theory, which, however, is found to be impracticable, and which I believe very few now consider tenable, he refers the whole matter to the judgment of Congress. If Congress should fail firmly and wisely to discharge that high duty, it is not the fault of the President.

"This Congress owes it to its own character to set the seal of reprobation upon a doctrine which is becoming too fashionable, and unless rebuked will be the recognized principle of our Government. Governor Perry and other provisional governors and orators proclaim that 'this is the white man's Government.' The whole copperhead party, pandering to the lowest prejudices of the ignorant, repeat the cuckoo cry, 'This is the white man's Government.' Demagogues of all parties, even some high in authority, gravely shout, 'This is the white man's Government.' What is implied by this? That one race of men are to have the exclusive right forever to rule this nation, and to exercise all acts of sovereignty, while all other races and nations and colors are to be their subjects, and have no voice in making the laws and choosing the rulers by whom they are to be governed. Wherein does this differ from slavery except in degree? Does not this contradict all the distinctive principles of the Declaration of Independence? When the great and good men promulgated that instrument, and pledged their lives and sacred honors to defend it, it was supposed to form an epoch in civil government. Before that time it was held that the right to rule was vested in families, dynasties, or races, not because of superior intelligence or virtue, but because of a divine right to enjoy exclusive privileges.

"Mr. Chairman, I trust the Republican party will not be alarmed at what I am saying. I do not profess to speak their sentiments, nor must they be held responsible for them. I speak for myself, and take the responsibility, and will settle with my intelligent constituents.

"This is not a 'white man's Government' in the exclusive sense in which it is used. To say so is political blasphemy, for it violates the fundamental principles of our gospel of liberty. This is man's Government; the Government of all men alike; not that all men will have equal power and sway within it. Accidental circumstances, natural and acquired endowment and ability, will vary their fortunes. But equal rights to all the privileges of the Government is innate in every immortal being, no matter what the shape or color of the tabernacle which it inhabits."

An extended debate followed in Committee of the Whole on the State of the Union, relative

to the views advanced by Mr. Stevens, in which Messrs. Raymond, of New York, Spalding and Shellabarger, of Ohio, and others, delivered speeches, which there is not space here to notice.

In the House, on December 18th, Mr. Price, of Iowa, offered the following resolution, which was referred to the joint Committee on Reconstruction:

Whereas, policy, propriety, and duty, all require that the Representatives of a free and loyal constituency should, at the opening of the first Congress after the suppression of the rebellion, see that, in the reorganization and readmission of the States recently in arms against the Government, no possible safeguard be left unprovided which will prevent in the future a recurrence of the troubles of the past; and whereas an attempt to assume the rebel debt in some shape, and to repudiate the national debt in some manner, and also to pay for the slaves who have been made free, are among the possibilities of the future; and whereas the most effectual way of preventing either or all of these would be so to amend the Constitution of the United States as to preclude for all time to come any chance of either of these results: Therefore,

Be it resolved, That, in the opinion of this House, the Constitution of the United States should be so amended, and that no State which has recently been in rebellion against the General Government ought to be entitled to a representation in Congress until such State, by its Legislature or other properly constituted authority, has adopted said amendment.

Mr. Ingersoll, of Illinois, offered the following resolution, which was agreed to:

Resolved, That the Committee on the Militia are hereby instructed to inquire into the expediency of providing, by law, for the equitable distribution of the surplus arms of the United States among the several States which have never been in rebellion.

Mr. Thornton, of Illinois, offered the following, which was laid on the table:

Whereas, at the first movement toward independence, the Congress of the United States instructed the several States to institute governments of their own, and left each State to decide for itself the conditions for the enjoyment of the elective franchise; and whereas during the period of the Confederacy there continued to exist a very great diversity in the qualifications of electors in the several States; and whereas the Constitution of the United States recognizes these diversities when it enjoins that in the choice of members of the House of Representatives the electors in each State shall have the qualifications requisite for the electors of the most numerous branch of the State Legislature; and whereas, after the formation of the Constitution, it remained, as before, the uniform usage of each State to enlarge the body of its electors according to its own judgment; and whereas so fixed was the reservation in the habits of the people, and so unquestioned has been the interpretation of the Constitution, that during the civil war the late President never harbored the purpose, certainly never avowed the purpose, of disregarding it: Therefore,

Resolved, That any extension of the elective franchise to persons in the States, either by act of the President or of Congress, would be an assumption of power which nothing in the Constitution of the United States would warrant, and that to avoid every danger of conflict, the settlement of this question should be referred to the several States.

Mr. Stillwell, of Indiana, offered the following, which was also referred to the Committee on Reconstruction:

Whereas, the war for the preservation of the Union and the Constitution is now over, the absurd doctrine of secession, and its counterpart, insurrection and rebellion, have been put down by the strong arm of the Government, peace and union being the object, and that having been obtained: Therefore,

Resolved, That the people who have been in rebellion against the Government, and who have submitted to the laws of the United States, adopted a republican form of government, repealed the ordinance of secession, passed the constitutional amendment forever prohibiting slavery, repudiated the rebel war debt, and passed laws protecting the freedman in his liberty, the representatives of that people elected to Congress having received their certificates of election from their respective Governors should be received as members of the Thirty-ninth Congress, when they shall take the oath prescribed by Congress, known as the test oath, without any unnecessary delay.

Mr. Ashley, of Ohio, by unanimous consent, introduced a bill "to enable the loyal citizens of the United States residing in States whose constitutional governments were usurped or overthrown by the recent rebellion, after accepting certain conditions prescribed by the United States in Congress assembled, to form a constitution and State government for each of said States preparatory to resuming as States their constitutional relations to the national Government," which was read a first and second time, and referred to the joint Committee on Reconstruction, and ordered to be printed.

In the House, on December 19th, Mr. Wilson, of Iowa, from the Committee on the Judiciary, reported the following joint resolution, with an amendment to the Constitution:

Resolved by the House of Representatives of the United States (the Senate concurring), That the following amendment to the Constitution of the United States be, and the same hereby is, proposed to the Legislatures of the several States for ratification, namely:

ARTICLE.—No tax, duty, or impost shall be laid, nor shall any appropriation of money be made, by either the United States, or any one of the States thereof, for the purpose of paying, either in whole or in part, any debt, contract, or liability whatsoever, incurred, made, or suffered by any one or more of the States, or the people thereof, for the purpose of aiding rebellion against the Constitution and laws of the United States.

The amendment reported by the committee was as follows:

Be it resolved by the Senate and House of Representatives of the United States in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid to all intents and purposes as a part of said Constitution, namely:

ARTICLE.—No tax, duty, or impost shall be laid, nor shall any appropriation of money be made, by either the United States, or any one of the States thereof, for the purpose of paying, either in whole or in part, any debt, contract, or liability whatsoever, incurred, made, or suffered by any one or more of the States, or the people thereof, for the purpose of aiding rebellion against the Constitution and laws of the United States.

The resolution was passed by the following vote:

YEAS—Messrs. Alley, Allison, Ames, Anderson, James M. Ashley, Baker, Baldwin, Banks, Barker, Baxter, Beaman, Benjamin, Bidwell, Bingham, Blow, Boutwell, Boyer, Brandagee, Bromwell, Broomall, Buckland, Bundy, Chanler, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Darling, Dawes, Defrees, Delano, Deming, Dixon, Donnelly, Driggs, Dumont, Eckley, Eggleston, Eliot, Farnsworth, Farquhar, Ferry, Finck, Garfield, Grinnell, Griswold, Hale, Abner C. Harding, Hart, Hayes, Henderson, Higby, Hill, Hogan, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, Demas Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, Ingersoll, Jenckes, Johnson, Julian, Kasson, Kelley, Kelso, Kerr, Ketcham, Kuykendall, Laffin, Latham, George V. Lawrence, William Lawrence, Loan, Longyear, Lynch, Marshall, Marston, Marvin, McClurg, McKee, McRuer, Mercur, Miller, Morrill, Moulton, Myers, Newell, Niblack, Noell, O'Neill, Orth, Paine, Patterson, Perham, Phelps, Pike, Plants, Price, Radford, Samuel J. Randall, William H. Randall, Raymond, Alexander H. Rice, John H. Rice, Rollins, Ross, Rousseau, Sawyer, Schenck, Schofield, Shellabarger, Sitgreaves, Sloan, Smith, Spalding, Starr, Stevens, Stillwell, Strouse, Tabor, Taylor, Thayer, Francis Thomas, John L. Thomas, Thornton, Trowbridge, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Voorhees, Ward, Warner, Elihu B. Washburne, William B. Washburn, Welker, Wentworth, Whaley, Williams, James F. Wilson, Stephen F. Wilson, Windom, and Wright—150.

NAYS—Messrs. Brooks, Denison, Eldridge, Grider, Aaron Harding, McCullough, Nicholson, Ritter, Rogers, Shanklin, and Trimble—11.

NOR VOTING—Messrs. Ancona, Delos R. Ashley, Bergen, Blaine, Culver, Davis, Dawson, Glossbrenner, Goodyear, Harris, Edwin N. Hubbell, James Humphrey, James M. Humphrey, Jones, Le Blond, McIndoe, Moorhead, Morris, Pomeroy, Winfield, and Woodbridge—21.

In the House, on January 8th, Mr. Williams, of Pennsylvania, offered the following resolution:

Resolved, That in order to the maintenance of the national authority and the protection of the loyal citizens of the seceding States, it is the sense of this House that the military forces of the Government should not be withdrawn from those States until the two Houses of Congress shall have ascertained and declared their further presence there no longer necessary.

It was agreed to by the following vote:

YEAS—Messrs. Ames, Anderson, Delos R. Ashley, Baker, Banks, Baxter, Beaman, Benjamin, Bidwell, Bingham, Blaine, Boutwell, Brandagee, Bromwell, Broomall, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Defrees, Deming, Donnelly, Driggs, Eggleston, Eliot, Farnsworth, Farquhar, Ferry, Garfield, Grinnell, Abner C. Harding, Hart, Hayes, Henderson, Higby, Hill, Holmes, Hooper, Asahel W. Hubbard, Chester D. Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, Jenckes, Julian, Kelley, Kelso, Ketcham, Kuykendall, Laffin, William Lawrence, Loan, Longyear, Lynch, Marvin, McClurg, McKee, McRuer, Mercur, Miller, Moorhead, Morrill, Morris, Moulton, Myers, O'Neill, Orth, Paine, Patterson, Plants, Price, Alexander H. Rice, Rollins, Sawyer, Schofield, Shellabarger, Spalding, Stevens, Thayer, Trowbridge, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Warner, Elihu B. Washburne, Welker, Williams, Stephen F. Wilson, and Windom—94.

NAYS—Messrs. Ancona, Bergen, Boyer, Brooks, Chanler, Davis, Dawson, Delano, Denison, Eldridge, Glossbrenner, Grider, Aaron Harding, Hogan, Edwin N. Hubbell, James M. Humphrey, Kerr, Latham, Le Blond, Marshall, Niblack, Nicholson, Noell, Sam-

uel J. Randall, Raymond, Ritter, Rogers, Ross, Smith, Stillwell, Strouse, Tabor, Taylor, Voorhees, Winfield, Woodbridge, and Wright—37.

NOR VOTING—Messrs. Alley, Allison, James M. Ashley, Baldwin, Barker, Blow, Buckland, Culver, Darling, Dawes, Dixon, Dumont, Eckley, Finck, Goodyear, Griswold, Hale, Harris, Hotchkiss, Demas Hubbard, James Humphrey, Ingersoll, Johnson, Jones, Kasson, George V. Lawrence, Marston, McCullough, McIndoe, Newell, Perham, Phelps, Pike, Pomeroy, Radford, William H. Randall, John H. Rice, Rousseau, Schenck, Shanklin, Sitgreaves, Sloan, Starr, Francis Thomas, John L. Thomas, Thornton, Trimble, Wentworth, Whaley, and James F. Wilson—61.

On January 9th, Mr. Broomall, of Pennsylvania, submitted the following resolution, which was referred to the Reconstruction Committee:

Resolved, 1. That the termination of the recent civil war has left the inhabitants of the territory reclaimed from the late usurpation in the condition of a conquered people, and without political rights.

2. That as a legitimate consequence, the relation of master and slave among them is destroyed, and that it is not within the province of civil law ever to revive it.

3. That the future political condition of these people must be fixed by the supreme power of the conqueror; and that the effect of amnesty proclamations and pardons is to relieve individuals from punishment from crime, not to confer upon them political rights.

4. That it is not the interest of the Government that these people shall remain in their present unorganized condition longer than is necessary for their own good and the good of the country.

5. That Congress should confer upon them the necessary power to form their own State governments and local institutions, but that this cannot be done until the rights of those among them, of whatever caste or color, who remained always true to their allegiance, are effectually protected and guaranteed.

6. That it is the paramount duty of the Government to guard the interests of all within the conquered territory who rendered no willing aid or comfort to the public enemy; and if this cannot otherwise be done, Congress should organize State governments composed of these alone, and forever exclude from all political power the active and willing participants in the late usurpation.

On the same day, Mr. Voorhees, of Indiana, called up the following resolutions offered some days previous, and considered by the House:

Resolved, That the message of the President of the United States, delivered at the opening of the present Congress, is regarded by this body as an able, judicious, and patriotic state paper.

Resolved, That the principles therein advocated for the restoration of the Union are the safest and most practicable that can now be applied to our disordered domestic affairs.

Resolved, That no States or number of States confederated together can in any manner sunder their connection with the Federal Union, except by a total subversion of our present system of government; and that the President in enunciating this doctrine in his late message has but given expression to the sentiments of all those who deny the right of power of a State to secede.

Resolved, That the President is entitled to the thanks of Congress and the country for his faithful, wise, and successful efforts to restore civil government, law, and order to those States whose citizens were lately in insurrection against the Federal authority; and we hereby pledge ourselves to aid, assist, and uphold him in his policy which he has

adopted to give harmony, peace, and union to the country.

Mr. Voorhees followed in support of his resolutions, and Mr. Bingham, of Ohio, replied, and moved their reference to the joint Committee on Reconstruction, which was ordered by the following vote :

Yea—Messrs. Allison, Ames, Anderson, James M. Ashley, Baker, Baldwin, Banks, Baxter, Beaman, Benjamin, Bidwell, Bingham, Blaine, Boutwell, Brandegee, Bromwell, Broomall, Buckland, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Davis, Dawes, Defrees, Deming, Donnelly, Driggs, Eggleston, Eliot, Ferry, Garfield, Grinnell, Hale, Abner C. Harding, Hart, Hayes, Henderson, Higby, Hill, Holmes, Hooper, Asabel W. Hubbard, Chester D. Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, Ingersoll, Jenckes, Julian, Kelley, Kelso, Ketcham, Kuykendall, Laffin, Latham, William Lawrence, Loan, Longyear, Lynch, Marvin, McClurg, McKee, McKuer, Mercur, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, O'Neill, Orth, Paine, Patterson, Perham, Phelps, Pitts, Platts, Price, Alexander H. Rice, John H. Rice, Rollins, Sawyer, Schofield, Shellabarger, Smith, Spaulding, Stevens, Stillwell, Thayer, John L. Thomas, Trowbridge, Upson, Van Aernam, Burt Van Horn, Warner, Elihu B. Washburne, Wm. B. Washburn, Welker, Williams, Stephen F. Wilson, and Windom—127.

Nay—Messrs. Ancona, Bergen, Boyer, Brooks, Candler, Darling, Dawson, Denison, Eldridge, Glossbrenner, Grider, Aaron Harding, Hogan, James M. Humphrey, Kerr, Le Blond, Marshall, Niblack, Nicholson, Neill, Radford, Samuel J. Randall, Raymond, Ritter, Rogers, Ross, Strouse, Tabor, Taylor, Voorhees, Winfield, and Wright—32.

Not Voting—Messrs. Alley, Delos R. Ashley, Barker, Blow, Culver, Delano, Dixon, Dumont, Eckley, Farnsworth, Farquhar, Finck, Goodyear, Griswold, Harris, Hotchkiss, Demas Hubbard, Edwin S. Hubbell, James Humphrey, Johnson, Jones, Kasson, George V. Lawrence, Marston, McCullough, McJodoe, Pomeroy, William H. Randall, Rousseau, Schoeck, Shanklin, Sitgreaves, Sloan, Starr, Francis Thomas, Thornton, Trimble, Robert T. Van Horn, Ward, Wentworth, Whaley, James F. Wilson, and Woodbridge—43.

On January 10th, Mr. Davis, of New York, offered the following resolution, which was laid over :

Resolved, That this House cherish the most entire confidence in the patriotism and policy of the President of the United States, and in his desire to restore the Union on the basis of permanent prosperity and peace, and that the coöperation of this House is pledged to him in support of the general policy of reconstruction inaugurated by him in the modes authorized by the Constitution, and consistent with the security of republican institutions.

On January 16th, Mr. Conkling, of New York, asked the unanimous consent of the House to offer the following resolution, which was objected to :

Resolved, That in reëstablishing Federal relations with the communities lately in rebellion, so as to permit them again to participate in administering the General Government, the following are necessary and proper requirements, and ought to be secured by such measures as will render them as far as possible immutable :

1. The absolute renunciation of all the pretensions and evasions of secession as a doctrine and as a practice.

2. The repudiation both by the State and by the

national governments of all public debts and obligations, including State and municipal liabilities contracted or assumed in aid of the late rebellion, and including also all claims by or on behalf of those who were in the military or naval service of the insurgents for bounty, pay, or pensions, and all claims by persons not loyal to the United States for damages or losses suffered by reason of the rebellion, and for advances made in its aid.

3. The assurance of human rights to all persons within their borders, regardless of race, creed, or color, and the adoption of such provisions against barbarism, disorder, and oppression, as will relieve the General Government from the necessity of standing guard over any portion of our country to protect the people from domestic violence and outrage.

4. The impartial distribution of political power among all sections of the country, so that four million people shall no longer be represented in Congress in the interest of sectional aggrandizement, and, at the same time, be excluded from political privileges and rights.

5. The election of Senators and Representatives in truth loyal to the United States, and never ring-leaders in the late revolt, nor guilty of dastardly betrayals which preceded the war or of atrocities which war cannot extenuate.

On the 22d, Mr. Grider, of Kentucky, offered the following resolutions, which were referred to the joint Committee on Reconstruction :

Resolved, That the United States Government grants the power peaceably, or if necessary by arms, "to enforce the laws, suppress insurrection, and repel invasion;" but the General Government cannot by any action whatever destroy itself nor the State governments; nor can the State governments destroy either, or legally disturb the harmony of the whole. All the grants and powers under the Constitution are conservative, none destructive; wherefore all the States have been and are always in the Union.

Resolved, That when the United States Government suppressed the insurrection it only vindicated its constitutional power and preëxisting rights, and no more; and the rights and powers of the Federal and State Governments are all remitted back, and assume the same condition and relations sustained before the insurrection, and (except so far as altered or amended) remain unimpaired and in full force and virtue.

Resolved, That the law of Congress apportioning representatives to the several States (including the insurrectionary States) under the census of 1860, is constitutional and valid, and that members of Congress from all the States, regularly elected under said law, are entitled forthwith to their seats upon taking the oath of office to support the Constitution of the United States.

Resolved, That as a generous kindness and cordial forgiveness consistent with right, now peace exists, are the highest attributes of our nature, and as we must have "one Government, one Constitution, and one people," the glory, protection, and safety of all—cherishing these feelings, we say it is untimely, unjust, and impolitic to insist upon amendments to the Constitution to operate upon all until all are represented in the House and Senate.

Resolved, That it is illogical and unconstitutional to hold that States are in the Union to vote for constitutional amendments, and yet not entitled to representation in Congress.

Resolved, That to tax any State by Congress, and to refuse to the people representation, is contrary to the first principles of the American Government, and is inconsistent with the constitutional and equal rights of all the people.

On January 22d, Mr. Stevens, from the joint

Committee on Reconstruction, reported the following joint resolution :

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States ; which, when ratified by three-fourths of the said Legislatures, shall be valid as part of said Constitution, namely :

ARTICLE —. Representatives and direct taxes shall be apportioned among the several States which may be included within this Union according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed ; *Provided, That whenever the elective franchise shall be denied or abridged in any State on account of race or color, all persons of such race or color shall be excluded from the basis of representation.*

On the question of ordering the joint resolution to be engrossed and read a third time, Mr. Stevens said :

"There are twenty-two States whose Legislatures are now in session, some of which will adjourn within two or three weeks. It is very desirable, if this amendment is to be adopted, that it should go forth to be acted upon by the Legislatures now in session. It proposes to change the present basis of representation to a representation upon all persons, with the proviso that wherever any State excludes a particular class of persons from the elective franchise, that State to that extent shall not be entitled to be represented in Congress. It does not deny to the States the right to regulate the elective franchise as they please ; but it does say to a State, 'If you exclude from the right of suffrage Frenchmen, Irishmen, or any particular class of people, none of that class of persons shall be counted in fixing your representation in this House. You may allow them to vote or not, as you please ; but if you do allow them to vote, they will be counted and represented here ; while if you do not allow them to vote, no one shall be authorized to represent them here ; they shall be excluded from the basis of representation.'"

Mr. Rogers, of New Jersey, followed, saying it was the first time a proposition of this kind had ever been offered in the House ; it was in violation of the main principle upon which the Revolutionary War had been conducted ; its adoption would prevent any State, North or South, from allowing qualified suffrage to its colored population ; it would drive every State, except where the negroes were in a majority, to allow to the negroes unqualified suffrage, and that it attempted in an indirect manner to accomplish what the party in power dare not boldly and openly meet before the people.

Mr. Conkling, of New York, followed, saying that the proposition commended itself for many reasons : First, it provided for representation coextensive with taxation ; second, it brought into the basis both sexes and all ages, and so counteracted and avoided, as far as possible, the casual and geographical inequalities of population ; third, it put every State on an equal foot-

ing in the requirement prescribed ; fourth, it left every State unfettered to enumerate all its people for representation or not, just as it pleased.

Mr. Brooks, of New York, said : "Mr. Speaker, I do not rise, of course, to debate this resolution in the few minutes allowed me by my colleague, nor, in my judgment, does the resolution need any discussion unless it may be for the mere purpose of agitation. I do not suppose that there is an honorable gentleman upon the floor of this House who believes for a moment that any movement of this character is likely to become the fundamental law of the land, and these propositions are, therefore, introduced only for the purpose of agitation. If the honorable gentleman from Pennsylvania (Mr. Stevens) had been quite confident of adopting this amendment, he would at the start have named what are States of this Union.

"The opinion of the honorable gentleman himself, that there are no States in this Union but those that are now represented upon this floor, I know full well ; but he knows as well that the President of the United States recognizes thirty-six States of this Union, and that it is necessary to obtain the consent of three-fourths of those thirty-six States, which number it is not possible to obtain. He knows very well that if his amendment should be adopted by the Legislatures of States enough, in his judgment, to carry it, before it could pass the tribunal of the executive chamber it would be obliged to receive the assent of twenty-seven States in order to become an amendment to the Constitution. The whole resolution, therefore, is for the purpose of mere agitation. It is an appeal from this House to the outside constituencies that we know by the name of Buncombe. Here it was born, and here, after its agitation in the States, it will die."

Mr. Shellabarger offered the following objections to the resolution of Mr. Stevens from the Reconstruction Committee :

"1. It contemplates and provides for, and in that way, taken by itself, authorizes the State to wholly disfranchise entire races of its people and that, too, whether those races be white or black, Saxon, Celtic, or Caucasian, and without regard to their numbers or proportion to the entire population of the State.

"2. It is a declaration made in the Constitution of the only great and free Republic in the world that it is permissible and right to deny to the races of men all their political rights and that it is permissible to make them the hewers of wood and drawers of water, the mud-sills of society, provided only you do not ask to have these disfranchised races represented in that Government, provided you wholly ignore them in the State. The moral teaching of the clause offends the free and just spirit of the age, violates the foundation principle of our own Government, and is intrinsically wrong.

"3. The clause, by being inserted into the

Constitution, and being made the companion of its other clauses, thereby construes and gives new meanings to those other clauses; and it thus lets down and spoils the free spirit and sense of the Constitution. Associated with that clause relating to the States being 'republican,' it makes it read thus: 'The United States shall guarantee to every State in this Union a republican form of government,' provided, however, that a government shall be deemed to be republican when whole races of its people are wholly disfranchised, unrepresented, and ignored."

Numerous amendments to the report of the committee were offered, without being adopted, and the debate continued.

Mr. Bingham, of Ohio, said: "Mr. Speaker, I am for the pending amendment to the Constitution of my country, and the other amendments to which I have already referred. I am for this and for the other essential amendments indicated, for the sake of the Union, and for the sake of the Constitution of the Union. Beyond that, if I know my own mind or my own heart, I have no feeling on this question. It towers above all party consideration; it touches the life of the Republic, and not the miserable inquiry whether this or that party shall be successful in the coming contest. It is for this House to decide whether amendments are necessary to the safety of the country and the protection of the people. I am for the proposed amendment from a sense of right—that absolute, eternal verity which underlies your Constitution. The right is the law of the Republic. So it was proclaimed in your imperishable Declaration by the words, 'All men are created equal; they are endowed by their Creator with the rights of life and liberty: to secure these rights Governments are instituted among men, deriving their just powers from the consent of the governed;' and by those other words, 'These States may do what free and independent States may of right (not of *wrong*, but of *right*, do.)'"

Mr. Raymond, of New York, in opposition to the resolution, said: "Now, sir, I cannot help believing—it is an inference merely—that this proposition is reported from that committee as part of a scheme for reconstructing the Government and the Constitution of the United States—for reconstructing both on the basis of a distinct principle which has been over and over again announced in this House. That principle is simply this: that by the war which has been raging, and as a consequence of that war, the States which were in rebellion have ceased to have any existence as States; that they have ceased to be States of this Union; that they exist only as so much waste, unorganized, ungoverned territory; that the people who live upon that territory are simply 'vanquished enemies,' to be governed and disposed of by us at our sovereign will, and subject to no law but our own discretion. It is on that principle, sir, that the action proposed at this time

is to be based, if it has any basis at all. That has been the tone of the debates on the subject here.

"I deny *in toto* the fact of such subjugation. I do not believe that the war has given us any such power. On the contrary, I hold that these States have never ceased to be States in and States of the Union. And they are to-day States of the Union, and therefore entitled to all the rights conferred upon them as such by the Constitution. And we have no right and no power to exercise any authority over them which the Constitution does not confer upon us, any more than we have over the States of New England or the West."

Mr. Raymond then proceeded to examine somewhat at length this principle upon which it was proposed to rest the question. Admitting a statement advanced by Mr. Shellabarger "that a State to be such in this Union must be characterized by habitual obedience to the Constitution and laws of the United States," he urged in opposition that "habitual obedience to law may be suspended without impairing the existence of the State in the sense of public law, or as a State of the Union under the Constitution of the United States." He then maintained that the Southern States did not cease to be States in the sense of international law. Their internal political organization was never suspended. Conquest of one of the States by a foreign power, causing a suspension of habitual obedience, would not affect the existence of the State, either in the sense of public law or in the contemplation of the Constitution of the United States. Neither does an attempted usurpation necessarily of itself take a State out of the Union. There is no specific time when these States ceased to belong to the Union. We have not conquered them in any sense of subjugation to any thing else than the Constitution of the United States. There is not in the Constitution a provision for the forfeiture of State rights. The action of the executive, legislative, and judicial departments has been such as to deal with the States in no other manner than they might have been dealt with before the war began. He then reviewed the action of the President, and insisted that nothing was necessary or required for complete restoration of the practical relations of the States with the national Government but the admission of their representatives in both Houses of Congress.

A vote was taken on a motion to refer the report to the Committee of the Whole on the State of the Union, and lost—yeas 87, nays 138.

The House then ordered the report to be re-committed to the Committee on Reconstruction, without instructions.

On January 31st Mr. Stevens, from the committee, reported back the joint resolution, amended as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of

the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as part of said Constitution, namely:

ARTICLE.—Representatives shall be apportioned among the several States which may be included within this Union according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed: *Provided*, That whenever the elective franchise shall be denied or abridged in any State on account of race or color, all persons therein of such race or color shall be excluded from the basis of representation.

The question was then taken, on agreeing to the joint resolution, and passed by the following vote:

YEAS—Messrs. Alley, Allison, Ames, Anderson, James M. Ashley, Baker, Banks, Barker, Baxter, Beaman, Benjamin, Bidwell, Bingham, Blaine, Blow, Boutwell, Brandagee, Bromwell, Broomall, Buckland, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Darling, Davis, Dawes, Defrees, Delano, Deming, Dixon, Donnelly, Eckley, Eggleston, Farnsworth, Farquhar, Ferry, Garfield, Grinnell, Griswold, Abner C. Harding, Hart, Hayes, Hill, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, Demas Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, James Humphrey, Ingersoll, Julian, Kasson, Kelley, Kelso, Ketcham, Kuykendall, Laffin, George V. Lawrence, William Lawrence, Longyear, Lynch, Marston, Marvin, McClurg, McIndoe, McKee, Mercer, Miller, Moorhead, Morrill, Morris, Moulton, Myers, O'Neill, Orth, Paine, Patterson, Perham, Pike, Plants, Pomeroy, Price, Alexander H. NOT VOTING—Messrs. Ancona, Delos, R. Ashley, Culver, Driggs, Dumont, Glossbrenner, Goodyear, Henderson, Higby, Jones, Loan, McKuer, Newell, Radford, Trowbridge, and Winfield—18.

On January 23d, Mr. Henderson, of Oregon, offered the following preamble and resolutions, which were referred to the same joint committee:

Whereas, the Constitution and Government of the United States were ordained and established by the people of the United States, and not by States in their individual character, for the welfare and general happiness of the whole people; and whereas the doctrine that a State or States have the right to secede or withdraw from the Government at pleasure is most pernicious, and strikes at the foundation of all government, and opens wide the door for universal anarchy and ruin: Therefore,

Resolved, That no State or States can constitutionally or lawfully secede or withdraw from the United States Government; nevertheless, either the one or the other can, by renouncing the Constitution and laws of the United States, and by waging war against them, or adhering to their enemies in time of war, forfeit their organization all their rights and privi-

leges as a State or States, and their standing as such in the Government.

Resolved, That while States, by rebellion against the General Government, forfeit their rights and existence as such, the United States lose none of their rights or authority over the inhabitants of such States; and the government over all such territory which has been forfeited by States, rightfully and properly reverts to the United States.

Resolved, That Congress has "power to dispose of and make all needful rules and regulations respecting the territory and other property belonging to the United States."

Resolved, That all the territory embraced within the boundaries of what is generally known as the State of Texas ought to be, under such rules and regulations as Congress may prescribe, set apart to the use and benefit of the colored people of the United States.

Resolved, That the welfare of both races demands that the colored people be separated from the whites at the earliest practicable period, and that the colored population of the United States be placed upon suitable territory and protected as a dependency of the United States.

On January 30th, Mr. Kasson, of Iowa, offered the following resolutions, which were referred to the same joint committee:

Resolved, That the joint Committee of Fifteen on Reconstruction consider the expediency of proposing the following several propositions to each of the States lately in rebellion, for adoption by the Legislatures or conventions thereof, as a fundamental compact between each of said States and the United States, irrepealable without mutual consent:

1. No ordinance, regulation, or law shall ever be adopted by or have force within said State, which shall cause, intend, or permit the secession or withdrawal of said State, or of the citizens thereof from the Union of these States; or the release of the officers or people of said State from their obedience to the Constitution of the United States of America; or from their allegiance to the constitutional Government thereof.

2. The right to bring and defend suits in all the courts of said State, and to give testimony therein, according to the usual course of law, shall be enjoyed on equal terms by all persons resident therein, irrespective of race or color; and all forfeitures, penalties, and liabilities under any law, in any criminal or other proceeding, for the punishment of any crime or misdemeanor, shall be applied to and shall bear upon all persons equally, without any distinction of race or color.

3. The right to acquire, hold, and dispose of property, real, personal, and mixed, shall, in said State, be enjoyed on equal terms by all naturalized citizens and by all persons native-born, without distinction of race or color.

4. No law, ordinance, or regulation shall be adopted in said State, recognizing or creating any debt or liability on the part of said State, or of any municipal or corporate authority within the jurisdiction thereof, on account of credit, money, material, supplies, personal services, or other consideration whatsoever, taken by or furnished to or for the aid of any government or authority, or pretended government or authority, or military or naval force, or military or naval or civil officer, or pretended officer, heretofore set up, or acting in hostility to the Government of the United States, or so to be set up hereafter, but all such liabilities shall be void; and no tax shall ever be imposed, assessed, or collected by any authority within said State on account thereof.

On February 19th, Mr. Longyear, of Michigan, offered the following resolutions, and commanded the previous question:

Resolved, That in the language of the proclamation of the President of May 29, 1865, "the rebellion which was waged by a portion of the people of the United States against the properly constituted authorities of the Government thereof in the most violent and revolting form, but whose organized and armed forces have now been almost entirely overcome, has in its revolutionary progress deprived the people" of the States in which it was organized "of all civil government."

Resolved, That whenever the people of any State are thus "deprived of all civil government," it becomes the duty of Congress, by appropriate legislation, to enable them to organize a State government, and, in the language of the Constitution, to guarantee to such State a republican form of government.

Resolved, That it is the deliberate sense of this House that the condition of the rebel States fully justifies the President in maintaining the suspension of the writ of *habeas corpus* in those States.

Resolved, That it is the deliberate sense of this House that the condition of the rebel States fully justifies the President in maintaining military possession and control thereof, and that the President is entitled to the thanks of the nation for employing the war power for the protection of Union citizens and the freedmen of those States.

The first resolution was adopted—yeas 102, nays 36, not voting 44. The second resolution was adopted—yeas 104, nays 33, not voting 45. The third resolution was adopted—yeas 120, nays 26, not voting 36. The fourth resolution was divided at the word "*thereof*," and the first part adopted—yeas 117, nays 23, not voting 42. The second part passed—yeas 134, nays 8, not voting 40.

In the Senate, on February 6th, the resolution which had passed the House for the amendment of the Constitution, relative to the apportionment of representation, came up for consideration. Mr. Doolittle, of Wisconsin, offered the following amendment, as a substitute for the article proposed by the House:

After the census to be taken in the year 1870 and each succeeding census, Representatives shall be apportioned among the several States, which may be included within this Union, according to the number in each State of male electors over twenty-one years of age qualified by the laws thereof to choose members of the most numerous branch of its Legislature. And direct taxes shall be apportioned among the several States according to the value of the real and personal taxable property situated in each State as: belonging to the State or to the United States.

Mr. Sumner, of Massachusetts, opened the debate, in opposition to the resolution of the House. It seemed to him to be nothing less than another compromise of human rights. There are four million citizens now robbed of all share in the government of their country, while, at the same time, they are taxed according to their means, directly and indirectly, for the support of the Government. The amendment of the House, by its adoption, will be a present renunciation of all power, under the Constitution, to apply the remedy for a grievous wrong, when the remedy is actually in hand; and it will hand over wards and allies through whom the Republic has been saved, and therefore our saviors, to the control of vindictive

enemies, to be taxed and governed without their consent.

The following counter-proposition was then offered by Mr. Sumner:

A joint resolution carrying out the guaranty of a republican form of government in the Constitution of the United States, and enforcing the constitutional amendment for the prohibition of slavery.

Whereas, it is provided in the Constitution that the United States shall guarantee to every State in the Union a republican form of government; and whereas, by reason of the failure of certain States to maintain governments which Congress might recognize, it has become the duty of the United States, standing in the place of guarantor, where the principal has made a lapse, to secure to such States, according to the requirement of the guaranty, governments republican in form; and whereas further, it is provided in a recent constitutional amendment that Congress may "enforce" the prohibition of slavery by "appropriate legislation," and it is important to this end that all relics of slavery should be removed, including all distinction of rights on account of color: Now, therefore, to carry out the guaranty of a republican form of government, and to enforce the prohibition of slavery,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be no oligarchy, aristocracy, caste, or monopoly invested with peculiar privileges and powers, and there shall be no denial of rights, civil or political, on account of color or race, anywhere within the limits of the United States or the jurisdiction thereof; but all persons therein shall be equal before the law, whether in the court-room or at the ballot-box. And this statute, made in pursuance of the Constitution, shall be the supreme law of the land, any thing in the Constitution or laws of any State to the contrary notwithstanding.

He then further said that it was vain to expect the return of the States to the Union until that security for the future, which is found only in the equal rights of all, whether in the court-room or at the ballot-box, was obtained. This is the great guaranty, without which all other guaranties would fail. This was the sole solution of the present troubles and anxieties. He said: "The powers of Congress over this subject are as ample as they are beneficent. From four specific fountains they flow—each one sufficient for the purpose—all four swelling into an irresistible current, and tending to one conclusion: first, the necessity of the case, by which, according to the analogies of the 'Territories,' disloyal States, having no local government, lapse under the authority of Congress; secondly, the rights of war, which do not expire or lose their grasp, except with the establishment of all needful guaranties; thirdly, the constitutional injunction to guarantee a republican form of government; and, fourthly, the constitutional amendment by which Congress, in words of peculiar energy, is empowered to 'enforce' the abolition of slavery 'by appropriate legislation.' According to the proverb of Catholic Europe, all roads lead to Rome, and so do all these powers lead to the jurisdiction of Congress over this whole subject. No matter which road you take, you arrive at the same point."

He then proceeded to show the necessity and duty of exercising the jurisdiction of Congress

"so as to secure that essential condition of a republican Government, the equal rights of all." He said: "Mr. President, such is the testimony of history, authority, and the Constitution, which binds the judgment on this occasion, leaving no alternative. Thus far, I have done little but bring the diversified testimony together and weave it into one body. It is not I who speak. I am nothing. It is the cause, whose voice I am, which speaks to you. But there are yet other things which, even at this late hour, crave to be said. And here, after this long review, I am brought back to more general considerations, and end as I began, by showing the necessity of enfranchisement for the sake of public security and public faith. I plead now for the ballot, as the great guaranty; the only sufficient guaranty—being in itself peacemaker, reconciler, schoolmaster, and protector—to which we are bound by every necessity and every reason; and I speak also for the good of the States lately in rebellion, as well as for the glory and safety of the Republic, that it may be an example to mankind.

"Let me be understood. What I especially ask is impartial suffrage, which is, of course, embraced in universal suffrage. What is universal is necessarily impartial. For the present, I simply insist that all shall be equal before the law, so that, in the enjoyment of this right, there shall be no restriction which is not equally applicable to all. Any further question, in the nature of 'qualification,' belongs to another stage of the debate. And yet I have no hesitation in saying that universal suffrage is a universal right, subject only to such regulations as the safety of society may require. These may concern (1) age, (2) character, (3) registration, (4) residence. Nobody doubts that minors may be excluded, and so, also, persons of infamous life. Registration and residence are both prudential requirements for the safeguard of the ballot-box against the nomads and Bohemians of politics, and to compel the exercise of this franchise where a person is known among his neighbors and friends. Education also, may, under certain circumstances, be a requirement of prudence, especially valuable in a Republic, where so much depends on the intelligence of the people. These temporary restrictions do not in any way interfere with the right of suffrage, for they leave it absolutely accessible to all. Even if impediments, they are such as may be easily overcome. At all events, they are not in any sense insurmountable, and this is the essential requirement of republican institutions. No matter under what depression of poverty, in what depth of obscurity, or with what diversity of complexion you may have been born, you are, nevertheless, a citizen—the peer of every other citizen, and the ballot is your inalienable right.

"Having pleaded for the freedman, I now plead for the Republic; for to each alike the ballot is a necessity. It is idle to expect any true peace while the freedman is robbed of this

transcendent light and left a prey to that vengeance which is ready to wreak upon him the disappointment of defeat. The country, sympathetic with him, will be in a condition of perpetual unrest. With him it will suffer and with him alone can it cease to suffer. Only through him can you redress the balance of our political system and assure the safety of patriot citizens. Only through him can you save the national debt from the inevitable repudiation which awaits it when recent rebels in conjunction with Northern allies once more bear sway. He is our best guaranty. Use him. He was once your fellow-soldier; he has always been your fellow-man. If he was willing to die for the Republic, he is surely good enough to vote. And now that he is ready to uphold the Republic, it will be madness to reject him. Had he voted originally, the acts of secession must have failed. Treason would have been voted down. You owe this tragical war and the debt now fastened upon the country to the denial of this right. Vacant chairs in once happy homes, innumerable graves, saddened hearts, mothers, fathers, wives, sisters, brothers, all mourning lost ones, the poor now ground by a taxation they had never known before, all testify against that injustice by which the present freedman was not allowed to vote. Had he voted, there would have been peace. If he votes now, there will be peace. Without this you must have a standing army, which is a sorry substitute for justice. Before you is the plain alternative of the ballot-box or the cartridge-box; choose ye between them."

Mr. Henderson, of Missouri, proposed to strike out all after the word "that" in the resolution, and insert the following:

The following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid to all intents and purposes as a part of the said Constitution, namely:

ARTICLE 14. No State, in prescribing the qualifications requisite for electors therein, shall discriminate against any person on account of color or race.

Mr. Fessenden, of Maine, followed, and proceeded to state the views of the committee in recommending this joint resolution. The result of leaving the Constitution as it was, without amendment, would be that, so far as the power exists in the States, it would still be exercised to deny all political rights to those who have, heretofore, been considered unfit and not in a condition to exercise them. That is, we should have, in a portion of the States, all the people represented and all the people acting, and in another portion of the States, all the people represented and but a portion of the people only exercising political rights and retaining them in their own hands. Is it not our duty to guard in some way against this? At this time no one contends that the mass of the population of the recent slave States is fit to be admitted to the exercise of the right of suffrage. The argument addressed to the committee was—What

can pass? What objection is there to basing representation on voters? First, we naturally become attached to that to which we are accustomed. It would hold out an inducement to run the ballot to an unreasonable extent. It would induce many States to change their laws and allow disfranchised whites to vote. The amendment proposed only remains. It leaves the original basis of representation where the Constitution placed it in the first instance. It accomplishes indirectly what we may not have the power to accomplish directly.

Mr. Lane, of Indiana, followed, and in his remarks considered the various plans of reconstruction proposed. Of the President's plan he said: "If the President had a right to regulate suffrage at all, he had a right to specify every condition under which suffrage should be exercised." He urged that both Presidents Lincoln and Johnson had recognized the fact that the Southern States were dead. By acts of Congress the existence of these States was totally and entirely ignored. The people have too long looked to the President for a plan of restoration. Look to Congress. It has the power, hence its duty. He said:

"We are brought to the question, Upon what safe basis can the States be restored to their constitutional relations to the United States? It cannot be done upon the basis alone of the loyal voters, for they are inconsiderable, and would be utterly overwhelmed by the rebel voters. It cannot be done by giving the rebel voters the power to control the legislation of the country. Now, suppose for one moment that you should determine that a reconstruction should take place based upon the votes of the rebels, what would be the result? What are the great questions now engaging the attention of the people, and which will engross the legislation of the country for the next half century? Questions of taxation and revenue. Do you suppose they will willingly tax themselves to pay the interest upon the immense debt created for their subjugation and overthrow?

"There are other questions you will be called upon to decide. You will have to provide a fund for the payment of your invalid pensioners. Think you that they will vote willingly to raise money to pay the pensions of your invalid soldiers when their own invalid pensioners are excluded? Can you hope for any cordial coöperation between the rebels and yourselves upon any of these great subjects of national legislation? Suppose you admit them here in the Senate, they not only vote upon all these high questions, but they counsel in reference to executive appointments; they counsel in reference to the confirmation of treaties; and their power for evil is almighty the moment you admit them with all the privileges of regularly organized and constituted States. I tremble in view of the evil consequences which would result, from the admission of rebel members, to your national debt, to the national credit, the plighted faith

of the nation to your bondholders, the plighted faith of the nation to your invalid soldiers, the plighted faith of the nation to your living and dead heroes.

"Mr. President, what do we propose to do? We see that it will not do to give power in the rebel States to the rebels. We see that the Union white men are but an inconsiderable minority, and they cannot be trusted there to organize States. Then if the States are to be organized immediately, the only question is, whether the right of suffrage shall be given to rebel white men or loyal black men. The amendment of the Senator from Missouri meets that issue squarely in the face. Whatsoever I desire to do I will not do by indirection. I trust I shall always be brave enough to do whatsoever I think my duty requires, directly and not by indirection."

The argument in favor of the proposed amendment he stated to be, that by limiting the basis of representation, Congress would induce the people of the South to give the right of suffrage to the negro. He did not believe it would have that effect; and if it would, it would be asking him to do by indirection that which as a brave and honest man he would prefer to do directly.

Mr. Hendricks, of Indiana, in opposition to the measure, said: "Then, sir, as the proposition does not rest upon population, as it does not rest upon property, as it does not rest upon voters, upon what principle does it rest? Upon what principle do Senators propose to adopt this amendment to the Constitution? I can understand it if you say that the States shall be represented in the House of Representatives upon their population; I can understand it if you say that they shall be represented upon their voters; but when you say that one State shall have the benefit of its non-voting population and another State shall not, I cannot understand the principle of equity and justice which governs you in that measure. Sir, if it does not stand upon a principle, upon what does it rest? It rests upon a political policy. A committee that had its birth in a party caucus brings it before this body, and does not conceal the fact that it is for party purposes. This measure, if you ever allow the Southern States to be represented in the House of Representatives, will bring them back shorn of fifteen or twenty Representatives; it will bring them back so shorn in their representation that the Republican party can control this country forever; and if you can cut off from fifteen to thirty votes for President of the United States in the States that will not vote for a Republican candidate, it may be that you can elect a Republican candidate in 1868. Now, sir, upon this subject I ask the attention of Senators. These are no words of mine. I will put upon the stand the most influential Republican to-day in the Congress of the United States. He says:

According to my judgment, they ought never to be recognized as capable of acting in the Union, or of

being counted as valid States, until the Constitution shall have been so amended as to make it what its framers intended; and so as to secure perpetual ascendancy to the party of the Union.

"That is the phrase of these times by which men undertake to describe their own party, 'the party of the Union.' A party that to-day says, this Union shall not be restored, a party that to-day says that eleven States shall stay out of Congress, arrogates to itself the name of 'the Union party.' Describing his party by that term, he says that the Constitution must be so amended as to secure the perpetual ascendancy of the Union party:

If they should grant the right of suffrage to persons of color, I think there would always be Union white men enough in the South, aided by the blacks, to divide the representation, and thus continue the Republican ascendancy.

"That is a little more distinct. Dropping the phrase, 'the Union party,' the head of this committee, the chieftain in the House, comes squarely out in the House of Representatives and says that the Constitution must be so amended as to secure the perpetual ascendancy of the Republican party. Mr. President, have we come to that in the Senate of the United States, that we abandon principle, that we seek no longer to base representation upon population, that we do not seek to base representation upon voters, but that we mingle the basis of representation so as to secure a party life? I hope that I shall never come to the consideration of a question of so grave importance with a partisan feeling."

Mr. Hendricks further insisted that it was a proposition the tendency of which was to place agriculture under the control and power of manufactures and commerce forever; and also was designed as a punishment on the Southern States.

Mr. Buckalew, of Pennsylvania, in opposition, said: "The amendment presents an alternative to each State in which persons of an inferior race or color may be found, whether Asiatics or Africans. In the Pacific States it may relate to the former, while in the Southern and Central States it will apply to the latter; and the alternative is that suffrage shall be extended to such race generally upon the same conditions and to the same extent that it is extended to the white race, otherwise the whole of such inferior race shall be deducted from the population of the State in assigning it Representatives in Congress. Every State in which Africans or Asiatics are found is to be subjected to a constitutional pressure in favor of indiscriminating suffrage to all races and colors of mankind found within its borders. If it refuse or neglect to establish such indiscriminating suffrage, it is to pay the penalty in a loss of power in the Federal Government. And it is to be observed that even where the disfranchisement is but partial, the whole race, and not merely the part disfranchised, is to be deducted from the population of the State in assigning it Representatives.

"Now, one of two things must happen in a State in case this amendment be adopted. Negro or Asiatic suffrage must be accepted, or the State will be stripped of a portion of the power which she now holds under the Constitution. This is, therefore, a penal amendment. While it assumes to leave the State free to regulate suffrage for itself, it imposes a penalty upon it if it decide in a particular way. No matter how strong, or even imperative, may be the reasons against lowering the standard of suffrage in a State to the capacity of the negro or Chinaman, the State must do it or be stripped of the constitutional right to full representation which she now holds. It is virtually a decision by Congress that to withhold negro suffrage to any extent, or for any cause, is criminal, and justly obnoxious to punishment, and that that punishment shall be imposed by three-fourths of the States upon the remainder by means of a constitutional amendment."

He then urged as general objections to the measure that eleven States were unrepresented in the Senate and House; the probability that any amendment made at that time would be a partisan one; that members of Congress were not chosen with reference to the subject of constitutional amendment; that whatever amendments were now proposed by Congress were to be submitted to Legislatures, and not to popular conventions in the States, and most of those Legislatures were to be the ones then in session; and that in thus substituting amendments a dispute was invited on the question of legislative assent necessary to their adoption.

Mr. Sumner, of Massachusetts, again took the floor, and thus alluded to the general subject of reconstruction, which had been largely discussed by previous speakers:

"The question before us, even in its simplest form, is of incalculable importance; but it has an added interest, inasmuch as it opens the whole vast subject of reconstruction. Into this field I shall not be tempted at this time, except to express a short opinion on the general principles we should seek to establish. Treason must be made odious, and to this end power must be secured to loyal fellow-citizens. In doing this, two indispensable conditions cannot be forgotten: first, all who have been untrue to the Republic must for a certain time, constituting the *transition period*, be excluded from the partnership of government; and, secondly, all who have been true to the Republic must be admitted into the partnership of government, according to the sovereign rule of the Constitution, which knows no distinction of color. Following these two simple commandments, there will be safety and peace, together with power and renown. Neglecting these two simple commandments, there must be peril and distraction, together with imbecility and dishonor. In the one way, reconstruction will be easy; in the other way, it will in any just sense be impossible. It may seem for the moment to succeed; but it must fail in the end.

This is all I have to say at present on reconstruction, and I turn at once to the precise question before us." He then remarked:

"The proposition now before you is the most important ever brought into Congress, unless, perhaps, we may except the amendment abolishing slavery, and to my mind it is the most utterly reprehensible and unpardonable. The same sentiment which led us to hail the abolition of slavery with gratitude as the triumph of justice, should make us reject with indignation a device to crystallize into organic law the disfranchisement of a race. It is with infinite regret that I differ from valued friends about me, but I cannot do otherwise. I bespeak in advance their candor, and most cheerfully concede to all from whom I differ the same indulgence which I claim for myself. In exposing such an attempt, I must speak frankly, as on other occasions, in exposing the crime against Kansas, or the infamy of that enactment which turned the whole North into a hunting-ground, where man was the game. The attempt now is on a larger scale, and is more essentially bad than the crime against Kansas or the Fugitive Slave Bill. Such a measure, so obnoxious to every argument of reason, justice, and feeling, so perilous to the national peace, and so injurious to the good name of the Republic, must be encountered as we encounter a public enemy. There is no language which can adequately depict its character. Thinking of it, I am reminded of those words of Chatham, where he held up to undying judgment a measure of the British ministry, which I think had already received the sanction of the House of Commons as the present attempt has already received the sanction of the House of Representatives. Chatham did not hesitate, nor did he tame his words, but exclaimed:

I am astonished, shocked, to hear such principles confessed; to hear them avowed in this House or in this country; principles equally unconstitutional, inhuman, and unchristian. I call upon you to stamp upon them an indelible stigma of the public abhorrence.

"Then, rising to still higher flight, he exclaimed:

My lords, I am old and weak, and at present unable to say more; but my feelings and indignation were too strong to have said less. I could not have slept this night in my bed, nor reposed my head on my pillow, without giving this vent to my eternal abhorrence of such preposterous and erroneous principles.

"But what was the measure which thus aroused the veteran orator compared with that which is now before us? It was only a transient act of wrong, small in its proportions, which he denounced. I am to denounce an act of wrong permanent in its influence, colossal in its proportions, operating in an extensive region, affecting millions of citizens, positively endangering the peace of the country, and covering its name with dishonor. Such is the character of the present attempt. I exhibit it as I see it. Others may not see it so. The British

ministry did not see the measure which Chatham denounced as he saw it, and as history now sees it. Of course Senators would not support the present proposition if they thought it disgraceful; nor would the British ministry have supported that earlier proposition had they thought it disgraceful. Unhappily, they did not think so; but I trust you will be warned by their example.

"With the eloquence of Chatham, another person from his place in the House of Lords held up to reprobation that apprenticeship system, which, under the sanction of both Houses of Parliament, followed emancipation in the British West Indies. I refer to Brougham. He did not hesitate to exclaim: 'Prodigious, portentous injustice!' and then continuing, he exclaimed again: 'The gross, the foul, the outrageous, the incredible injustice of which we are daily and hourly guilty toward the whole of the ill-fated African race!' But how small was the injustice which aroused his reprobation compared with that which you are now asked to perpetuate in constitutional law! The wrong which he arraigned was against eight hundred thousand persons in distant islands, to whom the people of Great Britain were bound by no ties of gratitude, and who were to them only fellow-men. The wrong which I now arraign is against four million persons, constituting a considerable portion of the 'people' of the United States, to whom we are bound by ties of gratitude, and who are to us fellow-citizens.

"From the moment I heard this proposition first read at the desk, I have not been able to think of it without pain. The reflection that it might find a place in the Constitution, or even that it might be sanctioned by Congress, is intolerable."

He then proceeded in an argument for the rejection of the proposition, which the Senator thus recapitulated:

"Following it from the beginning you have seen, first, how this proposition carries into the Constitution itself the idea of inequality of rights, thus defiling that unspotted text; secondly, how it is an express sanction of the acknowledged tyranny of taxation without representation; thirdly, how it is a concession to State rights at a moment when we are recovering from a terrible war waged against us in the name of State rights; fourthly, how it is the constitutional recognition of an oligarchy, aristocracy, caste, and monopoly, founded on color; fifthly, how it petrifies in the Constitution the wretched pretension of a white man's Government; sixthly, how it assumes what is false in constitutional law, that color can be a 'qualification' for an elector; seventhly, how it positively ties the hands of Congress in fixing the meaning of a republican government, so that under the guaranty clause it will be constrained to recognize an oligarchy, aristocracy, caste, and monopoly, founded on color, together with the tyranny of taxation without representation.

as not inconsistent with such a government; eighthly, how it positively ties the hands of Congress in completing and consummating the abolition of slavery according to the second clause of the constitutional amendment, so that it cannot for this purpose interfere with the denial of the elective franchise on account of color; ninthly, how it installs recent rebels in permanent power over loyal citizens; and, tenthly, how it shows forth in unmistakable character as a compromise of human rights, the most immoral, indecent, and utterly shameful of any in our history. All this you have seen, with pain and sorrow, I trust. Who that is moved to sympathy for his fellow-man can listen to the story without indignation? Who that has not lost the power of reason can fail to see the cruel wrong?

"And now the question occurs, what shall be done? To this I answer, reject at once the pending proposition; show it no favor; give it no quarter. Let the country see that you are impatient of its presence. But there are other propositions in the form of substitutes. For any one of these I can vote. They may differ in efficiency; but there is nothing in them immoral or shameful. There is, first, the proposition to found representation on voters instead of population, and, secondly, the proposition to secure equality in political rights by constitutional amendment or by act of Congress."

Mr. Fessenden, of Maine, followed, in reply to the objections which had been urged, saying: "The Senator from Massachusetts makes several points against this proposition, to which my answer is the same. His first point is, that it recognizes 'the idea of inequality of rights founded on race or color.' I deny *in toto* the correctness, or even the plausibility to a man of sense, of any point that he has raised on the subject. There is not one of them that is tenable; and more than that, there is not one of them but what is just as tenable against the proposition he is in favor of, to found representation on voters, as this. What lawyer in the world ever heard that a denial is an admission? What lawyer ever heard that a penalty is a permission? By this proposition we say simply this: 'If in the exercise of the power that you have under the Constitution you make an inequality of rights, then you are to suffer such and such consequences.' What sane man could ever pretend that that was saying, 'Make an inequality of rights and we will sanction it?' We do not deny, nobody can deny that the power may be thus exercised. What we say by this amendment is, 'If you attempt to exercise it in this wrongful way, you create an inequality of rights; and if you do create an inequality of rights—not we, but you—if you undertake to do it under the power which exists in the Constitution, then the consequence follows that you are punished by a loss of representation.' That is all there is in it. Does not the same thing follow with reference to the proposition to base representation upon voters? Suppose we

put it upon voters; what is the consequence? What have they got to do. If they do not admit colored men to vote, they lose their representation. If they do admit them to vote, they have the representation. The effect is precisely the same in both cases, only in one case we put it in a different form, and say directly, 'If you do make this distinction, founding it on population, then this consequence will follow.'"

The amendment offered by Mr. Henderson was rejected by yeas 10, nays 37.

Mr. Sumner modified his amendment so as to read, after the enacting clause, as follows:

That in all States lately declared to be in rebellion there shall be no oligarchy, aristocracy, caste, or monopoly invested with peculiar privileges and powers; and there shall be no denial of rights, civil or political, on account of color or race, but all persons shall be equal before the law, whether in the courtroom or at the ballot-box. And this statute, made in pursuance of the Constitution, shall be the supreme law of the land, any thing in the Constitution or laws of any such State to the contrary notwithstanding.

It was then rejected—yeas 8, nays 39.

Mr. Clark, of New Hampshire, offered the following amendment:

But whenever the elective franchise shall be denied or abridged in any State in the election of Representatives to Congress or other offices, municipal, State, or national, on account of race, color, or descent, or previous condition of servitude, or by any provision of law not equally applicable to all races and descents, all persons of such race, color, descent, and condition, shall be excluded from the basis of representation as prescribed in the second section of the first article of the Constitution.

It was adopted by the following vote:

YEAS—Messrs. Anthony, Brown, Chandler, Clark, Conness, Cragin, Creswell, Fessenden, Foster, Grimes, Harris, Henderson, Howard, Howe, Lane of Indiana, Morgan, Morrill, Nye, Poland, Pomeroy, Sprague, Sumner, Trumbull, Wade, Willey, Wilson, and Yates—26.

NAYS—Messrs. Buckalew, Cowan, Davis, Dixon, Doolittle, Guthrie, Hendricks, Johnson, Kirkwood, Lane of Kansas, McDougall, Nesmith, Norton, Riddle, Saulsbury, Sherman, Stewart, Stockton, Van Winkle, and Williams—20.

ABSENT—Messrs. Foot, Howard, Ramsey, and Wright—4.

Other amendments were offered and rejected, when the resolution was reported from the committee to the Senate, and Mr. Clark's amendment withdrawn.

On March 9th a vote was taken on the joint resolution as it came from the House, as follows:

YEAS—Messrs. Anthony, Chandler, Clark, Conness, Cragin, Creswell, Fessenden, Foster, Grimes, Harris, Howe, Kirkwood, Lane of Indiana, McDougall, Morgan, Morrill, Nye, Poland, Ramsey, Sherman, Sprague, Trumbull, Wade, Williams, and Wilson—25.

NAYS—Messrs. Brown, Buckalew, Cowan, Davis, Dixon, Doolittle, Guthrie, Henderson, Hendricks, Johnson, Lane of Kansas, Nesmith, Norton, Pomeroy, Riddle, Saulsbury, Stewart, Stockton, Sumner, Van Winkle, Willey, and Yates—22.

ABSENT—Messrs. Foot, Howard, and Wright—3.

Two-thirds of the Senate having failed to vote for it, it was not agreed to.

Previously, in the House, on February 20th, Mr. Stevens, of Pennsylvania, from the joint Committee of Fifteen, made the following report:

Concurrent resolution concerning the insurrectionary States.

Be it resolved by the House of Representatives (the Senate concurring), That in order to close agitation upon a question which seems likely to disturb the action of the Government, as well as to quiet the uncertainty which is agitating the minds of the people of the eleven States which have been declared to be in insurrection, no Senator or Representative shall be admitted into either branch of Congress from any of said States until Congress shall have declared such State entitled to such representation.

Mr. Grider, of Kentucky, presented the following minority report, which was read:

The minority of the Committee on Reconstruction on the part of the House, beg leave to report that said committee have directed an inquiry to be made as to the condition and loyalty of the State of Tennessee. There has been a large amount of evidence taken, some part of it conducing to show that at some localities occasionally there have been some irregularities and temporary disaffection; yet the main direction and weight of the testimony are ample and conclusive to show that the great body of the people in said State are not only loyal and willing, but anxious to have and maintain amicable, sincere, and patriotic relations with the General Government. Such being the state of the facts, and inasmuch as under the census of 1860 Congress passed a law which was approved in 1863, fixing the ratio and apportioning to Tennessee and all the other States representation; and inasmuch as Tennessee, disavowing insurrectionary purposes or disloyalty, has, under the laws and organic law of said State, regularly elected her members and Senators to the Congress of the United States, in conformity to the laws and Constitution of the United States, and said members are here asking admission; and inasmuch as the House by the Constitution is the "judge of the election, returns, and qualifications of its members," considering these facts and principles, we offer the following resolution, to wit:

Resolved, That the State of Tennessee is entitled to representation in the Thirty-ninth Congress, and the Representatives elected from and by said State are hereby admitted to take their seats therein upon being qualified by oath according to law.

Mr. Stevens, of Pennsylvania, objected to the reception of the minority report, saying: "I think I may say, without impropriety, that until yesterday there was an earnest investigation into the condition of Tennessee, to see whether, by act of Congress, we could admit that State to a condition of representation here, and admit its members to their seats here; but since yesterday there has arisen a state of things which the committee deem puts it out of their power to proceed further without surrendering a great principle; without the loss of all their dignity; without surrendering the rights of this body to the usurpation of another power. I call the previous question."

A series of dilatory motions followed, but the question was finally reached, and the resolution adopted by the following vote:

YEAS—Messrs. Allison, Anderson, James M. Ashley, Baker, Baldwin, Banks, Baxter, Beaman, Benjamin, Bidwell, Bingham, Blaine, Boutwell, Brandegee, Brownell, Broomall, Buckland, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Dawes, Defrees, Deming,

Donnelly, Driggs, Eckley, Eggleston, Eliot, Farnsworth, Farquhar, Ferry, Garfield, Grinnell, Griswold, Abner C. Harding, Hart, Hayes, Henderson, Higby, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, Demas Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, Ingersoll, Jenckes, Julian, Kelley, Kelso, Ketcham, Laffin, George V. Lawrence, William Lawrence, Loan, Longyear, Lynch, Marston, McClurg, McIndoe, McKee, McKuer, Mercur, Moorhead, Morrill, Morris, Moulton, Myers, O'Neill, Orth, Paine, Patterson, Perham, Pike, Plants, Pomeroy, Price, William H. Randall, John H. Rice, Sawyer, Schenck, Schofield, Shellabarger, Sloan, Spalding, Starr, Stevens, Thayer, John L. Thomas, Trowbridge, Upson, Van Aernam, Burt Van Horn, Ward, Warner, Elihu B. Washburne, William B. Washburn, Welker, Wentworth, Williams, Jas. F. Wilson, Stephen F. Wilson, Windom, and Woodbridge—109.

NAYS—Messrs. Bergen, Boyer, Brooks, Chanler, Coffroth, Dawson, Eldridge, Finck, Glossbrenner, Goodyear, Grider, Hale, Aaron Harding, Hogan, James M. Humphrey, Kerr, Latham, Marshall, McCullough, Newell, Niblack, Nicholson, Phelps, Radford, Samuel J. Randall, Raymond, Ritter, Rogers, Ross, Rousseau, Shanklin, Sitgreaves, Smith, Tabor, Taylor, Thornton, Trimble, Voorhees, Whaley, and Wright—40.

NOT VOTING—Messrs. Alley, Ames, Ancona, Delos R. Ashley, Barker, Blow, Bundy, Reader W. Clark, Culver, Darling, Davis, Delano, Denison, Dixon, Dumont, Harris, Hill, Edwin N. Hubbell, James Humphrey, Johnson, Jones, Kasson, Kuykendall, Le Blond, Marvin, Miller, Noell, Alexander H. Rice, Rollins, Stillwell, Strouse, Francis Thomas, Robert T. Van Horn, and Winfield—34.

In the Senate, the concurrent resolution was received from the House, and came up on the question of its consideration on February 21st, and was deferred to February 23d.

Mr. Fessenden, of Maine, said: "The resolution, it will be perceived, is nothing more or less than a legislative assertion by both Houses of Congress that they will not proceed to act upon the credentials of members from any of the States which lately constituted the so-called Confederate States until they have previously passed a law applicable to the condition of the States themselves. This, if you will allow me to say so, is in exact accordance with what Congress has indicated as its intention heretofore. It was indicated in the last Congress, and it was indicated in a resolution which came directly from the Committee on the Judiciary, of which the honorable Senator from Maryland (Mr. Johnson) was a member, and, as I am informed, with his concurrence, not as applicable to all the States, but as applicable to one of the States. It is before me in a few words, and I will read it. At the close of the report that was made to the Senate on the 18th of February to accompany joint resolution S. No. 117, on the subject of the credentials of members claiming seats from Louisiana, the last paragraph, which I will read, is:

The persons in possession of the local authorities of Louisiana having rebelled against the authority of the United States, and her inhabitants having been declared to be in a state of insurrection in pursuance of a law passed by the two Houses of Congress, your committee deem it improper for this body to admit to seats Senators from Louisiana, till by some joint action of both Houses there shall be some recognition

of an existing State government, acting in harmony with the Government of the United States, and recognizing its authority.

Mr. Johnson: "Is that the report of the 18th of February, 1865?"

Mr. Fessenden: "Yes, sir. Now, there is the principle laid down in so many words, and agreed to, as I understand, specifically by the honorable Senator from Maryland, whose authority we all acknowledge, that, inasmuch as the State of Louisiana had been declared to be in a state of rebellion, and intercourse with it had been suspended by a law of Congress, therefore Congress could not properly admit members from that State, except in pursuance of a law of Congress providing for her peculiar condition—I do not pretend to repeat the exact language. When that resolution was introduced into Congress, did it occasion any discussion upon that principle or the propriety of its application? Was there any objection made to it here? Was there any objection made anywhere? Did not everybody recognize the propriety of that exact expression of opinion as applied to the proposition to admit Senators and Representatives from such a State? I was not here at the time, but I am informed that there was no discussion upon that particular subject, and no fault was found with the particular course that was thus indicated, so far, at least, as this principle was concerned.

"How does it happen, then, that when a similar resolution is proposed, one applicable to other States that have been precisely in the like condition, there seems to be so much sensitiveness in the minds of gentlemen? How can it be accounted for that what was thought to be so proper as applicable to the State of Louisiana should be so improper as applicable to these other States? It is for gentlemen to answer.

"Let us look a little further, and see what has occurred since that time, because I feel somewhat sensitive on this subject. Charges have been made with reference to the committee of which I have the honor to be a member that have somewhat affected my view of my own condition, and I feel compelled not only to vindicate that committee, but to vindicate the action of Congress with reference to it."

Mr. Fessenden then read an extract from a speech of President Johnson, in which allusions were made to the committee as "an irrepressible central directory," etc., and said: "It will be noticed, Mr. President, in the extract which has been read there are very serious charges made. One is that there is an effort being made to concentrate all power in a few, and that that power is lodged in the hands of a sort of central committee, and the words which immediately follow furnish a sufficient indication of what the President meant. I think the President of the United States could hardly have considered with care the nature of the resolution under which we have been acting as a committee of this body; he could hardly have looked

at its history, and hardly have understood its meaning.

"The resolution as it finally passed stood in this way:

That a joint committee of fifteen members shall be appointed, nine of whom shall be members of the House and six members of the Senate, who shall inquire into the condition of the States which formed the so-called Confederate States of America, and report whether they, or any of them, are entitled to be represented in either House of Congress.

"What was that? Simply the appointment of a joint committee in this unexampled condition of the country, with a war of four years (in which eleven States had been engaged against the United States) just closed, after all the expenditure of blood and treasure that had been made in the country, at the first meeting of Congress which occurred after actual hostilities in the field had ceased—for what purpose? To inquire into the condition of those States and report whether they were entitled to representation. That simple provision for acquiring information in order to enable the House and the Senate to judge understandingly upon this important question affecting themselves has been represented by gentlemen and by newspapers as assuming authority which did not belong to Congress. I have nothing to say in this connection with reference to the President. I am speaking now of the complaints that were made of that resolution, a simple resolution to inquire into the condition of those States and report whether Representatives and Senators could be admitted from them. Sir, in this were we doing any thing more than our duty? Was it not advisable? It was not a single question relating, as we understood it, to the credentials of members. It was believed that at the very foundation of the whole question of the admission of members lay this great point, whether the condition of those States was such as to render the admission of those members safe. I have had this extract from the President's speech read simply to show what everybody must admit with regard to it. The last paragraph of the extract that I sent to the Chair and had read, is this:

I am free to say to you, as your Executive, that I am not prepared to take any such position. I said in the Senate in the very inception of the rebellion that States had no right to go out and that they had no power to go out. That question has been settled, and I cannot turn around now and give the lie direct to all I profess to have done in the last five years. I can do no such thing. I say that when they comply with the Constitution, when they have given sufficient evidence of their loyalty and that they can be trusted, when they yield obedience to the law, I say extend to them the right hand of fellowship, and let peace and union be restored.

"So say I, and so say all. When they do that, let these consequences follow. There is no difference on that point. The President himself, instead of saying any thing different from us, says when they have complied with these conditions then they ought to be admitted. He himself in his speech makes that a preliminary

to examining the question of credentials to see whether men come here properly accredited. Lest gentlemen on the other side should have failed to notice this sentence, let me read it again. It is peculiarly expressive:

I say that when they comply with the Constitution, when they have given sufficient evidence of their loyalty, and that they can be trusted, when they yield obedience to the law, I say extend to them the right hand of fellowship, and let peace and union be restored.

"That, it seems, is a matter into which somebody has a right to inquire. I should like to know if the Congress of the United States have not a right to ask these very questions and be satisfied upon them before they admit men as Senators and Representatives in the several bodies which constitute Congress. If Congress have a right to inquire (and I agree with the President entirely on the subject), what have we done more than to inquire? When Congress appointed this committee with power to examine into the condition (for that is all there was of it) of these so-called Confederate States and report whether they were in a fit condition to be represented by Senators and Representatives, what did we do more than simply to endeavor to carry out precisely what the President has laid down in his speech as preliminary to the admission of Senators and Representatives? I state this in order that the country may understand what all this noise has been about in reference to the appointment of this committee.

"But the President undertakes to say that legislative power has been granted to this committee; that the power of legislation which Congress possesses—he calls it 'the power of legislation'—over the question of the admission of Senators and Representatives has been passed out of the hands of Congress and given to a central power—a central directory, which chooses to exercise this power. Sir, is this committee of fifteen any thing more than the servant of Congress? Is any committee, either joint or special, which is appointed, any thing more than the mere servant of Congress? Can any member of it, or the whole of it, set up its will for a single day or a single hour or a single moment against the will of the body which constituted it? We were appointed for a special purpose, to make inquiries, and report to Congress the result of our inquiries; and for what reason? What was the great reason? Simply that neither branch, acting without sufficient information, might take a course from which the other branch would differ, and thus bring about a collision between the two bodies which constitute the Congress. Under those circumstances, is it quite fair to designate the committee of fifteen as a central directory, as a power assuming to judge and to decide questions which belong to the bodies which the committee represents? Is it quite fair to designate it as a central power sitting here with a view to get up the government of a few against

the government of the many? I can understand the allusion in no other way; and if any gentleman can place a different construction upon it, I should like to have him do so. I am unwilling, myself, individually, to rest under such an imputation. I have the honor to be one of that committee. I never understood myself as any thing but the servant of Congress, or of the body which sent me there, to endeavor to obtain information and to come to a conclusion upon which the body might act understandingly; and that we have not come to a conclusion yet, is only a proof that the question is a much larger one than gentlemen might have supposed, and involves more consideration and more examination than might possibly have been apparent to those who looked only upon the surface, and judged only from what they could gather from common report.

"If the Executive—and I mean to speak of the President with respect, because I entertain for him respect—has an idea that the several points which he has suggested are preliminaries to the admission of Senators and Representatives from these States, the question arises, who is to exercise that power of judgment? Does it belong to us, if a Senator presents himself here, to ascertain in the first place if those conditions have been complied with on the part of these States, or does it belong to him?

"If I have mistaken the view of the President, I shall be very glad to be corrected by him or by anybody that is authorized to speak for him; and one would think there are plenty of those gentlemen about; but what he says is, substantially, in my judgment, this: 'I have come to the conclusion that these States are in the Union to be represented in the councils of the nation, and particularly is the State of Tennessee. I admit that certain things must be done; they must show their loyalty, but I am the person to decide upon whether those things have been done; whether that loyalty has been shown; whether that condition has been complied with, and all other conditions that I may judge necessary, and when I have decided that question with reference to these States, Congress may take up the question of the elections, qualifications, and returns of the members who present themselves to them, inquire into that, and have nothing to do but to settle the question whether they come within the description of the Constitution or not.'

"If the President does not mean that, then the question is for Congress to decide. If he does mean that, the issue of which I spoke is directly presented to Congress. For myself, I could not rest, as a Senator of the United States, content with my position; I could not believe that I was faithful to the great interests committed to my care, connected with others as I am, by the State which sent me here, if I yielded for a moment to the idea, come from what source it may, that anybody but Congress had the right with reference to Senators and Repre-

sentatives to settle preliminarily the question whether the States that sent them here were entitled to have Senators and Representatives or not.

"Sir, we should be yielding every thing, we should have no power left, we should be less than children, we should hardly be entitled to call ourselves slaves, if a question upon which the very existence of these bodies, the Senate and House of Representatives may depend, the question of whether a State, or a body of men, or an organization anywhere is entitled to representation here, is not for us to settle and us alone, so far as those proposed members are concerned, without any dictation from anybody, ay, without any advice from anybody. The President is by the Constitution authorized and required to give information to Congress from time to time on the state of public affairs; but upon a question affecting the representation in the Senate or in the House of Representatives, he is not competent even to advise us, from his position and from the necessity that exists that all these different branches of the Government should be entirely independent of each other I am free to say I should consider myself as sitting in a body bound hand and foot, having no power, no rights, no independence, no character, if I thought I was compelled to ask the opinion of any one with regard to the right of a Senator to sit upon this floor and the right of the State which sent him here to be represented upon this floor. It is a question for us, and only for us.

"Looking, therefore, upon these two arguments in this part of the veto message as I did, one distinctly indicating that no legislation affecting the States which have recently been in rebellion would meet with the approval of the President while those States were not represented here, the other that all the consideration that we as members of the Senate had a right to give to this subject was to look at the papers presented and say whether men coming here had the proper credentials from somebody, leaving the question to be settled at the other end of the avenue whether or not the States themselves had a right to be represented on this floor—while I considered those two things as not only shadowed forth, but distinctly stated in the veto message, I could not hesitate for a single instant to say that where such reasons were given for the veto of a bill, I could not, without sacrificing all my self-respect, and what is of more consequence as far as I am concerned, sacrificing all the rights and honors of the body of which I am a member, vote to sustain that message, whatever good reasons might be given in other parts of it. Under those circumstances, and, I will confess, influenced by that particular message, influenced by those views and statements of the President, the committee of fifteen, which is so denounced, saw fit to propose distinctly the proposition to both Houses of Congress which is now upon your table; and it is this

That in order to close agitation—

To have no more dispute about it among ourselves as to our own action—

upon a question which seems likely to disturb the action of the Government, as well as to quiet the uncertainty which is agitating the minds of the people of the eleven States which have been declared to be in insurrection, no Senator or Representative shall be admitted into either branch of Congress from any of said States until Congress shall have declared such State entitled to such representation.

"That, sir, is resuming the original proposition, substantially. Having been instructed to inquire into the condition of these States, and to report whether they, or any of them, were entitled to representation, and not being prepared to report on that question, we propose to the House and the Senate this resolution, providing that—

No Senator or Representative shall be admitted into either branch of Congress from any of said States until Congress shall have declared such State entitled to such representation.

"Originally, I did not think that resolution was necessary; but now I do. Why? In order that Congress may assert distinctly its own rights and its own powers; in order that there may be no mistake anywhere, in the mind of the Executive or in the minds of the people of this country; that Congress, under the circumstances of this case, with this attempted limitation of its powers with regard to its own organization, is prepared to say to the Executive and to the country, respectfully but firmly, over this subject they have, and they mean to exercise, the most full and plenary jurisdiction; they will be limited with regard to it by no considerations arising from the views of others than themselves, except so far as those considerations may affect the minds of individuals; we will judge for ourselves, not only upon credentials and the character of men and the position of men, but upon the position of the States which sent those men here. In other words, to use the language of the President again, when the question is to be decided whether they obey the Constitution, whether they have a fitting constitution of their own, whether they are loyal, whether they are prepared to obey the laws as a preliminary, as the President says it is, to their admission, we will say whether those preliminary requirements have been complied with, and not he, and nobody but ourselves.

"It was my very strong opinion and impression with reference to this matter that induced me to ask the Senate to take up this question now. I deem it as transcending in importance the question of the amendment of the Constitution which has been under discussion for several days. I deem that, in the present condition of the country, situated as we are, it transcends in importance every question. Where are we, sir? Let us allow ourselves to consider for a moment. If we are not to inquire into and be satisfied of the condition of these States, if we are not to inquire and ascertain whether they

are or are not in such a situation that they may safely come here and govern (because when they come here they come as rulers), but if somebody else is to settle that question for us, all that Congress has to do is this: when a State chooses to go out of the Union and make war upon it, it is to provide the means to legislate; when the State has been conquered and is ready to come back again, it is to inquire of somebody else whether the State is in a condition to come back, and is to take the men who are sent here, and who may come here with credentials from a military governor appointed by the President, without a word except to inquire as to their qualifications. I supposed that Senators were somewhat in the nature of representatives of the people, although selected by the Legislatures of the States; that Senators, like Representatives, were sent here for the purpose of guarding the interests of the people, and although other officers were chosen for specific terms and exercised for the time greater power, that after all the protection of this Government must be found in its Congress; that public opinion was represented here, the public wishes were represented here, the rights of the whole people were guarded here, the money of the people was taken care of here—I mean in Congress, taking both Houses together—and that, in fact, all the essential powers of the Government, all that was to be done lies at the very foundation, every thing that was necessary in order to protect our form of government republican, and to save the liberties of the country, rested in the faithfulness of the Senators and Representatives of the United States, and in their power to judge of what was necessary in order to constitute and regulate their own bodies. But, sir, if this is not so, if they are confined simply to a mere question of papers, to a mere question of credentials, to simply taking the opinions of others as to who are entitled to seats in this body, so far as States having the right to send them here are concerned, then I consider that we are reduced to be mere creatures of circumstance, nothings, nobodies; at any time we may be overwhelmed; at any time we may lose our power; at any time we may cease to be that check, which the Constitution intends we should be, upon the Executive of the United States, and upon the other branches of the Government; at any time we may lose all of which we have been so justly proud with reference to our own condition as assigned us by the Constitution of the United States. Senators will pardon me, I hope, for speaking at such length upon that subject.

"I believe that the President is a friend of his country. I believe that he is a patriotic, devoted citizen; that he would do nothing to injure any of its institutions under any circumstances if he was aware, while doing it, of what he was doing. I believe, however, in reference to this matter that he has spoken unguardedly. His feelings in relation to the admission of Tennessee particularly, and these other States, have

carried him beyond what I believe in calmer moments and on due consideration he would be willing to go; far beyond what he himself on a calm review would find it in his power to stand by. This part of his message is not well considered.

"Mr. President, I think it will not be disputed by anybody, not even by the Senator from Maryland—and I call his attention to it—that this country has been in a state of war, decidedly in a state of war, war according to the books, war in its worst acceptation, war in the very strongest meaning of the term, without any limitation or qualification. If we have been in a state of war, the question arises—and it is a very simple one, and I think this whole thing lies in a narrow compass—is there any dispute as to what are the consequences of war? What are the consequences of successful war? Where one nation conquers another, overcomes it without qualifications, without terms, without limits, and after a bitter contest succeeds in crushing its enemy, occupying its enemy's territory, destroying its posts, what are the consequences? The Senator is perfectly familiar with the writers on international law. Let him read the chapter in the book under my hand upon 'Acquisitions by War.' Is there any thing more certain than that the conqueror has a right, if he chooses, to change the form of government, that he has a right to punish, that he has a right to take entire control of the nation and the people, that he has a right to exact security for the future, and such security for his own safety as he may demand; that all these rights are his, with only the limitation that he shall not abuse them and conduct them in a manner contrary to humanity, in the ordinary acceptation of the term?"

Mr. Johnson: "What is the book?"

Mr. Fessenden: "Vattel. The principle, then, is settled. Those are the consequences of successful war. We are told that we did not wage a war of conquest. Certainly we did not. Congress said precisely what it meant at the time it stated that this war was not waged for any purpose of subjugation. It was not commenced with any such idea, but if it follows that subjugation must come in order to accomplish what we desire to accomplish and what we must accomplish, it is not our fault. If subjugation becomes necessary, although that was not the idea with which the war was commenced, who can complain?"

"Now, is there any more dispute as to the next proposition, that the consequences of civil war are precisely the same? Is there any writer who does not lay it down distinctly that where a civil war, in the proper sense of the term, has existed, the consequences of that civil war, so far as the rights of the parties are concerned, are precisely the same that they are in other cases? If compelled to carry on the contest upon the same principles—as we are by the law of nations—and to treat it in all respects as a war between two independent na-

tions until the war is closed, is there a dispute that precisely the same consequences follow, precisely the same rights are obtained as would be the case in an international war? If not, let the Senator show me where he finds a distinction drawn between the consequences in the two cases. I take it these two propositions are beyond dispute; there can be no difficulty about them.

"Then the question arises, and it is only a natural one, Does our form of government change in any way the nature and inevitable legal consequences of a civil war? Is a civil war waged among us, living as we do under a written Constitution, different in any way so far as the consequences are concerned, on account of that written Constitution, from a civil war in any other nation in the world? That is a question upon which men may pause. It is very manifest to me that there can be no difference at all. And here I come to consider for a moment the argument of the honorable Senator from Maryland, because that is what I wanted to address myself to. He says that Congress can do no more than quell an insurrection; our Constitution speaks only of insurrections; and when an insurrection has existed in a State, the moment that insurrection is over the State returns to its former position; and he reads, I believe, from that clause of the Constitution which says that Congress may provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions. Now, does the Senator undertake to say in any way that that is all our Constitution gives power to do? If I understand the argument of the honorable Senator, it is this: here are State governments, and as there are State governments, and as we are living under a written Constitution, and Congress by the particular terms of that Constitution has power to provide for calling out the militia to suppress insurrections and repel invasions, therefore every thing that takes place in the way of a fight in this country, no matter what its extent, is to be considered an insurrection within the meaning of that clause. Do I understand the Senator to take that ground?"

Mr. Johnson: "I said that Congress had no authority to carry on war against a State."

Mr. Fessenden: "My answer to that is simply this: the Constitution has not specifically provided for the case of civil war; it never contemplated civil war; it would not contemplate civil war; but it provided the means to quell it by giving power to Congress to raise and support armies without stating for what objects those armies might be used; and it gave power to do every thing in fact that is necessary to be done in order to preserve and support the Government. But it speaks of insurrection. What is an insurrection? It is civil war. The Senator will hardly contend that they are synonymous terms. An insurrection, such as is mentioned and referred to in the Constitution, is not civil war; it is something

far less. The Senator will remember that Vattel—for I go no further so far as this argument is concerned—speaks of a tumult as one thing that may take place, that is, when there is a tumultuous assemblage and the laws are violated; and when that tumult assumes form and becomes a resistance to the law and to the governing authority, it is an insurrection; and when it assumes a greater form, and the laws are successfully resisted, and the sovereign power is defied by armed force, then it becomes a civil war. Is that condition of things what was meant, and all that was meant, by the clause of the Constitution giving power to call forth the militia to suppress insurrection?"

"If the Senator is right in his construction, there is no such thing as civil war under this Government, and can be no such thing; the Constitution does not provide for it; it speaks simply of 'insurrection;' and there can be none of the consequences of civil war, there can be none of the rules applicable to civil war, because the Constitution has not provided for it. Sir, this clause is of the narrowest possible limitation, and refers only to ordinary tumults carried to such an extent as to make insurrections that are perfectly familiar to us all, and the very provision of the Constitution which the Senator has quoted shows that was the understanding. The truth is, it has reference simply to the militia. It is a power—

To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

"Not that Congress shall have authority to suppress insurrections, as the Senator would have read it, and repel invasions; but it may use the militia force for the purpose of suppressing insurrections and repelling invasions, meaning simply that on a sudden emergency, when there is an insurrection or invasion, Congress may call upon the militia temporarily for the purpose of effecting the object. That is all. Now, then, sir, understanding that war has existed, and that its consequences are such as I have stated, and that civil war is attended by all the consequences of other wars, even among us under the Constitution, I say that, in my judgment, a State may be utterly extinguished and swept out of existence by civil war. It is a necessary consequence if the law of nations exists among us and we are bound by its provisions. A State may forfeit its *status*. The Government may say that it has forfeited its *status*, if it pleases to say so. It may impose upon such a State punishment; it may protect itself against the future; and if, in order to protect itself against the future, the Government finds it absolutely necessary to prevent it from resuming its original position, it has the perfect power to do so. It is a necessary consequence of the principle.

"In order to constitute a State of the Union there should be a republican government; that government must be acknowledged by Congress, and that government must have the re-

quisite provisions to connect it with the Union. When that government is destroyed, when the League is broken, when there are no provisions whatever that connect it with the United States, it ceases to be a State of the Union from necessity. I do not say that its people pass out from under the jurisdiction of the Government; it belongs to the Union, and its people are under the authority of the Union; but as a State having rights in the Union—rights, for instance, in this Congress—when it has ceased to connect itself with the Government by its own act or in any way, it is at an end for the time being, because something more is necessary than a bare organized existence. That is the position that I assume, and I have not been able to see but that it is correct.

"Now, will the Senator deny, will any one deny, that there has been a period and a long period during which there was no connection between these Confederate States and the Government of the United States? Have not years elapsed during which no such connection existed? Was not the form of government which bound them to the Union entirely destroyed? Was not the connection obliterated? Were not all their people in rebellion? Was there any thing by which any of those States could connect itself with the Government with which it had been formerly connected, and if not, what is necessary in order to bring it back? Is it not necessary that it should be recognized by this Government? Is it not necessary that it should have a constitution which does connect it with this Government? Is it not necessary that it should place itself in a position to discharge its duties toward this Government? And when it has done that, must it not apply to the Government for admission, for reinstatement in the Union?"

"This question has been argued, and argued by authority, as if we had nothing to say about it; as if these people were back again simply because they had made State constitutions. How do we know it? What proof have we? I want an answer.

"Gentlemen have been talking here from time to time and in the other House about the great abuse that these States were not admitted to representation while the Government was going on to tax them. Sir, the arms that were raised against us were never laid down until last April. From that time to December Congress was not in session. They were under the control of the military power. We came together on the first Monday of December. There had been an exhausting war, four years of deadly struggle; hundreds of thousands slain, hundreds of millions spent; a war more savage, in my judgment, on the part of the enemy we had to encounter, than has been known in modern times; in which the most savage hate was exhibited against every thing that was not of the Confederates, which was distinguished, remarkable, for its character, so distinct from all those wars that have marked modern periods.

We came together in December, and certain men presented themselves claiming to be admitted as Senators and as Representatives upon these floors. We had not been together thirty days before gentlemen contended here that they were entitled to admission upon an equality with ourselves and as parts of the governing power. It is not now ninety days since this Congress met; and before the expiration of ninety days, after this war of four years of the character that existed and with denunciations of the most bitter kind from all that people, we are told that we are perpetrating the most gross injustice because they are not already here in these seats as Senators and Representatives in Congress, and that our legislation is substantially good for nothing because they are not here.

"It is a most remarkable fact in this connection that not only have we not been together ninety days when we are called upon to admit these Senators and these Representatives, but we are called on to decide that the condition of that people is such as to render it safe, when the President himself, who calls upon us to do it, has not withdrawn his suspension of the writ of *habeas corpus* throughout that territory, but keeps his army in that territory, and when all the generals and himself at the head of all the generals tell us that it is unsafe to withdraw it, that they cannot be left to themselves, and that the army must remain and they be kept under military law.

"Mr. President, this strikes me as somewhat singular; and I say this because I want the country to understand it. Is no time to be allowed? Here, it is said, are eight million people; here is a territory embracing I do not know how many million square miles; here have been eleven States in rebellion; here has been a war of four years. Congress meets; the question is to be submitted to that Congress; and gentlemen talk here and denounce it, and the President himself denounces it, and the newspapers denounce it, and the Democracy denounce it; all raise their cry against us because within ninety days, when the President himself, as Commander-in-chief of the army, does not choose to withdraw the army from that territory, we have not put its Representatives and Senators in these seats to govern for themselves and to govern us. I allude to this fact simply for the purpose of showing how utterly false are the accusations made against Congress, come from what quarter they may, how utterly unreasonable it is to suppose that a question of this kind is to be settled in such a hurry.

"Now, sir, I have been speaking simply of the power of Congress; but it is a very different question when you come to consider what it is best to do. I assert the power in its fullest extent; I assert that by the civil war they lost all the rights which I have enumerated, and we acquired those which I have specified. I assert that they placed themselves in a position in

which they were not connected with this Union as States. I assert that they have many things to do in order to regain that position. I assert that in the mean time we have a right to govern them, govern them as Christian men and as statesmen, but to govern them because they placed themselves in a position to render it absolutely necessary that we should do so; and I assert, moreover, that they cannot come back here to occupy these seats or seats in the other House until we—no matter whether it is done by joint or several authority, so that it is conferred by Congress—be satisfied ourselves and decide that they are entitled to occupy these seats again; and that we have a right to take all the time necessary in order to give ourselves entire satisfaction on that subject, and they have no right to complain that in the mean while they are taxed without being represented, because they brought it upon their own heads. I say, moreover, that the interests and safety of this country require that we should be entirely convinced of what is due to ourselves and our constituents, and to the safety of all, before we proceed to the examination of the question of credentials and qualifications. But having said that, it is another question about what we should do; I have been talking about the right.

"I hold, then, sir, that it is best for all that as soon as possible, as soon as it can be done with any reasonable show of safety to ourselves and to the Government of this country, these States should be established in their original positions, that Senators should sit here in this branch and Representatives in the other, and that we should proceed as best we may to govern the whole country, a Government with the assent of all, all being represented. But what I wish to enter my dissent to is the doctrine that we cannot and ought not to deliberate on the subject, in our own way, in our own time, and that while we are doing it we should be denounced and the committee of which I am a member be denounced as an irresponsible tribunal, a central power; some power created to take legislation out of its proper channels, and that the majority of the Congress should be held up to the country, as it has been by gentlemen on the other side of the House, to say the least of it, and I think also impliedly by my honorable friend from Wisconsin himself, as perpetrating injustice day by day every day that passed without seeing men back in these vacant seats, or the simple question of their credentials under consideration; that this was an outrage upon States, States lately at war, States which up to this day have never sent us their constitutions or made any request whatever in proper form to be admitted or readmitted to their original condition."

Mr. Sherman, of Ohio, followed, saying: "If the meaning of the resolution is that, as a matter of convenience in the discharge of our duties, the Senators and Representatives ought to act in concert with each other in legislating upon and in discussing all propositions affecting the

right of States to representation, surely it is a reasonable proposition. We have already acted in concert at the beginning of this session by creating a joint committee as an organ of both bodies to confer with each other and to communicate to each House separately their deliberations. We have often before recognized the propriety of acting through joint committees on questions of great importance, when the concurrence of both Houses is needed, and when a free conference will probably tend to produce an agreement. Therefore, if this is the purpose of this resolution, it is a very simple and plain one, and obviously defensible.

"But, Mr. President, this resolution goes further. It asserts, and it was intended to assert, that with Congress, and with Congress alone, rests the duty of defining when a State once declared to be in insurrection shall be admitted to representation, in this and the other House of Congress. This is a proposition of constitutional law; and on this point I am glad to say that there has been no difference of opinion among us until this session of Congress. This question has been three times decided in the Senate. It has been decided by the unanimous report of our Judiciary Committee. It has not been controverted in this body until within a very few days, or until during the present session of Congress. At the last session a unanimous report was made from the Judiciary Committee, composed of some of the ablest lawyers in the Senate, in which this doctrine is, in my judgment, more clearly and distinctly expressed than in the resolution now before us. I cannot see why any one who gave his deliberate judgment to that proposition can oppose this. The honorable Senator from Maine read a portion of this report on Friday, but it will bear repetition, and I will now read it:

The persons in possession of the local authorities in Louisiana having rebelled against the authority of the United States, and her inhabitants having been declared to be in a state of insurrection in pursuance of a law passed by the two Houses of Congress, your committee deem it improper for this body to admit to seats Senators from Louisiana, till by some joint action of both Houses there shall be some recognition of an existing State government acting in harmony with the Government of the United States and recognizing its authority.

"If this is law, how can any Senator vote against the pending proposition, unless it is for reasons not involving the merits of that proposition?"

"It will be remembered that a bill came to the Senate, passed by the House of Representatives guaranteeing to the seceded States a republican form of government, commonly known as the Wade and Davis bill. It was antagonized here by various propositions, and among the rest by a proposition offered by the honorable Senator from Missouri (Mr. Brown). That bill contained many sections intended to provide a mode by which these eleven States might, when the rebellion was suppressed within their limits, be restored to their old places in the Union.

The proposition offered by Mr. Brown, as a substitute for the bill, I will now read; and I invite the attention of Senators to the distinct assertion of the very doctrine that is proclaimed in this resolution:

That when the inhabitants of any State have been declared in a state of insurrection against the United States by proclamation of the President, by force and virtue of the act entitled "An act to provide for the collection of duties on imports, and for other purposes," approved July 18, 1861, they shall be, and are hereby declared to be, incapable of casting any vote for electors of President or Vice-President of the United States, or of electing Senators or Representatives in Congress, until said insurrection in said State is suppressed or abandoned, and said inhabitants have returned to their obedience to the Government of the United States.

"Then mark these words:

nor until such return to obedience shall be declared by proclamation of the President, issued by virtue of an act of Congress, hereafter to be passed, authorizing the same.

"This proposition was introduced in antagonism to the proposition then before the Senate, as a substitute for it, to cover the whole ground, and I am told was framed by our fellow-Senator now dead, Judge Collamer. After debate it was adopted as a substitute, by the close vote of 17 yeas to 16 nays. Among the yeas were every Democratic member of this Senate and some of the Republicans. All the nays were Union Senators, friends of the original bill, including many classed as radicals. I give the vote in full:

YEAS—Messrs. Brown, Carlile, Cowan, Davis, Doolittle, Grimes, Henderson, Hendricks, Johnson, Lane of Indiana, McDougall, Powell, Richardson, Riddle, Saulsbury, Trumbull, and Van Winkle—17.

NAYS—Messrs. Chandler, Clark, Conness, Hale, Harlan, Lane of Kansas, Morgan, Morrill, Pomeroy, Ramsey, Sherman, Sprague, Sumner, Wade, Wilkinson, and Wilson—16.

"It may be said that these gentlemen voted for this proposition for the purpose of defeating a more offensive one: and if the vote rested here that would be a reasonable explanation. But in order to point the significance of this vote, the honorable Senator from Illinois, the chairman of the Judiciary Committee (Mr. Trumbull), called attention to the importance of the question, and said he wanted a definite vote upon this proposition by itself. He stated its importance, the effect of the principle involved, and asked for the yeas and nays on the passage of the bill as amended, in order, as he said, to ascertain the judgment of the Senate upon this distinct proposition. The bill then contained nothing but what I have read to you, and the vote was taken by yeas and nays, and stood as follows:

YEAS—Messrs. Brown, Chandler, Conness, Doolittle, Grimes, Harlan, Harris, Henderson, Johnson, Lane of Indiana, Lane of Kansas, McDougall, Morgan, Pomeroy, Ramsey, Riddle, Sherman, Sprague, Sumner, Ten Eyck, Trumbull, Van Winkle, Wade, Wilkinson, and Wilson—28.

NAYS—Messrs. Davis, Powell, and Saulsbury—3.

"So that by this deliberate vote, after de-

bate, after the attention of the Senate had been called to the importance of the proposition by the judicial organ of this body, at a time when there was no excitement and no party feeling here on this proposition, the doctrine we are discussing was asserted by an almost unanimous vote of the Senate. It seems to me that with this declaration of the opinion of the Senate before us, made when it was not influenced by party feeling or party excitement, we ought not to doubt the correctness of the pending resolution, not near so strong in its tenor or language. It ought not to be resisted by any one who thus committed the Senate to that proposition against a measure that would have organized a system to reconstruct the seceding States.

"But, Mr. President, I need not depend upon the vote of the Senate or upon the authorities, because I think, if you test this proposition by the simplest principles of constitutional law, there can appear no doubt that Congress has the sole and exclusive power over this subject. The Constitution of the United States gives to the President of the United States no legislative power except as a part of the law-making power. He is an executive officer, with no legislative power except that which he exercises in connection with us. The Constitution of the United States confers upon Congress not only the power to raise and support armies, to appropriate money therefor, and to provide and maintain a navy, but—

To make rules for the government and regulation of the land and naval forces.

"And among the residuary powers conferred upon Congress is that important one—

To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

"Therefore, where a power is conferred upon the President, and the legislative power is necessary in order to carry that power into effect, Congress alone possesses the power to arm the Executive with the necessary authority to execute the laws. Upon Congress alone rests all the residuary powers; and therefore it is that the power of Congress follows our flag wherever it floats. Our flag may go round the world, to South America, to Italy, to China; it may go into any foreign country as it did in Mexico; it may go into the Southern States subduing a rebellion, and wherever it goes the legislative power of Congress goes with it. It regulates and governs the army, and the President has nothing to do but to execute the will of Congress and the Constitution of the United States.

"It seems, therefore, testing it by reason, that this power must rest in Congress. The doctrine is very strongly stated by Story, in his Commentaries on the Constitution, in very much the language I have used; and he says, in speaking of the powers of Congress, that

the jurisdiction and power of the Government of the United States follow our flag or our army into a foreign country, and Congress may make rules and regulations for the government of the army of the United States in a foreign country as well as in our own, and it is the duty of the President to execute them. It is true that, in the absence of rules and regulations prescribed by Congress, the President may make such regulations as are absolutely necessary for the government of the army wherever it is, but it is only as a part of his duty to execute the general laws. If Congress chooses to step in and prescribe the mode and manner in which these powers shall be exercised, he is bound by his oath to observe such rules and regulations. I conclude, therefore, that as Congress has declared eleven States to be in a state of insurrection, as it is necessary now to pass some plan or law by which these States may be restored to their old place in the Union, Congress has the undoubted legislative power to prescribe the terms, conditions, and tests by which their loyalty and obedience to the law may be adjudged.

"But, Mr. President—and I say it with great deference to the committee who reported it—I do not believe the bare assertion of this power tends to promote the object stated by the resolution itself. The object of this resolution is stated to be to close agitation upon a question which seems likely to disturb the action of the Government, as well as to quiet the uncertainty which is agitating the minds of the people of the eleven States which have been declared to be in a state of insurrection. If this resolution would tend to promote these great objects, I would vote for it much more cheerfully than I will; but I regard it as a mere straw in a storm, thrown in at an inopportune moment; the mere assertion of a naked right which has never yet been disputed, and never can be successfully; a mere assertion of a right that we have over and over again asserted. The only doubt I ever had about the resolution was the wisdom of introducing it and passing it under the previous question in one House at a moment when there was undue or unusual excitement in the public mind. My idea is that the true way to assert this power is to exercise it, and that it was only necessary for Congress to exercise that power in order to meet all these complicated difficulties. This resolution does not provide for the contingencies that have happened. Let me state the case. Suppose the two Houses of Congress cannot agree upon a plan of reconstruction, as it is very obvious we shall have difficulty in doing. Opposition here is already developed to the constitutional amendment as part of the plan agreed upon, in quarters at least to me unexpected, and it is very doubtful whether we can agree by the requisite majority upon this leading idea of a change of the Constitution. Suppose the two Houses of Congress cannot agree with each other, what then? Must these

eleven States stand in their present isolated condition beyond the pale of civil law until the two Houses can agree upon some proposition?

"Mr. President, in my judgment the real difficulty in this whole matter has been the unfortunate failure of the executive and legislative branches of the Government to agree upon a plan of reconstruction. If at the last session we had provided a law, reasonable in itself, proper in its provisions, by which these States might have been guided in their efforts to come back into the Union, that would have been an end of this controversy; but unfortunately (and I am not here either to arraign the living or the dead) there was a failure to agree. Earlier in this war, during the Thirty-seventh Congress, a gentleman now in his grave, and whose eulogy was so fitly pronounced the other day in the House of Representatives by his colleague here, Henry Winter Davis, prepared a bill to meet this exigency. He was not then a member of Congress. He brought that bill to me. It was a bill to guarantee to each State a republican form of government. The provisions of the bill pointed out a plan by which these States, then declared by Congress to be in a state of insurrection, might, when that insurrection was subdued or abandoned, come back freely and voluntarily into the Union. It provided for representation; it provided for the election of a convention and a Legislature, and the election of Senators and members of Congress. It was a complete guaranty to the people within the States upon certain conditions to come back into the Union. The provisions and tests by which to judge when the state of insurrection had ceased and determined were prescribed. I introduced that bill here at the request of Mr. Davis. It was referred to the Judiciary Committee. It was not acted upon by them. I suppose they thought it premature. Afterward Mr. Davis came into the Thirty-eighth Congress as a member of the House of Representatives. Among the first acts performed by him after taking his seat was the introduction of this same bill, framed by him and introduced by me into the Senate, in the House of Representatives. It was introduced by him on the 15th December, 1863. It was debated in the House of Representatives and passed by a very decided vote, and it was sent to the Senate. It was reported to the Senate favorably; but in place of it was substituted the proposition I have already read, offered by the Senator from Missouri, which was adopted in the Senate. It was sent back to the House a committee of conference was appointed, and the result was the reporting to the Senate and the House of what was called the Wade and Davis bill. That bill was debated and finally passed upon the report of the Committee of Conference. It went to the President; he did not approve it.

"He then goes on and gives his reasons for not approving this plan; nor does he entirely

disapprove of it, but he said it was one of numerous plans which might be adopted."

Mr. Sumner, of Massachusetts, said: "Will the Senator allow me to interrupt him there? I will state that it so happened that I had an interview with the late President Lincoln immediately after the publication of that paper, and it was the subject of very minute and protracted conversation, in the course of which, after discussing it in detail, he expressed to me his regret that he had not accepted the bill."

Mr. Sherman continued: "Mr. President, I think every patriotic citizen of the United States will express his regret, not so much that the President did not approve that bill, because I will not condemn the President for declining to sign it, but that Congress in connection with the President did not agree upon some plan of reconstruction by which these States might have been guided, so that when the rebellion was put down they might see in the form of law some guide to lead them in the difficult road to restoration. Who does not now see that any law upon the subject would have been better than the absence of all law?"

"Now, I will ask Senators this plain question, whether we have a right now, having failed to do our constitutional duty, to arraign Andrew Johnson for following out a plan which in his judgment he deemed the best, and especially when that plan was the plan adopted by Mr. Lincoln, and which at least had the apparent ratification of the people of the United States in the election of Lincoln and Johnson."

"After this effort made by Congress to provide a plan of reconstruction, there was no effort made subsequently, no bill was introduced on the subject at the last session of Congress, no further effort was made to harmonize the conflicting views of the President and Congress. One whole session intervened after this veto, as I may call it, of President Lincoln, and no effort was made by Congress to reconcile this conflict of views; and when President Johnson came suddenly, by the hand of an assassin, into the presidential chair, what did he have before him to guide his steps? The forces of the rebellion had been subdued; all physical resistance was soon after subdued; the armies of Lee and Johnston and all the other armies of the rebels had been overwhelmed, and the South lay at our power. Who doubts, then, that if there had been a law upon the statute-book by which the people of the Southern States could have been guided in their effort to come back into the Union, they would have cheerfully followed it, although the conditions had been hard?"

"In the absence of law, I ask you whether President Lincoln and President Johnson did not do substantially right when they adopted a plan of their own and endeavored to carry it into execution? Although we may now find fault with the terms and conditions that were imposed by them upon the Southern States, yet we must remember that the source of all power

in this country, the people of the United States, in the election of these two men substantially sanctioned the plan of Mr. Lincoln. Why, sir, at the very time that Andrew Johnson was nominated for the Vice-Presidency he was in Tennessee as military governor, executing the very plan that he subsequently attempted to carry out, and he was elected Vice-President of the United States when he was in the practical execution of that plan."

"What was the condition of these States? I shall not waste much time upon this point, because mere theoretical ideas never appear to me to have much force when we are legislating on practical matters. They have been declared to be States in insurrection, but States still. The very resolution we have before us repeats three times that they are States now. They are referred to as States not entitled to representation. They are stated to be—

The eleven States which have been declared to be in insurrection.

"And again:

No Senator or Representative shall be admitted into either branch of Congress from any of said States until Congress shall have declared such State entitled to such representation.

"I could show very many acts of Congress in which they are referred to as States, but States in insurrection. And there is no difference between Congress and the President as to the present condition of these States. The executive branch of the Government in all its departments now treats them as States in rebellion or in insurrection. Tennessee is the only one of these States that has been proclaimed by the President to be out of insurrection. He is now exercising power in all these States as States in insurrection. He is suspending newspapers, exercising arbitrary power, suspending the writ of *habeas corpus*, treating them yet as States in insurrection; and in this view, as I have stated, Congress concurs."

"Now, what is the legal result of a State being in insurrection? It was sufficiently declared in the proposition I have already read, offered by the Senator from Missouri. They have no right while they are in insurrection to elect electors to the electoral college; they have no right to elect Senators and Representatives. In other words, they lose all those powers, rights, and privileges conferred upon them by the Constitution of the United States. Having taken up arms against the United States, they by that act lose their constitutional powers within the United States to govern and control our councils. They cannot engage in the election of a President, or in the election of Senators or members of Congress; but they are still States, and have been so regarded by every branch and every department of this Government. They are States in insurrection, whose rights under the Constitution are suspended until they cease to be in insurrection. When that period arrives is a question, in my judgment, which must be determined by Con-

gress, and not by the President, for the reason I have already stated; but it is clear that the first duty of Congress, under these circumstances, is to provide a mode and manner by which the condition of the States may be tested, and they may come back, one by one, each upon its own merits, upon complying with such conditions as the public safety demands.

"I propose now to recall, very briefly, the steps adopted by President Johnson in his plan of reconstruction. I do this for the purpose of presenting to the Senate, in a condensed view, the precise plan of reconstruction adopted by him, so that we may see at a single glance the present condition of these eleven States. When Mr. Johnson came into power he found the rebellion substantially subdued. What did he do? His first act was to retain in his confidence and in his councils every member of the Cabinet of Abraham Lincoln, and, so far as we know, every measure adopted by Andrew Johnson has had the approval and sanction of that Cabinet. If there is any doubt upon any measure it is upon the recent veto message; but up to and including that message, so far as we know—and in matters of this kind we cannot rely upon street rumors—Andrew Johnson's plan has met the approval of the Cabinet of Abraham Lincoln. He has executed every law passed by Congress upon every subject whatever, and especially has he executed the Freedmen's Bureau bill. He placed at the head of that bureau General Howard, one of the most fit and worthy men in the United States, to conduct the delicate affairs of that bureau, and General Howard has never asked him for any single act of authority, any single power, that was not freely granted by President Johnson. The Freedmen's Bureau is also under the control of Edwin M. Stanton. Every act passed by Congress in any way bearing on this rebellion the President has fairly and promptly executed. If there is any that he has failed to execute I should thank any Senator to name it to me, for I do not now recall it. Not only that, but he adopted the policy of President Lincoln *in hæc verba*, as I shall show hereafter in examining his proclamations, and he extended and made more severe, as you may say, the policy adopted by Mr. Lincoln. Not only that, but in carrying out his plans of reconstruction, he adopted all the main features of the only bill passed by Congress—the Wade and Davis bill. I have the bill before me, but I have not time to go into its details. My colleague, who remembers the features of that bill, will know that the general plan adopted by President Johnson is the only plan that was ever adopted by Congress. Let us look into President Johnson's plan a little more and see what it was. His first proclamation was in reference to Virginia. In this proclamation, dated Executive Chamber, May 9, 1865, he provided:

First, That all acts and proceedings of the political, military, and civil organizations which have been

in a state of insurrection and rebellion within the State of Virginia against the authority and laws of the United States, and of which Jefferson Davis, John Letcher, and William Smith were late the respective chiefs, are declared null and void.

"With a single stroke he swept away the whole superstructure of the rebellion. Then he provides for the execution of all the powers of the national Government within the rebel territory, extending there our tax laws. Perhaps President Johnson ought to have thought a little about these proclamations when he disputed the power of Congress to tax the people of the Southern States. He was the first to extend over those States the tax laws of the United States, and appoint assessors and collectors of internal revenue and collectors of customs in the various ports. Then he provides:

Ninth, That to carry into effect the guaranty of the Federal Constitution of a republican form of government and afford the advantage and security of domestic laws, as well as to complete the reestablishment of the authority of the laws of the United States, and the full and complete restoration of peace within the limits aforesaid, Francis H. Pierpont, Governor of the State of Virginia, will be aided by the Federal Government, so far as may be necessary, in the lawful measures which he may take for the extension and administration of the State government throughout the geographical limits of said State.

"That was the first element of his plan of reconstruction. The next was the amnesty proclamation, issued on the 29th of May following. In this proclamation he recites the previous proclamation of President Lincoln, and then goes on:

To the end, therefore, that the authority of the Government of the United States may be restored, and that peace, order, and freedom may be established, I, Andrew Johnson, President of the United States, do proclaim and declare that I hereby grant to all persons who have directly or indirectly participated in the existing rebellion, except as hereinafter excepted, amnesty and pardon, with restoration of all rights of property, except as to slaves, and except in cases where legal proceedings, under the laws of the United States providing for the confiscation of property of persons engaged in rebellion, have been instituted, &c.

"And then in the oath of amnesty he provides that any person claiming the benefit of the amnesty should swear that he will 'abide by and faithfully support all laws and proclamations which have been made during the existing rebellion with reference to the emancipation of slaves.' Then he goes on and excepts from the operation of this amnesty some fourteen classes of persons, more than quadrupling the exceptions of the previous proclamation of Mr. Lincoln; so that if there was any departure in this connection from the policy adopted by Mr. Lincoln, it was a departure against the rebels, and especially against those wealthy rebels who gave life and soul and power to the rebellion.

"These were the agencies and organs under which the plan of reconstruction was to go on. Now I ask you, what conditions were imposed on these people? First, the adoption of the constitutional amendment. He was not will-

ing to leave the matter to their amnesty oath or to the proclamation of President Lincoln, but he demanded of them the incorporation in their State constitutions of a prohibition of slavery, and the adoption by their Legislatures of the constitutional amendment, so as to secure beyond peradventure the abolition of slavery forever and ever throughout the United States. This he required in every order issued to the South, and demanded it as a first and preliminary condition to any effort toward reconstruction. Next, he demanded a repudiation of the rebel debt, and a guaranty put into the constitutions of the respective States that they never would, under any circumstances, pay any portion of the rebel debt. Next, he secured the enforcement of the test oath, so that every officer in the Southern States, under the act of Congress, was compelled to take that oath; or if he could not find officers there to do it, he sent officers from the Northern States to do it, so that this law, the most objectionable of any to the Southern people, was enforced in all instances at the South. It is true he appointed some provisional governors who could not take the test oath; but why? Because it was held that these provisional governors were not officers under the law. They were not officers whose commission was provided for by law; they were simply executive agents for the time being to carry into execution the plan of reconstruction; and he felt that if he could use any of these people in the Southern States for the purpose of performing this temporary duty, he had a right to do it. It was not prohibited by any law. The test oath only applied to officers of the United States who were provided for by law.

"Next, he enforced in every case full and ample protection to the freedmen of the Southern States. As I said before, no case was ever brought to his knowledge, so far as I can gather, in which he did not do full and substantial justice.

"Now, what are the objections to this policy? The first objection, that I have heard made most commonly, and which I have made myself, is, that the President was too liberal in exercising the pardoning power. But when we remember the fact that there were more than five times as many included in his exceptions as were included in the exceptions to the proclamation of Mr. Lincoln, and that the number of pardons in comparison with the whole number of persons excepted is substantially insignificant, and that we cannot know all the circumstances which surrounded every particular case of pardon, it is hardly fair for us to arraign the President of the United States. We can limit his power to pardon in these cases. The President of the United States has no power to pardon under the Constitution of the United States in cases like this. That power is derived from the amnesty law which we passed at an early period of the war. The constitutional power to pardon given to him by that instru-

ment extends only to cases where there had been a legal accusation by indictment or affidavit, or to cases where a man had been tried and convicted of a crime. That is the kind of pardon contemplated by the Constitution, but the authority which we gave him by law to extend pardon and amnesty to the rebels is as broad as the insurrection itself. We conferred upon the President of the United States the unlimited power of amnesty, and he has exercised that power only to a very moderate degree.

"But the principal objection that has been made to his policy is that he did not extend his invitation to all the loyal men of the Southern States, including the colored as well as the white people. If I were now required to state the leading objection made to the policy of the President in this particular, I should use the language of an eminent statesman, and say that when the President found before him an open field, with no law of Congress to impede him, with the power to dictate a policy in the South, to impose conditions on it, he ought to have addressed his proclamation to every loyal man above the age of twenty-one years. That would be the plan of the Senator from Massachusetts."

Mr. Sumner: "Every loyal man?"

Mr. Sherman: "I mean every loyal man of sound mind. Now, let us look at that question. In every one of the eleven seceded States, before the rebellion, the negro was excluded from the right of voting by their laws. It is true the Senator from Massachusetts would say these are all swept away. Admit that, but in a majority of the Northern States to this hour there is a denial of the right of suffrage to the colored population. In Ohio, Pennsylvania, and New York that right is limited, and these three States contain one-third of the people of the United States. In a large majority of the States, including the most populous, negro suffrage is prohibited. And yet you ask President Johnson, by a simple mandatory proclamation or military order, to confer the franchise on a class of people who are not only prohibited from voting in the eleven Southern States, but in a majority of the Northern States, and, indeed, I think in all the States except six.

"Further, it cannot be denied that the prejudice of the army of the United States, who were called upon to enforce this proclamation within these States, was against negro suffrage. Whether that prejudice is wise or unwise, blinded or aided by the light of reason, I shall not say. I never myself could see any reason why, because a man was black, he should not vote; and yet, in making laws, as the President was then doing, for the government of the community, you must regard the prejudices not only of the people among whom the laws are to be executed, but the prejudices of the army, and the people who are to execute those laws, and no man can doubt but what at that time there was a strong and powerful prejudice in the army and among all classes of

citizens against extending the right of suffrage to negroes, especially down in the far South, where the great body of the slaves were in abject ignorance.

"But that is not all, Mr. President. The President of the United States was of the opinion that he had no power to extend the elective franchise to them, and, therefore, in judging of his plan of reconstruction, we must give him at least a reasonable credit for honesty of purpose.

"We complain here that the President has not exercised his power to extend to freedmen the right of suffrage when Congress never has done it. We have absolute authority over this District, and until this session the proposition was not seriously mooted to extend the suffrage to the colored population. Here, better than anywhere else in the Union, they are fitted and entitled to suffrage, and yet we never, in our legislative power for this District, where we have absolute power, complied with that condition which has been asked of the President of the United States. It is complained that he did not extend the franchise to four millions in the Southern States, who are admitted to be ignorant, having been slaves for life, who are not prepared for liberty in its broadest and fullest sense, who have yet to be educated for the enjoyment of all the rights of freemen, when we ourselves never have been willing to this moment to confer the elective franchise upon the intelligent colored population of this District.

"So I think we have never conferred the right to vote upon negroes in the Territories. My colleague will know whether we have or not. We never have. Here we have Territories where we have the power to mould the incipient form and ideas, and where our power is absolute, and yet Congress has never prescribed as a condition to their organization as Territories and to their admission as States the right of negroes to vote.

"And this is not all. In the only plan Congress has ever proposed for the reconstruction of the Southern States, the Wade and Davis bill to which I have referred so often, Congress did not and would not make negro suffrage a part of their plan. The effort was made to do so, and it was abandoned. By that bill the suffrage was conferred only upon white male loyal citizens. And in the plan adopted by the President he adopted in this respect the very same conditions for suffrage prescribed by Congress.

"Now, have we, as candid and honorable men, the right to complain of the President because he declined to extend suffrage to this most ignorant freed population, when we have refused or neglected to extend it to them or to the negroes of this District, and to the colored men who may go into the Territories? No, sir; whatever may be our opinion of the theory or right of every man to vote—and I do not dispute or contest with honorable Senators

upon that point—I say with the President, that to ask of him to extend to four millions of these people the right of suffrage when we have not the courage to extend it to those within our control, when our States, represented by us here on this floor have refused to do it, is to make of him an unreasonable demand, in which the people of the United States will not sustain Congress."

Mr. Dixon, of Connecticut, said: "Mr. President, what now are the two great systems of policy with regard to reconstruction and reunion on which the minds of the people of this country are to-day divided? One of these systems, known, by way of distinction, as that of the President, is indicated in the words which I have cited from his veto message. It contemplates a careful, cautious, discriminating admission of a loyal representation from loyal States and districts in the appropriate House of Congress, by the separate action of each, every case to be considered by itself and decided on its own merits. It recognizes the right of every loyal State and district to be represented by loyal men in Congress. It draws the true line of distinction between traitors and true men. It furnishes to the States lately in rebellion the strongest possible inducement to loyalty and fidelity to the Government. It 'makes treason odious,' by showing that while the traitor and the rebel are excluded from Congress, the loyal and the faithful are cordially received. It recognizes and rewards loyalty wherever it is found, and distinguishes, as it ought, between a Horace Maynard and a Jefferson Davis.

"What is the other policy? It contemplates the entire exclusion of representation in either House of Congress from any State lately in rebellion, irrespective of its present loyalty or the character of its people, until the adoption of certain measures not definitely stated, whose advocates agree neither as to the measures proposed nor in the reasons given for their support—this exclusion to continue for an indefinite and unlimited period of time, declared by some to be for five years, by some thirty years, and by some in a certain contingency forever: the entire region comprised within the thirteen seceding States, including Tennessee, to be held meanwhile as conquered territory, and to be governed as subject provinces by the central power, and the people thereof to be ruled as vassals, liable and subject necessarily at all times to taxation, while thus wholly deprived of representation and of every right of self-government.

"And now, to render certain this policy—or at least in view of it—it is proposed by the resolution now under consideration to enact, so far as such a resolution can enact, that neither House of Congress shall admit a member from any one of the States lately in rebellion, whatever may be his own past or present character and conduct, and however true and loyal may be the people by whom he is elected, until consent, by an act of Congress, passed by both

Houses and signed by the President, in the face of the express provision of the Constitution, that 'each House shall be the judge of the elections, qualifications, and returns of its own members.'

"These, Mr. President, are the two systems of policy now presented for the consideration of this country. One or the other must be adopted by the Government. All minor issues, and all intermediate views and opinions, must gravitate toward and be absorbed by one or the other of these great commanding systems of policy; and all questions of local interest or of minor details in the work of reconstruction become therefore unimportant, and may be left out of consideration.

"I have stated what I believe to be the true issue in the briefest possible form of words. Here, in my judgment, is the whole of this vast question which is to agitate the public mind of this country, and the decision of which is to shape and control its governmental policy for a long period of years. All points of mere detail in regard to it will be lost sight of and forgotten in view of the vast and overwhelming idea of the permanent and fraternal reunion of the people of every one of those States under a common flag and a common representative Government. It is impossible, in the nature of things, that the public mind should be occupied by any other political question. Until this is decided, finally and forever, no personal or party consideration can divert the eager attention of the people from the exclusive investigation of this question. Nor can any thoughtful mind doubt as to the final decision. Before the war the love of the Union was the passion of the loyal national heart, and now that the war is over its passion will be reunion. For a brief period the dissevered sections of our country may be held apart by the main force of party and of faction, but every day the mutual attraction of the separated parts is growing stronger and more irresistible. If there are any who attempt to hold them asunder, their fate will be that of Milo:

'The Roman, when he rent the oak,
Dreamed not of the rebound.'

"They may be crushed, but the Union will be restored under a Constitution amended and purified, by which slavery is forever abolished, and freedom, with all its incidents, forever guaranteed.

"Believing the first-named policy to be, as has been conclusively proven by the distinguished Senator from Wisconsin (Mr. Doolittle), that of President Lincoln, and that in adopting it President Johnson has but followed in the path of his predecessor; and believing also that this policy is but a continuation of the great struggle in defence of the noble cause of the Union, for which President Lincoln and all his martyred brethren died, I declare my confident trust that the people will support and uphold Andrew Johnson in its advocacy and

defence, as in the darkest days of the war they supported and upheld Abraham Lincoln."

Mr. Johnson, of Maryland, followed, saying: "The question is, what is the present condition of the States in which the rebellion prevailed? I suppose all will agree that the rebellion or the insurrection, or (if my friend will have it so) the war, as contradistinguished from rebellion and insurrection, has terminated. There is no hostile force now to be found in any one of the States in which the rebellion or the insurrection or the civil war existed. There is no opposition found anywhere in those States, by act, to the authority of the Government of the Union. The paramount obligation due to that authority is practically conceded everywhere, and a willingness to abide by that paramount authority is manifested everywhere, so far as my information extends. However it may be in relation to individuals or classes of individuals to be found in those States, there does not exist now in any one of them any purpose or any wish to resist the authority of the General Government. On the contrary, so far from wishing to resist that authority, their ardent desire is to have it exercised over them, and to be protected by all the securities which the Constitution throws around individuals or States in the exercise of that authority.

"If the fact be as I have stated, and I repeat that I know of no evidence in contradiction of it, then it would seem strange that any department of this Government, while extending to them the authority of the Government, enforcing as against them the allegiance due by them to the Government, legislating in relation to them by virtue of authority, legislating in every form of legislation which Congress has a right to adopt, taxing them under the taxing power, both by the imposition of duties upon imports in their several ports and by the imposition of taxes by your internal revenue law, should be unwilling to give them the same security, the same guaranty that the Constitution secures to you and to all of us and our respective States in the execution of the same authority upon us and our States.

"With these preliminary remarks, I deem it necessary for the purpose I have in view very briefly to call the attention of the Senate to the character of the Government under which we live. My friend from Maine, and to a greater extent the member from Massachusetts (Mr. Sumner), have discussed the question which I am about to examine as if we were living under but one Government, owing but one allegiance, a Government not only paramount within any prescribed limits, but paramount everywhere without limitation, capable of doing every thing that any Government, national in point of character, can do within its domains. Is that true, Mr. President?

"When the thirteen colonies determined to resist what they considered the tyrannical usurpations of England and declared themselves free and independent, and succeeded in achieving

that independence, each for itself became as absolutely a nation as it is possible for any people to be. They professed to have no superior; they claimed perfect and absolute nationality as separate and distinct people, competent to do in peace or in war what any people, under any form of government, was competent to do in that condition. Finding it necessary, however, to have some form of general government, they adopted for that purpose the Articles of Confederation, and in those articles not only did not devolve upon that Government any powers inconsistent with their absolute sovereignty, but cautiously guarded against a possibility of an inference of that kind, by saying that all the powers not expressly granted to the Government created by the Articles of Confederation were still to be considered as remaining in the several States; and they did more. The form of government, if government it could be called, which those articles created, was in one sense no government at all. It constituted but a compact; it amounted but to a league; and all the powers, whatever they were, conferred upon it were powers to be exerted not upon the individual citizen anywhere directly, but upon the individual through the State governments. The capital vice of such a government, as experience soon demonstrated, was that it was unable to perform the functions for which governments are created; and the men of that day becoming convinced of that fact, recommended to the American people the Constitution under which we now live, which, for the execution of its own powers, looks to no State interference, to no State assistance, but to the direct responsibility of each individual citizen to the Government, within the limit of the powers conferred upon the Government.

"But it did not pass by the States altogether. It not only did not design to impair in any manner, except to the extent of the powers expressly delegated or existing by implication from those expressly delegated, the sovereignty of the States, but in order to place the continuing existence of that sovereignty beyond all doubt, and exempt it from the hazard of a possible implication that there might be found in some clause in the Constitution a feature which in the future might be construed to impair the sovereignty of the States, they, by an amendment soon after adopted, declared that all the powers not conferred were reserved to the States or the people. And in the clause relied upon by the honorable member from Massachusetts, which gives to Congress the authority to pass all laws that may be necessary and proper, that power is limited to such laws only as may be found necessary and proper to carry out the express or implied powers.

"Now, Mr. President, is the Government created by that Constitution a national Government? Not if the men of the day when it was adopted knew what its character was. It was partly national and partly Federal. Its adoption, the very act of its adoption, the

very manner provided for its adoption, demonstrate that in the judgment of the men of that day it was not a national Government. Its approval or rejection was submitted to the people of the several States respectively. The effect of the concurrence of the people of each of the States, in a number necessary according to the provisions of the Constitution to give it actual being, is another matter; but as far as relates to the act of adopting the Constitution, the people of the States considered and judged separately. It was not adopted by a majority of the people of the United States. It might have been adopted by the required number of States, and yet not have met the approval of a majority of the people of the United States. The Senate will find, upon refreshing their memories on the subject, that the character of the Government is stated with his accustomed perspicuity by Mr. Madison, the author of the thirtieth number of the *Federalist*. I forbear to read many of the passages which relate to the particular question, and will content myself with reading the paragraph at the close of the number:

The proposed Constitution, therefore, even when tested by the rules laid down by its antagonists, is, in strictness, neither a national nor a Federal Constitution, but a composition of both. In its foundation, it is Federal, not national; in the sources from which the ordinary powers of the Government are drawn it is partly Federal and partly national; in the operation of these powers it is national, not Federal; in the extent of them, again, it is Federal, not national; and finally, in the authoritative mode of introducing amendments, it is neither wholly Federal nor wholly national.

"That is obvious from this consideration: that the machinery of the Government, that without which it cannot continue at all, involves the existence of States. This body cannot be convened, and without it there can be no Congress, except by the votes of States. That is very clear. The provision is express that Senators are to be chosen by the States through their Legislatures; and no provision is made for any other mode under any possible state of circumstances by which they can be chosen. States, therefore, are absolutely necessary to the very existence of the Government. You can no more administer the Government without States than you would be able to administer the Government without people; and therefore, he who seeks to blot out of existence a State, strikes a blow at the very life of the Government. It may live, although one be stricken out of existence; it may live though eleven be stricken out of existence: but the blow at the Government, although not absolutely fatal, according to the hypothesis of fact which I have supposed, is no less a fatal blow. If the men by whom that Constitution was framed had been asked if they contemplated as possible a contingency when any of the existing States should cease to exist, they would have said no, because the continuing, wholesome existence of the Government depends upon the continu-

ing existence of the States. The General Government is infinitely more dependent upon the States than the States are upon the General Government. Why do I say so? Honorable members who have been engaged in this debate seem to suppose that all the political questions which can possibly arise, all the measures which it may be necessary to adopt in order to secure the prosperity and freedom of the people, are with Congress. That is not so. Not only is there a large mass of power necessary to be exerted in order to secure prosperity and peace and protection to the individual citizen, secured to the States, but the far larger mass of power belongs to the States. The whole subject of contracts as between man and man, the mode of disposing of personal property, the mode of disposing of real estate, the mode of devising real and personal estate, the law of marriage, the judicial jurisdiction over these several subjects of intimate concern to the interest of individuals, is with the States.

"Not only is the power of the Government limited as far as regards its legislative department, but it is equally limited in relation to its judicial department; and we should in vain search in that department of the Government for any authority to adjudicate upon the infinite variety of transactions which take place as between man and man in the States. The Government deals with external affairs, with matters involving the interests of the States *inter se*, with contracts entered into by the individuals of the several States, and it confers all measures of that description, and all judicial power over controversies arising out of measures of that description, upon this Government, but there it stops. Jurisdiction of all cases in law and equity—I cite the language literally, certainly substantially—arising under the Constitution and laws of the United States and treaties made in pursuance of their authority, is conferred upon the judicial department of the Government; but nothing else. Then what is to become of the interest of the people of the several States if they have no government of their own? Anarchy, unless (a proposition which I propose to examine) as far as the particular crisis in which we now are is concerned, those States are reduced to the condition of Territories; but assuming that they are now States as contradistinguished from Territories, then it follows that to the extent of the powers remaining in the States, if they have no lot in their execution, and you have no authority to provide for them, they are in a condition of anarchy. To use a favorite comparison of my friend from Massachusetts, that is as plain as the multiplication table.

"If that be plain, what would seem to be the consequence? That the Constitution never contemplated that the States should cease to exist, and it above all never could have contemplated that the Government of the United States, under any or all the powers conferred upon it by the Constitution, was intended to

possess under any state of circumstances the power to put an end to a State; and yet if they are now ended, if they have ceased to exist, and are to be treated as Territories, they did provide that the Congress of the United States, or the Government of the United States, should have the authority to assume over the people of those States the right to legislate, and the right to adjudicate upon matters expressly reserved to the States and the people of the States, although such was not the apparent purpose, and although so far from being the apparent purpose it was expressly disavowed, and assume to themselves the authority to convert this Government into a national, as contradistinguished from a Federal Government.

"I do not understand my friend from Maine to go to the extent of denying that they are to be considered as States now, but simply that their relations as States to the Government have terminated. The honorable member from Massachusetts goes a step further, and he maintains, and did as far back as 1862, that the effect of the rebellion as it then existed was to reduce the States where it prevailed to a territorial condition. I think when the honorable member from Massachusetts announced that proposition, it was said on the floor of the Senate that perhaps he was the only member of the body who would be found to support it; and yet, as the Senate will see in a moment, it is, if I understand the position taken by most of the Senators who have spoken on the other side of the Chamber, the very ground now assumed. It is said that war existed and the consequences of war followed; and as one of the consequences of war was to put the enemy in the hands of the conqueror, it necessarily follows that the people of the South and the States of the South are now at the footstool of the conqueror, bound to take whatever condition he may think proper to impose, bound by any legislation he may think proper to adopt. What was the doctrine of the honorable member from Massachusetts not only announced once, but over and over again repeated and maintained with all the learning for which he is remarkable? On the 11th of February, 1862, that honorable member submitted to the Senate resolutions 'declaratory of the relations between the United States and the territory once occupied by certain States, and now usurped by pretended governments without constitutional or legal right.' (See ANNUAL CYCLOPÆDIA, 1862—p. 345.)

"Am I right or am I wrong in saying that when that first resolution was submitted to the judgment of this body it was said in debate that it was exceedingly doubtful whether it could receive the vote of any member of the body except the mover? I am not sure that he was not himself so well satisfied of it that he did nothing more than have it referred, and there it slept. Then, at that time, whatever may be the judgment of Senators now, it could not be asserted of these States that either by abdication or forfeiture they had reduced the

territory belonging to them to the condition of a territory subject to be legislated over by force of the territorial clause of the Constitution. If not, why not? If the honorable member from Massachusetts was not right in proclaiming that the effect of the insurrection and the effect of the ordinances of secession which the States had before passed was to work abdication and forfeiture, and as it was not pretended at that time that there was any other mode by which the States could cease to exist except in consequence of the insurrection, then they were still existing. If *flagrante bello* the Senate considered them as States, in the name of reason why are they not to consider them as States now that the war is ended? If although enemies in fact, they were friends in law; foes in fact, but brothers in legal intentment; if they were continuing in existence politically while the war was being waged, by what, I was about to say, sophistry can the human mind be brought to the conclusion that what the war itself while it was being waged could not accomplish, is the result of a successful prosecution of the war?

"Now, Mr. President, what is the result if I am right so far? That they are States. States of what character? States standing in what relation? If the honorable member from Massachusetts was wrong in saying that they had abdicated or forfeited the character they possessed and the relation in which they stood, and they are States still, they are as much States as they were when the insurrection was inaugurated, and their relation to their sister States, and their consequent relation to the Government of the United States, is the same relation in which they stood to both when the insurrection was inaugurated. That would seem to follow logically as a necessary result, and if that is a necessary result, does it not also follow that they are entitled to representation in this Chamber? Whether they can present persons who can take their seats, because they have individually committed crimes against the United States, is another question; but I speak now of the right itself.

"What provision is there in the Constitution which puts it in the authority of this body to deny to any State of the United States an equal representation with those States that are represented here? Not only is there nothing; but so sedulous were the framers of that great instrument to guard against the possibility that any State should not be equally represented upon the floor of the Senate with every other State, that they placed that right beyond the power of amendment. The language of the Constitution, as we all know, is, that under the amendment clause of the Constitution, no State shall be deprived of its equal suffrage in the Senate of the United States except by its own consent.

"There are only two rights in the Constitution which were excepted out of the power of amendment; one of them, the one of which I

have just spoken, was placed beyond such power absolutely; the other, in my judgment, was a blot upon the Constitution itself, but it was a blot which the wise men and patriotic men of that day thought it was necessary should exist, because without it it was evident that a Government such as they desired could not be constituted—I mean the power of importing slaves for a period of twenty years.

"It was, therefore, in the view of the framers of the Constitution, a cardinal principle necessary to the success of the Government, and necessary to the protection of the States, that each State under every possible condition of circumstances should be entitled at all times thereafter, unless she consented to abandon it, to an equal suffrage in the Senate.

"If, therefore, they are still States and not Territories, if they are as they were when the insurrection commenced, then it would seem to be obvious that they have as much right to be represented in this Chamber as any one of the States that are here represented; and yet, what are we doing? I did not understand the honorable member from Maine as denying the right, but only as denying that the time had come when the right should be enjoyed; as only asserting that because of some external circumstances there might be danger to the Government, and that is the only danger that we can recognize. Party danger is not a danger that we can notice. It is the peril to the nation, if there is any peril, which will justify the exclusion of any State from the enjoyment of that right of suffrage upon which the Senate can rely. And what is there to show that there will be any danger to the public weal? Have they not thrown down their arms? We know they have. Have not all their armies been surrendered? We know they have. Are they not daily supplicants for the clemency of that department of the Government vested with the power to be clement? We know they are. Do they wish to be represented? Your table is loaded with their credentials. Do you object to the individual men? No. Perry, of South Carolina, whose credentials I had the honor to present yesterday; Hunt, of Louisiana, whose credentials I presented some three or four weeks ago; Sharkey, of Mississippi, and others of the same description of men, are now at your door, invoking you as brothers and statesmen, by the memories of the past, to permit them to come among you as equals, and claiming it upon the ground that every department of the Government, except ourselves, and that at this session, has admitted to be true in point of fact that they are still States of the Union.

"My friend from Maine maintains that I am in error in supposing that the insurrection which prevailed for four years was put down only by virtue of that clause of the Constitution which gives to Congress the right to use military force for the purpose of suppressing insurrection."

Mr. Fessenden: "Using the militia."

Mr. Johnson: "Well, the act of 1807, passed under that authority, gives the same power to use the army and navy of the United States that previous acts gave to use the militia, and we have legislated still more extensively by raising troops for the purpose of putting it down. I maintained in good faith, as I am sure every Senator who knows me will believe, that the authority is to be found exclusively under that clause. I stated that under the war power (that is, the power conferred upon Congress to declare war), there was no authority to war against a State of the Union, and I supported that opinion by referring to a part of the opinion given by Mr. Justice Grier, speaking in behalf of the majority of the Supreme Court, in the prize cases as reported in 2 Black, and in the dissenting opinion of Mr. Justice Nelson, in each of which it is stated that there is no clause in the Constitution which, either by direct terms or by implication, can be construed to confer upon Congress the authority to declare war against a State; and they go on, each of them, to maintain that the power conferred upon Congress in regard to the Southern rebellion is the power conferred by that clause of the Constitution which gives them authority to suppress insurrection, and is carried out by the passage of the acts of 1792 and 1795; and yet they say, and say properly, as I think (although in relation to that there was a difference of opinion, but only as to the time when that condition of things existed), that an insurrection may be of such an extent as entirely to put a stop practically to the authority of the Government, that it may become a war according to the extent to which it may be carried on by the insurgents. What did they say it for? What was the question before the court?"

"The President had blockaded the Southern ports; prizes had been made for a violation of the blockade, and the question in each of those prize cases was whether the vessels captured were subject to forfeiture. The majority of the court held that, independent of your act of July 13, 1861, a state of war existed, out of which grew belligerent rights, and one of the belligerent rights is the right of capture for violation of a blockade instituted by one belligerent as against the other belligerent. That is all. The minority of the court came to the same result in relation to captures made after the passage of the act of July 13, 1861. They denied that there was a war within the meaning of the Constitution existing antecedent to that period, because the whole war power was conferred upon Congress and the President had no right to initiate war; but when the war existed under the sanction of Congress it carried with it all the rights which belonged to belligerents, and therefore carried with it the right of the United States to blockade the enemy's ports, that being a belligerent right, and to capture for violation of the blockade.

"My friend from Maine says virtually (he did

not refer to the decision in terms) that there is no distinction between a civil war and an international war, and with the clearness which belongs to all his speeches he got on pretty well until he came to consider what effect upon that condition of war would be the operation of our peculiar Government, and he seemed to be a little puzzled to reconcile his own mind to the conclusion that the Government of the United States could by war of any kind put an end to a State government.

"But, now, is there not a distinction? Is there not some difficulty arising from the fact that the Government of the United States is not a Government over the State at all? The Government of the United States and the government of the State are equally, as far as the people of that State are concerned, the government of the people of that State. They owe allegiance to a certain extent to the Government of the United States; they owe allegiance to a much greater extent to the government of the State. The General Government cannot get on without the States. The States are not only a component but an essential part of the General Government. Blot them out, and the Government is at an end; blot them out, and these seats must be vacated, and the other hall be left desolate. Nobody can deny that. We could not vote ourselves in permanent session, I suppose. If not, our time expires; and how are our places to be filled? If any one State is left, or any two or three States are left, there will be some three or four or five or six Senators. Is that the Government our fathers designed? How is the judicial department of the Government to exercise its functions? It has no courts in these States if they have ceased to be States; if they are Territories, there is an end to the judicial system, so far as those Territories and the people who are to be found within their limits are concerned. In the case of *Canter vs. The American Insurance Company* (1 Peters), which has been very often before this body, and brought to the attention of the public as demonstrating the authority of Congress to regulate, even by abolishing, slavery in the Territories, this question was decided. The case is pregnant with instruction upon various points in this debate. It arose in this way: a vessel was wrecked upon the coast of Florida, then a Territory, and the cargo and the vessel, in part, were rescued, and the salvors filed a petition in the admiralty court of Florida, a court constituted by the Territorial Legislature of Florida, for the sale of the property to pay them the amount of their salvage, and it was sold. The property came into the hands of the purchaser, and he carried it to South Carolina. Upon the wreck of the vessel the insured abandoned to the underwriter, and the underwriter, when the property came into the port at Charleston, sued the person in whose possession it was to recover it, and he defended himself upon the ground that the decree under which it was sold was a legitimate

decree. The Supreme Court came to that conclusion. Among other objections to the validity of that decree was this: the court in Florida consisted of judges appointed for a limited time, whereas the courts known to the United States under the Constitution of the United States were composed of judges holding office during good behavior; and it was clear that if what had been done was done under the judiciary clause of the Constitution of the United States the sale was void, because the court was unconstitutional. Chief-Justice Marshall said:

It has been contended that, by the Constitution, the judicial power of the United States extends to all cases of admiralty and maritime jurisdiction, and that the whole of this judicial power must be vested "in one Supreme Court and in such inferior courts as Congress shall from time to time ordain and establish." Hence it has been argued that Congress cannot vest admiralty jurisdiction in courts created by the Territorial Legislature.

We have only to pursue this subject one step further to perceive that this provision of the Constitution does not apply to it. The next sentence declares that "the judges, both of the supreme and inferior courts, shall hold their offices during good behavior." The judges of the superior courts of Florida hold their offices for four years. These courts, then, are not constitutional courts, in which the judicial power conferred by the Constitution on the General Government can be deposited. They are incapable of receiving it.

"Now, let me apply this to what I have just stated. If it be so, why are your courts now in those States vested with the judicial authority conferred by the Constitution of the United States, exercising all their functions, administering justice as between man and man in those cases in which jurisdiction is conferred upon them by the Constitution? Why are they there? Only because they are still States. The moment you strike them down from the elevated character of States to the subordinate character of Territories, at once the judicial authority of the United States ceases within their limits; and yet what is the Supreme Court doing? What did they do the other day unanimously with the exception of the Chief Justice? They are receiving now records from the decisions of the courts in those States and they are hearing them. By a special order, passed a few days since, they directed that parties whose cases were here from the States lately in rebellion should have a right, if they applied for its enjoyment, to have their cases heard in advance, they having lost their priority only because of the war, and the court held that, the war ended, the judicial authority of the United States at once attached; and if the doctrine of *Canter vs. The American Insurance Company* be sound (and nobody can dispute it; nobody, certainly, in the past has disputed it), if the judicial authority contained in the Constitution is an authority conferred only upon the courts with reference to the United States as contradistinguished from the Territories, the Supreme Court could only have come to the conclusion that those cases were to be

heard now and decided now, because they were of opinion that those States are now States of the Union.

"Now, as to this right of war. War, says my friend from Maine, though it be a civil war, carries with it all belligerent rights. It does carry all belligerent rights that are not inconsistent with the character of the parties engaged in the war. What sort of a war is it that we are supposed to have been waging against these insurgents, this civil war, as he imagines it to have been? Was it a war of conquest? Could it be a war of conquest? If it was, it would have been the most extraordinary conquest that ever was made; it would have been a Government conquering itself. The States are a part of itself. Its existence depends upon the existence of the States. You cannot elect a President without the States; you cannot elect members of the House of Representatives without the States; you cannot elect members of the Senate without the States. Then to suppose that, under the authority to suppress insurrections, however those insurrections may be carried on, into whatever magnitude they may culminate, is to enable the Government to destroy the States under the doctrine of conquest, is to hold the doctrine that the Government can conquer itself. Who ever heard of that? What! the Government of the United States conquer States, and, by virtue of that conquest, extinguish the States? You might as well attempt to conquer the President; perhaps that may be done one of these days, sooner or later; or the President might as well attempt to conquer Congress; that may be done; and some people think, perhaps, that it ought to be done; but what is the result of either? The Government is either fatally destroyed or seriously wounded. A power, then, conferred on Congress to preserve is a power which Congress has a right to exert for the purpose of destroying. A power to be exerted merely for the purpose of vindicating the authority of the Constitution and the laws, seeing that they are faithfully observed by those who are bound to observe them, is an authority which, with reference to the people upon whom it is exercised, may be so carried on as to destroy the authority and the laws.

"Can that be so? What is the meaning of the book? [Holding up Vattel.] My friend did not read it. You can acquire—that is the chapter of Vattel to which he called my attention—you can acquire property by conquest; but I speak, as I think, understandingly, not only standing upon the authority of Vattel, but upon the authority of every writer upon the law of nations with which I am at all familiar, when I say that nowhere do any of them maintain the proposition that a Government can conquer itself. One nation carrying on war against another may obtain its territory, its people, by one of two modes, either by conquest effected by absolute subjugation, or by treaty independent of actual conquest; but

when a Government wages war as against its own citizens, no matter what may be the form of government, be it monarchical, be it imperial, be it democratic, the result is the same. If it carries on war against its own citizens, it may, if the war is carried on to a successful termination, punish the men who have been engaged in it; but the country remains; no title to the country is obtained by conquest. Whatever right it has in such a contingency is the right with which it started. That original right was suspended by force of arms; the arms subdued, the suspension ceases, and the Government stands as it stood when the war originated, having but the one country under the one Government; and whatever may be the form of government, if it carries on the war to a successful result, all that it has a right to do is to punish the individual parties who have been concerned in the opposition to its authority.

"Now, I suppose, and my friend from Maine supposes, and we all, perhaps, suppose that the rebellion had no just foundation; but a great many people in the United States, even in the loyal States, thought that it had. There was no injustice, in my opinion, perpetrated by the North upon the South that could not have been corrected, if it was unjust, by the fair administration of the Constitution of the United States; but a great many thought that the time had come when safety to themselves demanded a separation. They have paid the penalty of the error, and now they are before us asking us, through the proper constituted authority of the country, to pardon the error; they are before us now pledged, if we can take the testimony of their leading men holding high official station, to abide by the result of the trial to which their doctrine of secession and of slavery has been submitted. They stand before you now admitting that their hopes are centred in the Union, that their safety is there to be found, and there only, and they ardently implore you to suffer them to come again into your midst, share your duties, participate in your trials, join their counsels to your own for the purpose of making the country even greater than it was in any time of the past.

"Now, what do you say by this resolution? You must be kept out until Congress shall by law declare that you ought to be admitted. When is that to be? I am no prophet; but if the signs of the times are to be relied upon, that is to be just when Congress shall think proper; and when they will think proper, and why they will think proper, and what conditions they will annex, is all now in the womb of time. Are they to be kept out until that matter is settled by Congress? They will be if you pass this resolution and it is observed. Is it right? I heard it on this floor when I had formerly the honor of a seat in this body, and I heard it in conversation from time to time, sometimes angrily, sometimes socially, 'The Southern men cannot be driven to separation,'

and I heard it from others that the Northern men could not be driven into hostility as against them. The error of both has been signal. What sort of rebellion have we had? One greater than the world has ever before witnessed. You have crushed it. Now, what do you propose to do? Vattel tells you, treat them kindly and then you will have peace; treat them unkindly, deal with them as unequal, treat them oppressively, and the time for a renewed struggle depends only upon their becoming convinced that they have a reasonable chance to make a renewed struggle successful; and if what you propose to do shall lead to delay, which I suppose may be the consequence of it, you will find that the people in the loyal States will be divided. They are now asking why is it, when not an arm is raised against the authority of the Government, that we have not peace? Why is it that on the contrary we have every day increased agitation? They see, a great many of them, that one means of having peace and quiet is to take the States back, to give them all the rights which the Constitution secures to them, to set the citizens of the States at work. Do this, let them be satisfied that they have the protection of the Government of the Union, as well as the protection of their own States, and the South soon will again blossom like the rose; her wealth in the past, great as it has been, will prove to be as nothing compared with what it will be in the future; and my life for it—I think I am warranted in so saying from my knowledge of the character of the men—my life for it, let them participate in all the rights which the Government was intended to secure to all, and so far from the country being imperilled, its increased strength, its enhanced power, will date from that happy day."

Mr. Hendricks, of Indiana, said: "Two purposes, it seems to me, are intended by this resolution; or at least two results are likely to be secured by its adoption in its present shape. The first is to have a congressional declaration that the States themselves, as States, have been in rebellion. The second is to make the impression upon the country that these States are only to be brought back into the Union again by an act of Congress. I do not believe in either of these propositions. The States have not been regarded as in rebellion. That has not been the language of the Executive proclamations; it has not been the language of Congress in its legislation in regard to the insurrection. The phraseology has heretofore been, 'States, the inhabitants of which have been declared to be in rebellion.' Certainly, the State of Virginia was one of the most prominent States in this rebellion. The weight that she brought to the cause when she seceded, and the power which she brought to the army during the war, made her a very conspicuous member of the Southern Confederacy that was attempted to be established. Yet all of Virginia was not regarded as in rebellion. Some of the counties

of the State of Virginia were excepted, as I now recollect, by the President in his proclamation declaring what portions of the territory of the United States were in rebellion. The State was never declared to be in rebellion as a State; but the inhabitants of portions of the State of Virginia were declared to be in rebellion. Why, at the close of the war, after it is over, shall we adopt language that was not used during the pendency of the war or at its commencement—legislative language, if you please—to give a character to the rebellion which it has not had heretofore?

"My great objection to this resolution is that it undertakes to establish the idea in the country that these States have to be brought back into the Union by an act of Congress, which I do not believe. I believe that in law the States are in the Union, and that all that is needed is to give them practical relations to the Federal Government in every respect. So far as that was within the power of the Executive, it has been done. The Executive department is exercising all of its powers within and over these States. In some of the States, I believe, the Federal judiciary is also exercising its powers. It now simply requires the action of Congress to give them their full rights as States in the Union. Therefore I do not think it is proper to say in this resolution that the States have been in rebellion, or to provide that the States are to be brought back again by an act of Congress. This is all I have to say upon the amendment."

Mr. Wade, of Ohio, said: "Mr. President, I am perfectly aware that a war is made—and I am willing to meet it anywhere—upon what are called the radicals of the country, and I am one of them. In olden times I was here in the Senate called an abolitionist, but they have changed the name since. They have all got to be abolitionists now, and they have changed my name to 'radical.'"

Mr. Conness: "A radical change."

Mr. Wade: "No, sir, it is not a radical change. My radicalism is exactly the same thing that what you called my abolitionism was. Sir, it has conquered you. Who dare get up to-day and say that he is not an abolitionist?"

Mr. Sumner: "And it will conquer again."

Mr. Wade: "Will conquer again! It has conquered. What do you call this tempest in a teapot now before us? Do you call that a war? Sir, it does not rise to the dignity of warfare. The attempt is put down now in the hearts of the people. God knows the reverberations from all parts of the country show that the attempt to war on the radicals will not rise to respectability enough to make a defence. I thank God for it, for, Mr. President, in the history of mankind, so far as I have read or know it, there never has been a time when parties were so organized on radical principles of justice and right. The party with whom I act appeal to no expediency, to none of your political policies; we dig down to the granite

of eternal truth, and there we stand, and they who assail us have to assail the great principles of the Almighty, for our principles are chained to His throne, and are as indestructible as the Almighty himself. And do you think by your puny attempts, by false, copperhead, miserable papers like this to assail us, and think to prevail over the principles which we have adopted? I want no warfare with anybody; but if you will make war upon such principles as we have adopted, it is the worse for you. You cannot prevail.

"I have been in these political warfares for a long time; I claim to be an old soldier in them. I stood in this Senate when there were not five men with me to support me, and then I rose here and told those who were inveighing like demons against the principles that they called abolitionism, that I was an abolitionist. To-day you are all abolitionists, not voluntarily, but by compulsion. Yes, sir, compulsory abolitionists, for who does not go for abolition? Your President is an abolitionist; every leading man of the South is compelled to say he is an abolitionist, whether he is at heart or not. Such are the triumphs of the great principles of right, justice, and liberty, which were abetted and advocated by the great party with whom I have acted and claim now to act.

"Talk not to me about resolutions or the veto of a bill making any successful opposition to the measures that we have brought forward now for the purpose of advancing right, liberty, and justice in the South and everywhere else. You may delay the blow, but come it will, for the decree is not of us, but of the Almighty; we shall prevail, and all you can do or say will not be able to prevail against it.

"I have wondered a great deal why men did not learn more about these things than they seem to do. Our principles are assailed now with just the same virulence that they used to be when we were in a small minority. I do not hold that they have triumphed thus far because of any superior capacity on our part. Certainly not. Why is it, then, that we, from the smallest of all beginnings, have conquered the prejudices of the people and conquered the predominant party of this country which had stood completely dominating the whole nation for more than forty years? Why is it that we have conquered you and now are triumphant here in this Senate and almost by two-thirds in both branches, with the whole nation at our backs? What miracle has wrought this change? None other than the great consoling fact that justice, liberty, and right are destined among the American people to succeed, and the gates of hell cannot prevail against them, although they are trying at this particular time very hard to do it.

"Mr. President, I did not rise to speak on this resolution. It has been here long enough. I wish we would come to a vote upon the subject. I did not intend to open my mouth upon it, and I should not have said any thing now but

for the fact that I have been assailed by forgeries and falsehoods here without the least foundation in the world. When I see things running as calmly, as glibly, and as triumphantly as the principles I advocate do now, I am content to sit still and see the hand of the Lord. I am not compelled to labor now. Formerly we had a little something to do, but now we may sit still, in perfect calmness, and see how right and justice will work themselves out.

"I say to you, Mr. President, that it will not be one month from to-day before any man who claims that he is not a radical here will wish to God he had been. I understand very well that, from the President of the United States to the copperhead and the sympathizer, the radicals are sought to be put down, but you ought to have found out that it requires hard wrestling to put them down. You have not the force you used to have to contend with them; and, as I said before, you do not seem to be capable of learning any thing.

"I tell you we are triumphant. The people are impatient; the people are ahead of any of us, but I do not intend that they shall be of me if I can help it. On the great principles of justice and right for which I have always contended in this body, I have always intended to be ahead of the great mass of the people, but they have overtaken me, and are now threatening to go ahead of me. If I could take another advance I would do it; but having grounded myself on the granite of eternal truth, as I said before, I do not see that I can get any further; that is my foundation, and I defy all opposition to it. I do not care whether I am assailed by Presidents and called a traitor, or by somebody else; I do not care who it is that assails me or from whom the assault comes; it does not shake my nerves at all. I have seen times when a man wanted more faith to believe in the triumphant justice of God than now. His course with this nation has been so manifest for years past that no man but an utter heathen can doubt that the Almighty arm is bared in defence of the principles we advocate. If now, cowed by the impatience of the people, who are ready and eager for the contest on the issue that is sought to be joined with us, we should be backward, we should be the greatest cowards on God's earth. But we are not; and I say if Presidents or kings seek to make opposition to us stand firm, my friends, and you that waver, all better go back a little."

Mr. Dixon: "Waver in what?"

Mr. Wade: "Waver in the determination to bring right and justice by all men. If you waver from that, and think by expediency you can triumph, you are mistaken. You cannot do it; nobody can do it."

Mr. Cowan, of Pennsylvania, said: "I now move the resolution of the committee which proposes to stop agitation and quiet the country by declaring that eleven States shall not have representation in Congress, or either branch of

the same, until Congress shall have declared such State entitled to such representation.

"Now, let us for one instant contemplate this most extraordinary proposition. Is it not a virtual setting aside or suspension of the Constitution itself until Congress shall be moved to declare it restored?"

"That instrument declares that—

Representatives * * * * * shall be apportioned among the several States which may be included within this Union according to their respective numbers, &c.

"And by an act of Congress, of March 4, 1862, a certain number of Representatives, fifty-six, were apportioned to the eleven States in question, fixing by law their constitutional right in this behalf.

"The resolution before us sets all that at naught, and declares that these States shall have no representation at all till Congress shall so decide. The Constitution further declares that—

The Senate of the United States shall be composed of two Senators from each State.

"And this resolution declares that eleven States shall have no Senators at all till Congress shall so decide.

"Now, it is well to know whether Congress or the Constitution is supreme in this respect. We have been in the habit of thinking Congress was but the creature of the Constitution; that its title to rule and legislate for the people was under and by virtue of that instrument. How, then, does it assume to disregard it? Has the Sabbath become greater than the Lord of the Sabbath? Has the stream risen above the fountain, and the servant above his master?

"But it is said these States have been in rebellion. Well, suppose they have? Rebellion is treason; treason is a crime, and ought to be punished. But can Congress inflict that punishment? The Constitution says emphatically:

No bill of attainder or *ex post facto* law shall be passed.

"Now, if Congress were to pass this resolution, it would be both; because it is a bill which of itself inflicts this deprivation of right upon the people of eleven States as a punishment for their alleged treason, which is a species of attainder known as a 'bill of pains and penalties,' and which has been held to be included in the prohibition of 'bills of attainder.' Again, even if that barrier was not in the way, there is another, equally impassable, lying in this. Up until this time it has never been the law of the United States that a community could be punished at all *en masse*, either for treason or any thing else, and if Congress were to attempt it now as a punishment for crimes already committed, it would be null and void; it would be an '*ex post facto* law,' and one expressly forbidden.

"The whole is monstrous, no matter in what light it may be viewed. We have seen how small a number of traitors there were even in the worst parts of the South, and that after the

people of all classes had been left by the Federal Government at the mercy of these fiends, men, women, and children; after they had suffered all the miseries of war as the consequence, then to turn round to them and say to them, 'We will not punish the rebels who are guilty and who have brought all these misfortunes upon you, but we will punish you who are innocent. Instead of saying to the traitors 'We will hang you for treason,' you say to the innocent people, 'We will keep you out of Congress.' Think of it.

"We have no right to do this, either by law or in morals, and just as long as we persist in it, just so long will we be the allies of disunion, and enemies to the peace of the country. We hear it said here very often that in order to enable us to judge correctly and act advisedly in this matter we ought to have a general recognition of the State governments by Congress, that we may act together and avoid conflict. All this is plausible, but mischievous, because there is really not a doubt but that the present State governments are in the sole and undisputed possession of their several States, and are obeyed cheerfully as such. And the pretence that they require investigation and legislation to restore their relations with the Federal Government is only urged as it indirectly attains the end so much to be deprecated, namely, that of punishing the people in an unlawful and unconstitutional manner.

"Another and fatal objection to the course proposed in this resolution is that it provides for the joint action of the House and Senate in a matter which it is of the greatest moment should be kept entirely separate. If joint action can take place in cases of this kind, then the advantages which the country expected, and which it has realized, in the Senate of the United States, are lost to it perhaps forever.

"The constitutions of the two Houses are entirely different. The House of Representatives is national, representing numbers; the Senate is Federal, representing States. The great States of New York, Pennsylvania, Ohio, Illinois, are therefore potent in the House, but in the Senate, Rhode Island, Delaware, Vermont, and New Hampshire are their equals, and serve as a kind of breakwater to prevent the effects of the sudden impulses of such heavy populations as inhabit the States first named. The Senate is indeed the bulwark of the smaller States, and they ought therefore to be the especial guardians of the Constitution, because it is only by maintaining the strictest reverence for it they can expect to maintain their equal rights. I have been much surprised therefore to find Senators on this floor, whose interests of all others were most in danger, show such apathy with regard to these innovations, which if they are ever to become precedents will assuredly work the destruction of the lesser States.

"Now, the Constitution expressly provides that—

Each House shall be the judge of the elections, returns, and qualifications of its own members.

"A provision that must strike every one at first sight as necessary if the bodies are to be a check one upon the other. Because, if the Senate had to decide who shall go into the House or who shall not go in, the House would soon become the creature of the Senate and dependent upon it for its existence; and so if the Senate were to allow the House the same rights over its members. This resolution, however, very ungenerously selects only a single point upon which to apply the joint action complained of, and that is this: that both Houses shall jointly decide which are the States entitled to representation. That is the whole of it.

"Now, Mr. President, can any thing be clearer than that this very question has been already settled authoritatively and beyond dispute? Has not the Constitution settled it? Is it not to be found on every line and page of our laws—and especially in the act of March 4, 1862?

"Then, if this be so, the joint committee prevents the Senate from deciding on the elections, returns, and qualifications of its members, because it gets behind the whole and denies the right of States to members at all. It does not deny but that they have Legislatures competent to elect—if it did, the answer would be obvious: the Senate will decide that on the question of elections—but it declares at once, boldly, that although the people of these States are desirous of submitting to the laws they offended against, we will impose upon them a new penalty not known to the law.

"Mr. President, I think I have shown beyond question that at the breaking out of the rebellion there was not any considerable number of people, in any of the States in question, who ever were guilty of treason to the United States, if we admit the law to be as I hold it is, namely, that if the legitimate Government of any country suffers itself to be dispossessed and a hostile Government to be established and put in possession in its stead, so that it cannot protect its citizens in their resistance to such hostile Government, then it cannot punish them for acts done afterward under the authority of and in obedience to the hostile government; such acts cannot amount to treason, and the law excuses them.

"I think I have also shown that the moment the rebels yield and surrender, they are immediately in the custody of the law, and can only be subjected to such punishment as it provides—to be inflicted upon them through the courts according to 'due process' of law.

"I have shown that for any guilty part taken by the people in the late war, that the sufferings and losses they endured in that war were the natural and sufficient punishment; that after it they remained purged, and ought to be remitted to all their constitutional rights at once.

"That it is due to the dignity of the United States as a great nation if she punishes the actual traitors who incited the rebellion that it be done solemnly and according to the strictest form of law, in open courts, where the prisoners may have counsel and witnesses so that they may make their defence, if they have any.

"That according to the Constitution and laws, all the States are still in the Union; that secession ordinances could not repeal the one nor war set aside the other; that they are neither dead by forfeiture or *felo de se*, but are now in full and perfect existence with all their municipal machinery in full play.

"That the proposition of the committee of fifteen to amend the Constitution is fundamental and revolutionary, and destructive of the freedom of the States and the liberties of the people; that it is a threat to deprive them of their rights by compelling them either to admit negroes to the right of suffrage or to give up a share of their representation, which is theirs by law and the last amendment to the Constitution.

"That the resolution now before us from the same committee is also revolutionary and destructive, being an attempt to suspend the Constitution and laws in regard to representation in Congress over eleven States of the Union until Congress shall see fit to restore them. It is a declaration on the part of the members of the present House and Senate, that having the means of keeping these States from being represented here, they are going to do so as long as they please; that no one of these measures can be justified as a punishment for the rebellion; that the Constitution forbids them as bills of pains and penalties, and as *ex post facto* in their character.

"Then, sir, here at the conclusion, I will endeavor to answer a question which has been so often put; and with that air of braggart triumph that indicates an answer impossible. The question is this: 'Would you bring back here into the Senate rebels and traitors, the authors of all our troubles, whose hands are yet red with the blood of our slaughtered people? And if not, how do you propose to avoid it unless you deny these States representation for a time at least?'

"To all this I answer, no, as emphatically as any other Senator can do; but I would keep them out in a very different way from that proposed. I would keep them out by following the mode and seeking the remedy afforded by the Constitution and laws, instead of adopting a course forbidden by both and unjust in itself. I would keep out traitors, not keep out States; I would punish criminals, and not enslave communities; I would single out the guilty, and not confound the innocent with them.

"Is not this easy? When the traitor asks admission here, you can arrest him for his treason; you can commit him for trial; and the offence is not bailable. I suppose everybody will agree

that would keep him out, at least till he is tried. It has another great advantage, too: it is lawful, and none can complain of it.

"After the trial, if acquitted, he is not a traitor, and his case presents no difficulty. If he is convicted, attainted, and hanged, I suppose that would allay all fears of his return.

"Now, Mr. President, when I think how obvious and effectual this plan would be, I am amazed that it should have ever entered into the human mind to contrive another. Why is it not adopted? Sir, I am afraid to answer. I am afraid there are patriots who would prefer to let treason go unwhipped rather than they should risk their own hold on power. It looks to me much like that; and if so, I am sorry that any man can be so short-sighted as not to see the fatal consequences of such an exchange as this. Does it not say, your treason may go if you let us rule the country?

"One word more and I am done. The country is alarmed, the people are anxious, and the political atmosphere bodes the coming of no common storm. What can we do to prevent it and bring back peace to the country and harmony to the party? Is there no common ground on which we can stand? Is there no common standard round which we can rally? I think there is, sir. Surely, we may go back to the Constitution which we have all sworn to support. We can go back to the laws and enforce them without dissension among ourselves. Then there are things which we may avoid doing. We may avoid new measures on which we cannot agree, and which only serve as wedges to split us further and further asunder.

"Mr. President, why these new measures? Who is bound to the support of a new measure except the author of it? What member of a party is bound to a new measure not in contemplation of the party at the time it was organized, at the time its platform was laid down, except the author; and if dissension and division spring up from the new measure, who is responsible for that? The man who stands on the record, or the man who introduces the new measure? The man who catches the foxes and ties their tails so as to send them into the standing corn, or the men who do not? These are questions that the country are coming to ask. They will ask, who did this thing, who brought this about? Was the Freedmen's Bureau in the Baltimore platform? Was it in the Chicago platform? Where did the party agree to that as a party? Where was that laid down as a line to which all party men should come? The pretence is absurd. The Freedmen's Bureau bill is not now and never was a party measure, except with some few people who took it into their heads that it was a very good thing. Nobody blamed them for that; they had a right to believe that; but other people who did not believe it are not to be ostracized on that account, particularly if those who did not believe it thought that in itself it was not

only inexpedient and impolitic, but that it was unconstitutional.

"Now, Mr. President, I say the country is beginning to inquire who introduced this cause of dissension; who started this wedge which is to drive and drive until it separates the great Republican party? I say it is perfectly plain that the man who started the new measure, the man who persists in it, the man who ostracizes and denounces everybody who differs with him about it. I think, Mr. President, that is so plain that he who runs may read. Certainly there can be no doubt about that.

"Then, in conclusion, I have only to say that if we refuse these moderate counsels, if we refuse to abandon these *novæ res*, these new things, the only remedy will be to take the consequences, and they seldom linger long behind the act."

Mr. Doolittle, of Wisconsin, said: "Mr. President, if we choose to admit or refuse to admit Senators upon this floor, what have the House of Representatives to do about it? Can they send their Sergeant-at-Arms over here and take out our members? Can they send over their Sergeant-at-Arms and put members into this body? Can the Supreme Court do it? Suppose they decide that somebody has a right to come into this body or that he ought to be kept out, can they send their marshal to the Senate with their decree that A B and C D shall take their places in the Senate of the United States, or can they send over their marshal with their decree that A B or C D shall be taken from this body? Not at all. The idea that the President of the United States can send down any person here directing that A B or C D shall be admitted into this body, or that A B and C D shall be removed from this body, is equally preposterous, absurd, and revolutionary.

"It is because I, as an individual member of this Senate, insist that, upon this question of judging upon the right of representation in this body from every State, this body is independent of the House of Representatives, independent of the Supreme Court, independent of the Executive, independent of everybody under heaven, that I oppose the resolution that is now pending before the Senate—a resolution which on its face purports to be no law and has no binding effect. It binds nobody except as a man may be bound by a caucus resolution. You may say it binds his honor. It pledges him, that is all. This resolution has no effect. It is as void as a blank piece of paper, so far as any legal effect is concerned. But there is contained in this resolution a proposition that we as Senators pledge ourselves that we will not act upon the question of the admission of Senators of this body until the House gives their consent. This is, substantially, a mere caucus arrangement anyhow. It is not legislation. It is merely the expression of the opinion of gentlemen in the House of Representatives and gentlemen sitting here in the Senate that the two Houses of Congress have no authority

to go into an examination of the right of representatives to seats here until the two Houses by joint resolution or act of Congress agree. That is my objection to this resolution."

Mr. Saulsbury, of Delaware, said: "It is sometimes said on the other side of the House that certain doctrines uttered upon this side are repudiated. Sir, I do not know that this side of the House has distinctly announced any opinions through this debate. We have kept very quiet. It seems a division has been gotten up on the other side of the House between what are called the radicals and the conservatives. The Democratic portion of this body have sometimes been referred to as operating with the conservatives and as against the radicals. I think that any fair and impartial observer of what transpires here will bear testimony to the truth of what I now say. We have taken no sides in this quarrel. It is a division among the gentlemen themselves. They exercised what they supposed to be and what was, if they believed the bill to be a constitutional bill, the constitutional right of passing what was called the Freedmen's Bureau bill. The President of the United States in returning it with his objections exercised a perfectly constitutional right. Because he did so there was a very considerable manifestation of disapprobation of his action. When his veto message came in, the Democratic portion of this House voted upon that subject precisely as they voted before. But will my radical friends—as they seem to glory in the appellation of radicals—allow me to make one remark? In the great issue which they have made upon the President, and not the President upon them, they are pretty much in the situation, in my opinion, of the crazy man who got on the railroad track in the far West, where they had never before seen a car. It being announced that the cars would run on a certain day he went out and placed himself near a station, and as the train came along threw up his hat and his arms. The engineer, supposing that something was on the track, stopped the train and inquired what was the matter. The man replied, 'I want you to know, sir, that I, after having fought the lions of Bashan, am not going to be scared by a certain kind of hen-coop set up on wheels.' Sir, Andrew Johnson has laid the track, the car is in motion, and if our radical friends do not want to get run over they had better get off the track."

Mr. McDougall, of California, followed, saying: "I do not rise in my place now to enter into any lengthy discussion, for I would not trespass on the time of the Senator from Massachusetts who has been kind enough to afford me an opportunity of saying a few words. I choose not to engage in a general discussion of the questions that have been debated here, but to say a few words only as to the pending question. I have not been able yet to comprehend in the mind of a fair-minded and just man who speaks the truth, or who desires to speak it, the

possibility of his undertaking to overcome the Constitution of the United States by a resolution of the two Houses. That is the proposition pending, to overcome the plain letter of the Constitution of the United States by a resolution of the two Houses. There is a crime known to criminal law as obtaining property by false pretences; and it is said, I believe, in that law, that if you pretend as to an after-fact, it is not a technical false pretence. If the swearing is as to a past fact, then the person charged, on the charges being proven, may be condemned and punished. It has struck me that it may be a grave question now, whether falsely swearing as to what one has done is perjury, while falsely swearing as to what one will do, is not. It has been the practice of our Government ever since it was instituted to swear all the State officers to support the Constitution of the State and the Constitution of the United States, and I suppose every gentleman on this floor has taken that oath many times. Falsely swearing as to what you will do, perhaps may not be technical perjury; but permit me to say that when gentlemen undertake to violate the Constitution which they have sworn to support, and dare to say that because what they propose to do is right they dare to violate their oaths, it is one of the technical ways of avoiding just conclusions, which has been condemned by all just men, and will be condemned above."

Mr. Fessenden, of Maine, closed the debate, saying: "Now, sir, it will be observed that the resolution does not declare that neither body shall have the right to admit members until Congress has made a declaration upon the subject. There is nothing said about the right in any way or in any terms. It is precisely what I designated it to be the other day, a mere legislative declaration of our opinion and determination that, until Congress has declared the State (whichever one it may be that is before us), to be in a condition to be represented here, neither body will act upon the credentials of members."

"It will be noticed, and I say this in answer to what has been said by the honorable Senator from Connecticut (Mr. Dixon) as well as the honorable Senator from Wisconsin (Mr. Doole), that in no way does the resolution touch the question, as commonly understood, of the elections, qualifications, and returns of members. It leaves that matter precisely where it found it. It does not undertake to judge on the subject or to investigate it; and, in accordance with that idea, all the credentials which have been laid before the body, instead of being sent to the committee, have been simply laid upon the table."

"Now, Senators inquire, why will you deprive yourselves of the power to do certain things? The question of the admission of a member is in the hands of a majority of the body. The majority can control it always. It can do as it pleases with reference to it. If a majority of this body thinks that it is advisable

that Congress should first settle the question of the condition of the States, whether the States have placed themselves in a condition to send members here, they have the unquestionable power to lay those credentials on the table, and to keep them there until that question has been determined to their satisfaction. The Senate having that power to lay these credentials on the table and keep them there, is it a great stretch of power, is it going beyond their jurisdiction, to say that we will not take them from the table—for it is the majority that is to determine the question of qualifications and every thing else—until both branches have come to the conclusion that they shall be taken from the table in each branch and be acted upon? It is nothing but a legislative declaration of the course we intend to pursue with reference to the credentials that have been laid on our table, and I should like to inquire of anybody whether we have not the perfect right to do it? Even after we have done it, after we have made that legislative declaration—which I deem it important to make, because I think the power of Congress over the question of the condition of these States has been questioned—we, as a Senate, I concede, can, in spite of this legislative declaration, at any moment take them from the table and act upon them without asking the consent of the House of Representatives, and the House can, on its own side, in spite of this resolution, if passed, take the credentials of those claiming to be members of that House from its table and act upon them if it pleases. There is no question about that; and therefore this resolution is precisely what I described it to be—nothing in the world but a legislative declaration that we do not deem it advisable, and do not mean, and do not intend, to act upon the question of the admission of individuals who come here claiming seats, until Congress, both branches, shall have investigated and settled the question of the condition of the States."

"Now, sir, for one I am free to say if matters should go so far as to show that either House was acting unreasonably, wilfully, from temper, unjustly, so as to produce improper delay, I should conclude that it was time to reverse this action so far as this body was concerned."

"The ground on which I put this resolution originally—and Congress can at any time pass a law to the same effect if it pleases—was simply that we owed it to ourselves that this matter should be properly investigated, should be investigated by both branches, should be investigated in such a manner as to enable us to come to a conclusion which should be satisfactory, and that it had better be done by a joint committee of both branches; because it would be a very serious matter if one branch were to come to one conclusion and admit members, and the other branch were to come to the opposite conclusion and refuse to admit members. Under the circumstances by which we are surrounded, I have thought that Congress, by the concurrence of both branches, should first settle the

question which lies at the foundation, whether the States were in a condition and had the right as well as the power (if you choose to admit that) to send members here."

"The question was taken on the resolution, and it was adopted by the following vote:

YEAS—Messrs. Anthony, Brown, Chandler, Clark, Conness, Cragin, Creswell, Fessenden, Foster, Grimes, Harris, Henderson, Howe, Kirkwood, Lane of Indiana, Morrill, Nye, Poland, Pomeroy, Ramsey, Sherman, Sprague, Sumner, Trumbull, Wade, Willey, Williams, Wilson, and Yates—29.

NAYS—Messrs. Buckalew, Cowan, Davis, Dixon, Doolittle, Guthrie, Hendricks, Johnson, Lane of Kansas, McDougall, Morgan, Nesmith, Norton, Riddle, Saulsbury, Stewart, Stockton, and Van Winkle—18.

ABSENT—Messrs. Foot, Howard, and Wright—3.

In the House, on February 26th, Mr. McClurg, of Missouri, offered the following resolution, which was referred to the joint Committee on Reconstruction—yeas 102, nays 27.

Whereas, it is the opinion of this House, that the continued contumacy in the seceding States renders it necessary to exercise congressional legislation in order to give the loyal citizens of those States protection in their natural and personal rights enumerated in the Constitution of the United States, and, in addition thereto, makes it necessary to keep on foot a large standing army to secure the present enjoyment of those rights, to maintain the authority of the national Government, and to keep the peace; and whereas the country is already heavily burdened by a war debt incurred to defend the nationality against an infamous rebellion, and it is neither just nor politic to inflict this vast additional expense on the peaceful industry of the nation: Therefore,

Resolved, That it be referred to the joint committee of fifteen of the Senate and House to ascertain whether such contumacy be clearly manifest, and if so to inquire into the expediency of levying contributions on the disloyal inhabitants of such seceding States, to defray the extraordinary expenses that will otherwise be imposed on the General Government; and that said committee be instructed to report by bill or otherwise.

Mr. Bingham, from the joint committee, reported the following:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of the said Legislatures, shall be valid as part of said Constitution, namely:

ARTICLE —. The Congress shall have power to make all laws which shall be necessary and proper to secure to the citizens of each State all privileges and immunities of citizens in the several States, and to all persons in the several States equal protection in the rights of life, liberty, and property.

Mr. Ashley, of Ohio, on March 5th, offered the following:

Resolved by the House of Representatives (the Senate concurring), That the Constitution of the United States confers on Congress ample power for the protection of the emancipated slaves and freedmen in the States recently in rebellion.

Resolved, That in behalf of the loyal American people, the Congress of the United States pledge full and complete protection to all loyal men, irrespective of race or color, residing in the States recently in rebel-

lion, and especially to the soldiers and sailors who served in the Union army and navy, and to this end the Congress will demand such guaranties as to them shall seem sufficient, before recognizing any of the new State governments which now are or which hereafter may be organized, either under the order and direction of the President or by an independent movement of the loyal people in any such State.

Resolved, That the Union party of the nation, represented in Congress, earnestly desire that all States recently in rebellion shall, at the earliest moment consistent with the safety of the national Union, be restored to all the privileges, rights, and dignities of the States of the American Union which have not been in rebellion, and that so soon as constitutional State governments are organized therein, which shall secure, by constitutional provisions, the rights of all loyal men, without regard to race or color, and when the people of such States shall have elected men of undoubted loyalty as Senators and Representatives, the Congress of the United States will recognize such government as the constitutional government of such State.

Resolved, That in addition to the foregoing, Congress will also demand, as a condition to the complete restoration of any reorganized State, the entire exemption of every citizen from liability to taxation for payment of the rebel debt, or reimbursement either of expenditure incurred by State or local authorities, in aid of the rebellion, or for loss incurred by the emancipation of slaves.

On April 30th, Mr. Stevens, of Pennsylvania, from the joint committee, reported as follows:

A joint resolution proposing an amendment to the Constitution of the United States.

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as part of the Constitution, namely:

ARTICLE —. *Sec. 1.* No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Sec. 2. Representatives shall be apportioned among the several States which may be included within this Union according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But whenever in any State the elective franchise shall be denied to any portion of its male citizens not less than twenty-one years of age, or in any way abridged, except for participation in rebellion or other crime, the basis of representation in such State shall be reduced in the proportion which the number of male citizens shall bear to the whole number of such male citizens not less than twenty-one years of age.

Sec. 3. Until the 4th day of July, in the year 1870, all persons who voluntarily adhered to the late insurrection, giving it aid and comfort, shall be excluded from the right to vote for Representatives in Congress, and for electors for President and Vice-President of the United States.

Sec. 4. Neither the United States nor any State shall assume or pay any debt or obligation already incurred, or which may hereafter be incurred, in aid of insurrection or of war against the United States, or any claim for compensation for loss of involuntary service or labor.

Sec. 5. The Congress shall have power to enforce by appropriate legislation the provisions of this article.

Its consideration was postponed to a sub-

sequent day. At the same time Mr. Stevens further reported, as follows:

A bill to provide for restoring the States lately in insurrection to their full political rights.

Whereas, it is expedient that the States lately in insurrection should, at the earliest day consistent with the future peace and safety of the Union, be restored to full participation in all political rights: and whereas the Congress did, by joint resolution, propose for ratification to the Legislatures of the several States, as an amendment to the Constitution of the United States, an article in the following words, to wit:

ARTICLE —. Sec. 1. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Sec. 2. Representatives shall be apportioned among the several States which may be included within this Union, according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But whenever, in any State, the elective franchise shall be denied to any portion of its male citizens not less than twenty-one years of age, or in any way abridged except for participation in rebellion or other crime, the basis of representation in such State shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens not less than twenty-one years of age.

Sec. 3. Until the 4th day of July, in the year 1870, all persons who voluntarily adhered to the late insurrection, giving it aid and comfort, shall be excluded from the right to vote for Representatives in Congress, and for electors for President and Vice-President of the United States.

Sec. 4. Neither the United States nor any State shall assume or pay any debt or obligation already incurred, or which may hereafter be incurred, in aid of insurrection or of war against the United States, or any claim for compensation for loss of involuntary service or labor.

Sec. 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

Now, therefore,
Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever the above-recited amendment shall have become part of the Constitution of the United States, and any State lately in insurrection shall have ratified the same, and shall have modified its constitution and laws in conformity therewith, the Senators and Representatives from such State, if found duly elected and qualified, may, after having taken the required oaths of office, be admitted into Congress as such.

Sec. 2. *And be it further enacted,* That when any State lately in insurrection shall have ratified the foregoing amendment to the Constitution, any part of the direct tax under the act of August 5, 1861, which may remain due and unpaid in such State may be assumed and paid by such State; and the payment thereof, upon proper assurances from such State to be given to the Secretary of the Treasury of the United States, may be postponed for a period not exceeding ten years from and after the passage of this act.

Its consideration was postponed to a subsequent day. At the same time Mr. Stevens further reported, as follows:

A bill declaring certain persons ineligible to office under the Government of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress

assembled, That no person shall be eligible to any office under the Government of the United States who is included in any of the following classes, namely:

1. The President and Vice-President of the Confederate States of America, so called, and the heads of departments thereof.

2. Those who in other countries acted as agents of the Confederate States of America, so called.

3. Heads of Departments of the United States, officers of the Army and Navy of the United States, and all persons educated at the Military or Naval Academy of the United States, judges of the courts of the United States, and members of either House of the Thirty-sixth Congress of the United States who gave aid or comfort to the late rebellion.

4. Those who acted as officers of the Confederate States of America, so called, above the grade of colonel in the army or master in the navy, and any one who, as Governor of either of the so-called Confederate States, gave aid or comfort to the rebellion.

5. Those who have treated officers or soldiers or sailors of the army or navy of the United States, captured during the late war, otherwise than lawfully as prisoners of war.

Its consideration was also postponed to a subsequent day.

In the House, the consideration of the joint resolution for the amendment of the Constitution came up for consideration on March 8th. Mr. Stevens, of Pennsylvania, said: "I beg gentlemen to consider the magnitude of the task which was imposed upon the committee. They were expected to suggest a plan for rebuilding a shattered nation—a nation which though not dissevered was yet shaken and riven by the gigantic and persistent efforts of six million able and ardent men; of bitter rebels striving through four years of bloody war. It cannot be denied that this terrible struggle sprang from the vicious principles incorporated into the institutions of our country. Our fathers had been compelled to postpone the principles of their great Declaration, and wait for their full establishment till a more propitious time. That time ought to be present now. But the public mind has been educated in error for a century. How difficult in a day to unlearn it! In rebuilding, it is necessary to clear away the rotten and defective portions of the old foundations, and to sink deep and found the repaired edifice upon the firm foundation of eternal justice. If, perchance, the accumulated quicksands render it impossible to reach in every part so firm a basis, then it becomes our duty to drive deep and solid the substituted piles on which to build. It would not be wise to prevent the raising of the structure because some corner of it might be founded upon materials subject to the inevitable laws of mortal decay. It were better to shelter the household and trust to the advancing progress of a higher morality and a purer and more intelligent principle to underpin the defective corner.

"I would not for a moment inculcate the idea of surrendering a principle vital to justice. But if full justice could not be obtained at once, I would not refuse to do what is possible. The commander of an army who should find his

enemy intrenched on impregnable heights would act unwisely if he insisted on marching his troops full in the face of a destructive fire merely to show his courage. Would it not be better to flank the works and march round and round and besiege, and thus secure the surrender of the enemy, though it might cost time? The former course would show valor and folly; the latter moral and physical courage, as well as prudence and wisdom.

"This proposition is not all that the committee desired. It falls far short of my wishes, but it fulfils my hopes. I believe it is all that can be obtained in the present state of public opinion. Not only Congress but the several States are to be consulted. Upon a careful survey of the whole ground, we did not believe that nineteen of the loyal States could be induced to ratify any proposition more stringent than this. I say nineteen, for I utterly repudiate and scorn the idea that any State not acting in the Union is to be counted on the question of ratification. It is absurd to suppose that any more than three-fourths of the States that propose the amendment are required to make it valid; that States not here are to be counted as present. Believing, then, that this is the best proposition that can be made effectual, I accept it. I shall not be driven by clamor or denunciation to throw away a great good because it is not perfect. I will take all I can get in the cause of humanity, and leave it to be perfected by better men in better times. It may be that that time will not come while I am here to enjoy the glorious triumph; but that it will come is as certain as that there is a just God.

"The House should remember the great labor which the committee had to perform. They were charged to inquire into the condition of eleven States of great extent of territory. They sought, often in vain, to procure their organic laws and statutes. They took the evidence of every class and condition of witness, from the rebel vice-president and the commander-in-chief of their armies down to the humblest freedman. The sub-committees who were charged with that duty—of whom I was not one, and can therefore speak freely—exhibited a degree of patience and diligence which was never excelled. Considering their other duties, the mass of evidence taken may be well considered extraordinary. It must be remembered, also, that three months since, and more, the committee reported and the House adopted a proposed amendment fixing the basis of representation in such way as would surely have secured the enfranchisement of every citizen at no distant period. That, together with the amendment repudiating the rebel debt, which we also passed, would have gone far to curb the rebellious spirit of secession, and to have given to the oppressed race their rights. It went to the other end of the Capitol, and was there mortally wounded in the house of its friends.

"After having received the careful examination and approbation of the committee, and

having received the united Republican vote of one hundred and twenty Representatives of the people, it was denounced as 'utterly reprehensible' and 'unpardonable;' 'to be encountered as a public enemy;' 'positively endangering the peace of the country, and covering its name with dishonor.' 'A wickedness on a larger scale than the crime against Kansas or the fugitive slave law; gross, foul, outrageous; an incredible injustice against the whole African race;' with every other vulgar epithet which polished cultivation could command. It was slaughtered by a puerile and pedantic criticism, by a perversion of philosophical definition which, if when I taught school a lad who had studied Lindley Murray had assumed, I would have expelled him from the institution as unfit to waste education upon. But it is dead, and unless this (less efficient, I admit) shall pass, its death has postponed the protection of the colored race perhaps for ages. I confess my mortification at its defeat. I grieved especially because it almost closed the door of hope for the amelioration of the condition of the freedmen. But men in pursuit of justice must never despair. Let us again try and see whether we cannot devise some way to overcome the united forces of self-righteous Republicans and unrighteous copperheads. It will not do for those who for thirty years have fought the beasts at Ephesus to be frightened by the fangs of modern catamounts.

"Let us now refer to the provisions of the proposed amendment.

"The first section prohibits the States from abridging the privileges and immunities of citizens of the United States, or unlawfully depriving them of life, liberty, or property, or of denying to any person within their jurisdiction the 'equal' protection of the laws.

"I can hardly believe that any person can be found who will not admit that every one of these provisions is just. They are all asserted, in some form or other, in our DECLARATION or organic law. But the Constitution limits only the action of Congress, and is not a limitation on the States. This amendment supplies that defect, and allows Congress to correct the unjust legislation of the States, so far that the law which operates upon one man shall operate *equally* upon all. Whatever law punishes a white man for a crime shall punish the black man precisely in the same way and to the same degree. Whatever law protects the white man shall afford 'equal' protection to the black man. Whatever means of redress is afforded to one shall be afforded to all. Whatever law allows the white man to testify in court shall allow the man of color to do the same. These are great advantages over their present codes. Now different degrees of punishment are inflicted, not on account of the magnitude of the crime, but according to the color of the skin. Now color disqualifies a man from testifying in courts, or being tried in the same way as white men. I need not enumerate these partial and

oppressive laws. Unless the Constitution should restrain them, those States will all, I fear, keep up this discrimination, and crush to death the hated freedmen. Some answer, 'Your civil rights bill secures the same things.' That is partly true, but a law is repealable by a majority. And I need hardly say that the first time that the South with their copperhead allies obtain the command of Congress it will be repealed. The veto of the President and their votes on the bill are conclusive evidence of that. And yet I am amazed and alarmed at the impatience of certain well-meaning Republicans at the exclusion of the rebel States until the Constitution shall be so amended as to restrain their despotic desires. This amendment once adopted cannot be annulled without two-thirds of Congress. That they will hardly get. And yet certain of our distinguished friends propose to admit State after State before this becomes a part of the Constitution. What madness! Is their judgment misled by their kindness; or are they unconsciously drifting into the haven of power at the other end of the avenue? I do not suspect it, but others will.

"The second section I consider the most important in the article. It fixes the basis of representation in Congress. If any State shall exclude any of her adult male citizens from the elective franchise, or abridge that right, she shall forfeit her right to representation in the same proportion. The effect of this provision will be either to compel the States to grant universal suffrage or so to shear them of their power as to keep them forever in a hopeless minority in the national Government, both legislative and executive. If they do not enfranchise the freedmen, it would give to the rebel States but thirty-seven Representatives. Thus shorn of their power, they would soon become restive. Southern pride would not brook a hopeless minority. True it will take two, three, possibly five years before they conquer their prejudices sufficiently to allow their late slaves to become their equals at the polls. That short delay would not be injurious. In the mean time the freedmen would become more enlightened, and more fit to discharge the high duties of their new condition. In that time, too, the loyal Congress could mature their laws and so amend the Constitution as to secure the rights of every human being, and render disunion impossible. Heaven forbid that the Southern States, or any one of them, should be represented on this floor until such foundations of freedom are built high and firm! Against our will they have been absent for four bloody years; against our will they must not come back until we are ready to receive them. Do not tell me that there are loyal representatives waiting for admission—until their States are loyal they can have no standing here. They could merely misrepresent their constituents.

"I admit that this article is not as good as the one we sent to death in the Senate. In my judgment, we shall not approach the measure

of justice until we have given every adult freedman a homestead on the land where he was born and toiled and suffered. Forty acres of land and a hut would be more valuable to him than the immediate right to vote. Unless we give them this we shall receive the censure of mankind and the curse of Heaven. That article referred to provided that if one of the injured race was excluded the State should forfeit the right to have any of them represented. That would have hastened their full enfranchisement. This section allows the States to discriminate among the same class, and receive proportionate credit in representation. This I dislike. But it is a short step forward. The large stride which we in vain proposed, is dead; the murderers must answer to the suffering race. I would not have been the perpetrator. A load of misery must sit heavy on their souls.

"The third section may encounter more difference of opinion here. Among the people I believe it will be the most popular of all the provisions; it prohibits rebels from voting for members of Congress and electors of President until 1870. My only objection to it is that it is too lenient. I know that there is a morbid sensibility, sometimes called mercy, which affects a few of all classes, from the priest to the clown, which has more sympathy for the murderer on the gallows than for his victim. I hope I have a heart as capable of feeling for human woe as others. I have long since wished that capital punishment were abolished. But I never dreamed that all punishment could be dispensed with in human society. Anarchy, treason, and violence would reign triumphant. Here is the mildest of all punishments ever inflicted on traitors. I might not consent to the extreme severity denounced upon them by a provisional governor of Tennessee—I mean the late lamented Andrew Johnson of blessed memory—but I would have increased the severity of this section. I would be glad to see it extended to 1876, and to include all State and municipal as well as national elections. In my judgment we do not sufficiently protect the loyal men of the rebel States from the vindictive persecutions of their victorious rebel neighbors. Still I will move no amendment, nor vote for any, lest the whole fabric should tumble to pieces.

"I need say nothing of the fourth section, for none dare object to it who is not himself a rebel. To the friend of justice, the friend of the Union, of the perpetuity of liberty, and the final triumph of the rights of man and their extension to every human being, let me say, sacrifice as we have done your peculiar views, and instead of vainly insisting upon the instantaneous operation of all that is right accept what is possible, and 'all these things shall be added unto you.'

"I move to recommit the joint resolution to the Committee on Reconstruction."

Mr. Blaine, of Maine, arose to inquire if those to whom pardons had been granted by the

President would not be unjustly affected by the third section of the amendment. To which Mr. Stevens replied: "None of those who have been fully pardoned are affected by this provision."

Mr. Finck, of Ohio, thought it an inauspicious time to propose or make changes in the Constitution. He condemned the course which had been pursued by the majority in Congress; and said that, stripped of all disguises, the proposed measure was a mere scheme to deny representation to eleven States; to prevent indefinitely, a complete restoration of the Union, and perpetuate the power of a sectional and dangerous party. He further said:

"What is the theory on which these propositions are based?"

"This Union is composed of thirty-six States; and by law, in full force, but the provisions of which are defied and utterly disregarded, this House is legally and constitutionally to be composed of two hundred and forty-one members; but we have Representatives here from only twenty-five States, and only one hundred and eighty-four members.

"The constitutional number of Senators is two for each State, and when full that body would now consist of seventy-two, while it is in fact composed of but fifty. So that eleven States are denied all representation in both branches of Congress, although the Constitution provides 'that no State, without its consent, shall be deprived of its equal suffrage in the Senate;' and the right to representation in the House is equally clear.

"But this House by the mere exertion and combination of numbers excludes from its deliberations fifty-seven members; and the Senate by the same power excludes twenty-two members from a voice and vote in that chamber. And it is, sir, in this strange and extraordinary condition of our affairs that we are gravely invited to proceed to change the Constitution in such a manner as to deeply and materially affect every State whose representatives are excluded from Congress; and we are further asked to say to these States thus excluded, that if they refuse to debate themselves as equal States in the Union and decline to ratify and approve by affirmative action these changes, their exclusion shall be perpetual.

"I ask gentlemen to pause and reflect before they commit themselves to so monstrous and revolutionary a scheme as this."

Mr. Garfield, of Ohio, followed, and said: "First let me say I regret more than I shall be able to tell this House that we have not found the situation of affairs in this country such and the public virtue such that we might come out on the plain, unanswerable proposition that every adult intelligent citizen of the United States, unconvicted of crime, shall enjoy the right of suffrage." He expressed his entire approbation of the amendments, except the third, which was liable to a double construction relative to its effect upon those who had been

pardoned, and the whole section would have been far more defensible if the disfranchisement had been made perpetual.

The joint resolution was fully debated in the House until the 10th, when Mr. Stevens withdrew his motion to recommit and moved the previous question, which was seconded, and the main question ordered, when the joint resolution was passed by the following vote:

YEAS—Messrs. Alley, Allison, Ames, Anderson, Delos R. Ashley, James M. Ashley, Baker, Baldwin, Banks, Barker, Baxter, Beaman, Benjamin, Bidwell, Bingham, Blaine, Blow, Boutwell, Brownell, Broomall, Buckland, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Darling, Davis, Dawes, Defrees, Delano, Deming, Dixon, Dodge, Donnelly, Driggs, Dumont, Eckley, Eggleston, Eliot, Farnsworth, Ferry, Garfield, Grinnell, Griswold, Abner C. Harding, Hart, Hayes, Henderson, Higby, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, Demas Hubbard, James R. Hubbell, Hulburd, James Humphrey, Ingersoll, Jenckes, Julian, Kasson, Kelley, Kelso, Ketcham, Kuykendall, Laffin, George V. Lawrence, William Lawrence, Loan, Longyear, Lynch, Marston, McClurg, McIndoe, McKee, McRuer, Mercur, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, O'Neill, Orth, Paine, Patterson, Perham, Pike, Plants, Price, William H. Randall, Raymond, Alexander H. Rice, John H. Rice, Rollins, Sawyer, Schenck, Schofield, Shellabarger, Spalding, Stevens, Stillwell, Thayer, Francis Thomas, John L. Thomas, Trowbridge, Upson, Van Aernam, Bart Van Horn, Robert T. Van Horn, Ward, Warner, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, Williams, James F. Wilson, Stephen F. Wilson, Windom, Woodbridge, and the Speaker—128.

NAYS—Messrs. Ancona, Bergen, Boyer, Chandler, Coffroth, Dawson, Eldridge, Finck, Glossbrenner, Goodyear, Grider, Aaron Harding, Harris, Kerr, Latham, Le Blond, Marshall, McCullough, Niblack, Phelps, Radford, Samuel J. Randall, Ritter, Rogers, Ross, Rousseau, Shanklin, Sitgreaves, Smith, Strouse, Tabor, Taylor, Thornton, Trimble, Wiley, Winfield, and Wright—87.

NOT VOTING—Messrs. Brandagee, Culver, Denison, Farquhar, Hale, Hill, Hogan, John H. Hubbard, Edwin N. Hubbell, James M. Humphrey, Johnson Jones, Marvin, Nicholson, Noell, Pomeroy, Sloan Starr, and Wentworth—19.

In the Senate the debate on the joint resolution commenced on May 23d, by Mr. Howard of Michigan, who endeavored to present the views and motives which influenced the committee in presenting the report. A great number of witnesses, he said, had been examined as to the political and social condition of the Southern States, and the result of their investigations was the joint resolution presented. He then stated the privileges and rights already secured under the Constitution to the citizen and said: "Now, sir, there is no power given in the Constitution to enforce and to carry out any of these guaranties. They are not powers granted by the Constitution to Congress, and of course do not come within the sweeping clause of the Constitution authorizing Congress to pass all laws necessary and proper for carrying out the foregoing or granted powers, but they stand simply as a bill of rights in the Constitution, without power on the part of Congress to give them full effect; while at the same

time the States are not restrained from violating the principles embraced in them except by their own local constitutions, which may be altered from year to year. The great object of the first section of this amendment is, therefore, to restrain the power of the States and compel them at all times to respect these great fundamental guaranties. How will it be done under the present amendment? As I have remarked, they are not powers granted to Congress, and therefore it is necessary, if they are to be effectuated and enforced, as they assuredly ought to be, that additional power should be given to Congress to that end. This is done by the fifth section of this amendment, which declares that 'the Congress shall have power to enforce by appropriate legislation the provisions of this article.' Here is a direct affirmative delegation of power to Congress to carry out all the principles of all these guaranties, a power not found in the Constitution.

"The last two clauses of the first section of the amendment disable a State from depriving not merely a citizen of the United States, but any person, whoever he may be, of life, liberty, or property without due process of law, or from denying to him the equal protection of the laws of the State. This abolishes all class legislation in the States and does away with the injustice of subjecting one caste of persons to a code not applicable to another. It prohibits the hanging of a black man for a crime for which the white man is not to be hanged. It protects the black man in his fundamental rights as a citizen with the same shield which it throws over the white man. Is it not time, Mr. President, that we extend to the black man, I had almost called it the poor privilege of the equal protection of the law? Ought not the time to be now passed when one measure of justice is to be meted out to a member of one caste while another and a different measure is meted out to the member of another caste, both castes being alike citizens of the United States, both bound to obey the same laws, to sustain the burdens of the same Government, and both equally responsible to justice and to God for the deeds done in the body?"

"But, sir, the first section of the proposed amendment does not give to either of these classes the right of voting. The right of suffrage is not, in law, one of the privileges or immunities thus secured by the Constitution. It is merely the creature of law. It has always been regarded in this country as the result of positive local law, not regarded as one of those fundamental rights lying at the basis of all society and without which a people cannot exist except as slaves, subject to a despotism.

"As I have already remarked, section one is a restriction upon the States, and does not, of itself, confer any power upon Congress. The power which Congress has, under this amendment, is derived, not from that section, but from the fifth section, which gives it authority to pass laws which are appropriate to the attainment

of the great object of the amendment. I look upon the first section, taken in connection with the fifth, as very important. It will, if adopted by the States, forever disable every one of them from passing laws trenching upon those fundamental rights and privileges which pertain to citizens of the United States, and to all persons who may happen to be within their jurisdiction. It establishes equality before the law, and it gives to the humblest, the poorest, the most despised of the race the same rights and the same protection before the law as it gives to the most powerful, the most wealthy, or the most haughty. That, sir, is republican government, as I understand it, and the only one which can claim the praise of a just Government. Without this principle of equal justice to all men and equal protection under the shield of the law, there is no republican government and none that is really worth maintaining.

"The second section of the proposed amendment does not recognize the authority of the United States over the question of suffrage in the several States at all; nor does it recognize, much less secure, the right of suffrage to the colored race. I wish to meet this question fairly and frankly; I have nothing to conceal upon it; and I am perfectly free to say that if I could have my own way, if my preferences could be carried out, I certainly should secure suffrage to the colored race to some extent at least; for I am opposed to the exclusion and proscription of an entire race. If I could not obtain universal suffrage in the popular sense of that expression, I should be in favor of restricted, qualified suffrage for the colored race. But, sir, it is not the question here what will we do; it is not the question what you, or I, or half a dozen other members of the Senate may prefer in respect to colored suffrage; it is not entirely the question what measure we can pass through the two houses; but the question really is, what will the Legislatures of the various States to whom these amendments are to be submitted do in the premises; what is it likely will meet the general approbation of the people who are to elect the Legislatures, three-fourths of whom must ratify our propositions before they have the force of constitutional provisions?"

"Let me not be misunderstood. I do not intend to say, nor do I say, that the proposed amendment, section two, proscribes the colored race. It has nothing to do with that question, as I shall show before I take my seat. I could wish that the elective franchise should be extended equally to the white man and to the black man; and if it were necessary, after full consideration, to restrict what is known as universal suffrage for the purpose of securing this equality, I would go for a restriction; but I deem that impracticable at the present time, and so did the committee.

"The committee were of opinion that the States are not yet prepared to sanction so fundamental a change as would be the concession

of the right of suffrage to the colored race. We may as well state it plainly and fairly, so that there shall be no misunderstanding on the subject. It was our opinion that three-fourths of the States of this Union could not be induced to vote to grant the right of suffrage, even in any degree or under any restriction, to the colored race. We may be right in this apprehension or we may be in error. Time will develop the truth; and for one I shall wait with patience the movements of public opinion upon this great and absorbing question. The time may come, I trust it will come, indeed I feel a profound conviction that it is not far distant, when even the people of the States themselves where the colored population is most dense, will consent to admit them to the right of suffrage. Sir, the safety and prosperity of those States depend upon it; it is especially for their interest that they should not retain in their midst a race of pariahs, so circumstanced as to be obliged to bear the burdens of Government and to obey its laws without any participation in the enactment of the laws.

"The second section leaves the right to regulate the elective franchise still with the States, and does not meddle with that right.

"The three-fifths principle has ceased in the destruction of slavery and in the enfranchisement of the colored race. Under the present Constitution this change will increase the number of Representatives from the once slaveholding States by nine or ten. That is to say, if the present basis of representation, as established in the Constitution, shall remain operative for the future, making our calculations upon the census of 1860, the enfranchisement of their slaves would increase the number of their Representatives in the other House nine or ten, I think at least ten; and under the next census it is easy to see that this number would be still increased; and the important question now is, shall this be permitted while the colored population are excluded from the privilege of voting? Shall the recently slaveholding States, while they exclude from the ballot the whole of their black population, be entitled to include the whole of that population in the basis of their representation, and thus to obtain an advantage which they did not possess before the rebellion and emancipation? In short, shall we permit it to take place that one of the results of emancipation and of the war is to increase the Representatives of the late slaveholding States?

"The committee thought this should no longer be permitted, and they thought it wiser to adopt a general principle applicable to all the States alike, namely, that where a State excludes any part of its male citizens from the elective franchise, it shall lose Representatives in proportion to the number so excluded; and the clause applies not to color or to race at all, but simply to the fact of the individual exclusion. Nor did the committee adopt the principle of making the ratio of representation

depend upon the number of voters, for it so happens that there is an unequal distribution of voters in the several States, the old States having proportionally fewer than the new States. It was desirable to avoid this inequality in fixing the basis. The committee adopted numbers as the most just and satisfactory basis, and this is the principle upon which the Constitution itself was originally framed, that the basis of representation should depend upon numbers; and such, I think, after all, is the safest and most secure principle upon which the Government can rest. Numbers, not voters; numbers, not property; this is the theory of the Constitution.

"By the census of 1860, the whole number of colored persons in the several States was four million four hundred and twenty-seven thousand and sixty-seven. In five of the New England States, where colored persons are allowed to vote, the number of such colored persons is only twelve thousand one hundred and thirty-two. This leaves of the colored population of the United States in the other States unrepresented, four million four hundred and fourteen thousand nine hundred and thirty-five, or at least one-seventh part of the whole population of the United States. Of this last number, three million six hundred and fifty thousand were in the eleven seceding States, and only five hundred and forty-seven thousand in the four remaining slave States which did not secede, namely, Delaware, Maryland, Kentucky, and Missouri. In the eleven seceding States the blacks are to the whites, basing the calculation upon the census of 1860, nearly as three to five. A further calculation shows that if this section shall be adopted as a part of the Constitution, and if the late slave States shall continue hereafter to exclude the colored population from voting, they will do it at the loss at least of twenty-four Representatives in the other House of Congress, according to the rule established by the act of 1850. It is not to be disguised—the committee have no disposition to conceal the fact—that this amendment is so drawn as to make it the political interest of the once slaveholding States to admit their colored population to the right of suffrage. The penalty of refusing will be severe. They will undoubtedly lose, and lose so long as they shall refuse to admit the black population to the right of suffrage, that balance of power in Congress which has been so long their pride and their boast.

"I did not favor the third section of the amendment in the committee. I do not believe if adopted, it will be of any practical benefit to the country. It will not prevent rebels from voting for members of the several State Legislatures. A rebel, notwithstanding this clause may vote for a member of the State Legislature. The State Legislature may be made up entirely of disloyal elements, in consequence of being elected by a rebel constituency. That Legislature when assembled has the right, under the

Constitution, to appoint presidential electors itself if it shall choose to do so, and to refuse to refer that question to the people. It is the right of every State. It is very probable that the power of the rebel States would be used in exactly that way. We should therefore gain nothing as to the election of the next or any future President of the United States."

Mr. Wade, of Ohio, said: "I move to amend the joint resolution by striking out all after the word 'article' in line eight, and substituting the proposition which I send to the Chair to be read."

The Secretary read the words proposed to be inserted, as follows:

Sec. 1. No State shall make or enforce any law which shall abridge the privileges or immunities of persons born in the United States or naturalized by the laws thereof; nor shall any State deprive any person of life, liberty, or property without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Sec. 2. No class of persons as to the right of any of whom to suffrage discrimination shall be made, by any State, shall be included in the basis of representation, unless such discrimination be in virtue of impartial qualifications founded on intelligence or property, or because of alienage, or for participation in rebellion or other crime.

Sec. 3. The public debt of the United States, including all debts or obligations which have been or may hereafter be incurred in suppressing insurrection or in carrying on war in defence of the Union, or for payment of bounties or pensions incident to such war and provided for by law, shall be inviolable. But debts or obligations which have been or may hereafter be incurred in aid of insurrection or of war against the United States, and claims of compensation for loss of involuntary service or labor, shall not be assumed or paid by any State nor by the United States.

Sec. 4. The Congress shall have power to enforce by appropriate legislation the provisions of this article.

This amendment was subsequently withdrawn.

Mr. Wilson, of Massachusetts, said: "As amendments are being offered, I desire to submit an amendment, for the purpose of having it printed, to the second section of the article reported by the committee, and also an amendment to the third section."

The Secretary read the amendment proposed by Mr. Wilson to the second section, which was to strike out the section, and in lieu of it to insert the following words:

Representatives shall be apportioned among the several States according to their respective numbers; but if in any State the elective franchise is or shall be denied to any of its inhabitants, being male citizens of the United States above the age of twenty-one years, for any cause except insurrection or rebellion against the United States, the basis of representation in such State shall be reduced in the proportion which the number of male citizens so excluded shall bear to the whole number of male citizens over twenty-one years of age.

Mr. Wilson: "Before the other amendment is read, I wish to state in a single word the distinction between the proposition just read and the section of the committee's proposition for which it is offered as a substitute. In the original proposition the language is 'citizens of the State,' in this it is 'inhabitants, being

male citizens of the United States.' I think the distinction is of vital importance. Now, let the Secretary read my other proposition."

The Secretary read the proposed amendment, which was to strike out section three, and in lieu of it to insert the following:

That no person who has resigned or abandoned or may resign or abandon any office under the United States, and has taken or may take part in rebellion against the Government thereof, shall be eligible to any office under the United States or of any State.

Mr. Clark, of New Hampshire, said: "I desire to offer this as a substitute for the third section of the committee's resolution:

No person shall be a Senator or Representative in Congress, or be permitted to hold any office under the Government of the United States, who, having previously taken an oath to support the Constitution thereof, shall have voluntarily engaged in any insurrection or rebellion against the United States, or given aid or comfort thereto.

"I wish also to propose an amendment to the section in regard to the rebel debt, in these words:

Debts incurred in aid of rebellion or war against the United States are illegal and void, shall not be enforced in any court, or assumed or paid by the United States or any State, or by its authority; nor shall any compensation ever be made for the loss or emancipation of any slave.

Mr. Buckalew, of Pennsylvania, moved to add to the resolution the following additional section:

Sec. 6. This amendment shall be passed upon in each State by the Legislature thereof which shall be chosen, or the members of the most popular branch of which shall be chosen next after the submission of the amendment, and at its first session; and no acceptance or rejection shall be reconsidered or again brought in question at any subsequent session; nor shall any acceptance of the amendment be valid if made after three years from the passage of this resolution.

On May 29th, Mr. Johnson, of Maryland, moved to strike out the third section of the amendment, which motion was adopted unanimously.

Mr. Howard, of Michigan, then moved to amend section one of the article by adding after the words "section one," the following words, to constitute a part of the section:

All persons born in the United States and subject to the jurisdiction thereof are citizens of the United States and of the States wherein they reside.

He further moved to amend the second section by striking out the word "citizens," in the twentieth line, where it occurs, and inserting after the word "male" the words "inhabitants, being citizens of the United States;" and by inserting at the end of that section the words "any such State."

The third section, he said, "has already been stricken out. Instead of that section, or rather in its place, I offer the following:

Sec. 3. No person shall be a Senator or Representative in Congress, or an elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath as a member of

Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof; but Congress may, by a vote of two-thirds of each House, remove such disability.

"The following is to come in as section four:

The obligations of the United States incurred in suppressing insurrection, or in defence of the Union, or for payment of bounties or pensions incident thereto, shall remain inviolate.

"Section four, as it now stands, will be changed to section five, and I propose to amend that section as follows: strike out the word 'already,' in line thirty-four, and also the words 'or which may hereafter be incurred,' in line thirty-five, and also the words 'or of war' in lines thirty-five and thirty-six, and insert the word 'rebellion' in lieu thereof; and also strike out the words 'loss of involuntary service or labor' in line thirty-seven, and insert 'the loss or emancipation of any slave; but all such debts, obligations, and claims shall be forever held illegal and void.'"

Mr. Sumner, of Massachusetts, said: "I wish to give notice of an amendment which at the proper time I intend to offer to Senate bill No. 292, entitled 'A bill to provide for restoring to the States lately in insurrection their full political rights.' It is to strike out all after the enacting clause of the first section and to insert a section as a substitute which I ask to have printed."

The Secretary read it, as follows:

Strike out all after the enacting clause of the first section of the bill and insert in lieu thereof the following:

That when any State lately in rebellion shall have ratified the foregoing amendment and shall have modified its constitution and laws in conformity therewith, and shall have further provided that there shall be no denial of the elective franchise to citizens of the United States because of race or color, and that all persons shall be equal before the law, the Senators and Representatives from such State, if found duly elected and qualified, may, after having taken the required oaths of office, be admitted into Congress as such: *Provided*, That nothing in this section shall be so construed as to require the disfranchisement of any loyal person who is now allowed to vote.

On May 8th, the first amendment, moved by Mr. Howard, was considered.

The Secretary read the amendment, which was, after the words "section one," to insert:

All persons born in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the States wherein they reside.

So that the section will read:

Sec. 1. All persons born in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the States wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, nor shall any State deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

Mr. Doolittle, of Wisconsin, moved to amend the amendment, by inserting after the word "thereof" the words "excluding Indians not taxed."

Mr. Howard, of Michigan, objected to the amendment, on the ground that Indians who maintain tribal relations have always been regarded in our legislation and jurisprudence as *quasi* foreign nations.

The effect of the amendment on the Chinese in California was thus stated by Mr. Conness: "Now, I will say, for the benefit of my friend, that he may know something about the Chinese in future, that this portion of our population, namely, the children of Mongolian parentage, born in California, is very small indeed, and never promises to be large, notwithstanding our near neighborhood to the Celestial land. The habits of those people, and their religion, appear to demand that they all return to their own country at some time or other, either alive or dead. There are, perhaps, in California to-day about forty thousand Chinese—from forty to forty-five thousand. Those persons return invariably, while others take their places; and, as I before observed, if they do not return alive, their bones are carefully gathered up and sent back to the Flowery Land. It is not an unusual circumstance that the clipper-ships trading between San Francisco and China carry at a time three or four hundred human remains of these Chinese. When interred in our State they are not interred deep in the earth, but laid very near the surface, and then mounds of earth are laid over them, so that the process of disinterment is very easy. That is their habit and custom; and as soon as they are fit for transmission to their own country they are taken up with great regularity and sent there. None of their bones are allowed to remain. They will return, then, either living or dead.

"Another feature connected with them is, that they do not bring their females to our country but in very limited numbers, and rarely ever in connection with families; so that their progeny in California is very small indeed. From the description we have had, from the honorable Senator from Pennsylvania, of the Gypsies, the progeny of all Mongolians in California is not so formidable in numbers as that of the Gypsies in Pennsylvania. We are not troubled with them at all. Indeed, it is only in exceptional cases that they have children in our State: and therefore the alarming aspect of the application of this provision to California, or any other land to which the Chinese may come as immigrants, is simply a fiction in the brain of persons who deprecate it, and that alone."

Mr. Doolittle, of Wisconsin, supported his amendment on the ground that there was a large mass of Indian population, clearly subject to the jurisdiction of the United States, who ought not to be included as citizens of the United States.

Mr. Trumbull, of Illinois, urged that the words "subject to the jurisdiction of the United

States" did mean not owing allegiance to anybody else. The Indians are not subject to our jurisdiction.

Mr. Johnson, of Maryland, said that who is a citizen of the United States is, at present, an open question. There is no definition as to how citizenship can exist in the United States except through the medium of citizenship in a State. The amendment proposes to define what citizenship is in the best way that can be devised. He further thought that in one sense the Indians were a part of the people of the United States, being within the Territorial limits. The United States may exercise jurisdiction over all the tribes. The courts would sustain this jurisdiction. The amendment proposed should, therefore, be accepted.

Mr. Hendricks, of Indiana, asked if it were not a matter to be decided by Congress alone, whether to treat with the Indians by treaty, or govern them by direct law. He said: "I asked the question whether, under the Constitution, under the powers of this Government, we may extend our laws over the Indians and compel obedience, as a matter of equal right, from the Indians. If the Indian is bound to obey the law, he is subject to the jurisdiction of the country; and that is the question."

"Now, sir, this question has once or twice been decided by the Attorney-General so far as he could decide it. In 1855 he was inquired whether the laws of the United States regarding the intercourse with the Indian tribes, by the general legislation in regard to Oregon, had been extended to Oregon; and he gave as his opinion that the laws had been extended to Oregon, and regulated the intercourse between the white people and the Indians there. Subsequently, the Attorney-General was asked whether Indians were citizens of the United States in such sense as that they could become the owners of the public lands where a right to acquire them was limited to citizens; and in the course of that opinion he says that the Indian is not a citizen of the United States by virtue of his birth, but that he is a subject."

Mr. Howard, of Michigan, said in reply: "According to the ideas of the honorable Senator from Wisconsin, as I understand them, this consequence would follow the adoption of his amendment: all that would remain to be done on the part of any State would be to impose a tax upon the Indians, whether in their tribal condition or otherwise, in order to make them citizens of the United States. The great objection, therefore, to the amendment is that it is an actual naturalization, whenever the State sees fit to enact naturalization law in reference to the Indians in the shape of the imposition of a tax, of the whole Indian population within its limits. There is no evading this consequence."

Mr. Saulsbury, of Delaware, said: "I do not presume that any one will pretend to dis-

guise the fact that the object of this first section is simply to declare that negroes shall be citizens of the United States. There can be no other object in it, I presume, than a further extension of the legislative kindness and beneficence of Congress toward that class of people.

'The poor Indian, whose untutored mind
Sees God in clouds, or hears Him in the wind,'
was not thought of. I say this, not meaning it to be any reflection upon the honorable committee who reported the amendment, because for all the gentlemen composing it I have a high respect personally; but that is evidently the object. I have no doubt myself of the correctness of the position, as a question of law, taken by the honorable Senator from Wisconsin; but, sir, I feel disposed to vote against his amendment, because if these negroes are to be made citizens of the United States, I can see no reason, in justice or in right, why the Indians should not be made citizens. If our citizens are to be increased in this wholesale manner, I cannot turn my back upon that persecuted race, among whom are many intelligent, educated men, and embrace as fellow-citizens the negro race. I therefore, as at present advised, for the reasons I have given, shall vote against the proposition of my friend from Wisconsin, although I believe, as a matter of law, that his statements are correct."

The question was taken, and resulted as follows:

YEAS—Messrs. Buckalew, Cowan, Davis, Doolittle, Guthrie, Hendricks, Johnson, McDougall, Norton, and Riddle—10.

NAYS—Messrs. Anthony, Clark, Conness, Cragin, Creswell, Edmunds, Fessenden, Foster, Grimes, Harris, Henderson, Howard, Howe, Kirkwood, Lane of Kansas, Morgan, Morrill, Nye, Poland, Pomeroy, Ramsey, Sherman, Stewart, Sumner, Trumbull, Van Winkle, Wade, Willey, Williams, and Wilson—30.

ABSENT—Messrs. Brown, Chandler, Dixon, Lane of Indiana, Nesmith, Saulsbury, Sprague, Wright, and Yates—9.

The first and second amendments proposed by Mr. Howard were then agreed to. To the amendment offered as section three, Mr. Hendricks, of Indiana, moved to amend by inserting the words "during his term of office," before the words "have engaged." The motion was lost, and the amendment of Mr. Howard agreed to, by the following vote:

YEAS—Messrs. Anthony, Chandler, Clark, Conness, Cragin, Creswell, Edmunds, Fessenden, Foster, Grimes, Harris, Henderson, Howard, Howe, Kirkwood, Lane of Indiana, Lane of Kansas, Morgan, Morrill, Nye, Poland, Pomeroy, Ramsey, Sprague, Stewart, Sumner, Trumbull, Van Winkle, Wade, Willey, Williams, and Wilson—32.

NAYS—Messrs. Buckalew, Cowan, Davis, Doolittle, Guthrie, Hendricks, Johnson, Norton, Riddle, and Saulsbury—10.

ABSENT—Messrs. Brown, Dixon, McDougall, Nesmith, Sherman, Wright, and Yates—7.

The section four of the amendment then came up for consideration, which declares that the obligations incurred by the United States shall remain inviolate. Mr. Hendricks, of Indiana, said:

"At the meeting of Congress, but before the President had delivered his message, and before his views had been officially communicated, the Republican members, in caucus, determined to raise a committee of fifteen to 'inquire into the condition of the States which formed the so-called Confederate States of America, and report whether they or any of them are entitled to be represented in either House of Congress.' In most indecent haste the resolution passed both branches, and the committee became fastened upon Congress and the country. Because of its party origin, the work it had to do, and the secret character of its proceedings, that committee came to be known in the country as the 'revolutionary tribunal,' the 'directory,' and the 'star chamber.' Its first report was made some months since, in which it was proposed to reduce the representation of the Southern States; but by the aid of the distinguished Senator from Massachusetts (Mr. Sumner), who submits to party restraints upon his judgment with impatience, that measure was defeated. Its second report is now upon our desks. It passed the House, but when it came under discussion in the Senate, and had to bear the test of the independent judgment of Senators, it was found wanting, and its defeat became almost certain. A second defeat of a party programme could not be borne; its effect upon the fall elections would be disastrous. A caucus was called, and we witnessed the astounding spectacle of the withdrawal, for the time, of a great legislative measure, touching the Constitution itself, from the Senate, that it might be decided in the secret councils of a party. For three days the Senate-chamber was silent, but the discussions were transferred to another room of the Capitol, with closed doors and darkened windows, where party leaders might safely contend for a political and party policy.

"When Senators returned to their seats I was curious to observe who had won and who lost in the party lottery. The dark brow of the Senator from New Hampshire (Mr. Clark) was lighted with a gleam of pleasure. His proposed substitute for the third section was the marked feature of the measure. But upon the lofty brow of the Senator from Nevada (Mr. Stewart) there rested a cloud of disappointment and grief. His bantling, which he had named universal amnesty and universal suffrage, which he had so often dressed and undressed in the presence of the Senate, the darling offspring of his brain, was dead; it had died in the caucus; and it was left to the sad Senator only to hope that it might not be his last. Upon the serene countenance of the Senator from Maine, the chairman of the fifteen, there rested the composure of the highest satisfaction; a plausible political platform had been devised, and there was yet hope for his party.

"In this weighty business now before us what are the facts? The House sent us four propositions to change the Constitution in one bill.

Upon discussion it was found that probably no one of the propositions, nor any proposed modification thereof, could receive the required vote. Two-thirds of the Senators, belonging to one political party, retired from the Senate to consider and agree upon a bill. Each Senator by going into the secret caucus, agreed and became bound to vote for whatever the majority of the caucus should adopt. A section or an entire bill may be adopted by a bare majority of the caucus, much less than one-half the Senate, but the entire two-thirds must vote for it in the Senate, not because it is right, but because the majority of the caucus has said so; and thus an amendment of the Constitution may be adopted by the Senate when a majority of the body would vote against it if no party obligation rested upon them. What Senator would dare propose to shut these doors against the people, that we in secret might take steps to change their great charter of liberty? The people would not endure it, but in congregating thousands would burst them open and demand to know all that was said and done upon a matter of such interest to them. The present proposed amendment has been decided upon in a conclave more secret than has ever been known in this country.

"So carefully has the obligation of secrecy been observed that no outside Senators, not even the sharp-eyed men of the press, have been able to learn one word that was spoken, or one vote given. An Egyptian darkness covers the proceeding. The secret could not be more profound had the conclave assembled down in the deep and dark caverns of the earth. If you change the Constitution, have the people not the right to know how and why it is done, what was proposed and said, and how each Senator voted? Is it not their business? Or indeed have they masters, party chieftains, who may say to them, 'We govern, you obey!' Is it not a fact that should arrest attention, that since this measure was reported from the caucus scarce an explanation has been conceded, and not one amendment offered or voted for by a single Senator who was in the caucus, so exacting and imperative is the obligation, and so literally is party authority obeyed? Sir, if the people can only come to know how this thing has been done, I believe they will refuse their indorsement.

"I now propose a brief examination of the measure as it came from the caucus. It proposes an additional article of five sections, making that number of amendments or additions to the Constitution.

"For the first section the virtue is claimed that it defines citizenship of the United States and of the States. I will read that part of the section:

All persons born in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside.

"What citizenship is, what are its rights and duties, its obligations and liabilities, are not

defined or attempted to be defined; but these varied questions are left as unsettled as during all the course of our history, when they have occupied the attention and taxed the learning of the departments of Government. But this is certain, that the section will add many millions to the class of persons who are citizens. We have been justly proud of the rank and title of our citizenship, for we understood it to belong to the inhabitants of the United States who were descended from the great races of people who inhabit the countries of Europe, and such emigrants from those countries as have been admitted under our laws. The rank and title conferred honor at home and secured kindness, respect, and safety everywhere abroad; but if this amendment be adopted, we will then carry the title and enjoy its advantages in common with the negroes, the coolies, and the Indians. When the Senator from Wisconsin proposed an amendment excluding the savage Indians of the forest, I believe every Senator who had been in the caucus voted against it. No one was authorized to change a word that the caucus had used, but I am not quite sure that the people of Minnesota will regard the obligation to a caucus as a sufficient reason why the Senator from that State (Mr. Ramsey) should seek to confer the rank, privileges, and immunities of citizenship upon the cruel savages who destroyed their peaceful settlements and massacred the people with circumstances of atrocity too horrible to relate. How our citizenship will be esteemed at home and abroad, should this amendment be adopted, we may judge by consulting the sentiments with which we regard Mexican citizenship. We feel that it defines a mixed population, made up of races that ought not to mingle—whites, negroes, and Indians—of whom twenty thousand could not cope with four thousand soldiers of the United States of pure white blood on the field of Buena Vista. It was the work of many generations to place the name and fame of our citizenship so high that it ranked with the proudest titles on earth; but the mad fanaticism and partisan fury of a single year may so degrade it as there shall be

‘None so poor to do it reverence.’

“The second section now demands our attention. The intent and effect of that section is to take away representation in Congress in all the States in which the right of voting is not given to the negroes. The purpose is to constrain every State to confer the right of voting upon the negroes; and in case of refusal, the penalty is loss of representation. The section does not rest upon the proposition that those whom the States treat as unfit to vote shall not be represented, for it is so framed as to continue to the Northern and Eastern States their twenty Representatives that are based upon a non-voting population. It is so framed, also, as to continue to the States of Maryland, Tennessee, West Virginia, and Missouri, their full representation, although during the war

the military power was so used in those States as to place the political power in the hands of a few, who so exercised it as to exclude the residue of the people from the ballot-box. You say that if the States treat the negroes as unfit to vote, then they shall not be represented; that no representation shall be allowed for them; then, I ask, if in some of the Northern States the foreigner is denied a vote for five years, why shall he be voted for? If in Maryland, West Virginia, Tennessee, and Missouri, the majority are treated as unfit to vote, why shall the minority vote for them and be represented for them? Come, now, let candor and truth have full sway, and answer me, is it not because you believe that the few in these States now allowed to vote will send radicals to Congress, and therefore you allow them to send full delegations that it may add to your political party power? And I now submit to your patriotism, to your love of our country, if we have not come upon most dangerous times, when our Constitution is to be torn up and remodelled that a political party may make its power more secure, that it may hold on to the offices, and shape and control sectional policies.

“Mr. President, I now venture the prediction that this thing cannot succeed; that in this land of intelligence and love of liberty and right, permanent power cannot be built upon inequality, injustice, and wrong. If the principle be right that none but voters ought to be represented, why do you not say so? If you think the negro ought to have the right of voting; if you are in favor of it, and intend it shall be given, why do you not in plain words confer it upon them? It is much fairer than to seek it by indirection, and the people will distinctly understand you when you propose such a change of the Constitution. I am not for it directly, nor will I coerce the States to its allowance. If conferred by the free action of the States, I am content. Within the limits of constitutional right and power I will support all measures necessary and proper for the protection and elevation of the colored race; measures safe and just to both races; but I do not believe that it is for the good of either race that they should be brought into close social and political relations.

“The third section provides that no person shall ever hold any office under the United States, or under any State, who, having at any time taken the oath prescribed by the Constitution as an officer of the United States or of any State, shall engage in rebellion or give aid and comfort to the public enemies. The proposition to exempt from the operations of the section those who against their will were compelled to participate in the rebellion, was voted down; and the section now stands excluding from all offices every person of the described class who either voluntarily or involuntarily became connected with the rebellion; and that, too, notwithstanding the party may be under the shield of the President's pardon. This

harsh and sweeping measure will include many excellent men whose services now in the work of reconciliation would be of the greatest value to the country—men who displayed heroic courage in standing out against the secession movement, but who afterward yielded obedience to and served the established government *de facto*. This measure is in the spirit that pursued the supporters of Cromwell and the Parliament after the Restoration. It is in the spirit of vengeance after men are beaten and have surrendered, and cannot bring a blessing to our country. Senators say that the measure is not penal in its character. Why not? When pardoned, are not these men eligible to State and Federal offices? And do you not propose to strip them of their eligibility because of their crime?

"The fourth section provides that the public debt shall remain inviolate. Who has asked us to change the Constitution for the benefit of the bondholders? Are they so much more meritorious than all other classes that they must be specially provided for in the Constitution? Or, indeed, do we distrust ourselves, and fear that we will all become repudiators? A provision like this, I should think, would excite distrust, and cast a shade on public credit. But perhaps the real purpose is so to hedge in the bondholders by constitutional provision as that they never may be taxed; that Congress can never assent to their taxation, and so that three billions of capital may bear no portion of the public burdens. Such would be the effect of this amendment. Who has attacked public credit, or questions the obligation to pay the public debt? Are the bondholders not receiving their interest, even in advance, and in gold? Why, then, do they ask this extraordinary guaranty? They trusted the good faith of the people, and there is no breach of that faith. When things entirely unusual are asked, it is well for the people to inquire, why it is, what is the purpose, and how far will it carry us?

"The fifth section declares the debts contracted in aid of the rebellion illegal, and prohibits their payment. Mr. President, who is so stupid as to have supposed these debts legal, or that they had any valid existence for one hour after the *de facto* government of the Confederate States ceased to exist? Who is so silly as to fear their payment? The least that may be said of this section is that it would be harmless, but I would regret to see the face of the Constitution marred by a provision so unnecessary and trifling.

"The sixth and last section provides that Congress shall have power to enforce, by appropriate legislation, the provisions of the article. When these words were used in the amendment abolishing slavery, they were thought to be harmless; but during this session there has been claimed for them such force and scope of meaning as that Congress might invade the jurisdiction of the States, rob them of their

reserved rights, and crown the Federal Government with absolute and despotic power. As construed, this provision is most dangerous. Without it the Constitution possesses the vitality and vigor for its own enforcement through the appropriate departments.

"Mr. President, I have now briefly examined the provisions of this article, and cannot resist the conviction that some of them are useless, while others are vicious and dangerous. Nor can I resist the conviction that this measure is pressed, not because of an exigency in our affairs, but to carry out a party programme. The President has his policy. You oppose him. You charge him with usurpation, while at the same time you are straining every brace and timber in the Constitution to secure to yourselves absolute control; indeed, you reach out beyond the Constitution, and by amendment—a proceeding to be resorted to only upon rare and solemn occasions—you grasp after, and, with the avidity of hunger, clutch power."

The amendments proposed by Mr. Howard were adopted. Numerous amendments were then offered to the second section, relative to the basis of representation, which were largely debated and rejected, and the action of the Committee of the Whole reported and approved by the Senate by two-thirds vote. The joint resolution, as amended by the Senate, was as follows:

Joint resolution proposing an amendment to the Constitution of the United States.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as part of the Constitution, namely:

ARTICLE —. *Sec. 1.* All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

Sec. 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of representation thereof shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Sec. 3. No person shall be a Senator or Representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States or under any State, who, having previously taken an oath as a member of Congress

or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may, by a vote of two-thirds of each House, remove such disability.

Sec. 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims shall be held illegal and void.

Sec. 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

In the House, on June 13th, the question was put on concurring with the amendments of the Senate; and there were—yeas 130, nays 32, not voting 32; as follows:

YEA—Messrs. Alley, Allison, Ames, Delos R. Ashley, James M. Ashley, Baker, Baldwin, Banks, Barker, Baxter, Beaman, Bidwell, Bingham, Blaine, Boutwell, Bromwell, Buckland, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Darling, Davis, Dawes, Defrees, Delano, Dodge, Donnelly, Driggs, Dumont, Eckley, Eggleston, Eliot, Farnsworth, Farquhar, Ferry, Garfield, Grinnell, Griswold, Hale, Abner C. Harding, Hart, Hayes, Henderson, Higby, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, John H. Hubbard, James R. Hubbell, Jenckes, Julian, Kelley, Kelo, Ketchum, Kuykendall, Laffin, Latham, George V. Lawrence, Loan, Longyear, Lynch, Marvin, McCarg, McKee, McKuer, Mercer, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, O'Neill, Orth, Paine, Perham, Phelps, Pike, Plants, Pomeroy, Price, William H. Randall, Raymond, Alexander H. Rice, John H. Rice, Sawyer, Schenck, Schofield, Shellabarger, Sloan, Smith, Spalding, Stevens, Stillwell, Thayer, Francis Thomas, John L. Thomas, Trowbridge, Upson, Van Aernam, Robert T. Van Horn, Ward, Warner, Henry D. Washburn, William B. Washburn, Welker, Wentworth, Whaley, Williams, James F. Wilson, Stephen F. Wilson, Windom, and the Speaker—120.

NAY—Messrs. Ancona, Bergen, Boyer, Chanler, Coffroth, Dawson, Denison, Eldridge, Finck, Glossbrenner, Grider, Aaron Harding, Hogan, Edwin N. Hubbell, James M. Humphrey, Kerr, Le Blond, Marshall, Niblack, Nicholson, Samuel J. Randall, Ritter, Rogers, Ross, Sitgreaves, Strouse, Tabor, Taylor, Thornton, Trimble, Winfield, and Wright—32.

NOT VOTING—Messrs. Anderson, Benjamin, Blow, Brandegee, Broomall, Culver, Deming, Dixon, Goodrear, Harris, Hill, Demas Hubbard, Hulburd, James Humphrey, Ingersoll, Johnson, Jones, Kasson, William Lawrence, Marston, McCullough, McIndoe, Nell, Patterson, Radford, Rollins, Rousseau, Shank, Starr, Burt Van Horn, Elihu B. Washburne, and Woodbridge—32.

The Speaker: "Two-thirds of both Houses having concurred in the joint resolution, proposing an amendment to the Constitution of the United States, the joint resolution has passed."

In the House, on June 18th, Mr. Cobb, of Wisconsin, from the Committee on Enrolled Bills, reported that, on June 16th, a copy of the joint resolution to amend the Constitution was filed with the Secretary of State.

Mr. Bingham, of Ohio, asked leave to introduce the following resolution, which was granted:

Resolved by the House of Representatives (the Senate concurring), That the President of the United States be requested to transmit forthwith to the Executives of the several States of the United States copies of the article of amendment proposed by Congress to the State Legislatures to amend the Constitution of the United States, passed June 13, 1866, respecting citizenship, the basis of representation, disqualification for office, the validity of the public debt of the United States, etc., to the end that the said States may proceed to act upon the said article of amendment, and that he request the Executives of the States that may ratify the said amendment to transmit to the Secretary of State certified copies of such ratification.

The resolution was adopted—yeas 87, nays 20.

On June 22d President Johnson sent the following message to the House:

WASHINGTON, D. C., June 22, 1866.

To the Senate and House of Representatives:

I submit to Congress a report of the Secretary of State, to whom was referred the concurrent resolution of the 18th instant respecting a submission to the Legislatures of the States of an additional article to the Constitution of the United States. It will be seen from this report that the Secretary of State had, on the 16th instant, transmitted to the Governors of the several States certified copies of the joint resolution passed on the 13th instant proposing an amendment to the Constitution.

Even in ordinary times any question of amending the Constitution must be justly regarded as of paramount importance. This importance is at the present time enhanced by the fact that the joint resolution was not submitted by the two Houses for the approval of the President, and that of the thirty-six States which constitute the Union eleven are excluded from representation in either House of Congress, although, with the single exception of Texas, they have been entirely restored to all their functions as States in conformity with the organic law of the land, and have appeared at the national capital by Senators and Representatives, who have applied for and have been refused admission to the vacant seats. Nor have the sovereign people of the nation been afforded an opportunity of expressing their views upon the important questions which the amendment involves. Grave doubts, therefore, may naturally and justly arise as to whether the action of Congress is in harmony with the sentiments of the people, and whether State Legislatures, elected without reference to such an issue, should be called upon by Congress to decide respecting the ratification of the proposed amendment.

Waiving the question as to the constitutional validity of the proceedings of Congress upon the joint resolution proposing the amendment, or as to the merits of the article which it submits through the executive department to the Legislatures of the States, I deem it proper to observe that the steps taken by the Secretary of State, as detailed in the accompanying report, are to be considered as purely ministerial, and in no sense whatever committing the Executive to an approval or a recommendation of the amendment to the State Legislatures or to the people. On the contrary, a proper appreciation of the letter and spirit of the Constitution, as well as of the interests of national order, harmony, and union, and a due deference for an enlightened public judgment, may at this time well suggest a doubt whether any amendment to the Constitution ought to be proposed by Congress and pressed upon the Legislatures of the several States for final decision until after the

admission of such loyal Senators and Representatives of the now unrepresented States as have been, or as may hereafter be, chosen in conformity with the Constitution and laws of the United States.

ANDREW JOHNSON.

DEPARTMENT OF STATE, WASHINGTON, June 20, 1866.

To the President:

The Secretary of State, to whom was referred the concurrent resolution of the two Houses of Congress of the 18th instant, in the following words—"that the President of the United States be requested to transmit forthwith to the Executives of the several States of the United States, copies of the article of amendment proposed by Congress to the State Legislatures, to amend the Constitution of the United States, passed June 13, 1866, respecting citizenship, the basis of representation, disqualification for office, and validity of the public debt of the United States, etc., to the end that the said States may proceed to act upon the said article of amendment, and that he request the Executive of each State that may ratify said amendment to transmit to the Secretary of State a certified copy of such ratification"—has the honor to submit the following report, namely, that on the 16th instant, Hon. Amasa Cobb, of the Committee of the House of Representatives on Enrolled Bills, brought to this Department and deposited therein an enrolled resolution of the two Houses of Congress, which was thereupon received by the Secretary of State and deposited among the rolls of the Department, a copy of which is hereunto annexed.

Thereupon the Secretary of State, on the 16th instant, in conformity with the proceeding which was adopted by him in 1865, in regard to the then proposed and afterward adopted congressional amendment of the Constitution of the United States, concerning the prohibition of slavery, transmitted certified copies of the annexed resolution to the Governors of the several States, together with a certificate and circular letter. A copy of both of these communications is hereunto annexed.

Respectfully submitted,

WILLIAM H. SEWARD.

In the Senate, on January 29th, Mr. Trumbull, of Illinois, called up the bill to protect all persons in the United States in their civil rights, and furnish the means of their vindication. He moved to amend by inserting in the third line of the first section the words "all persons of African descent born in the United States are hereby declared to be citizens of the United States;" so that the section would read:

That all persons of African descent born in the United States are hereby declared to be citizens of the United States, and there shall be no discrimination in civil rights or immunities among the inhabitants of any State or Territory of the United States on account of race, color, or previous condition of slavery, etc.

He said: "Mr. President, I regard the bill to which the attention of the Senate is now called as the most important measure that has been under its consideration since the adoption of the constitutional amendment abolishing slavery. That amendment declared that all persons in the United States should be free. This measure is intended to give effect to that declaration, and secure to all persons within the United States practical freedom. There is very little importance in the general declaration of abstract truths and principles unless they can be carried into effect, unless the persons who are to be affected by them have some means of

availing themselves of their benefits. Of what avail was the immortal declaration 'that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness,' and 'that to secure these rights governments are instituted among men,' to the millions of the African race in this country who were ground down and degraded and subjected to a slavery more intolerable and cruel than the world ever before knew? Of what avail was it to the citizen of Massachusetts, who, a few years ago, went to South Carolina to enforce a constitutional right in court, that the Constitution of the United States declared that the citizens of each State shall be entitled to all the privileges and immunities of citizens in the several States? And of what avail will it now be that the Constitution of the United States has declared that slavery shall not exist, if in the late slaveholding States laws are to be enacted and enforced depriving persons of African descent of privileges which are essential to freemen?

"Since the abolition of slavery, the Legislatures which have assembled in the insurrectionary States have passed laws relating to the freedmen, and in nearly all the States they have discriminated against them. They deny them certain rights, subject them to severe penalties, and still impose upon them the very restrictions which were imposed upon them in consequence of the existence of slavery, and before it was abolished. The purpose of the bill under consideration is to destroy all these discriminations, and to carry into effect the constitutional amendment. The first section of the bill, as it is now proposed to be amended, declares that all persons of African descent shall be citizens of the United States, and—

That there shall be no discrimination in civil rights or immunities, among the inhabitants of any State or Territory of the United States on account of race, color, or previous condition of slavery; but the inhabitants of every race and color, without regard to any previous condition of slavery or involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall have the same right to make and enforce contracts, to sue, be parties, and give evidence, to inherit, purchase, lease, sell, hold, and convey real and personal property, and to full and equal benefit of all laws and proceedings for the security of person and property, and shall be subject to like punishment, pains, and penalties, and to none other, any law, statute, ordinance, regulation, or custom to the contrary notwithstanding.

"This section is the basis of the whole bill. The other provisions of the bill contain the necessary machinery to give effect to what are declared to be the rights of all persons in the first section, and the question will arise, has Congress authority to pass such a bill? Has Congress authority to give practical effect to the great declaration that slavery shall not exist in the United States? If it has not, then nothing has been accomplished by the adoption of the constitutional amendment. In my judgment, Congress has this authority."

Mr. Saulsbury, of Delaware, followed, in opposition to the bill, saying: "Mr. President, I regard this bill as one of the most dangerous that was ever introduced into the Senate of the United States, or to which the attention of the American people was ever invited. During the last four or five years I have sat in this chamber and witnessed the introduction of bills into this body which I thought obnoxious to many very grave and serious constitutional objections; but I have never since I have been a member of the body seen a bill so fraught with danger, so full of mischief, as the bill now under consideration. Deeming it to be of this character, duty to my country, duty to my State, duty to myself as a man, as a citizen, and as a legislator, duty to my children, and duty to my fellow-citizens everywhere, demands that I should utter my protest against its enactment into a law. Before, however, I proceed to consider it in the light of the Constitution as it existed previous to the recent amendment, let me notice the basis of authority for it as claimed by the honorable Senator from Illinois.

"I presume that honorable Senator would not contend that, independently of the constitutional amendment, Congress had a right to enact this law, although I know that many have claimed powers equally extensive. But from the argument of the honorable Senator, I infer that the sole basis of authority in his judgment for passing the bill is the amendment to the Constitution of the United States abolishing slavery. If that be so, it is admitted that before the adoption of that amendment Congress had not the right to enact such a law as this. Let us consider then for one moment whether the adoption of that amendment gave to Congress such an authority.

"What was that amendment? That neither slavery nor involuntary servitude should exist in the United States, except as a punishment for crime whereof the party should have been duly convicted. Now, here is a complete answer, in my judgment, to the argument of the honorable Senator, based upon the authority conferred by that amendment. Before and at the time of the adoption of that amendment the people of the United States were composed of persons of different races, the two main portions of which were white and black; the whites were free; a portion of the black population were free and a portion were slaves. In the State of Maryland about one-half of the black population were free and one-half slaves. In my own State there were about ten free negroes to one slave. In Kentucky and in most of the slaveholding States there were large free negro populations, as we supposed.

"I should like to know whether persons belonging to the African race in the State of Maryland, and the State of Delaware, and the other slaveholding States, who had been emancipated by their owners either by deed or will, or who were never in bondage, were, at the time of the adoption of the constitutional amendment, free

or slave. Were they not freemen? What was the objection urged by many against the enactment of the fugitive slave law? It was that under that enactment a freeman—a free colored man, as they called him; a free negro, as I uniformly call him—might be kidnapped, carried far from his home, and reduced to slavery. Had the Congress of the United States, previous to the adoption of the amendment, the power to pass this law, to say that the free negroes in the States of Maryland and Delaware, and the other slaveholding States, or the free negroes all over the United States, should be the equals of the white man before the law, and possess the powers which this bill proposes to confer? Had you the power, before the enactment of the constitutional amendment, to pass such a law? If you had not, did the passage of that amendment, setting free that portion who were in slavery, and putting them on an equality in reference to their *status* with the free negroes that then existed in the United States, give you the power to legislate beyond the persons you set free and in reference to the whole negro race in the United States, a portion of which were free before? Is the amendment to the Constitution so potential that if there was but one slave negro in the United States you could, under and by virtue of the clause which says you may carry the amendment into effect by appropriate legislation, bestow all the rights which this bill proposes to bestow upon the whole free negro population of the United States? Sir, it needs but a statement of the facts to show that under the constitutional amendment you have no such power. If you have the power under it, you had the power before the amendment to do the same thing in reference to that portion of the negro population who were not in a state of slavery but who were free.

"If the power to pass such an act as this exists anywhere, it must exist in the Constitution as originally framed. Sir, was it ever pretended by any statesman before that that Constitution conferred such a power as this? Look at the powers enumerated in the Constitution and see whether it is possible for the ingenuity of man to arrive at the conclusion that any such power exists; for, Mr. President, the Constitution is the bond of agreement according to the terms of which the States agreed to live together, and all the powers which Congress possesses are found in the eighth section of the first article of the Constitution. They are: 'to lay and collect taxes, duties, imposts,' etc., 'to borrow money,' 'to establish uniform rules of naturalization,' 'to coin money,' 'to provide for the punishment of counterfeiting,' 'to establish post-offices,' 'to promote the progress of science and arts,' 'to constitute tribunals of justice,' 'to define and punish piracy,' etc., 'to declare war,' 'to raise and support armies,' 'to provide a navy,' 'to make rules for the government and regulation of the land and naval forces,' 'to provide for calling forth the militia,' etc., 'to provide for organizing, arming, and

disciplining the militia,' etc., to 'exercise exclusive legislation in all cases' over this District, or such district as should be established as the seat of Government, and to 'make all laws which shall be necessary and proper for carrying into execution the foregoing powers.'"

Mr. Cowan, of Pennsylvania, followed, saying: "I am entirely opposed to the whole of this first section; and, in my judgment, it has not a particle of constitutional warrant. As I understand the chairman of the Committee on the Judiciary, he takes his ground upon an amendment to the Constitution of the United States recently passed. The first section of that amendment is in these words:

Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their jurisdiction.

"Now, Mr. President and gentlemen of the Senate, in all good faith, what was the meaning of that? What was its intent? Can there be any doubt of it? Is there a sane man within the sound of my voice who does not know precisely what was intended by the American people in adopting that amendment to the Constitution? I may say there is no shirking this thing; there is no way of dodging it or avoiding it. We must meet it; and if we are men we will meet it, and we will meet it in the spirit in which it was made. That amendment, everybody knows and nobody dare deny, was simply made to liberate the negro slave from his master. That is all there is of it. Will the chairman of the Committee on the Judiciary or anybody else undertake to say that that was to prevent the involuntary servitude of my child to me, of my apprentice to me, or the *quasi* servitude which the wife to some extent owes to her husband? Certainly not. Nobody pretends that it was to be wider in its operation than to cover the relation which existed between the master and his negro African slave.

"Now, mark it, that particular relation, and the breaking of it up, is the subject of that first clause of the amendment, and it does not extend any further, and cannot by any possible implication, contortion, or straining, be made to go further among honest men. That was followed by another clause, and a very proper clause, which everybody at the time understood, and which I have never known anybody to be mistaken about until I came into the Senate of the United States this session. That other clause was this:

Congress shall have power to enforce this article by appropriate legislation.

"Enforce what? The breaking of the bond by which the negro slave was held to his master; that is all. It was not intended to overturn this Government and to revolutionize all the laws of the various States everywhere. It was intended, in other words, and a lawyer would have so construed it, to give to the negro the privilege of the *habeas corpus*; that is, if

anybody persisted in the face of the constitutional amendment in holding him as a slave, that he should have an appropriate remedy to be delivered. That is all."

Mr. Howard, of Mich. replied, saying: "I happened to be a member of the Judiciary Committee at the time this amendment was drafted and adopted, and reported to the Senate. I recollect very distinctly what were the views entertained by members of that committee at the time it was under consideration before them. And notwithstanding the very vehement style of the Senator from Pennsylvania, in placing a narrow and utterly ineffectual construction upon it, I take this occasion to say that it was in contemplation of its friends and advocates to give to Congress precisely the power over the subject of slavery and the freedmen which is proposed to be exercised by the bill now under our consideration.

"It was easy to foresee, and of course we foresaw, that in case this scheme of emancipation was carried out in the rebel States it would encounter the most vehement resistance on the part of the old slaveholders. It was easy to look far enough into the future to perceive that it would be a very unwelcome measure to them, and that they would resort to every means in their power to prevent what they called the loss of their property under this amendment. We could foresee easily enough that they would use, if they should be permitted to do so by the General Government, all the powers of the State governments in restraining and circumscribing the rights and privileges which are plainly given by it to the emancipated negro. If I understand correctly the interpretation given to the article by the Senator from Delaware and the Senator from Pennsylvania, it is this: that the sole effect of it is to cut and sever the mere legal ligament by which the person and the service of the slave was attached to his master, and that beyond this particular office the amendment does not go; that it can have no effect whatever upon the condition of the emancipated blacks in any other respect. In other words, they hold that it relieves him from his so-called legal obligation to render his personal service to his master without compensation; and there leaves him, totally, irretrievably, and without any power on the part of Congress to look after his well-being from the moment of this mockery of emancipation. Sir, such was not the intention of the friends of this amendment at the time of its initiation here and at the time of its adoption; and I undertake to say that it is not the construction which is given to it by the bar throughout the country, and much less by the liberty-loving people.

"But let us look more closely at this narrow construction. Where does it leave us? We are told that the amendment simply relieves the slave from the obligation to render service to his master. What is a slave in contemplation of American law, in contemplation of the laws of all the slave States? We know full well;

the history of two hundred years teaches us that he had no rights, nor nothing which he could call his own. He had not the right to become a husband or a father in the eye of the law, he had no child, he was not at liberty to indulge the natural affections of the human heart for children, for wife, or even for friend. He owned no property, because the law prohibited him. He could not take real or personal estate either by sale, by grant, or by descent or inheritance. He did not own the bread he earned and ate. He stood upon the face of the earth completely isolated from the society in which he happened to be; he was nothing but a chattel, subject to the will of his owner, and unprotected in his rights by the law of the State where he happened to live. His rights, did I say? No, sir, I use inappropriate language. He had no rights; he was an animal; he was property, a chattel. The Almighty, according to the ideas of the times, had made him to be property, a chattel, and not a man.

"Now, sir, it is not denied that this relation of servitude between the former negro slave and his master was actually severed by this amendment. But the absurd construction now forced upon it leaves him without family, without property, without the implements of husbandry, and even without the right to acquire or use any instrumentalities of carrying on the industry of which he may be capable; it leaves him without friend or support, and even without the clothes to cover his nakedness. He is a waif upon the current of time; he has nothing that belongs to him on the face of the earth except solely his naked person. And here, in this state, we are called upon to abandon the poor creature whom we have emancipated. We are coolly told that he has no right beyond this, and we are told that under this amendment the power of the State within whose limits he happens to be is not at all restrained in respect to him, and that the State through its Legislature may at any time declare him to be a vagrant, and as such commit him to jail, or assign him to uncompensated service.

"Now, Mr. President, I ask these gentlemen—I appeal not only to their knowledge of the true principles of construction, but I appeal to their humanity—to say whether it is possible innocently and sincerely to ascribe to the advocates of this amendment any such cruel and inhuman purpose as this? No, sir; I think they cannot lay their hands upon their hearts and say that in advocating this amendment we intended to leave the negro in so helpless and destitute a condition. But if theirs be the true construction, then it is competent for the Legislature of each State to declare by law that no negro who has once been a slave shall ever, within the limits of that State, have the right or privilege of earning and purchasing property; of having a home under which to shelter him and his family, if he has one; of having a wife and family, or of eating the bread he

earns; thus leaving it in the power of these interested States to expatriate him at any moment and drive him beyond their limits; to deprive him of a home, to deprive him of all the fruits of his toil and his industry, and finally to reduce him to a condition infinitely worse than that of actual slavery, by compelling him to labor at such price as the old master may see fit to pay him, while at the same time he, not being a slave, has no claim whatever upon the old master for support, thus treating him as a nuisance upon the face of the earth.

"No, sir, such was not the intention of the advocates of this amendment. Its intention was to make him the opposite of a slave, to make him a freeman. And what are the attributes of a freeman according to the universal understanding of the American people? Is a freeman to be deprived of the right of acquiring property, of the right of having a family, a wife, children, home? What definition will you attach to the word 'freeman' that does not include these ideas? The once slave is no longer a slave; he has become, by means of emancipation, a free man. If such be the case, then in all common sense is he not entitled to those rights which we concede to a man who is free?"

Mr. Guthrie, of Kentucky, said: "I consider that there is no warrant in the Constitution for such legislation as this, and it is impossible that there should be, and besides, it will be the most impolitic law that ever was passed. The gentleman from Illinois says that this is simply a bill providing that all persons shall have their rights. I might return the compliment by saying that it is simply a bill declaring that we have established a military despotism, and the laws are to be enforced at the point of the bayonet. This bill and the one passed last week invoke military power everywhere, and throw the protection of the military over any thing. Gentlemen, is this a proper answer to this war, to the gallantry of our officers and soldiers, and to the hope of the American people that we should have a restored Union? Is it a proper answer to those who have lent you their money and whom you yet owe, to sow this cause of dissension between the States, this pestering interference that will lead to dissension, and God knows what else it will lead to? I say that this bill, as well as the kindred measure passed last week, should not be passed on account of economy. It should not be passed on account of your creditors. How many creditors have you now knocking at your doors for money and property seized and put into your Treasury, whom you cannot pay, whom you are afraid to make appropriations for? And yet you are taking by these bills more money from the Treasury than would pay probably the principal of the debt due to these men. Is it just to the creditors to whom you owe this money that you should leave their claims unsettled, and that you should attempt to carry on this Government by such legislation as this?"

Mr. Hendricks, of Indiana, said: "This bill is a wasp; its sting is in its tail. Sir, what is the bill? It provides, in the first place, that the civil rights of all men, without regard to color, shall be equal; and, in the second place, that if any man shall violate that principle by his conduct, he shall be responsible to the court; that he may be prosecuted criminally and punished for the crime, or he may be sued in a civil action and damages recovered by the party wronged. Is not that broad enough? Do Senators want to go further than this? To recognize the civil rights of the colored people as equal to the civil rights of the white people, I understand to be as far as Senators desire to go; in the language of the Senator from Massachusetts (Mr. Sumner), to place all men upon an equality before the law; and that is proposed in regard to their civil rights.

"Why, sir, this bill provides that there shall be commissioners, not ordinary commissioners that the courts in the exercise of their judgment and discretion shall appoint, but extraordinary commissioners, and from its language it seems to contemplate that there shall be a commissioner in every county of the United States, and these commissioners are authorized to appoint as many agents or deputy marshals as they may see fit to appoint, and these deputy marshals may call upon the body of the people, for what purpose? To pursue a runaway white man. Oh, I recollect how the blood of the people was made to run cold within them when it was said that the white man was required to run after the fugitive slave; that the law of 1850 made you and me, my brother Senators, slave-catchers; that the *posse comitatus* could be called to execute a writ of the law for the recovery of a runaway slave under the provisions of the Constitution of the United States; and the whole country was agitated because of it. Now slavery is gone; the negro is to be established upon a platform of civil equality with the white man. That is the proposition. But we do not stop there; we are to reenact a law that nearly all of you said was wicked and wrong; and for what purpose? Not to pursue the negro any longer; not for the purpose of catching him; not for the purpose of catching the great criminals of the land; but for the purpose of placing it in the power of any deputy marshal in any county of the country to call upon you and me, and all the body of the people to pursue some white man who is running for his liberty because some negro has charged him with denying to him equal civil rights with the white man."

Mr. Lane, of Indiana, said: "What are the objects sought to be accomplished by this bill? That these freedmen shall be secured in the possession of all the rights, privileges, and immunities of freemen; in other words, that we shall give effect to the proclamation of emancipation and to the constitutional amendment. How else, I ask you, can we give them effect than by doing away with the slave codes of the respective States where slavery was lately tol-

erated? One of the distinguished Senators from Kentucky (Mr. Guthrie), says that all these slave laws have fallen with the emancipation of the slave. That, I doubt not, is true, and by a court honestly constituted of able and upright lawyers, that exposition of the constitutional amendment would obtain.

"But why do we legislate upon this subject now? Simply because we fear and have reason to fear that the emancipated slaves would not have their rights in the courts of the slave States. The State courts already have jurisdiction of every single question that we propose to give to the courts of the United States. Why, then, the necessity of passing the law? Simply because we fear the execution of these laws if left to the State courts. That is the necessity for this provision."

Various amendments to the bill were offered and rejected. Mr. Saulsbury, of Delaware, moved to amend the second line of the first section by adding after the words "civil rights" the words "except the right to vote in the States." He said: "I do hold that under the words 'civil rights' the power to vote is given, because it is a civil right. The honorable chairman of the Judiciary Committee, who has this bill under charge, says he does not mean to confer that right. His meaning cannot control the operation or the effect of this law, if the bill shall become a law. I believe that if this bill is enacted into a law your judges in most of the States will determine that under these words the power of voting is given. The honorable Senator cited an authority the other day, from Maryland I think it was, in which it was decided that that right was conferred after domicile had been acquired according to the laws of the State. Sir, I wish to exclude that very idea; and if you do not mean to confer that power I want you to say so. However highly I esteem the learning of the honorable chairman of the Judiciary Committee, I am not willing to trust to his declaration that that power is not to be conferred, and I want this Congress to say that in conferring these civil rights they do not mean to confer the right to vote.

"Talk to me, sir, about the words 'civil rights' not including the right to vote! What is a civil right? It is a right that pertains to me as a citizen. And how do I get the right to vote? I get it by virtue of citizenship, and I get it by virtue of nothing else. When this act is passed into a law, and I find a Republican judge in any of the States of this country deciding that under it a negro has the right to vote, I am not going to quarrel with the opinion of that judge, because I believe he is deciding the law correctly. Sir, if you do not intend to confer that right, say so. If you do not mean to invade the States of this Union, and take from them the right to prescribe the qualifications of voters, say so. That is all I ask. Do not leave it in doubt."

The amendment was rejected, and the bill reported to the Senate and concurred in. It

was then ordered to be engrossed, read a third time and passed, as follows:

YEAS—Messrs. Anthony, Brown, Chandler, Clark, Conness, Cragin, Dixon, Fessenden, Foot, Foster, Harris, Henderson, Howard, Howe, Kirkwood, Lane of Indiana, Lane of Kansas, Morgan, Morrill, Nye, Poland, Pomeroy, Ramsey, Sherman, Sprague, Stewart, Sumner, Trumbull, Wade, Willey, Williams, Wilson, and Yates—33.

NAYS—Messrs. Buckalew, Cowan, Davis, Guthrie, Hendricks, McDougall, Nesmith, Norton, Riddle, Sanlebury, Stockton, and Van Winkle—12.

ABSENT—Messrs. Creaswell, Doolittle, Grimes, Johnson, and Wright—5.

In the House, on March 1st, the bill to protect all persons in the United States in their civil rights, was called up and amended.

Mr. Wilson, of Iowa, said: "Mr. Speaker, I think I may safely affirm that this bill, so far as it declares the equality of all citizens in the enjoyment of civil rights and immunities, merely affirms existing law. We are following the Constitution. We are reducing to statute form the spirit of the Constitution. We are establishing no new right, declaring no new principle. It is not the object of this bill to establish new rights, but to protect and enforce those which already belong to every citizen. I am aware, sir, that this doctrine is denied in many of the States; but this only proves the necessity for the enactment of the remedial and protective features of this bill. If the States would all observe the rights of our citizens, there would be no need of this bill. If the States would all practise the constitutional declaration, that

The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States (*Article four, section two, Constitution of the United States*),

and enforce it, as meaning that the citizen has

The right of protection by the Government, the enjoyment of life and liberty, with the right to acquire and possess property of every kind, and to pursue and obtain happiness and safety; to claim the benefit of the writ of *habeas corpus*; to institute and maintain actions of any kind in the courts of the State; to take, hold, and dispose of property, either real or personal; to be exempt from higher taxes or impositions than are paid by the other citizens of the State (*Corfield vs. Coryell, 4 Washington's Circuit Court Reports, p. 380*),

we might very well refrain from the enactment of this bill into a law. If they would recognize that 'general citizenship' (Story on the Constitution, vol. ii., p. 604), which under this clause entitles every citizen to security and protection of personal rights (*Campbell vs. Morris, 3 Harris & McHenry, 585*), we might safely withhold action. And if, above all, Mr. Speaker, the States should admit, and practise the admission, that a citizen does not surrender these rights because he may happen to be a citizen of the State which would deprive him of them, we might, without doing violence to the duty devolved upon us, leave the whole subject to the several States. But, sir, the practice of the States leaves us no avenue of escape, and we must do our duty by supplying the protection which the States deny.

"Mr. Speaker, if all our citizens were of one race and one color, we would be relieved of most of the difficulties which surround us. This bill would be almost, if not entirely, unnecessary, and if the States, seeing that we have citizens of different races and colors, would but shut their eyes to these differences, and legislate, so far at least as regards civil rights and immunities, as though all citizens were of one race and color, our troubles as a nation would be well-nigh over. But such is not the case, and we must do as best we can to protect our citizens, from the highest to the lowest, from the whitest to the blackest, in the enjoyment of the great fundamental rights which belong to all men.

"It will be observed that the entire structure of this bill rests on the discrimination relative to civil rights and immunities made by the States on 'account of race, color, or previous condition of slavery.' That these things should not be, is no answer to the fact of their existence. That the result of the recent war, and the enactment of the measures to which the events of the war naturally led us, have intensified the hate of the controlling class in the insurgent States toward our colored citizens is a fact against which we can neither shut our ears nor close our eyes. Laws barbaric and treatment inhuman are the rewards meted out by our white enemies to our colored friends. We should put a stop to this at once and forever. And yet I would not do this in a way which would deprive a white man of a single right to which he is entitled. I would merely enforce justice for all men; and this is lawful, it is right, and it is our bounden duty."

Mr. Rogers, of New Jersey, said: "Now, sir, no bill has been offered in this House or in the other, the freedmen's bill not excluded, which proposes to give to Congress such dangerous powers over the liberties of the people as this bill under consideration, and if it can be constitutionally passed by the Congress of the United States, and is no infringement upon the reserved or undelegated powers of the States, then Congress has the right, not only to extend all the rights and privileges to colored men that are enjoyed by white men, but has the right to take away. If Congress has the right to extend the great privileges of citizenship, which heretofore have been controlled by the States, to any class of beings, they have the right, by the same authority, to take away from any class of people in any State the same rights that they have the right to extend to another class of persons in the same State. In other words, if the Congress has power under our present organic law to decide what rights and privileges shall be extended to negroes, it has the same power and authority under that organic law to extend its legislation so as to take away the most inestimable and valuable rights of the white men and the white women of this country, and not only take away but destroy every blessing of life, liberty, and property, upon the principle

that Congress has unlimited sovereign power over the rights of the States; and whenever, in its judgment, it may see fit, it may carry this power on to an unlimited extent."

Mr. Cook, of Illinois, in reply, said: "Sir, I know of no way by which these men can be protected except it be by the action of Congress, either by passing this bill or by passing a constitutional amendment. And when gentlemen tell me that they are in favor of protecting the people of color, and yet oppose every practicable method of protecting them, I beg leave most respectfully to doubt their judgment in the matter. The question is, shall we leave these men in this condition? It is idle to say we are not leaving them to a system of slavery. If it had not been for the acts of the military commanders, had not the laws which have already been enacted by the Legislatures of the rebel States been set aside, the negroes would all have been slaves now under the operation of their vagrant acts or other laws.

"I believe that this bill is a proper remedy for these evils. I believe that we have the constitutional power to pass it, and that it is our duty to pass it. I affirm that we shall be justly chargeable with want of good faith, want of honor and of common honesty, if we abandon these men, who by our invitation have aided us and have thereby made themselves obnoxious to the majority of the white men of the South, and leave them to the tender mercies of our enemies and theirs."

Mr. Thayer, of Pennsylvania, followed on the same side of the question, saying: "The sole purpose of the bill is to secure to that class of persons the fundamental rights of citizenship; those rights which constitute the essence of freedom, and which are common to the citizens of all civilized States; those rights which secure life, liberty, and property, and which make all men equal before the law, as they are equal in the scales of eternal justice and in the eyes of God.

"To accomplish this great purpose, the bill declares, in the first place, that all persons born in the United States, and not subject to any foreign power, are citizens of the United States. Now, I do not regard that as the enunciation of any new principle. It is, in my judgment, but declaratory of the existing law. According to my apprehension, every man born in the United States, and not owing allegiance to a foreign power, is a citizen of the United States. It is a rule of universal law, adopted and maintained among all nations that they who are born upon the soil are the citizens of the State. They owe allegiance to the State, and are entitled to the protection of the State. Such is the law, whether you put it into this bill or not. So far as this declaration of the bill is concerned, it is but reiterating an existing and acknowledged principle of law.

"Well, conceding that this general proposition is true, either by the force of existing law, or by the declaration which it is proposed to put

into this bill, it is then asked, by what power, by what authority, do you propose to guarantee and protect the rights of the citizens of this Government? If the proposition which I have assumed as true be correct, that these people are citizens of the United States, does it not seem at the first blush to be a very singular proposition to say that the United States under its Constitution have no right to guarantee to its own citizens, by positive law, those great fundamental rights of citizenship which are enumerated in this bill? Does it not strike the mind of every man with wonder that the framers of the Constitution of the United States who made this great and wonderful fabric of human Government, and who evinced so much skill and foresight in making it, should have framed a Government which is incapable of protecting its citizens in these fundamental rights of citizenship? Would it not be an extraordinary circumstance if the framers of the Constitution had made a Constitution which was powerless to protect the citizens of the United States in their fundamental civil rights, their rights of life, liberty, and property? And yet to that position are these gentlemen driven who deny the existence of any power which authorizes Congress to pass this bill.

"If I am asked from whence the power is derived to pass this bill, I reply that I derive it, in the first place, from the second section of the late amendment to the Constitution. I say, further, that so far as regards the power to declare the freemen citizens is concerned, it may be clearly derived (if it be not inherent in the very frame of every Government) from that clause of the Constitution which gives the express power to Congress to pass laws for naturalization. And I might say, also, that in my judgment sufficient power is found, by implication at least, in that clause of the Constitution which guarantees to all the citizens of the United States their right to life, liberty, and property."

Mr. Eldridge, of Wisconsin, in opposition, said: "This bill is, it appears to me, one of the most insidious and dangerous of the various measures which have been directed against the interest of the people of this country. It is another of the measures designed to take away the essential rights of the States. I know that when I speak of States and State rights, I enter upon unpopular subjects. But, sir, whatever other gentlemen may think, I hold that the rights of the States are the rights of the Union, that the rights of the States and the liberty of the States are essential to the liberty of the individual citizen. The gentleman from Pennsylvania (Mr. Thayer) inquires what right of the States this bill proposes to take away. I reply, it seeks to lay prostrate at the feet of the Federal Government the judiciary of the States. It not only proposes to enter the States to regulate their police and municipal affairs, but it attempts to destroy the independence of the State judiciary.

"Is it not an invasion of the right of the citizen of a State when you declare that an independent judge, who, in the exercise of his conscientious judgment and in obedience to his oath of office, renders a decision in accordance with the laws and constitution of his State, shall be convicted as a criminal and subjected to punishment by fine or imprisonment? Is it not a most flagrant and tyrannical interference with the independence of the judiciary when you thus seek to influence a judge in his decision by holding up before him a penalty for the violation of some pretended right of some black inhabitant of a State? Has the citizen no interest in the independence of the judiciary? Is this not an interference with the rights of the white man? The inquiry was made by some gentleman—I think by the gentleman from Missouri (Mr. Loan)—why are these penalties made applicable only to the judicial officer? It was answered that the purpose was to control the judge and prevent his executing the law of the State by his judgment when it operated peculiarly upon the freedman, and thereby enforce the execution of the Federal law. There is no doubt it is a measure designed to accumulate and centralize power in the Federal Government."

After further debate, the bill was recommit-
ted, by yeas 82, nays 70.

On March 13th, the bill was reported back from the Committee on the Judiciary, with amendments, and passed by the following vote:

YEA—Messrs. Alley, Allison, Ames, Anderson, James M. Ashley, Baker, Baldwin, Banks, Baxter, Baman, Bidwell, Blaine, Blow, Boutwell, Bromwell, Broomall, Buckland, Bundy, Sidney Clarke, Cobb, Cocking, Cook, Cullom, Darling, Davis, Dawes, Deiano, Deming, Dixon, Donnelly, Driggs, Dumont, Eliot, Farnsworth, Farquhar, Ferry, Garfield, Grinnell, Abner C. Harding, Hart, Hayes, Higby, Hill, Holmes, Hooper, Asahel W. Hubbard, Chester D. Hubbard, Demas Hubbard, John H. Hubbard, Hubbard, James Humphrey, Ingersoll, Jenckes, Julian, Kelley, Kelso, Ketcham, Kuykendall, Laflin, George F. Lawrence, William Lawrence, Loan, Longyear, Lynch, Marston, Marvin, McClurg, McRuer, Mercur, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, O'Neill, Orth, Paine, Perham, Pike, Plants, Price, Alexander H. Rice, Sawyer, Schenck, Schofield, Shellabarger, Sloan, Spalding, Starr, Stevens, Thayer, Francis Thomas, John L. Thomas, Trowbridge, Upson, Van Aernam, Burt Van Horn, Ward, Warner, Elihu B. Washburne, William B. Washburn, Welker, Wentworth, Whaley, Williams, James F. Wilson, Stephen F. Wilson, Windom, and Woodbridge—111.

NAY—Messrs. Ancona, Bergen, Bingham, Boyer, Brooks, Coffroth, Dawson, Devison, Glossbrenner, Goodyear, Grider, Aaron Harding, Harris, Hogan, Edwin N. Hubbell, Jones, Kerr, Latham, Le Blond, Marshall, McCullough, Nicholson, Phelps, Radford, Samuel J. Randall, William H. Randall, Ritter, Rogers, Ross, Rousseau, Shanklin, Sitgreaves, Smith, Tabor, Taylor, Thornton, Trimble, and Winfield—58.

NOT VOTING—Messrs. Delos R. Ashley, Barker, Benjamin, Brandagee, Chanler, Reader W. Clark, Culver, Defrees, Eckley, Eggleston, Eldridge, Finck, Griwold, Hale, Henderson, Hotchkiss, James R. Hubbell, James M. Humphrey, Johnson, Kasson,

McIndoe, McKee, Niblack, Noell, Patterson, Pomerooy, Raymond, John H. Rice, Rollins, Stillwell, Strouse, Robert, T. Van Horn, Henry D. Washburn, and Wright—34.

In the Senate, on March 15th, the question came up on concurrence with the amendments of the House.

The first amendment was in section one, line five, after the words "United States," to strike out—

Without distinction of color, and there shall be no discrimination in civil rights or immunities among the inhabitants of any State or Territory of the United States on account of race, color, or previous condition of slavery; but the inhabitants.

And in lieu thereof to insert "and such citizens;" so as to make the section read:

That all persons born in the United States and not subject to any foreign power, excluding Indians not taxed, are hereby declared to be citizens of the United States; and such citizens of every race and color, without regard to any previous condition of slavery or involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall have the same right, etc.

The next amendment of the House was in section one, line thirteen, after the word "right," to insert the words "in every State and Territory in the United States;" so that the clause will read:

And such citizens of every race and color, without regard to any previous condition of slavery or involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall have the same right in every State and Territory in the United States to make and enforce contracts, to sue, be parties and give evidence, to inherit, purchase, lease, sell, hold, and convey real and personal property, and to full and equal benefit of all laws and proceedings for the security of persons and property.

These amendments were concurred in, with others of less importance.

On March 27th President Johnson returned the bill with his objections to the Senate, where it originated. (For the bill and veto message, *see* PUBLIC DOCUMENTS.)

In the Senate, on April 4th, the veto of the President was taken up for consideration.

Mr. Trumbull, of Illinois, took the floor, to show "that the provisions of the bill were not unjust to the whole or to any portion of the people, nor unconstitutional." He insisted that there was no section of it that was not clearly constitutional. The first section was merely declaratory of what the law was, and Congress has the right to declare who shall be citizens of the United States. He then considered the objection that a part of the States were unrepresented. As it was their own fault, he insisted that the other States should not be thereby deprived of the power of legislation. To the objection that the bill proposed a discrimination against a large number of intelligent foreigners in favor of the negro, he replied that the bill declared there should be no distinction in civil rights between any other race or color and the white race. To the objection to the

second section of the bill as affording discriminating protection to colored persons, as providing for counteracting forbidden legislation by imposing fine and imprisonment upon legislators who may pass conflicting laws, he said: "But, sir, there is another answer, in my judgment, more conclusive, to all these objections to this second section, which is the vital part of the bill. Without it, it would scarcely be worth the paper on which the bill is written, a law without a penalty, without a sanction, is of little value to anybody. What good does it do for the Legislature to say, 'Do this, and forbear to do that,' if no consequence is to follow the act of disobedience? This is the vitality of the bill. What is the objection that is made to it, and which seems even to have staggered some friends of the measure? It is because it reads in the first section that any person who 'under color of law' shall commit these offences shall be subject to the penalties of the law. Suppose those words had been left out and the bill read, 'any person who shall subject any inhabitant of a State to different punishment by reason of his color shall be punished,' would there have been any objection to the bill then? That is the way most criminal laws read. That is the way the law punishing conspiracies against the Government reads. If two or more persons conspire together to overthrow the Government, or by force to resist its authority, they are liable to indictment, and, upon conviction, to imprisonment in the penitentiary and to heavy fine. Would the fact that the persons engaged in the conspiracy were judges or Governors or ministerial officers, acting under color of any statute or custom, screen them from punishment? Surely not.

"These words 'under color of law' were inserted as words of limitation, and not for the purpose of punishing persons who would not have been subject to punishment under the act if they had been omitted. If an offence is committed against a colored person simply because he is colored, in a State where the law affords him the same protection as if he were white, this act neither has nor was intended to have any thing to do with his case, because he has adequate remedies in the State courts; but if he is discriminated against under color of State laws, because he is colored, then it becomes necessary to interfere for his protection.

"The assumption that State judges and other officials are not to be held responsible for violations of United States laws, when done under color of State statutes or customs, is akin to the maxim of the English law that 'the king can do no wrong.' It places officials above the law. It is the very doctrine out of which the rebellion was hatched."

Mr. Johnson, of Maryland, in opposition to the bill, said: "Now, what does this bill do? It says that every man born within the United States, whether born as a slave or not—for it is not prospective, operating only upon those who may be born subsequent to the abolition

of slavery in the United States—but whoever was born at any time, though born in slavery, is to be considered a citizen by reason of the fact of his being born alone. The States where slavery existed declared, at the time of the birth, if he was born of a slave mother, that he was a slave. The constitutions and laws of the States, undisputed, declared—I mean the States in which slavery existed—that no descendant of a colored mother, whether she was free or not, was to be considered a citizen by virtue of birth; and yet my friend from Illinois, and the Congress of the United States in passing this bill, have declared that those who were born in a state of slavery, who were never citizens as long as that condition existed, who were prevented from becoming citizens by the constitution of the State in which they resided, which has never been changed, shall, by force of this enactment, be considered as citizens of the United States, and of course for all purposes. If it be true that whether birth is to give citizenship of the United States depends upon the fact whether the party born by the laws of the State in which he is born becomes a citizen of that State, then I should like to know where is the authority in Congress to interfere with what the State has done in the past, or may be doing in the present, or may do in the future, unless it can be accomplished under the constitutional amendment."

The debate on the message was continued by Messrs. Cowan, Stewart, Wade, Brown, Doolittle, and others, when the question was taken on the passage of the bill, "the objections of the President of the United States to the contrary notwithstanding," and the vote resulted as follows:

YEAS—Messrs. Anthony, Brown, Chandler, Clark, Conness, Cragin, Creswell, Edmunds, Fessenden, Foster, Grimes, Harris, Henderson, Howard, Howe, Kirkwood, Lane of Indiana, Morgan, Morrill, Nye, Poland, Pomeroy, Ramsey, Sherman, Sprague, Stewart, Sumner, Trumbull, Wade, Willey, Williams, Wilson, and Yates—33.

NAYS—Messrs. Buckalew, Cowan, Davis, Doolittle, Guthrie, Hendricks, Johnson, Lane of Kansas, McDougall, Nesmith, Norton, Riddle, Sanlisbury, Van Winkle, and Wright—15.

ABSENT—Mr. Dixon.

The President *pro tempore* thus announced it: "The yeas being 33, and the nays 15, the bill has passed the Senate by the requisite constitutional majority, notwithstanding the objection of the President to the contrary."

On April 9th the bill and message were received by the House from the Senate. A motion was made to lay the same on the table, and lost—yeas 37, nays 123. The question of the passage of the bill was then taken and decided as follows:

YEAS—Messrs. Alley, Allison, Delos R. Ashley, James M. Ashley, Baker, Baldwin, Banks, Barker, Baxter, Beaman, Benjamin, Bidwell, Boutwell, Braddege, Bromwell, Broomall, Buckland, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Colfax, Conkling, Cook, Cullom, Darling, Davis, Dawes, DeForest, Delano, Deming, Dixon, Dodge, Donnelly, Eckley,

Egleston, Eliot, Farnsworth, Farquhar, Ferry, Garfield, Grinnell, Griswold, Hale, Abner C. Harding, Hart, Hayes, Henderson, Higby, Hill, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, John H. Hubbard, James R. Hubbell, Hubbard, James Humphrey, Ingersoll, Jenckes, Kasson, Kelley, Kelso, Ketcham, Ladin, George V. Lawrence, William Lawrence, Loan, Longyear, Lynch, Marston, Marvin, McClurg, McIndoe, McKee, McEuer, Mercer, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, O'Neill, Orth, Paine, Patterson, Perham, Pike, Plants, Pomeroy, Price, Alexander H. Rice, John H. Rice, Rollins, Sawyer, Schenck, Schofield, Shellabarger, Spalding, Starr, Stevens, Thayer, Francis Thomas, John L. Thomas, Trowbridge, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, Wentworth, James F. Wilson, Stephen F. Wilson, Windom, and Woodbridge—122.

YAYS—Messrs. Ancona, Bergen, Boyer, Coffroth, Dawson, Denison, Eldridge, Finck, Glossbrenner, Aaron Harding, Harris, Hogan, Edward N. Hubbell, James M. Humphrey, Latham, Le Blond, Marshall, McCullough, Niblack, Nicholson, Noell, Phelps, Radford, Samuel J. Randall, William H. Randall, Raymond, Ritter, Rogers, Ross, Rousseau, Shanklin, Sigsbees, Smith, Strouse, Tabor, Taylor, Thornton, Trimble, Whaley, Winfield, and Wright—41.

Nor VOTED—Messrs. Ames, Anderson, Bingham, Blaine, Blow, Chanler, Culver, Driggs, Dumont, Goodyear, Grider, Demas Hubbard, Johnson, Jones, Jehan, Kerr, Kuykendall, Sloan, Stillwell, Warner, and Williams—21.

The Speaker thus announced the result: "On the question, 'Shall this bill pass notwithstanding the objections of the President?' the yeas are 122 and the nays 41. Two-thirds of the House having, upon this reconsideration, agreed to the passage of the bill, and it being certified officially that a similar majority of the Senate, in which the bill originated, also agreed to its passage, I do, therefore, by the authority of the Constitution of the United States, declare that this bill, entitled 'An act to protect all persons in the United States in their civil rights and furnish the means of their vindication,' has become a law."

In the Senate, on January 12th, the bill "to enlarge the powers of the Freedmen's Bureau" was reported from the Committee on the Judiciary, with amendments, which were agreed to.

Mr. Stewart, of Nevada, said: "Mr. President, I desire to make a few remarks in reply to the Senator from Ohio, and this bill being before the Senate, calls up the precise question upon which I desire to occupy the attention of the Senate for a moment upon the subject discussed by the Senator from Ohio. Without attempting to make a speech, I wish to remark that here is a practical measure before the Senate for the benefit of the freedman, carrying out the constitutional provision to protect him in his civil rights. I am in favor of this bill. It goes to the utmost extent that I think we are entitled to go under the constitutional amendment. There is another bill introduced by the Senator from Illinois which must go along with it, which provides civil jurisdiction for the pro-

tection of the freedman. Under this constitutional amendment we can protect the freedman and accomplish something for his real benefit.

"So far as this question of negro suffrage is concerned, I say it stands upon a different basis from the other propositions discussed by the gentleman, and the other positions assumed by the President. I do not believe that we must arrive at the conclusion that there must be universal suffrage throughout the South, without regard to color, before we can organize those States. This is the only issue between us now. If this question were out of the way, we could settle every thing else in two weeks, at least so far as a portion of the Southern States are concerned, and we could receive such Southern representatives as are loyal and none other. As the Senator from Ohio has said, there would be no difficulty in agreeing upon every thing else, if it were not for the question of negro suffrage in the South. We may as well meet the issue here and understand each other. This is the issue—the only issue before the country. We all want the Union; we all want the Constitution; we all want to see each State enjoying the blessings of that Union and Constitution alike; but there are some who are determined to sacrifice the Union and the Constitution unless they can achieve the right of suffrage for the negro."

Mr. Wade: "I wish to ask the Senator this question: if it was the verdict of the war that slavery should be abolished, was it not also the verdict, if it was further necessary for the security of the country, that suffrage should be awarded to the colored people that you had set free? Why was not that as much a verdict of the war as the other?"

Mr. Stewart: "The Senator from Ohio assumes that it is necessary for the security of the country that the right of suffrage should be granted to the negro; that the Government cannot be carried on without it. That is an assumption that is hardly warranted. But even if that were true, it would not be as much a verdict of the war as the other."

Mr. Wade: "Why not?"

Mr. Stewart: "Because the other was named; this was not. The other was named in the pleadings upon which we went to trial and fought it out; this is an issue outside of the pleadings, one that was not named, and consequently not as much a verdict of the war. That is the reason."

"But, sir, I contend that it is not necessary to call in the aid of the black man to the government of this country. I do not pretend to say that he shall not at some future time have the right of suffrage under restrictions. But when he shall receive it, it will be for his benefit, not ours. I believe the Anglo-Saxon race can govern this country. I believe it because it has governed it. I believe it because it is the only race that has ever founded such institutions as ours. I believe it because we have a peculiar situation, peculiar education, peculiar

qualifications which are not common to other sections or other races of the world. I believe the white man can govern it without the aid of the negro; and I do not believe that it is necessary for the white man that the negro should vote. If he ever does vote, it will be simply as a boon to him. I think we can carry on the Government without him. I think we have had abundant proof of that.

"Inasmuch as this was not a part of the verdict of the war; inasmuch as I do not believe it to be necessary for the preservation of the Union, but will endanger our national existence, I am for the Union without negro suffrage, but I am not in favor of turning the negro over to oppression in the South. I am in favor of legislation under the constitutional amendment that shall secure to him a chance to live, a chance to hold property, a chance to be heard in the courts, a chance to enjoy his civil rights, a chance to rise in the scale of humanity, a chance to be a man. I am in favor of this because we are pledged to do it. We have given him freedom, and that implies that he shall have all the civil rights necessary to the enjoyment of that freedom. The Senator from Illinois has introduced two bills, well and carefully prepared, which if passed by Congress will give full and ample protection under the constitutional amendment to the negro in his civil liberty, and guarantee to him civil rights, to which we are pledged."

Mr. Hendricks, of Indiana, followed, in opposition to the bill. He said that the bill proposed to make the Freedmen's Bureau permanent, and to extend it over the States of the North as well as the South. It asked for an appropriation of nearly twelve millions of dollars to carry on the operations. It provides for an army of officers who are to be organized under the War Department. It proposes to confirm the rights of the colored people to lands under General Sherman's order, for three years, and authorizes the officers to buy homes for the poor colored freedmen. He further said: "The language is very comprehensive. We propose, first, to legislate against the effects of 'local law, ordinance, police, or other regulation;' then against 'custom,' and lastly, against 'prejudice,' and to provide that if 'any of the civil rights or immunities belonging to white persons' are denied to any person because of color, then that person shall be taken under the military protection of the Government. I do not know whether that will be understood to extend to Indiana or not. That will be a very nice point for the bureau to decide, I presume, after the enactment of the law. The section limits its operation to 'any State or district in which the ordinary course of judicial proceedings has been interrupted by the rebellion.'"

"It is claimed that under the second section, Congress may do any thing necessary, in its judgment, not only to secure the freedom of the negro, but to secure to him all civil rights that are secured to white people. I deny that construction, and it will be a very dangerous con-

struction to adopt. The first section abolishes slavery. The second section provides that Congress may enforce the abolition of slavery 'by appropriate legislation.' What is slavery? It is not a relation between the slave and the State; it is not a public relation; it is a relation between two persons whereby the conduct of the one is placed under the will of the other. It is purely and entirely a domestic relation, and is so classed by all law writers; the law regulates that relation as it regulates other domestic relations. This constitutional amendment broke asunder this private relation between the master and his slave, and the slave then, so far as the right of the master was concerned, became free; but did the slave, under that amendment, acquire any other right than to be free from the control of his master? The law of the State which authorized this relation is abrogated and annulled by this provision of the Federal Constitution, but no new rights are conferred upon the freedman.

"Then, sir, to make a contract is a civil right which has ordinarily been regulated by the States. The form of that contract and the ceremonies that shall attend it are not to be regulated by Congress, but by the States. Suppose that it becomes the judgment of the State that a contract between a colored man and a white man shall be evidenced by other solemnities and instruments than are required between two white men, shall not the State be allowed to make such a provision? Is it a civil right to give evidence in courts? Is it a civil right to sit upon a jury? If it be a civil right to sit upon a jury, this bill will require that if any negro is refused the privilege of sitting upon a jury, he shall be taken under the military protection of the Government. Is the right to marry according to a man's choice a civil right? Marriage is a civil contract, and to marry according to one's choice is a civil right. Suppose a State shall deny the right of amalgamation, the right of a negro man to intermarry with a white woman, then that negro may be taken under the military protection of the Government; and what does that mean? Under the seventh section, in such a case as that, when you have taken the negro under the military protection of the Government, perhaps sent a squad of men after him, what is then to be done when he is thus protected? What is meant by taking him under the protection of the Government? Does it mean that this military power shall enforce his civil right, without respect to the prohibition of the local law? In other words, if the law of Indiana, as it does, prohibits under heavy penalty the marriage of a negro with a white woman, may it be said a civil right is denied him which is enjoyed by all white men to marry according to their choice, and if it is denied, the military protection of the colored gentleman is assumed, and what is the result of it all? I suppose they are then to be married in the camp of the protecting officer without regard to the State laws."

Mr. Trumbull, of Illinois, in reply, said that it was not intended to make the bureau a permanent institution, but to aid and protect those helpless people until they could take care of themselves. The bureau was a part of the military establishment not only during the conflict, but until peace could be firmly established. The authority of the bureau was designed to be exercised under the war powers of the Government. It was proposed to extend the bureau beyond the insurrectionary States in order to protect the freedmen in the other States. He further said:

"My object in bringing forward these bills was to bring to the attention of Congress something that was practical, something upon which I hoped we all could agree. I have said nothing in these bills which are pending, and which have been recommended by the Committee on the Judiciary—and I speak of both of them because they have both been alluded to in this discussion—about the political rights of the negro. On that subject it is known that there are differences of opinion, but I trust there are no differences of opinion among the friends of the constitutional amendment, among those who are for real freedom to the black man, as to his being entitled to equality in civil rights. If that is not going as far as some gentlemen would desire, I say to them it is a step in the right direction. Let us go that far, and going that far, we have the coöperation of the executive department."

Mr. Cowan, of Pennsylvania, followed, saying: "I have not had an opportunity to examine the bill exactly in all its details. If it was only to operate for the relief of the refugees, of course I suppose there could be no valid objection to it; but the operation of the original bill and this supplement is much wider, and really intends to introduce an *imperium in imperio*. It carries with it not only the power to relieve the refugees, but also a police power which in my State would be exceedingly objectionable; and that the mere fact should be recognized for one instant that it was to operate there, or might by any possibility operate there, would be exceedingly mischievous, and I am unwilling upon this floor, and feel it utterly inconsistent with my duty to my State, to allow any such thing to pass here. Where the necessity for this institution exists, let it be confined there, but let it not be extended beyond. If there are any portions of the States which have not been in rebellion where this jurisdiction is necessary, they should be accurately defined, because this is an extraordinary jurisdiction, and one which trenches upon those peculiar and acknowledged State rights which are estimated very highly by all of us everywhere—one which ought not to be extended beyond the limits of that necessity which begets its existence."

Mr. Guthrie, of Kentucky, said: "Mr. President, I should like to know the peculiar reasons why this bill is to be extended to the State of

Kentucky. She has never been in rebellion. Though she has been overrun by rebel armies, and her fields laid waste, she has always had her full quota in the Union armies, and the blood of her sons has marked the fields whereon they have fought. Kentucky does not want and does not ask this relief. The freedmen in Kentucky are a part of our population; and where the old and lame and halt and blind and infants require care and attention they obtain it from the counties. Our whole organization for the support of the poor, through the agencies of the magistrates in the several counties, is complete."

Mr. Saulsbury, of Delaware, opposed the passage of the bill, saying: "Now, sir, I wish to show to the Senate and to the country what are the dangerous powers intrusted to this Freedman's Bureau, and to those who shall have the management of it. You will recollect, Mr. President, that the original bill provided for the appointment of one commissioner with a salary of \$3,000, with the privilege of having under him clerks at a certain salary. This bill provides that there may be districts formed not exceeding twelve out of the whole number of States in the Union, and that 'there shall be an assistant commissioner for each district with like salary.' That, as I stated the other day, would amount to the sum of \$36,000. It provides, also, that these twelve districts may be subdivided by the President of the United States so as to make the sub-districts within the whole limits of the United States one for each county or parish in the United States.

"The number of counties in the United States is eighteen hundred and seventy-eight, I believe, as corrected by my friend, the Senator from Kentucky, exclusive of the two new States recently admitted. There being, then, that number of counties in the United States, and this bill giving to the President of the United States the power to appoint an agent for every one of those counties at a salary of \$1,500 each, there would be an expenditure of \$2,817,000. Then there are seventy-two clerks of assistant commissioners which this bill provides for, at \$1,200 each, and they would amount to \$86,400. Then thirty-seven hundred and fifty eight clerks of agents (for the bill gives the power to appoint these assistant commissioners, these agents, and clerks for them), would amount to \$4,507,600, making the cost under this bill to the people of the United States for officers alone \$7,442,000.

"What a magnificent bill this would be for a presidential election! With all these agencies appointed by the Executive of the United States interested in his reelection, or in the success of the candidate of the party of which he might be a member, what a powerful political engine it would be to operate upon such an election!

"But, sir, this is not all the expense that will be incurred by this bill. Another section requires that there shall be three million acres of land assigned in certain States in the South for

these freedmen; and, mark you, the negro is a great favorite in the legislation of Congress, and the bill provides that it shall be 'good land.' No land is to be provided for the poor white men of this country, not even poor land; but when it comes to the negro race three million acres must be set apart, and it must be 'good land' at that. I know that the bill provides that this land shall be rented to the negro; but those of you who have observed the thriftiness and skill with which the negro population manage their agricultural operations, will find that when Sambo comes to pay his rent his rent will be pretty much like the rent of the individual who, when his landlord called upon him for his one-third of the produce of the farm, said, 'sir, I did not produce a third.' He will raise nothing to pay the rent. I estimate the rental value of those three million acres of your land at five dollars per acre, and the free negroes of the country are to be entitled to \$15,000,000 more in the way of rental of lands; for no one can suppose that their benevolent and faithful friends of the Republican party will ever collect any rents from them, least of all that any such rents will ever be received into the Treasury of the United States.

"The bill provides that these three million acres shall be in allotments of forty acres each, and each freedman is to have a farm of good land of forty acres; and you do not propose to put the negro upon his little farm of forty acres without a house to live in, because your bill provides in another section that they shall be provided with shelter. Then, after having given him forty acres of good land to live upon, what will it cost to build a very moderate dwelling-house, with necessary out-houses, for this favorite of the legislation of Congress? Not less than \$300, because the negro race now think, at least, that they are equal to the white race, and they have a right to believe, considering the legislation of Congress and the laudation which we hear every day of them, that they are a little better. The erection of these buildings will require an additional expenditure of \$22,500,000. Sir, the time was when it was said that a white man, provided he behaved himself, was as good as a negro; but, looking at the legislation of Congress and the tone of the public press of the Northern States, I think we shall have to come to the conclusion that even if the white man does behave himself, he is not quite as good as the negro, for you find no bills introduced in Congress to furnish homes and houses to the white men of this country, whether poor or rich.

"But, sir, this is not the only expense. You say in this bill that these negroes shall be furnished with provisions, medicines, etc. When you look around upon your own galleries and see the free negroes who are living out of the bounty of the Freedmen's Bureau sitting here every day witnessing your deliberations, do you suppose that the freedmen contemplated by this bill are going to work when others who

are living out of the Freedmen's Bureau are witnessing every day the proceedings of Congress? Certainly not. I estimate, then, that to these four million freedmen you would have to give the small sum of fifty dollars each; and that would be a very small sum. This would require a further expenditure of \$200,000,000.

"Your bill does not stop there; but this enfranchised race must be schooled; and your bill provides that there shall be school-houses, ay, and asylums too, erected for them. I suppose that of the freedmen of the United States there will be nearly a million, including the children and those who are grown, who need schooling, and whom it will be necessary to educate; and mark you, the extent of the supplies is left discretionary with the commissioner; he may expend this money at his discretion. Well, sir, how many pupils will there be, and how many school-houses will be required? I suppose, first, there will be a million pupils, young and old, of this whole race; and I suppose it would cost twenty dollars each to school them. That would take \$20,000,000. I suppose it would take thirty thousand school-houses, and your bill authorizes the building of these houses, and that each school will cost \$300. Here is an additional item of expense amounting in the aggregate to the sum of \$9,000,000.

"Then, after the negro has his house built for him and his forty acres of land allotted to him, he has not the means, you tell us, of providing for himself; his farm must be stocked, and your bill, under the clause for 'furnishing the necessary provisions,' gives the power to stock it. What will that cost? I suppose it will cost \$300 to each of the seventy-five thousand farms, which will amount to the further trifling sum of \$22,500,000.

"Thus, sir, we see that the amount of expenditure authorized under the provisions of this bill, or the loss to the Government under it, may be no less than \$295,000,000, and cannot reasonably be supposed to be less than \$250,000,000."

Mr. Fessenden, of Maine, followed in support of the bill, saying: "Mr. President, I was about to say that this bill, as it stands, is intended to meet a necessary or an inevitable result of the war—a war initiated by the South, carried on by them—a contest long, bitter, and exhausting. In the course of that war it became necessary to take measures to emancipate the slaves. Those measures were taken; they had their effect; and, as a consequence, the Constitution has now been changed so that slavery no longer exists in this country. A large body of men, women, and children, millions in number, who had received no education, who had been laboring from generation to generation for their white owners and masters, able to own nothing, to accomplish nothing, are thrown, without protection, without aid, upon the charities of the world, in communities hostile to them, in communities which

had been in the habit of looking upon them not only with derision but with all the feelings of contempt which it is possible one human being can indulge toward another, so far as their status was concerned and so far as they were concerned, and in communities, too, angered, outraged, if you please, by the fact that all these men had been freed from their domination. That was a necessity arising out of the contest. They were so freed, and found themselves and were found in that condition; and why? For the reason that we were compelled to avail ourselves of their services, in one particular, and in another for the reason that we were compelled to deprive their masters of the material aid which they furnished toward carrying on the contest against us; and thus we find them when arms have disappeared.

"Now, will any man tell me that under such circumstances, a great people having availed themselves of that very fact, having used these former slaves, having deprived the enemy of all the aid which he received from them, will now throw them upon the world without the slightest protection, without the slightest aid, without any comfort, exposed to persecution and prosecution in every possible shape; and why? Because there is no provision in the Constitution whereby Congress is authorized to feed and clothe anybody. We have a written Constitution. In spite of all that the honorable Senator from Delaware has chosen to say, I think we have a respect for it. I think in all cases we have endeavored to adhere to it. There may have been some cases during the war where its provisions were violated, and perhaps necessarily violated. That comes as a matter inevitable in the course of all governments in the many contingencies to which they are exposed, and under circumstances for which no previous provision could be made; but I would have gentlemen to reflect upon one thing, that as a part of the Constitution, written or unwritten, all governments, stand the laws of nations necessarily, inevitably, from the relations which all communities bear to each other, and from the contingencies to which they are exposed. That being the case, and that unwritten law of nations being actually a part of our written law, we accept, as we must accept, all the consequences which follow from it.

"We have been plunged into a war almost, not quite, the greatest of modern times, involving vast results. Will gentlemen undertake to tell me that under such circumstances the necessary results of that war, if it brings about a state of things not found in our written Constitution, are to be avoided, shunned, not noticed in any possible way; that our affairs as connected with it are not to be closed up under the same law which governed us and govern nations while the war continued? If so, that a miserable, weak, powerless people we are! We can carry on a great war, but the moment the clash of arms has ceased to strike our ears we become utterly powerless to pro-

vide for any of its necessary and inevitable results, because it is not written in the Constitution what we should do in a case which could not be foreseen, and which the founders of this Government purposely avoided foreseeing or speaking about! They provided on general principles for the emergency, but did not talk of it as a thing that could possibly occur. The Greeks would not mention in their laws the crime of parricide, because they would not suppose it was a crime that could ever be perpetrated.

"We find ourselves in that condition, we, the Congress of the United States who have been carrying on this war—because after all, as part of the Government, we have carried it on—the gentlemen who sit opposite me, and who do not agree with me in my political views and sentiments, and with whom I do not agree, giving their aid to the same thing, I trust with a good heart and good spirit, I trust honestly and meaning all they appeared to do; and when they find us or find themselves and the Government in this condition necessarily as an inevitable and unavoidable result of the contest which they themselves have waged, the moment we begin to provide for what came out of it they tell us, 'You are working against the Constitution; you cannot find any thing there by which you can feed or clothe a man, woman, or child.' That is the substance of what the honorable Senator from Delaware has told us to-day, and he finds particular offence in the fact that occasionally you see a skin a little darker than his own in the gallery. That is unconstitutional too, I suppose.

"Sir, I accept no such doctrines. Whether you call it the war power or some other power, the power must necessarily exist, from the nature of the case, somewhere, and if anywhere, in us, to provide for what was one of the results of the contest in which we have been engaged. All the world would cry shame upon us if we did not. I know the gentlemen on the other side of the House, and personally I respect them; we are on the best terms in the world that men can be on who do not think alike; and I would trust the honorable Senator from Delaware himself if the case was put upon him to decide, and he had to bear the responsibility of it before the world. He would not dare, no, he would not wish, to avoid it. Every sentiment of his heart, and every manly emotion of his nature would revolt at any such idea. It only shows the difference between what a man would do himself and what for party purposes he can advise others to do.

"I have thus stated the foundation of the bill. And what have we already done? At the last session of Congress we did what, although I was not a member of Congress at the time, met with my perfect approbation; we put it upon the War Department to take care of these people who had been a part of the war, and an essential part of the war. We recognized it as connected with the military operations of the

country, as it properly was. I did not approve at the time of the attempt to put it in any shape upon the Treasury Department; it did not belong there. It was connected with our military operations, and could best be carried on as a part of them. Those operations having ceased in the field, we were not by that means delivered from what remained to be done in order to carry out to the full all that was incumbent upon us to do to accomplish the purpose. We could not divest ourselves if we would of the responsibility that was upon us in reference to that matter, and we would not if we could; and again I will do the honorable Senators on the other side the justice to say that if the responsibility was on them they would not attempt any such thing for their own good name and for the good name and credit of their country.

"With regard, therefore, to all these details of objection to the bill—and I rose principally to say this—I see nothing which should trouble anybody arising from the considerations which have been advanced to us with reference to the constitutionality of the bill itself. We must meet it, and we must meet it under some power. There is no positive prohibition. It is a thing to be done. We have the power to appropriate money, and though we do not find a specific power to appropriate money for this particular purpose, it is yet an object of Government, a thing that the Government and country must provide for, and there is no other way of doing it. If we may appropriate money for this purpose, I ask the Senator to tell me what the distinction is between money and land; for, much as the objection originally struck me, I have been obliged to inquire why if I found the power to do the one I did not find the power to do the other. We may give away the public lands, but it does not follow from that power that we cannot purchase land. We may take the title and the power of Government over lands that are purchased for the mere purpose of carrying into execution certain specified powers. That has been decided. But because we may have specific permission in the Constitution to do that, it is a *non sequitur* that we have no power beyond it. To be sure, the lawyer's argument may be that from the fact of certain powers being specifically granted others are excluded; but we cannot argue thus in this case when we come to apply it to a state of facts that could not be contemplated before they arose."

On January 24th, Mr. Davis of Kentucky, stated his objections, as follows: "I oppose the passage of this measure—

"1. Because a majority of the Senate exclude Senators from eleven States from their seats for the purpose of securing the passage of this and other measures:

"2. The measure is unconstitutional, because it proposes to invest the Freedmen's Bureau with judicial powers; because it authorizes the President to assign army officers to the exercise

of those judicial powers; because it breaks down the partition of the powers of the Government made by the Constitution, and blends and concentrates in the same hands executive and judicial powers; and because it deprives the citizen of his right to trial by jury in civil cases.

"3. It ought not to pass because it is a scheme devised to practise injustice and oppression upon the white people of the late slaveholding States for the benefit of the free negroes, to engender strife and conflict between the two races, and to prostitute the powers of the Government for the impoverishment and degradation of the white race and the enrichment and exaltation of the negro race.

"4. It will produce a profligate, wasteful, and unnecessary expenditure of the public money.

"5. It is one of the bold, reckless, and unconstitutional systems of measures devised by the radical party to enable it to hold on to power and office."

These objections were sustained by lengthy remarks, after which the bill was passed by the following vote:

YEAS—Messrs. Anthony, Brown, Chandler, Clark, Conness, Cragin, Creswell, Dixon, Doolittle, Fessenden, Foot, Foster, Grimes, Harris, Henderson, Howard, Howe, Kirkwood, Lane of Indiana, Lane of Kansas, Morgan, Morrill, Norton, Nye, Poland, Pomeroy, Ramrey, Sherman, Sprague, Stewart, Sumner, Trumbull, Van Winkle, Wade, Williams, Wilson, and Yates—37.

NAYS—Messrs. Buckalew, Davis, Guthrie, Hendricks, Johnson, McDougall, Riddle, Saulsbury, Stockton, and Wright—10.

ABSENT—Messrs. Cowan, Nesmith, and Willey—3.

In the House, a new bill as a substitute to the Senate bill, was passed by the following vote:

YEAS—Messrs. Alley, Allison, Ames, Anderson, Delos R. Ashley, James M. Ashley, Baker, Baldwin, Banks, Barker, Baxter, Beaman, Benjamin, Bidwell, Bingham, Blaine, Blow, Boutwell, Brandagee, Broomwell, Broomall, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Darling, Davis, Dawes, Defrees, Delano, Deming, Dixon, Donnelly, Driggs, Dumont, Eckley, Eggleston, Eliot, Farnsworth, Farquhar, Ferry, Garfield, Grinnell, Griswold, Hale, Abner C. Harding, Hart, Hayes, Henderson, Higby, Hill, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, Dennis Hubbard, John H. Hubbard, James R. Hubbell, James Humphrey, Ingersoll, Jenckes, Julian, Kasson, Kelley, Kelso, Ketcham, Kuykendall, Laffin, Latham, George V. Lawrence, William Lawrence, Loan, Longyear, Lynch, Marston, Marvin, McClary, McIndoe, McKee, McKuer, Mercur, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, O'Neil, Orth, Paine, Patterson, Perham, Phelps, Pike, Platts, Pomeroy, Price, William H. Randall, Raymond, Alexander H. Rice, John H. Rice, Rollins, Sawyer, Schenck, Scofield, Schellabarger, Smith, Spalding, Starr, Stevens, Stillwell, Thayer, Francis Thomas, John L. Thomas, Trowbridge, Upson, Van Aerssen, Burt Van Horn, Robert T. Van Horn, Ward, Warner, Elihu B. Washburne, William B. Washburn, Welker, Wentworth, Whaley, Williams, James Wilson, Stephen F. Wilson, Windom, and Woodbridge—136.

NAYS—Messrs. Boyer, Brooks, Chanler, Dawso

Eldridge, Finck, Glossbrenner, Grider, Aaron Harding, Harris, Hogan, Edwin N. Hubbell, James M. Humphrey, Kerr, Le Blond, Marshall, McCullough, Niblack, Nicholson, Noell, Samuel J. Randall, Ritter, Rogers, Ross, Rousseau, Shanklin, Sitgreaves, Strouse, Tabor, Taylor, Thornton, Trimble, and Wright—33.

NOT VOTING—Messrs. Ancona, Bergen, Buckland, Cuiver, Denison, Goodyear, Hulburd, Johnson, Jones, Radford, Sloan, Voorhees, and Winfield—18.

This amendment was reported back on February 8th, from the Committee on the Judiciary to whom it had been committed in the Senate.

Mr. Trumbull, of Illinois, stated, that it consisted of the Senate bill *verbatim* with a few exceptions. These limited the operation of the bureau to those sections of the country within which the writ of *habeas corpus* was suspended on February 1, 1866, being the insurrectionary States and Kentucky. It had no operation except where there were freedmen. It limited the number of clerks and their pay; and forbade the purchase of land, except with special appropriations made by Congress. These limitations constituted the chief features of the House bill, in which the Committee recommended the Senate to concur with a few exceptions, the effect of which was to remove the limitation of the operations of the bureau to certain sections of the country. This report was concurred in by the Senate, and subsequently approved by the House.

On February 19th, the President sent to the Senate a message with his objections to the bill. (See PUBLIC DOCUMENTS.)

On motion of Mr. Lane, of Indiana, the consideration of the message was postponed until the next day, when the message was discussed by Messrs. Davis of Kentucky, Trumbull of Illinois, and Willey, of West Virginia. The vote was then taken on the passage of the bill, the objections of the President to the contrary notwithstanding, as follows:

YEAS—Messrs. Anthony, Brown, Chandler, Clark, Conness, Cragin, Creswell, Fessenden, Foster, Grimes, Harris, Henderson, Howard, Howe, Kirkwood, Lane of Indiana, Lane of Kansas, Morrill, Nye, Poland, Pomeroy, Ramsey, Sherman, Sprague, Sumner, Trumbull, Wade, Williams, Wilson, and Yates—39.

NAYS—Messrs. Buckalew, Cowan, Davis, Dixon, Doolittle, Guthrie, Hendricks, Johnson, McDougall, Morgan, Nesmith, Norton, Riddle, Saulsbury, Stewart, Stockton, Van Winkle, and Willey—18.

ABSENT—Messrs. Foot and Wright—2.

Two-thirds of the members present not having voted for the bill, it failed to become a law.

In the House, on May 22d, Mr. Eliot, of Massachusetts, from the select Committee on Freedmen's Affairs, reported a bill entitled "An act to establish a Bureau for the relief of Freedmen and Refugees, and for other purposes." Subsequently Mr. Eliot explained that the bill continued the bureau for the term of two years, and provided that its care should be extended to all loyal refugees and freedmen. Other sections changed the objectionable features of the previous act, and also embodied the provisions of the Civil Rights bill. He then proceeded to

examine the existing law, and to show that more protection was necessary. Several amendments were offered and adopted, when the bill passed by the following vote:

YEAS—Messrs. Allison, Ames, Anderson, Delos R. Ashley, James M. Ashley, Baker, Baldwin, Banks, Baxter, Beaman, Bidwell, Blaine, Bromwell, Buckland, Reader W. Clark, Sidney Clarke, Cobb, Cook, Cullom, Dawes, Defrees, Deming, Dixon, Dodge, Donnelly, Dumont, Eekley, Eggleston, Eliot, Farquhar, Ferry, Garfield, Abner C. Harding, Hart, Henderson, Higby, Holmes, Hooper, Asabel W. Hubbard, Chester D. Hubbard, Demas Hubbard, John H. Hubbard, James R. Hubbell, Ingersoll, Jenckes, Julian, Kelley, Latham, George V. Lawrence, William Lawrence, Loan, Longyear, Lynch, Marston, McClurg, McKee, McRuer, Mercur, Moorhead, Morrill, Morris, Myers, O'Neill, Orth, Paine, Patterson, Perham, Pike, Plants, Price, Alexander H. Rice, John H. Rice, Rollins, Sawyer, Schenck, Schofield, Shellabarger, Sloan, Starr, Stevens, Stillwell, Thayer, Francis Thomas, Trowbridge, Upson, Van Aernam, Burt Van Horn, Ward, Henry D. Washburn, William B. Washburn, Welker, Whaley, Williams, James F. Wilson, Stephen F. Wilson, and Woodbridge—98.

NAYS—Messrs. Ancona, Bergen, Chanler, Darling, Davis, Dawson, Eldridge, Glossbrenner, Goodyear, Grider, Hale, Aaron Harding, Hogan, Edwin N. Hubbell, James M. Humphrey, Kuykendall, Le Blond, Marshall, Marvin, McCullough, Niblack, Nicholson, Radford, Samuel J. Randall, Raymond, Ritter, Ross, Sitgreaves, Strouse, Taylor, Trimble, and Wright—32.

NOT VOTING—Messrs. Alley, Barker, Benjamin, Bingham, Blow, Boutwell, Boyer, Brandagee, Broomall, Bundy, Coffroth, Conkling, Culver, Delano, Denison, Driggs, Farnsworth, Finck, Grinnell, Griswold, Harris, Hayes, Hill, Hotchkiss, Hulburd, James Humphrey, Johnson, Jones, Kasson, Kelso, Kerr, Ketcham, Lavin, McIndoe, Miller, Moulton, Noell, Phelps, Pomeroy, William H. Randall, Rogers, Rousseau, Shanklin, Smith, Spalding, Tabor, John L. Thomas, Thornton, Robert T. Van Horn, Warner, Eilhu B. Washburne, Wentworth, Windom, and Winfield—55.

On June 26th the bill came up for consideration in the Senate. Some amendments were proposed by Mr. Wilson, of Massachusetts, and adopted, the most important of which was to strike out the sixth section of the bill and insert seven others, relating to lands in South Carolina and Georgia, occupied under the order of General Sherman. On a motion to limit the number of officers and their pay—

Mr. Hendricks, of Indiana, said: "The question now is whether the commissioner shall have the power to appoint as many clerks and agents as he pleases; and I did not think that the Senator was happy in meeting that particular point. He says that the salary is fixed. I say to the Senator that the salary is not fixed. The number is not defined, and the salary is not fixed. This bill provides that the clerks and agents shall not receive less than \$500 nor more than \$1,200; but if the commissioner chooses, he may give to one man \$500 and to another man \$1,200 for doing the very same thing."

"Mr. Wilson, of Massachusetts, followed, saying: 'I take it we would all agree with the Senator from Indiana and fix the number of officers and define their pay if it was in our power to do so; but we do not know precisely the number of

officers that will be needed and we cannot tell the exact amount of their duties. In one State it will be much larger than in others. We have, therefore, been driven to the necessity of allowing the commissioner, under the direction of the President, to appoint these officers, 'so far as the same shall be, in his judgment, necessary for the efficient and economical administration of the affairs of the bureau.' The object is to have as few employes as it is possible to get along with, and to pay them at the cheapest rate. We authorize them, in order to avoid the necessity of appointing new men, to detail men from the army. We provide, also, that the clerks appointed shall have a salary of not less than \$500 nor more than \$1,200, and the persons to be appointed will receive a salary somewhere between those two sums. I think the provision of the bill as it now stands is imposed upon us by the very necessities of the case. Wherever we can define the number of officers and fix their salaries, I think it is our duty to do it; but I think we cannot do it here; and I hope, therefore, that the amendment will not be adopted."

All the amendments were approved by the Senate, and the bill ordered to be engrossed for the third reading, when Mr. Hendricks, of Indiana, in opposition, said: "I think this is a very objectionable measure, and regret to see it pass; but I am well aware that any argument that could be made upon it, at this stage of its consideration, would not influence its fate, and therefore I do not propose to take up the time of the Senate in its discussion further than to say that in the very nature of the thing, an institution of this sort cannot bring good either to the white or to the colored race, in my judgment. I do not believe that any bureau can be a success which sends men into a community to govern a part of that community. There is no society in New England, there is no society in the Northwest, which can be governed well for the country under a system like this. I think during the last six months we have had so much information in regard to the practical operation of this bureau as to call upon men to hesitate before they continue its existence for two years longer. My information upon the subject is, and it is that upon which I rely, that this bureau has been a cause of evil and disturbance in the Southern States, and has not secured to the colored people that blessing which is any compensation to the country for the enormous expense it is upon the national treasury."

The bill was then passed.

The House, on June 29th, refused to concur in the amendments of the Senate, and a Committee of Conference was appointed by both Houses.

In the Senate, on July 2d, the committee made a report, which was concurred in.

In the House, on July 8d, the Conference Committee made a report, which Mr. Eliot, of Massachusetts, thus explained the more important features: "Mr. Speaker, the first amendment which the Senate made to the bill as it was passed by the House was simply an enlarge-

ment of one of the sections of the House bill, which provided that the volunteer medical officers engaged in the medical department of the bureau might be continued, inasmuch as it was expected that the medical force of the regular army would be speedily reduced to the minimum, and in that case all the regular officers would be wanted in the service. It was therefore thought right that there should be some force connected with the Bureau of Refugees and Freedmen. The Senate enlarged the provisions of the House bill by providing that officers of the volunteer service now on duty might be continued as assistant commissioner and other officers, and that the Secretary of War might fill vacancies until other officers could be detailed from the regular army. That is the substance of the first material amendment.

"The next amendment made by the Senate was to strike out a section of the House bill which simply provided that upon application for restoration by the former owners of the land assigned under General Sherman's field order, the application should not be complied with. That section is stricken out and another substituted for it, which provides that certain lands, which are now owned by the United States, having been purchased by the United States under tax commissioners' sales, shall be assigned in lots of twenty acres to freedmen who have had allotments under General Sherman's field order, at the price for which the lands were purchased by the United States; and not only that those freedmen should have such allotments, but that other freedmen who had had lots assigned to them under General Sherman's field order, and who may have become dispossessed of their land, should have assignments made to them of these lands belonging to the United States. I think the justice of that provision will strike every one. And it will be perhaps a merit in the eyes of many that it does not call upon the Treasury for the expenditure of any money. In the bill which was passed by the House it will be recollected that there was a provision under which there should be purchased by the commissioner of the bureau enough public lands to be substituted for the lands at first assigned to freedmen. Instead of that, provision is made by which they can have property belonging to the United States which has come into its possession under tax sales, and where the titles have been made perfect by lapse of time."

Mr. Washburn, of Indiana: "What is the price at which these lands are to be sold to freedmen?"

Mr. Eliot: "A dollar and a half an acre."

Mr. Washburn, "That is not the cost to the Government."

Mr. Eliot: "I ought to state that the price is fixed in the bill at \$1.50 an acre. The gentleman from Indiana (Mr. Washburn) says that is not the cost to the Government. I am not so familiar with the facts as to be able to state how that is. The next amendment of the Senate provides that certain lands which were purchased

by the United States at tax sales, and which are now held by the United States, should be sold at prices not less than ten dollars an acre, and that the proceeds should be invested for the support of schools, without distinction of color or race, on the islands in the parishes of St. Helena and St. Luke. That is all the provision which was made for education. It will be remembered that in the other bill there was a provision which was deemed pretty elaborate and pretty extensive. That provision was stricken out and the provision of the Senate is a substitute for it. The next amendment, or rather a part of one long amendment, consists of two sections that merely provide for carrying into execution the prior sections to which I have referred.

"The only other material amendment made by the Senate gives to the commissioner of the bureau power to take property of the late Confederate States, held by them or in trust for them, and which is now in charge of the commissioner of the bureau—to take that property and devote it to educational purposes. The amendment further provides that when the bureau shall cease to exist, such of the late so-called Confederate States as shall have made provision for education without regard to color should have the balance of money remaining on hand, the same to be divided among them in proportion to their population."

The House subsequently concurred in the report.

On July 16th, the President returned the bill to the House with his objections, as follows:

To the House of Representatives:

A careful examination of the bill passed by the two Houses of Congress entitled "An act to continue in force and to amend an act to establish a Bureau for the relief of Freedmen and Refugees, and for other purposes," has convinced me that the legislation which it proposes would not be consistent with the welfare of the country, and that it falls clearly within the reasons assigned in my message of the 19th of February last (see PUBLIC DOCUMENTS), returning, without my signature, a similar measure which originated in the Senate. It is not my purpose to repeat the objections which I then urged. They are yet fresh in your recollection, and can be readily examined as a part of the records of one branch of the national Legislature. Adhering to the principles set forth in that message, I now reaffirm them, and the line of policy therein indicated.

The only ground upon which this kind of legislation can be justified is that of the war-making power. The act of which this bill was intended as amendatory was passed during the existence of the war. By its own provisions it is to terminate within one year from the cessation of hostilities and the declaration of peace. It is therefore yet in existence, and it is likely that it will continue in force as long as the freedmen may require the benefit of its provisions. It will certainly remain in operation as a law until some months subsequent to the meeting of the next session of Congress, when, if experience shall make evident the necessity of additional legislation, the two Houses will have ample time to mature and pass the requisite measures. In the mean time the questions arise, why should this war measure be continued beyond the period designated in the original act; and why, in time of peace, should military tribunals be created to continue until each "State

shall be fully restored in its constitutional relations to the Government, and shall be duly represented in the Congress of the United States?" It was manifest, with respect to the act approved March 8, 1866, that prudence and wisdom alike required that jurisdiction over all cases concerning the free enjoyment of the immunities and rights of citizenship, as well as the protection of person and property, should be conferred upon some tribunal in every State or district where the ordinary course of judicial proceeding was interrupted by the rebellion, and until the same should be fully restored. At that time, therefore, an urgent necessity existed for the passage of some such law. Now, however, the war has substantially ceased; the ordinary course of judicial proceedings is no longer interrupted; the courts, both State and Federal, are in full, complete, and successful operation, and through them every person, regardless of race and color, is entitled to and can be heard. The protection granted to the white citizen is already conferred by law upon the freedman; strong and stringent guards, by way of penalties and punishments, are thrown around his person and property, and it is believed that ample protection will be afforded him by due process of law, without resort to the dangerous expedient of "military tribunals," now that the war has been brought to a close.

The necessity no longer existing for such tribunals, which had their origin in the war, grave objections to their continuance must present themselves to the minds of all reflecting and dispassionate men. Independently of the danger in representative republics of conferring upon the military in time of peace extraordinary powers—so carefully guarded against by the patriots and statesmen of the earlier days of the Republic, so frequently the ruin of governments founded upon the same free principle and subversive of the rights and liberties of the citizen, the question of practical economy earnestly commends itself to the consideration of the law-making power. With an immense debt, already burdening the incomes of the industrial and laboring classes, a due regard for their interests, so inseparably connected with the welfare of the country, should prompt us to rigid economy and retrenchment, and influence us to abstain from all legislation that would unnecessarily increase the public indebtedness. Tested by this rule of sound political wisdom, I can see no reason for the establishment of the "military jurisdiction" conferred upon the officials of the bureau by the fourteenth section of the bill.

By the laws of the United States, and of the different States, competent courts, Federal and State, have been established and are now in full practical operation. By means of these civil tribunals, ample redress is afforded for all private wrongs, whether to the person or the property of the citizen, without denial or unnecessary delay. They are open to all, without regard to color or race. I feel well assured that it will be better to trust the rights, privileges, and immunities of the citizen to tribunals thus established and presided over by competent and impartial judges, bound by fixed rules of law and evidence, and where the right of trial by jury is guaranteed and secured, than to the caprice and judgment of an officer of the bureau, who, it is possible, may be entirely ignorant of the principles that underlie the just administration of the law. There is danger, too, that conflict of jurisdiction will frequently arise between the civil courts and these military tribunals, each having concurrent jurisdiction over the person and the cause of action—the one judicature administered and controlled by civil law, the other by the military. How is the conflict to be settled, and who is to determine between the two tribunals when it arises? In my opinion it is wise to guard against such conflict by leaving to the courts and juries the protection of all civil rights and the redress of all civil grievances.

The fact cannot be denied that since the actual cessation of hostilities many acts of violence, such

perhaps as had never been witnessed in their previous history, have occurred in the States involved in the recent rebellion. I believe, however, that public sentiment will sustain me in the assertion that such deeds of wrong are not confined to any particular State or section, but are manifested over the entire country, demonstrating that the cause that produced them does not depend upon any particular locality, but is the result of the agitation and derangement incident to a long and bloody civil war. While the prevalence of such disorders must be greatly deplored, their occasional and temporary occurrence would seem to furnish no necessity for the extension of the bureau beyond the period fixed in the original act. Besides the objections which I have thus briefly stated, I may urge upon your consideration the additional reason that recent developments in regard to the practical operations of the bureau in many of the States show that in numerous instances it is used by its agents as a means of promoting their individual advantage; and that the freedmen are employed for the advancement of the personal ends of the officers, instead of their own improvement and welfare, thus confirming the fears originally entertained by many that the continuation of such a bureau for any unnecessary length of time would inevitably result in fraud, corruption, and oppression.

It is proper to state that in cases of this character investigations have been promptly ordered, and the offender punished whenever his guilt has been satisfactorily established. As another reason against the necessity of the legislation contemplated by this measure, reference may be had to the "Civil Rights bill," now a law of the land, and which will be faithfully executed as long as it shall remain unrepealed and may not be declared unconstitutional by courts of competent jurisdiction. By that act it is enacted "that all persons born in the United States and not subject to any foreign power, excluding Indians not taxed, are hereby declared to be citizens of the United States; and such citizens, of every race and color, without regard to any previous condition of slavery or involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall have the same right in every State and Territory in the United States, to make and enforce contracts, to sue, to be parties, and give evidence, to inherit, purchase, lease, sell, hold, and convey real and personal property, and to full and equal benefit of all laws and proceedings for the security of person and property, as is enjoyed by white citizens, and shall be subject to like punishment, pains, and penalties, and to none other, any law, statute, ordinance, regulation, or custom to the contrary notwithstanding."

By the provisions of the act full protection is afforded, through the district courts of the United States, to all persons injured, and whose privileges, as there declared, are in any way impaired; and heavy penalties are denounced against the person who wilfully violates the law. I need not state that that law did not receive my approval; yet its remedies are far preferable to those proposed in the present bill; the one being civil and the other military.

By the sixth section of the bill herewith returned, certain proceedings by which the lands in the "parishes of St. Helena and St. Luke, South Carolina," were sold and bid in, and afterward disposed of by the tax commissioners, are ratified and confirmed. By the seventh, eighth, ninth, tenth, and eleventh sections, provisions by law are made for the disposal of the lands thus acquired to a particular class of citizens. While the quieting of titles is deemed very important and desirable, the discrimination made in the bill seems objectionable, as does also the attempt to confer upon the commissioners judicial powers, by which citizens of the United States are to be deprived of their property in a mode contrary to that provision of the Constitution which declares that no

person "shall be deprived of life, liberty, or property without due process of law." As a general principle, such legislation is unsafe, unwise, partial, and unconstitutional. It may deprive persons of their property who are equally deserving objects of the nation's bounty as those whom by this legislation Congress seeks to benefit. The title to the land thus to be portioned out to a favored class of citizens, must depend upon the regularity of the tax sale under the law as it existed at the time of the sale, and no subsequent legislation can give validity to the rights thus acquired as against the original claimants. The attention of Congress is therefore invited to a more mature consideration of the measures proposed in these sections of the bill.

In conclusion, I again urge upon Congress the danger of class legislation, so well calculated to keep the public mind in a state of uncertain expectation, disquiet, and restlessness, and to encourage interested hopes and fears that the national Government will continue to furnish to classes of citizens in the several States means for support and maintenance, regardless of whether they pursue a life of idleness or of labor, and regardless also of the constitutional limitations of the national authority in times of peace and tranquillity.

The bill is herewith returned to the House of Representatives, in which it originated, for its final action.

ANDREW JOHNSON.

WASHINGTON, July 16, 1866.

After the reading of the message the bill was repassed by the House by a two-thirds vote, as follows:

YEAS—Messrs. Alley, Allison, Ames, Anderson, Delos B. Ashley, James M. Ashley, Baker, Banks, Barker, Baxter, Benjamin, Bidwell, Bingham, Bowwell, Bromwell, Buckland, Bundy, Beader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Dawes, De-frees, Delano, Deming, Donnelly, Driggs, Eckert, Eggleston, Eliot, Ferry, Garfield, Grinnell, Griswold, Hale, Hart, Henderson, Higby, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, Julian, Kasson, Kelley, Ketcham, Lafin, Latham, George V. Lawrence, William Lawrence, Loan, Long-year, Lynch, Marston, Marvin, McClurg, McKee, McRuer, Mercer, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, O'Neill, Orth, Perham, Pike, Plants, Price, William H. Randall, Alexander R. Rice, Rollins, Sawyer, Schofield, Shellabarger, Spalding, Stevens, Thayer, John L. Thomas, Trowbridge, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Warner, Elihu B. Washburne, William R. Washburn, Welker, Wentworth, Whaley, Williams, James F. Wilson, Stephen F. Wilson, Windom, Woodbridge, and the Speaker—104.

NAYS—Messrs. Ancona, Boyer, Dawson, Eldridge, Finck, Glossbrenner, Grider, Aaron Harding, Horan, Humphrey, Johnson, Kerr, Kuykendall, Le Blond, Marshall, Niblack, Nicholson, Noell, Phelps, Samuel J. Randall, Raymond, Ritter, Rogers, Ross, Rousseau, Shanklin, Sitgreaves, Tabor, Taylor, Thornton, Trimble, Henry D. Washburn, and Wright—51.

NOT VOTING—Messrs. Baldwin, Beaman, Bergen, Blaine, Blow, Brandagee, Broomall, Chanler, Coffroth, Cullom, Culver, Darling, Davis, Denison, Dixon, Dodge, Dumont, Farnsworth, Farquhar, Goodear, Abner C. Harding, Harris, Hayes, Hill, Demas Hubbard, Edwin H. Hubbell, Ingersoll, Jenckes, Jones, Kelso, McCullough, McIndoe, Paine, Patterson, Pomeroy, Radford, John H. Rice, Schenck, Sloan, Smith, Starr, Stillwell, Strouse, Francis Thomas, Upson, and Winfield—45.

In the Senate, the bill was again passed by the following vote:

YEAS—Messrs. Anthony, Brown, Chandler, Clark, Conness, Cragin, Creswell, Edmunds, Fessenden, Foster, Grimes, Harris, Henderson, Howard, Howe, Kirk

wood, Lane of Indiana, Morgan, Morrill, Nye, Poland, Pomeroy, Ramsey, Sherman, Sprague, Stewart, Sumner, Trumbull, Wade, Willey, Williams, Wilson, and Yates—33.

Yates—Messrs. Buckalew, Davis, Doolittle, Guthrie, Hendricks, Johnson, McDougall, Nesmith, Norton, Riddle, Saulsbury, and Van Winkle—12.

ASSENT—Messrs. Cowan, Dixon, Lane of Kansas, and Wright—4.

In the House, on March 14th, a bill reported by the Committee on the Judiciary to amend the act of 1863, relative to the responsibility of officers, etc., was considered. Mr. Cook, of Illinois, stated the object of the bill to be to relieve all officers and persons acting under military authority from responsibility when sued for acts done during the late war, when done by order of superior officers, and to provide for the trial of the question of authority in the Federal instead of the State courts.

He said: "The first section of this bill provides that an order from any military officer of the United States holding the command of the department, district, or place within which the act complained of shall have been done, shall be a defence.

"This provision is rendered necessary from the fact which appears in evidence before the committee that the State courts in some of the border States have held, under section four of the act of which this is an amendment, that the order of the President of the United States is necessary to justify the party doing the act, and as it is scarcely possible for a party sued to produce an order from the President of the United States directing him to do the particular act complained of, the law became in many instances a dead letter. The principle that a Government shall relieve its officer from individual responsibility for any act done by the command of a military superior has been settled so long and so well that I do not propose to discuss it now. In order to make that principle operative in the act to which this is an amendment, the provision contained in the first section of this bill is indispensably necessary. Where the State courts hold that the order of the President of the United States himself must be produced to justify the impressment of a horse or seizure of forage or military supplies, the protection designed to be given by the act is taken entirely away. The spirit of the first act it is believed is met by the words of this amendment, which provides that a military order issued by any person having the command of the district, department, or place where the act complained of is done shall be a defence. The soldier or subordinate officer must at his peril obey without question the order of his superior, and that order should protect him from individual responsibility for acts done in pursuance of it.

"The second section of the bill has reference merely to the character of the evidence of the existence of this order which shall be produced.

"The third section of the bill provides for the removal of the action from the State to

the Federal courts at any time before the jury was impanelled to try the same. By the original act it was necessary that the motion for a change of venue should be filed at the term that the appearance of the defendant was entered. Evidence is before the committee tending to show that in the State of Kentucky alone fifteen hundred suits have been brought against citizens who acted or claimed to act in behalf of the United States, for acts done by command of military officers. In the vast majority of these cases the defendants were not aware that it was necessary that the motion to change the venue should be made at the appearance term. In some cases the suits were brought before the act became generally known, and in consequence thereof many are prevented from taking the change of venue to the Federal court which they desired to do.

"I find by reference to the act of 1833, called the 'force bill,' precisely such a provision was inserted to meet the state of facts in South Carolina in nullification times. That act provides that the change of venue may be taken at any time before trial. To meet this difficulty, and to secure to those who were intended to be protected by the law of 1863 the benefit of that protection, it is provided in the third section of this act that the change of venue may be made after the appearance of the defendant and before the impanelling of the jury to try the cause. That applies to suits pending as well as to suits to be commenced hereafter. The object of the section is to give relief to those men who have been sued there, and who, not understanding that it was necessary to file a petition for a change of venue at the appearance term, have suffered that term to pass. Section three provides for a state of fact like this: there was evidence before the committee tending to show that in some of the State courts of Kentucky the courts have refused to grant a change of venue after application has been made precisely in accordance with the terms of the act of 1863.

The reasons assigned, so far as I have heard them, are two. The first is, that the act of 1863 is unconstitutional; and the second is, that the court has a discretion which it may exercise to refuse to approve the security which is offered by the defendant that he will file the record in the United States court.

"The fifth section of the bill provides for cases which have occurred in which the clerks of the State courts have refused to give certified copies of the record to be filed in the United States courts, and to prevent the right to a change of venue being defeated by any default of the clerks of the State courts.

"There is another important provision of this bill which I failed to explain. The law of 1863 provides that at the time the defendant shall file his petition for a change of venue he shall give security, to be approved by the State court, conditioned that he will at the next term of the Federal court file a copy of the record in that court. There was evidence before the commit-

tee tending to show that the courts have exercised a discretion to refuse the security when tendered, for the purpose of embarrassing the defendant in securing this change of venue, and consequently it is required in this bill that 'on the filing of the petition, verified as provided in said fifth section, the further proceedings in the State court shall cease, and not be resumed until a certificate, under the seal of the circuit court of the United States, stating that the petitioner has failed to file copies in the said circuit court, at the next term, is produced.'

"The venue is not to be changed unless the party at the next term of the United States court files his copy of the order of the State court. There are but two principles embodied in this bill. Both principles are embodied in the bill of 1833, which received the sanction of Congress and the assent of President Jackson. The first principle is, that the United States will protect its officers in executing its laws and maintaining its authority. And the second principle is, that in testing the question whether a man has been acting under the authority of the United States, the question shall be tried in the courts of United States. Those two principles, I conceive, cannot be surrendered without surrendering entirely the power to administer the Government and to execute the laws."

Mr. Harding, of Kentucky, replied: "Under the original act, to make a valid defence required the special order or authority of the President of the United States. But by this bill any order, verbal or written, general or special, by any officer in command of any district, department, or place, any kind of order is made to justify the act complained of. Now, I beg that this feature of the bill will be noticed, and it will be seen that it is framed wholly in the interests of one of the parties litigant. Congress is asked to intervene between parties litigant after the suit has been commenced, and to act exclusively in favor of one of the parties, and ignore the rights of the other party altogether."

"I learn now for the first time, by the gentleman's remark, that there was evidence before the committee. But what sort of evidence was it? Strictly and rigidly *ex parte* evidence—evidence in favor of the defendants in all cases—but not a word in favor of the plaintiff. The result is what might have been expected. The bill before us is strictly framed in the interest of the defendant, utterly ignoring the rights of the plaintiff."

"Now, sir, is it not worth while to consider the fact that there may be cases in which the plaintiff is not exactly a criminal because he brings a suit, but may have a just cause of action? This bill seems to treat the act of suing in the State courts as but little less criminal than committing the original outrage. Every provision in this bill, from first to last, is manifestly framed in the interest of the defendant, to the utter exclusion of the rights of the plaintiff."

"Sir, I would be willing to give my support

to a bill which should fairly attempt to promote the ends of justice, without regard to the parties litigant. But look at this bill; compare it with the original act. That act requires a special order of the President. It is to be presumed that the President would not act rashly—would not order the arrest of a person without some evidence, or at least some reasonable ground of suspicion. But under the provisions of this bill, if it be passed, any mere law student can, I affirm, frame a defence and exonerate any defendant, though he may have committed robbery, murder, or other high crime; because the defendant is not required to state or to prove that there was any ground of suspicion, or any probable cause whatever for the seizure, arrest, or imprisonment complained of; the order of any officer in command at any place, either general or special, verbal or written, is made a full defence."

Mr. Rogers, of New Jersey, followed in opposition, saying: "Sir, I affirm—and I feel that I can do so without fear of successful contradiction—that the provisions of this bill are contrary to the fundamental principles of our Government; and without regard to any express prohibitions of the Constitution, they are violative of those great rights of property, liberty, and life, which the Government was founded to secure. When this Congress undertakes to trample upon and override the elementary principles of society, it saps the foundation-principles of our Government; and it requires no express restraining clause of the Constitution to forbid such an outrage. The provisions of this bill are inimical to those great doctrines of republican liberty which give vitality to the Constitution of the United States, and which our Revolutionary fathers intended to hand down unimpaired as a priceless jewel to their posterity."

"Sir, the act of March 3, 1863, to which this purports to be a supplement, made 'any order issued by the President or under his authority a complete defence for any search, seizure, arrest, or imprisonment made, done, or committed, or act omitted to be done.' This bill goes much further than that act. It not only dispenses with the kind of proof which was required by that act, but it substitutes a new species of proof. It authorizes the commission of trespasses that were not authorized by the act of March 3, 1863. This bill proposes to legalize 'any search, seizure, arrest, or imprisonment made, done, or committed, or any acts omitted to be done during the said rebellion, by any officer or person under and by virtue of any order, written or verbal, general or special, issued by any military officer of the United States, holding the command of the department, district, or place within which such seizure, search, arrest, or imprisonment was made, done, or committed, or any acts were so omitted to be done, either by the person or officer to whom the order is addressed, or by any other person aiding or assisting him therein.'

"The act of March 3, 1868, was confined to searches, seizures, arrests, and imprisonments made by men claiming to have military authority and by virtue of the order of the President. This bill goes further, and protects from punishment any act done under 'any order, written or verbal, general or special, issued by any military officer of the United States holding command of the department, district, or place.' Under this bill the military officer commanding any town, though he be only a corporal, will be protected from punishment, though he may without authority have torn the wife from her husband and plunged to her heart the deadly knife of the assassin. If a man can show an order from any military authority, that order exempts him from all responsibility for any outrage, however heinous, which he may have committed. A private soldier can justify himself for rape, arson, murder, or any other outrage, if he can produce the order of his superior officer.

"In addition to that, sir, this bill proposes to legalize as proof that which is unknown to the laws of evidence sanctioned by the common law. A simple telegraphic dispatch, without any proof of its authenticity, is to be received as a defence against any charge. Is that the way in which the liberties of the citizen were intended to be secured by the Constitution? Was it ever contemplated by the framers of that instrument that such evidence should be accepted to screen and protect the midnight assassin from punishment for the gravest crimes of which humanity can be guilty?"

Mr. McKee, of Kentucky, replied: "What does this bill propose? Merely to allow those men who during the war have acted under orders from superior officers, from the President of the United States down to department commanders, and who have committed any acts which could be recognized under the laws of a State as illegal, to be protected in the performance of a duty which they were required to perform under their oath mustering them into the Federal army. The question is, whether we shall protect them from malicious persecution instituted and carried on in the several States by those who never had the interest of the country at heart, and who have taken every opportunity to assail, annoy, and trouble the soldiers of the Federal army. It is a bill, sir, to give them that protection which the Government owes to them. I say that the Government is worthless unless it protects those men whom it intrusted its own protection, and who saved it from the deadly stroke of treason. This simply protects them in the courts of the United States because the State courts have refused and do refuse to give that protection to these men. I contend, sir, that it is the peculiar province of the Government of the United States in its own courts to guarantee that protection to the officers and soldiers who served in any capacity in its service during the rebellion. There is where they are most likely to

have their rights protected. There is where local prejudices are frowned down."

The bill was further debated by members of the House from Kentucky, where three thousand five hundred suits had been brought, and finally passed by the following vote:

YEAS—Messrs. Alley, Allison, Ames, Anderson, Delos R. Ashley, James M. Ashley, Baker, Baldwin, Banks, Barker, Baxter, Beaman, Bidwell, Bingham, Blaine, Blow, Boutwell, Bromwell, Broomall, Buckland, Bundy, Reader W. Clark, Conkling, Cook, Culom, Delano, Deming, Dixon, Driggs, Dumont, Eggleston, Eliot, Farnsworth, Farquhar, Ferry, Garfield, Grinnell, Abner C. Harding, Hart, Hayes, Henderson, Hill, Holmes, Hooper, Asahel W. Hubbard, Chester D. Hubbard, Demas Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, Ingersoll, Jenckes, Kasson, Kelley, Kelso, Ketcham, Kuykendall, Ladin, Latham, George V. Lawrence, William Lawrence, Loan, Lynch, Marston, Marvin, McClurg, McKee, McRuer, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, Noell, O'Neill, Orth, Paine, Perham, Phelps, Pike, Plants, Price, William H. Randall, Raymond, John H. Rice, Rollins, Rosseau, Sawyer, Schofield, Shellabarger, Sloan, Smith, Stevens, Stillwell, Thayer, Trowbridge, Upson, Van Aernan, Burt Van Horn, Robert T. Van Horn, Ward, Warner, Elihu B. Washburne, William B. Washburn, Welker, Wentworth, Williams, James F. Wilson, Windom, and Woodbridge—112.

NAYS—Messrs. Ancona, Bergen, Boyer, Brooks, Chanler, Coffroth, Dawson, Eldridge, Glossbrenner, Grider, Hale, Aaron Harding, Hogan, Edwin N. Hubbell, James M. Humphrey, Jones, Kerr, Le Blond, Marshall, McCullough, Nicholson, Samuel J. Randall, Ritter, Rogers, Ross, Sitgreaves, Strouse, Tabor, Thornton, Trimble, and Winfield—81.

NOR VOTING—Messrs. Benjamin, Brandagee, Sidney Clarke, Cobb, Culver, Darling, Davis, Dawes, Defrees, Denison, Donnelly, Eckley, Finck, Goodyear, Griswold, Harris, Higby, Hotchkiss, James Humphrey, Johnson, Julian, Longyear, McIndoe, Mercur, Niblack, Patterson, Pomeroy, Radford, Alexander H. Rice, Schenck, Shanklin, Spalding, Starr, Taylor, Francis Thomas, John L. Thomas, Henry D. Washburn, Whaley, Stephen F. Wilson, and Wright—49.

In the Senate, the bill was reported from the Judiciary Committee on April 11th, and postponed until the next day, when several verbal amendments were made.

Mr. Edmunds, of Vermont, moved the following amendment:

Or so far as it operates as a defence for any act done or omitted in any State represented in Congress during the rebellion, and in which, at the time and place of any such act or omission, martial law was not in force.

He said: "Mr. President, I am not one of that class of persons who are struck with constitutional paralysis on every occasion when some necessary law for the security of the public is about to be enacted; and therefore I am willing to go as far as any reasonable degree of patriotism, or even any reasonable degree of courage, will permit into the debatable land of constitutional doubt in passing acts of this kind, which are really designed for the security of men who have been acting under the orders of the Government in enforcing the laws; but it has appeared to me that there are limits beyond which it is not only unsafe, but unwise, for those who represent the people to go, even

for the good end in view of reaching so noble a purpose as that of protecting the persons whom it is said have been sued in actions at law for carrying out the orders of the President of the United States, either directly or indirectly.

"The act of 1863, to which this bill is an amendment, simply provided that the order of the President of the United States, or the order of any one acting under his authority, should stand as a defence against actions of this description. This bill goes further, and provides that not only the order of the President of the United States or of the Secretary of War, but the order of any military officer of the United States holding the command of the department, district, or the place within which any search, seizure, arrest, or imprisonment was made, etc., shall stand as a defence in and of itself; so that in States of the Union which have never been in rebellion, in States of the Union where martial law has never been proclaimed, the act of a captain recruiting a company of volunteers is to be by an *ex post facto* law a complete defence to an action of trespass against him for false imprisonment, or for taking a horse, or whatever it may be. Certainly it must be an extreme necessity indeed which drives us to such legislation as that. It is the exercise, as it appears to me, in regions where martial law and rebellion have not prevailed at all, of a power which can nowhere be found in the Constitution, which can nowhere be raised by implication from any of its provisions, and which is contrary to the natural sense of justice which pervades every man's bosom.

"I know that there is a precedent for this class of legislation. In the time of that king who was called, or rather miscalled, the first gentleman in Europe, and who was certainly the worst monarch, and whose fears of assassination and the overthrow of his Government were such as to drive him nearly crazy, a subservient Parliament passed an act somewhat similar to this, which declared that all arrests of people suspected of treason, which had been made, or which might be made within a certain limited time, should be regarded as lawful, independent of the question of whether there was any ground of suspicion, and independent of the question what subject of his Britannic majesty it was who should make the arrest. But, sir, I have yet to learn that any court in Great Britain ever upheld an act of that description. I believe that no decision can be found anywhere in any civilized community holding that an *ex post facto* enactment, declaring, by mere force of the law, that a past transaction should be guilty or guiltless, had any force at all except as it fortified martial law or operated upon districts where civil law was not in force. Therefore it has appeared to me, not, as I have said before, as one of those persons who are delighted to find constitutional objections to every thing which is proposed in the disturbed state of the country, but rather as

one of those who desire to use that noble instrument to its fullest extent, and not to abuse its powers, that it is unwise as well as illegal to pass a law of this description, which operates upon districts of the country where there has been perfect repose, and where the mantle of the civil law has been unfolded day by day in the courts of justice.

"Now, if I correctly understand public law (and I do not claim any great familiarity with it), where martial law does prevail, the order of the commanding officer, the order of his subordinate traced down through to the smallest corporal that carries a musket, so that it emanates from headquarters, as all proper discipline makes orders emanate, is a defence, independent of enactments and independent of any special statute on the subject. There is no meaning which can be attached, in my judgment, to the term 'martial law,' except that it has the force of law; and therefore, if there were any sections of this country where martial law has prevailed and where these arrests and imprisonments and seizures have been made, whether right or wrong, so that they were made by authority of the superior commander, that very law itself furnishes the justification, and it needs no act of Congress to confirm it. At the same time I am willing, if it be thought that an act of Congress will make it stronger, to acquiesce in that opinion. But when you ask me to go a step further, and into regions where peace and repose have prevailed continually, and martial law has not existed, and where no foe has raised his banner anywhere, and to say that the order of the President of the United States, or the order of any other person professing to act under his authority, however remote, is to be held as a defence in a court of law, then I am compelled to disagree, because it invades what has always been considered the fundamental private rights of every member of organized society."

Mr. Howard, of Michigan, said: "Now, sir, the great object of this bill is, in every case where a soldier or officer has acted in good faith under an order addressed to him or intended for him, to extend to him the protection of the law as against the consequences of any act which he might do and perform under that order or under color of that order, and to enable the defendant in such case as that to transfer the prosecution of the suit (for the proceeding may be criminal or it may be civil) from the local or State tribunal to a Federal tribunal, thus giving the defendant an opportunity of presenting his case to a court and a jury not infected by the local prejudices of the place where the act was committed.

"I must confess that I see no ground or reason whatever for drawing the distinction that is drawn by this amendment of the Senator from Vermont. I see no reason why it should not be applied as well in loyal States in the case of acts by military officers or soldiers as to the same acts when performed in rebel States

or in any State under martial law. The reason is the same in both cases, the great object being the protection of the soldier or the officer in the discharge of his duty, and that is a duty which I hold devolves upon Congress. A soldier or an officer who is a subordinate must not omit to obey the order. If he refuses to do so it is always at the peril of his life or of imprisonment; and to expose a person thus situated to the consequences which might flow from a suit or prosecution in a community where there were strong prejudices against him is something I imagine which we ought not to do. The bill is nothing, in my judgment, but simple, naked justice, applicable to one case as well as to another, and to one locality as well as another."

The amendment moved by Mr. Edmunds was rejected by the following vote:

YEAS—Messrs. Buckalew, Cowan, Doolittle, Edmunds, Guthrie, Hendricks, Johnson, McDougall, Nesmith, and Saulsbury—10.

NAYS—Messrs. Anthony, Chandler, Clark, Conness, Cragin, Creswell, Foster, Grimes, Henderson, Howard, Howe, Kirkwood, Lane of Indiana, Lane of Kansas, Morgan, Nye, Pomeroy, Ramsey, Sherman, Sprague, Stewart, Sumner, Trumbull, Van Winkle, Wade, Willey, Williams, Wilson, and Yates—29.

ABSENT—Messrs. Brown, Davis, Dixon, Fessenden, Harris, Morrill, Norton, Poland, Riddle, and Wright—10.

Mr. Saulsbury, of Delaware, moved to strike out the fourth section imposing damages on State officers on proceeding with a suit after notice of removal. He said: "Now, Mr. President, I am very free to say that if I were a judge in any State I should not feel myself bound to pay any attention whatever to this act; because I do not believe the Congress of the United States has the constitutional authority to pass the act. Suppose a judge of a State court should honestly be of that opinion, and suppose some Secretary of War, or the agent of some Secretary of War, or some Secretary of State, or the agent of some Secretary of State, has caused a citizen within the limits of one of the States to be arrested, and application is made to the State courts for redress, and the State courts believe they have the constitutional authority to afford that redress, notwithstanding the provisions of this act, and shall honestly so decide, your act proposes to punish them in damages for the exercise of an honest judicial opinion. I will not discuss the question, however, Mr. President, but I make the motion to strike out the fourth section of the bill."

Mr. Clark: "I hardly think it is worth while that I should spend much time in answering the Senator from Delaware, and I would not say a word now if this had not been the second time when he uttered words like those which he has now uttered in defiance of the authority of the United States. When the Civil Rights bill was upon its passage, when the Senate was about to vote on it, the Senator from Delaware, in the spirit that he now shows in the Senate, and in the hearing of the people

who were here, stood up in the Senate and defied almost the authority of the United States, and said that if he were a judge, or a person acting in that capacity, in the State of Delaware, he would not obey the law. He repeats that same thing to-day. Sir, if it be so that the rebel spirit which defies the nation, in the person of judges and others, has crept into the Senate, and shows itself here, the more the necessity of the bill which we propose to pass. 'I will not yield to that authority'—so said the rebel, and that produced the war; and now, when the war is over, the Senator from Delaware stands up and repeats that he will not yield to the authority of the United States. It is time this should be done with. It is time that the Senator should understand that the authority of the United States will be supreme, whether it takes a Senator or the merest rebel soldier. This Government must be obeyed, and it is not worth having if it cannot cause itself to be obeyed. This proceeding, if attempted to be carried on in a State court, in defiance of the United States authority, should be void, and the judge and everybody else who undertakes to set himself up in this way—for it will not be an honest authority—should be punished for so doing. We have had about enough of this State authority to teach it to yield respect and obedience to the laws of the United States."

Mr. Hendricks: "I was not able to see that the reply of the Senator from New Hampshire met the point made by the Senator from Delaware. This bill addresses itself to each one of us as lawyers. It proposes to confer upon the courts of the United States jurisdiction, and to control the proceedings of the State courts in certain causes; and I was not able to see the impropriety on the part of a Senator in saying that if he were a judge in a State court he should disregard the provisions of a law which he thought to be unconstitutional. Sir, it is not clear that this proposed transfer of causes from the State courts to the Federal courts was contemplated by the Constitution; and when a similar provision found its way in what is called the Civil Rights bill I had the same opinion upon it. Causes such as are not described at all in the provisions of the Constitution, which defines the jurisdiction of the Federal courts, are to be transferred from the State courts to the Federal courts, merely because Congress so provides. I have my doubts whether it can properly be done. When a case is pending in a State court, and an application is made to transfer that cause to the United States court, if the judge in the State court shall be of opinion that under the Constitution of the United States that cause ought not to be transferred, I submit to the judgment of the Senator from New Hampshire, what is the clear duty of the State judge? Ought he to send the cause from his court into a Federal court, contrary to the laws and Constitution of the country? What jurisdiction shall be possessed by the Federal courts is defined in the Constitution of the Uni-

ted States; and I am of opinion that that definition of jurisdiction does not include the cases provided for in this bill.

"But, sir, suppose it be proper to transfer these causes from the State to the Federal courts, ought the third and fourth sections of this bill to be as they are? We are all familiar with the act which authorizes the transfer of certain causes from the State to the Federal court. Where a citizen of one State brings a suit against a citizen of another State, in a State court, the act of Congress authorizes the transfer of that cause to the Federal court, upon the application of the defendant; and why? Because the Constitution of the United States provides that litigation between citizens of different States may be heard in the Federal court, which is supposed to be disinterested in judgment and feeling between the parties. But in that act we do not find such extraordinary provisions as are in this bill. In that case the defendant, upon the first day of the term, must come into the State court and make his application for the transfer before he does any act which recognizes the jurisdiction of the State court, and he must give his bond that upon the first day of the next term of the Federal court he will file the papers in the cause in the Federal court, and enter his appearance. That is required of the defendant in a cause where it is clearly proper, within the provisions of the Constitution, to take the case from the State to the Federal court.

"Here, however, in a case, to say the least of it, where it is doubtful whether the transfer can be authorized by Congress, it is provided that that transfer may be asked by the defendant, after he has entered an appearance in a State court, after he has recognized, by his appearance and pleadings, the jurisdiction of the State court. And, sir, there is very strange language here, which may be construed authorizing the transfer after a judgment has been rendered in the State court. I call the attention of the Senator from New Hampshire to the language found in the third section, commencing in the eighth line, and I ask him to explain to the Senate the meaning of this language:

But nothing herein contained shall be held to abridge the right of such removal after final judgment in the State court; nor shall it be necessary, in the State court, to offer or give surety for the filing of copies in the Circuit Court of the United States.

"Nothing herein contained shall be construed to abridge the right to take the case from the State to the Federal court after judgment rendered. After the defendant has recognized the jurisdiction of the local court, after he has pleaded in that court, after he has submitted to trial by a jury, and after upon the verdict a judgment has been rendered, I want to know of the Senator whether he contemplates that there should be a transfer, and that the judgment of the State court shall be vacated and a new trial had in the United States court.

"But, sir, in the existing law which authorizes the transfer of causes to the Federal from the State courts in cases that are clearly within the provisions of the Constitution, is there any provision that if the judge shall be of opinion that the case ought not to be transferred, he shall be liable to punishment, he shall be liable to suit and damages? No, sir. Congress, in the enactment upon that subject, has assumed that the State judge will do his duty. But here, almost for the first time, and I believe for the first time unless a provision like this is found in what is called the Civil Rights bill, it is provided that if the judge shall deny the transfer, upon the exercise of his judgment, for what Congress may hold to be an error of judgment, he shall be liable to a civil suit and to damages. Are Senators willing to say that the State judges are to be punished by suits and damages for an error of judgment.

"Mr. President, these are very extraordinary provisions, and I am not at all surprised that the Senator from Delaware should express himself upon them very earnestly. The language which he used I did not observe at the time; but I am very free to say to the Senate that if I were a State judge, and I thought the provision of this law was unconstitutional, I certainly should regard the Constitution as a higher law than the act of Congress which, in my judgment, if it should be my judgment, was contrary to the provisions of the Constitution. It presents the question to a judge whether a case can be transferred to the Federal court; and shall he not decide it? If I bring a suit in a State court against a man who has done me a grievous wrong during these four or five years, a wrong perhaps accompanied with violence and malice, and the cause is set down for trial upon an appearance and plea by the defendant, and he then asks a transfer of the cause to the Federal court, and the judge shall say that the case must be heard before him and before a jury in that court, shall that judge, because of the exercise of a sound and honest judgment, be punished by suit and damages? I ask the Senator from New Hampshire if he has known of any cases in which the State courts have refused under existing laws to allow a transfer where a proper case was made for a transfer. I have heard of none."

Mr. Wilson: "There are a great many cases of that kind. I understand the Legislature of Kentucky has passed a law forbidding the judges of that State to allow these transfers. I understand further that there are over three thousand of these cases in that State. One officer of the Government has thirty-five cases against him. One of the judges of that State, Mr. Andrews, formerly a member of the House of Representatives, would not allow the order of the Government to the officer to be considered as any defence; he said it was no defence; and in the course of ten days afterwards he discharged a rebel on the ground that his

order from the rebel service was a complete defence."

Mr. Hendricks: "I am not familiar with the case referred to by the Senator from Massachusetts. If the judge to whom he refers showed partiality, or that he was governed by corrupt motives, I certainly have no apology or defence to make for him. But I had not heard of any refusals by State judges to allow transfers of causes where the cases were properly presented. I know that in the State of Indiana, as far as my practice has extended, there has been no occasion to complain. If a judge has acted in Kentucky as the Senator from Massachusetts understands, then the remedy against him is by impeachment, not by a general provision that for the exercise of his judgment a judicial officer shall be liable to suit and to penalties."

Mr. Williams, of Oregon, said: "I understand that it has been repeatedly decided by the Supreme Court of the United States, so that the question now is regarded as finally settled, that where, in a State court, a party sued makes a defence under the Constitution, laws, or treaties of the United States, he has a right to have that cause removed at any time during its progress from the State court to a court of the United States, and there have the questions involved adjudicated. I think there can be no question, upon this authority, and upon other decisions of a like nature of the Supreme Court of the United States, as to the constitutionality of this section, because it is manifest that a military officer in the discharge of his duty is acting under the law or the authority of the United States."

Mr. Cowan, of Pennsylvania, followed, saying: "Mr. President, it might be well to inquire from whence sprang all this brood of transferring cases from the State courts to the United States courts. How did it happen that there ever was a precedent for that thing? I will try and explain that. Among other powers delegated to the United States was the power of levying taxes, imposts, duties, and so on, or in other words, to enforce a revenue system. In early times in this country there was no act of Congress taking cognizance of that revenue system and providing for the decision of cases under it; and hence, perhaps, thirty-five or thirty-six years ago, about 1830, an act of Congress was passed which provided that whenever a revenue officer in the execution of his duty collecting the revenue shall be involved in lawsuits with anybody about that subject, those cases should be transferred to the courts of the United States in order that he might be tried there, because the cases arose not under State laws, but under the laws of the United States. That was right and proper. Where the officer was acting under the laws of the United States, where he was executing the laws of the United States, and where the whole subject-matter was within the jurisdiction of the United States, it was eminently proper that the cause should be carried into the United States courts; but that is a

very different thing from the application we have made of that rule here, and a very different thing from the later precedent which we have followed. This is not that case. This is a case where *prima facie* the State courts have not only clear, unquestionable jurisdiction, jurisdiction never before perhaps doubted, but where the United States, by the very terms of the instrument under which we govern the Union, have no such power. Take the Constitution and the judiciary act and read them. Let any man read them and see where he can find the authority there. The nearest he can possibly come to it is that these may be said to be cases arising under the laws of the United States. I am perfectly free to say that an argument may be made there; but I am also perfectly free to say, and I am perfectly sure in saying, that the man who decides that question one way or the other is not on account of that decision to be taken as a criminal or to be mulcted in damages because of any mistake he may make.

"As my honorable friend from California (Mr. McDougall) very often says, the old fathers were wiser than we are. What did they do? They provided that whenever a defendant in any court sets up a justification under the laws of the United States or under the Constitution of the United States, and the State court refused that defence, decided against it, decided against the constitutionality of the law under which he set it up, in such case he should have a writ of error to the Supreme Court of the United States. What could be plainer and wiser? If it be true that under the laws of the United States these officers are justifiable in any particular case, where is the objection to their making that defence in the State court, and, if it is not allowed, give them the right to appeal to the Supreme Court of the United States. What can be plainer than that?"

Mr. Howard, of Michigan, in support of the bill, said: "Mr. President, a very strenuous opposition is made to the fourth section of the bill. The honorable Senator from Delaware has moved to strike it out. Another Senator has moved an amendment to that amendment, to strike out the word 'judges' in the seventh line, so as to exempt the judges of the State courts from the damages which are contemplated in the section. I am opposed to both these amendments, and in favor of the passage of the bill with the fourth section in it, because I think that section contains a sound principle, and that without it there may be many cases in which great injustice may be done to parties who are brought into the State courts on claims of damages by owners of property taken for the purposes of the war. I see no constitutional difficulty whatever in the fourth section. Still I am aware that it comes within that long category of bills which the Senate have passed or endeavored to pass during the late war, which by certain gentlemen in this chamber have been denounced as flagrantly unconstitutional. Indeed, the honorable Senator from Delaware has

gone so far as to say to us that if he were a judge sitting for the purpose of administering justice between man and man in his own State, and this statute, if it should become a statute, should be presented to him, and should be insisted upon by way of defence, he would feel bound to hold it unconstitutional and void, and that he would proceed, notwithstanding this Federal statute, to pass a final judgment in the case which might be before him, and to enforce it.

"It is not necessary for me to say that it is the duty of a judge, whether he occupy a high or an inferior position, as such to decide every question of law that may fairly be presented to his consideration. I am not aware that the law exempts any class of judges of courts from this high and solemn duty. Still, it does seem to me that if I were a State judge, and this question were presented to me in the form which he has suggested, certainly if a doubt hung over the question at all, I should feel it my duty to decide in favor of the validity of the statute, leaving the question finally to be determined by the court of *dernier ressort*, the Supreme Court of the United States, and such, I think, would be felt to be the duty of almost every well-informed State tribunal.

"But, sir, is there any thing in this statute which is in conflict with the Constitution? And does the judicial power of the United States as delegated in the Constitution itself cover the cases which are contemplated by the section? That is the first and principal point for us to determine. If there be a delegation of power in the Constitution covering these cases, the question of its constitutionality cannot be raised upon that issue. The Constitution declares that 'the judicial power shall extend to all cases in law and equity arising under this Constitution, the laws of the United States,' etc. Are the cases contemplated by section four cases arising under any law of the United States? What are they, and what is their character?

"I am speaking of regular acts of war performed by inferiors in obedience to the orders of their superiors. I am not speaking of wilful and wanton trespasses committed by soldiers or officers without warrant and without order, because the bill contemplates no such cases, affords protection in no such cases. I am speaking of acts done under regular orders. Do those acts present cases coming under any law of the United States? That involves the question whether the war itself existed in pursuance of any law of the United States. If the war itself was waged in pursuance of law, if the Congress of the United States, in providing for its prosecution, did not transcend the Constitution itself, all these acts of war were committed under a law of the United States; and the acts themselves, taken in connection with the party plaintiff and the party defendant in the State court, constitute a case at law. A case at law must have parties; there must be a fact connected with it, there must be an allegation on one side by one party against the other in re-

spect to which the plaintiff asks for relief or asks for judgment. That I understand to be in very brief terms a definition of a case at law.

"The judicial power of the United States extends to just such cases; that is to say, it reaches them, it covers them. The judicial power of the United States may, if Congress so choose, take these cases and deal with them in any way it sees fit. If the case exists in a State court, being covered by and subject to the judicial power of the United States under the Constitution, it is competent undoubtedly for Congress to provide for the prosecution, trial, and decision of these cases in their own way. That, in brief, is all that is contemplated in this statute. But, sir, if according to the doctrine of some, if according to the teachings of a class of doctors who have been too numerous and whose teachings have been too fatal in this country, it is not competent for the Congress of the United States to wage war, as they say, against a State; if the acts of the United States in the prosecution of this war were according to the doctrines of those teachers, all void and of no effect; if a State ordinance of secession is to be the paramount law of the land, the Constitution of the United States to the contrary notwithstanding, then, sir, I agree that all these cases are not cases arising under any law of the United States, and therefore they cannot be removed from a State court in which they may happen to be brought. But, sir, I do not belong to that school of politics. I reject the whole theory of Mr. Calhoun and all his followers from beginning to end upon the question of the right of a State to secede, or the right of the Government of the United States to wage war for the purpose of putting down a rebellion or an insurrection. I hold all our acts to be perfectly valid, and as valid as they were necessary."

The amendment of Mr. Saulsbury was rejected, and after some verbal changes the bill was passed, as follows:

YEAS—Messrs. Anthony, Chandler, Clark, Conness, Cragin, Doolittle, Edmunds, Foster, Henderson, Howard, Howe, Johnson, Kirkwood, Lane of Indiana, Morgan, Norton, Nye, Poland, Pomeroy, Ramsey, Sprague, Stewart, Sumner, Trumbull, Van Winkle, Wade, Willey, Williams, Wilson, and Yates—30.

NAYS—Messrs. Buckalew, Guthrie, Hendricks, and Saulsbury—4.

ABSENT—Messrs. Brown, Cowan, Creswell, Davis, Dixon, Fessenden, Grimes, Harris, Lane of Kansas, McDougall, Morrill, Nesmith, Riddle, Sherman, and Wright—15.

The amendments of the Senate were not approved by the House, and committees of conference were appointed, and the bill was passed after an unimportant modification of the sixth amendment of the Senate.

Subsequently in the session an amendment to this amendment was passed, which provides means for the removal of the person of the defendant, whose cause had been removed from State court.

In the House, on December 12th, Mr. Raymond, of New York, presented the credentials of persons elected in Tennessee to seats in the House, that they might come before the House.

Mr. Stevens, of Pennsylvania, said: "I rise to a question of order. I do not mean to oppose the main object of the gentleman from New York (Mr. Raymond). But I hold that this is not a question of privilege. The State of Tennessee is not known to this House nor to Congress. If the gentleman will put his proposition in another shape, and not present it as a question of privilege, I will not object to it. But if he presents it as a question of privilege, I make the point of order that it is not such a question."

The point of order was overruled by the Speaker. Mr. Raymond followed, saying, that his object was merely to get the papers in a position to be acted upon. The disposition which should be made of the papers was a matter of indifference to him. He moved their reference to the joint Committee of Fifteen, when appointed, which was approved.

On July 19th, in the House it was resolved, by a vote of yeas 70, nays 27, to reconsider the vote by which a joint resolution relative to Tennessee had been recommitted to the Committee on Reconstruction.

Mr. Bingham, of Ohio, then withdrew the motion to recommit, and offered the following substitute:

Joint resolution declaring Tennessee again entitled to Senators and Representatives in Congress.

Whereas, the State of Tennessee has in good faith ratified the article of amendment to the Constitution of the United States, proposed by the Thirty-ninth Congress to the Legislatures of the several States, and has also shown to the satisfaction of Congress, by a proper spirit of obedience in the body of her people, her return to her due allegiance to the Government, laws, and authority of the United States: Therefore,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the State of Tennessee is hereby restored to her former proper, practical relations to the Union, and is again entitled to be represented by Senators and Representatives in Congress, duly elected and qualified, upon their taking the oaths of office required by existing laws.

Mr. Boutwell, of Massachusetts, in opposition to the resolution, said: "I will state briefly the reasons why I shall vote against this proposition. I have two prominent reasons against it. I would have yielded somewhat of one of them, provided I had seen a single shadow of hope coming from the State of Tennessee itself. I feel, on the examination of the constitution of Tennessee, that the voting power is confined exclusively to the white population. If Tennessee would have even yielded to allow the colored men who had been soldiers to vote; or if they had even initiated a policy which might have grown to fulness hereafter, I might have consented to the proposition. Since the proposition that is now before the House assumes to dictate terms to the State of Tennessee, and of

right assumes it, we also have the power to insist that that State shall recognize the great principle of which I have spoken.

"My second objection to this proposition is that the amendment of the Constitution submitted by Congress to the Legislatures of the several States, although ratified by the Legislature of the State of Tennessee, has not become a portion of the Constitution of the United States. And since it has not become a part of the Constitution, then the restrictions that are contained within it have no application upon that State whatever. And Tennessee, if admitted at this session of Congress, will be admitted with the same number of Representatives that the State had when the rebellion commenced. We will thus find the representation of the several States very unequal, and it seems to me that the people of the free North will express not only dissatisfaction but indignation at such a proposition. I think there certainly should have been a restriction here, to the effect that before the proposed amendment becomes a part of the Constitution of the United States, Tennessee shall not be entitled to any more representation than she would be were the amendment in full operation and effect. I have briefly stated the two principal objections with me to the adoption of this resolution, and will not occupy more time of the House."

Mr. Bingham, of Ohio, said, in reply: "Mr. Speaker, Tennessee to-day is as republican as Massachusetts on the principle that the majority of the law-abiding citizens of a State who have not forfeited their privileges by treason have the right to control its political power. That is the primal principle of American institutions, and that is the principle which the gentleman from Massachusetts comes here to-day to repudiate.

"The restoration of the State of Tennessee, in the mode proposed, to her proper relations in the Union is no surrender of that principle, unless you set up here the right of the rebels lately in arms to govern the loyal people, the rebels whom you undertake to disfranchise by the constitutional amendment, and which amendment I trust in God the American people will ratify and thereby disfranchise those who compassed the nation's life and filled the land with the graves of the nation's defenders. If the rebels are to be excluded from political power, then, sir, the men who speak this day from Tennessee are the majority, overwhelmingly the majority of its free population, black and white included.

"But, says the gentleman, they exclude from the elective franchise loyal black men who bore arms for the defence of the Republic. I admit it. So does Ohio, so does Pennsylvania, and so, also, do a majority of the States of the Union. Is that any reason, sir, that Tennessee should be denied representation in this House? It would be better if justice, equal and exact justice, were established in every State."

The resolution was finally passed by the following vote:

YEAS—Messrs. Allison, Ames, Ancona, Anderson, Delos R. Ashley, James M. Ashley, Baker, Banks, Baxter, Bidwell, Bingham, Boyer, Bromwell, Buckland, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Davis, Dawes, Dawson, Defrees, Delano, Deming, Donnelly, Driggs, Eckley, Eggleston, Eldridge, Farnsworth, Farquhar, Ferry, Finck, Garfield, Glossbrenner, Aaron Harding, Abner C. Harding, Hart, Hogan, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, Humphrey, Ingersoll, Johnson, Kasson, Kerr, Ketcham, Koontz, Kuykendall, Ladin, Latham, George V. Lawrence, William Lawrence, Lynch, Marston, McCullough, McRuer, Mercur, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, Niblack, Nicholson, Noell, O'Neill, Orth, Perham, Phelps, Pike, Plants, Price, Radford, Samuel J. Randall, William H. Randall, Raymond, Alexander H. Rice, John H. Rice, Ritter, Rogers, Rollins, Ross, Rousseau, Sawyer, Schenck, Schofield, Shellabarger, Sitgreaves, Spalding, Stevens, Strouse, Tabor, Taylor, Thayer, Francis Thomas, John L. Thomas, Thornton, Trimble, Trowbridge, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Warner, Henry D. Washburn, William B. Washburn, Welker, Wentworth, Whaley, James F. Wilson, Stephen F. Wilson, Windom, Woodbridge, Wright, and the Speaker—125.

NAYS—Messrs. Alley, Benjamin, Boutwell, Eliot, Higby, Jenckes, Julian, Kelley, Loan, McClurg, Paine, and Williams—12.

NOR VOTING—Messrs. Baldwin, Barker, Beaman, Bergen, Blaine, Blow, Brandagee, Broomall, Chanler, Cook, Cullom, Culver, Darling, Denison, Dixon, Dodge, Dumont, Goodyear, Grider, Grinnell, Griswold, Hale, Harris, Hayes, Henderson, Hill, Demas Hubbard, Edwin N. Hubbell, Jones, Kelso, Le Blond, Longyear, Marshall, Marvin, McIndoe, McKee, Patterson, Pomeroy, Shanklin, Sloan, Smith, Starr, Stillwell, Upson, Elihu B. Washburne, and Winfield—46.

In the Senate, on July 21st, Mr. Trumbull, from the Judiciary Committee, reported back the joint resolution of the House relative to Tennessee, with an amendment. These amendments, with others, were fully discussed, and the Senate finally modified the resolution, as follows:

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the State of Tennessee is hereby restored to her former proper, practical relations to the Union, and is again entitled to be represented by Senators and Representatives in Congress.

The next amendment of the Senate was to strike out the preamble of the House and insert in lieu thereof the following:

Whereas, in the year 1861, the government of the State of Tennessee was seized upon and taken possession of by persons in hostility to the United States, and the inhabitants of said State in pursuance of an act of Congress were declared to be in a state of insurrection against the United States; and whereas said State government can only be restored to its former political relations in the Union by the consent of the law-making power of the United States; and whereas the people of said State did, on the 22d day of February, 1865, by a large popular vote, adopt and ratify a constitution of government whereby slavery was abolished, and ordinances and laws of secession and debts contracted under the same were declared void; and whereas a State government has been organized under said constitution, which has ratified the amendment to the Constitution of the

United States abolishing slavery; also the amendment proposed by the Thirty-ninth Congress, and has done other acts proclaiming and denoting loyalty: Therefore,

The vote in the Senate on the passage of the joint resolution, as thus amended, was as follows:

YEAS—Messrs. Anthony, Chandler, Clark, Conness, Cowan, Creswell, Doolittle, Edmunds, Foster, Hendricks, Howard, Howe, Lane, Morgan, Morrill, Nesmith, Nye, Poland, Pomeroy, Sprague, Stewart, Trumbull, Van Winkle, Wade, Willey, Williams, Wilson, and Yates—28.

NAYS—Messrs. Brown, Buckalew, McDougall, and Sumner—4.

ASSENT—Messrs. Cragin, Davis, Dixon, Fessenden, Grimes, Guthrie, Harris, Henderson, Johnson, Kirkwood, Norton, Ramsey, Riddle, Saulsbury, Sherman, and Wright—16.

These amendments of the Senate were agreed to in the House by the following vote:

YEAS—Messrs. Allison, Ames, Anderson, Delos R. Ashley, Baker, Banks, Barker, Baxter, Benjamin, Bidwell, Bingham, Boutwell, Bromwell, Broomall, Buckland, Sidney Clarke, Conkling, Defrees, Dixon, Donnelly, Driggs, Eckley, Eggleston, Eliot, Farnsworth, Farquhar, Ferry, Garfield, Abner C. Harding, Hart, Hayes, Higby, Holmes, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, Ingersoll, Julian, Kelley, Ketcham, Koontz, Kuykendall, Ladin, George V. Lawrence, William Lawrence, Loan, Lynch, Marston, McClurg, McRuer, Mercur, Miller, Moorhead, Morrill, Morris, Moulton, Myers, Newell, O'Neill, Orth, Paine, Perham, Plants, Price, William H. Randall, Alexander H. Rice, John H. Rice, Rollins, Sawyer, Schenck, Schofield, Shellabarger, Spalding, Stevens, John L. Thomas, Trowbridge, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Welker, Wentworth, Whaley, Williams, James F. Wilson, Stephen F. Wilson, Windom, and Woodbridge—93.

NAYS—Messrs. Ancona, Bergen, Boyer, Dawson, Eldridge, Finck, Glossbrenner, Aaron Harding, Jenckes, Johnson, Latham, Le Blond, Marshall, Niblack, Nicholson, Radford, Samuel J. Randall, Raymond, Ritter, Ross, Shanklin, Strouse, Tabor, Taylor, Thornton, and Trimble—26.

NOR VOTING—Messrs. Alley, James M. Ashley, Baldwin, Beaman, Blaine, Blow, Brandagee, Bundy, Chanler, Reader W. Clark, Cobb, Cook, Cullom, Culver, Darling, Davis, Dawes, Delano, Deming, Denison, Dodge, Dumont, Goodyear, Grider, Grinnell, Griswold, Hale, Harris, Henderson, Hill, Hogan, Demas Hubbard, Edwin N. Hubbell, Humphrey, Jones, Kasson, Kelso, Kerr, Longyear, Marvin, McCullough, McIndoe, McKee, Noell, Patterson, Phelps, Pike, Pomeroy, Rogers, Sitgreaves, Sloan, Smith, Starr, Stillwell, Thayer, Francis Thomas, Upson, Warner, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Winfield, and Wright—62.

The President, on July 24th, approved the resolution, and sent the following message to the House:

To the House of Representatives:

The following "joint resolution, restoring Tennessee to her relations in the Union," was last evening presented for my approval:

"Whereas, in the year 1861, the government of the State of Tennessee was seized upon and taken possession of by persons in hostility to the United States, and the inhabitants of said State, in pursuance of an act of Congress, were declared to be in a state of insurrection against the United States; and whereas said State government can only be restored to its former political relations in the Union by the consent of the law-making power of the United States; and

whereas the people of said State did, on the 22d day of February, 1865, by a large popular vote, adopt and ratify a constitution of government whereby slavery was abolished, and all ordinances and laws of secession, and debts contracted under the same, were declared void; and whereas a State government has been organized under said constitution, which has ratified the amendment to the Constitution of the United States abolishing slavery; also the amendment proposed by the Thirty-ninth Congress, and has done other acts proclaiming and denoting loyalty: Therefore,

Be it resolved by the Senate and House of Representatives of the United States in Congress assembled, That the State of Tennessee is hereby restored to her former proper, practical relations to the Union, and is again entitled to be represented by Senators and Representatives in Congress."

The preamble simply consists of statements, some of which are assumed, while the resolution is merely a declaration of opinion. It comprises no legislation, nor does it confer any power which is binding upon the respective Houses, the Executive, or the States. It does not admit to their seats in Congress the Senators and Representatives from the State of Tennessee; for, notwithstanding the passage of the resolution, each House, in the exercise of the constitutional right to judge for itself of the elections, returns, and qualifications of its members, may, at its discretion, admit them or continue to exclude them. If a joint resolution of this kind were necessary and binding as a condition precedent to the admission of members of Congress, it would happen, in the event of a veto by the Executive, that Senators and Representatives could only be admitted to the halls of legislation by a two-thirds vote of each of the two Houses.

Among other reasons recited in the preamble for the declarations contained in the resolution, is the ratification, by the State government of Tennessee, of "the amendment to the Constitution of the United States abolishing slavery, and also the amendment proposed by the Thirty-ninth Congress." If, as is also declared in the preamble, "said State government can only be restored to its former political relations in the Union by the consent of the law-making power of the United States," it would really seem to follow that the joint resolution which at this late day has received the sanction of Congress, should have been passed, approved, and placed on the statute-books before any amendment to the Constitution was submitted to the Legislature of Tennessee for ratification. Otherwise the inference is plainly deducible that while, in the opinion of Congress, the people of a State may be too strongly disloyal to be entitled to representation, they may nevertheless, during the suspension of their "former proper, practical relations to the Union," have an equally potent voice with other and loyal States in propositions to amend the Constitution, upon which so essentially depend the stability, prosperity, and very existence of the nation.

A brief reference to my annual message of the 4th of December last will show the steps taken by the Executive for the restoration to their constitutional relations to the Union of the States that had been affected by the rebellion. Upon the cessation of active hostilities, provisional governors were appointed, conventions called, governors elected by the people, Legislatures assembled, and Senators and Representatives chosen to the Congress of the United States. At the same time the courts of the United States were reopened, the blockade removed, the custom-houses reestablished, and postal operations resumed. The amendment to the Constitution abolishing slavery forever within the limits of the country was also submitted to the States, and they were thus invited to and did participate in its ratification, thus exercising the highest functions pertaining to a State. In addition, nearly all of these States, through their conventions and Legislatures, had adopted and ratified constitutions "of government whereby slavery was abolished and all ordinances and laws of secession and debts and contracts under the same were declared void." So far, then, the political existence of the States and their rela-

tions to the Federal Government had been fully and completely recognized and acknowledged by the executive department of the Government; and the completion of the work of restoration, which had progressed so favorably, was submitted to Congress, upon which devolved all questions pertaining to the admission to their seats of the Senators and Representatives chosen from the States whose people had engaged in the rebellion.

All these steps had been taken, when, on the 4th day of December, 1865, the Thirty-ninth Congress assembled. Nearly eight months have elapsed since that time; and no other plan of restoration having been proposed by Congress for the measures instituted by the Executive, it is now declared, in the joint resolution submitted for my approval, "that the State of Tennessee is hereby restored to her former proper, practical relations to the Union, and is again entitled to be represented by Senators and Representatives in Congress." Thus, after the lapse of nearly eight months, Congress proposes to pave the way to the admission to representation of one of the eleven States whose people arrayed themselves in rebellion against the constitutional authority of the Federal Government.

Eagerly desiring to remove every cause of further delay, whether real or imaginary, on the part of Congress to the admission to seats of loyal Senators and Representatives from the State of Tennessee, I have, notwithstanding the anomalous character of this proceeding, affixed my signature to the resolution. My approval, however, is not to be construed as an acknowledgment of the right of Congress to pass laws preliminary to the admission of duly qualified representatives from any of the States. Neither is it to be considered as committing me to all the statements made in the preamble, some of which are, in my opinion, without foundation in fact, especially the assertion that the State of Tennessee has ratified the amendment to the Constitution of the United States proposed by the Thirty-ninth Congress. No official notice of such ratification has been received by the Executive or filed in the Department of State; on the contrary, unofficial information from most reliable sources induces the belief that the amendment has not yet been constitutionally sanctioned by the Legislature of Tennessee. The right of each House, under the Constitution, to judge of the elections, returns, and qualifications of its own members is undoubted, and my approval or disapproval of the resolution could not in the slightest degree increase or diminish the authority in this respect conferred upon the two branches of Congress.

In conclusion, I cannot too earnestly repeat my recommendation for the admission of Tennessee, and all other States, to a fair and equal participation in national legislation when they present themselves in the persons of loyal Senators and Representatives, who can comply with all the requirements of the Constitution and the laws. By this means harmony and reconciliation will be effected, the practical relations of all the States to the Federal Government reestablished, and the work of restoration, inaugurated upon the termination of the war, successfully completed.

ANDREW JOHNSON.

WASHINGTON, D. C., July 24, 1866.

The credentials of the Representatives from Tennessee were then withdrawn from the Reconstruction Committee by the House and referred to the Committee on Elections, who reported the same to be in conformity to law, and the gentlemen were sworn in.

In the Senate, on March 22d, Mr. Trumbull, of Illinois, from the Committee on the Judiciary, made a report on the protest of several

members of the New Jersey Legislature against the admission of Mr. Stockton to a seat.

The Committee on the Judiciary, to whom were referred the credentials of John P. Stockton, claiming to have been elected a Senator from the State of New Jersey for six years from the 4th day of March, 1865, together with the protest of certain members of the Legislature of said State against the validity of his election, submit the following report:

The only question involved in the decision of Mr. Stockton's right to a seat is whether an election, by a plurality of votes of the members of the Legislature of New Jersey, in joint meeting assembled, in pursuance of a rule adopted by the joint meeting itself, is valid. The protestants insist that it is not, and they deny Mr. Stockton's right to a seat, because, as they say, he was not appointed by a majority of the votes of the joint meeting of the Legislature.

The legislative power of the State of New Jersey is vested by the State constitution in a Senate and General Assembly, which are required, for legislative purposes, to meet separately; but which, for the appointment of various officers, are required to assemble in joint meeting, and when so assembled are, by the constitution itself, styled the "Legislature in joint meeting."

The constitution of New Jersey does not prescribe the manner of choosing United States Senators, as, indeed, it could not, the Constitution of the United States having vested that power, in the absence of any law of Congress, exclusively in the Legislature; but it does constitute the two Houses one body for the purpose of appointing certain State officers. The statute of New Jersey declares that "United States Senators on the part of the State shall be appointed by the Senate and General Assembly in joint meeting assembled;" but it does not prescribe any rules for the government of the joint meeting, nor declare the manner of election.

The practice in New Jersey has been for the joint meeting to prescribe the rules for its own government.

In 1794 fifteen rules were adopted, the first two of which are as follows:

1. That the election of State officers during the present session be *circa voce*, unless when otherwise ordered; and that all officers be put in nomination at least one day before their election.
2. That the chairman shall not be entitled to vote except in case of a tie, and then to have a casting vote.

The other thirteen rules related chiefly to the method of conducting the proceedings. Each joint meeting which has since assembled has adopted its own rules, usually those of the preceding joint meeting, sometimes, however, with additions or exceptions.

In 1851 the following additional rule was adopted:

Resolved, That no person shall be elected to any office, at any joint meeting during the present session, unless there be a majority of all the members elected personally present, and agreeing thereto.

In 1855 the joint meeting, after adopting the fifteen rules of the preceding joint meeting, added the following:

That all candidates for office, upon receiving a majority of the votes cast by this joint meeting, shall be declared duly elected.

The joint meeting of 1861 adopted the rules of the preceding joint meeting for its own government, among which were the following:

1. That the election of State officers during the present session be *circa voce*, unless when otherwise ordered.
15. That in all questions the chairman of the joint meeting be called upon to vote in his turn, as one of the representatives in the Senate or Assembly, but that he have no casting vote as chairman.
18. That all candidates for office, upon receiving a majority of the votes cast by this joint meeting, shall be declared to be duly elected.

The same rules were adopted by each joint meeting from 1861 to 1865.

The joint meeting which assembled February 15, 1865, and at an adjourned session of which Mr. Stockton was appointed Senator, adopted, at its first meeting, the rules of the preceding joint meeting, except the sixteenth rule, in lieu of which the following was adopted:

Resolved, That no candidate shall be declared elected unless upon receiving a majority of the votes of all the members elected to both Houses of the Legislature.

After having appointed various officers under the rules which had been adopted at the assembling of the joint meeting, the following rule was adopted:

Resolved, That the vote for county judges and commissioners of deeds be taken by acclamation, and that the counties in which vacancies exist be called in alphabetical order.

Acting under this rule, quite a number of officers were appointed by acclamation. Not completing its business, the joint meeting adjourned from time to time till March 15th, when the following rule was adopted:

Resolved, That the resolution that no candidate shall be declared elected unless upon receiving a majority of the votes of all the members elected to both Houses of the Legislature be rescinded, and that any candidate receiving a plurality of votes of the members present shall be declared duly elected.

Every member of both Houses, eighty-one in all, was present and voting when the above resolution was passed, and it was carried by a vote of 41 in the affirmative, of whom eleven were senators and thirty representatives, to 40 in the negative, of whom ten were senators and thirty representatives. The joint meeting then proceeded to the election of a United States Senator, with the following result:

Hon. John P. Stockton, 40 votes; Hon. J. C. Ten Eyck, 37 votes; J. W. Wall, 1 vote; P. D. Vroom, 1 vote; F. T. Frelinghuysen, 1 vote; H. S. Little, 1 vote.

Whereupon John P. Stockton, having received a plurality of all the votes cast, was declared duly elected. The joint meeting then proceeded to the election of various other officers, having completed which it rose.

The credentials of Mr. Stockton are under the great seal of the State, signed by the Governor and in due form. No objection appears to have been made at the time to the election. Its validity is now called in question by a protest, dated March 20, 1865, and signed by eight senators and thirty members of the General Assembly. The Constitution of the United States declares that the Senate of the United States "shall be composed of two Senators from each State, chosen by the Legislature thereof," and that "the times, places, and manner of holding election for Senators and Representatives shall be prescribed in each State by the Legislature thereof," but Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

The right to choose United States Senators in a joint meeting of the two Houses which compose the Legislature of a State has been too long and too frequently exercised to be now brought in question. This has been the manner of election in some States from the beginning, and is now the manner of most of them.

For the purpose of choosing United States Senators the joint meeting of the two Houses is regarded as the Legislature, and especially would this be so in New Jersey, where the joint meeting is by the constitution of the State denominated a Legislature. It has uniformly been held that when the two branches of a Legislature meet in joint convention to elect a United States Senator they are merged into one, and act as one body, so that an election may be effected against the entire vote of the members of one House if the person voted for receive the requisite number of votes from the members of the other. It being

then, settled that the two Houses of a Legislature in joint meeting assembled constitute the Legislature, vested by the Constitution of the United States with authority, acting as one body, to elect a Senator, the question is, did the joint meeting of the Senate and General Assembly of New Jersey, duly convened, in pursuance of a resolution previously concurred in by each House separately, choose John P. Stockton United States Senator?

That it was competent for a plurality to elect, if a law to that effect had been prescribed by competent authority, will hardly be questioned. This is the rule very generally, if not universally, adopted in the election of members of the House of Representatives, who are "chosen every second year by the people of the several States," and no one questions the validity of the election of a Representative by a plurality vote when the law authorizes a plurality to elect. It is, however, insisted, and truly, that no law of New Jersey authorizes a plurality to elect. The laws of New Jersey are silent on this subject, but they do authorize a joint meeting of the two Houses of the Legislature to appoint a Senator, and it has been the uniform practice of this joint meeting since the foundation of the government to prescribe the rules for its own government. These rules as to the number of votes necessary to effect an election have varied at different times, sometimes requiring a majority of all the members elected to both Houses of the Legislature, sometimes a majority only of those present, and in the case under consideration only a plurality.

Suppose, under the rule first stated, but 79 members had been present in the joint meeting, and 40 had voted for the same person, would he have been elected? And if not, why not? 79 out of 81 would have constituted a quorum, and 40 would have been a majority of those present. The only reason why such a vote would not have made an election would be the existence of the rule adopted by the joint meeting, declaring that "no candidate should be elected unless receiving a majority of the votes of all the members elected to both Houses of the Legislature." While that rule was in force, no presiding officer would have thought of declaring a candidate elected, nor would any candidate have supposed himself elected, because he received a majority of the votes cast, unless such majority was a majority of all the members elected to the Legislature. Under the other rule, "that a person receiving a majority of the votes of those present should be declared elected," who would doubt the validity of an election by 81 out of 60 votes, if only so many had been cast? If the joint meeting had the right to prescribe, at one time, that it should require a majority of all elected to the Legislature to elect, at another time that a majority of those present might elect, and at still another time that elections might be had by acclamation, it had the right to prescribe that a plurality should elect; and when any candidate received a plurality he thereupon became elected, not simply by the will of those who voted for him, but by the will of the joint meeting, which had previously, by a majority vote, resolved that such plurality should elect.

It might be urged in this case, with much plausibility, that inasmuch as the constitution of New Jersey recognizes the two Houses in joint meeting as a Legislature, that such joint meeting was the very body on whom the Constitution of the United States had conferred the power to prescribe "the times, places, and manner of holding elections for Senators;" but your committee prefer placing the authority of the joint meeting to prescribe the plurality rule on the broader ground, that in the absence of any law either of Congress or the State on the subject, a joint meeting of the two Houses of a Legislature, duly assembled and vested with authority to elect a United States Senator, has a right to prescribe that a plurality may elect, on the principle that the adoption of such a rule by a majority vote in the

first instance makes the act subsequently done in pursuance of such majority vote its own.

The committee recommend for adoption the following resolution:

Resolved, That John P. Stockton was duly elected, and is entitled to his seat, as a Senator from the State of New Jersey, for the term of six years from the 4th day of March, 1865.

Mr. Clark, of New Hampshire, moved to amend the resolution reported by the committee, by inserting the word "not" before the word "duly," and also before the word "entitled." He said: "I could not bring my mind to the conclusion that the Senator from New Jersey now holding the seat was entitled to it, or that he was duly elected. I differed from the majority of the committee upon this point. Mr. Stockton was elected in a joint convention of the two Houses. After that joint convention had assembled, it undertook to say, in the absence of any law or rule prescribed by competent authority to that effect, that a less number of the convention than a majority, to wit, a plurality, should entitle the person receiving such plurality to an election. There were in that convention eighty-one persons present. Upon casting their votes for Senator, it was found that Mr. Stockton received forty votes, and Mr. Ten Eyck and other persons forty-one; so that Mr. Stockton did not have a majority of the convention; and the question now submitted to the Senate, and the one upon which I think the whole matter must turn, is, whether that joint convention, sitting and acting as it did as a joint assembly, had the power and authority to say that a person not receiving a majority of the votes was entitled to a seat in this Senate.

"I maintain this as my first proposition: that under the Constitution of the United States, the constitution of New Jersey, and the laws of New Jersey, where the constitution and the laws prescribe no different rules, a majority was necessary to constitute a valid election. In the absence of a law prescribed by the Legislature of New Jersey, or some authority, if there was any other authority competent to do it, I say a majority would be required to entitle the Senator holding the seat to remain in it, because it is the law of corporations aggregate, and it is the parliamentary law of the land, that when a deliberate body or assembly like that undertakes to act, it acts by a majority, and only by a majority, unless it has the power to prescribe for itself a different rule, or some other authority having such power has done it. There is no pretence that the Legislature of New Jersey or any other authority but this joint convention so assembled ever undertook to say that a plurality should elect; but the joint convention did. I do not undertake to deny that it was competent for the Legislature of New Jersey, organized and acting in its proper manner and sphere, to say that a plurality might elect. I do not deny that a plurality of a Legislature, when the majority so determine, can elect a Senator. I concede that, but I say that here

nobody having competent authority undertook to prescribe that a plurality should elect."

Mr. Fessenden, of Maine, followed, saying, that the election of Senators came under this clause of the Constitution :

The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six years ; and each Senator shall have one vote.

It will be noticed he said, that Senators are to be chosen by "the Legislature," not by the legislators ; not by the members of the Legislature, but by "the Legislature." In his view the Legislature in the election of a United States Senator was merely the agent of the Constitution of the United States, to perform a certain act. It was therefore under the control of no other power. No provision in the constitution of New Jersey providing the mode in which a Senator shall be elected or the course that shall be taken, or the rules of the proceeding, or any thing of that kind would bind in any way the Legislature which is to perform the act. No provision of law of a previous Legislature would in any manner bind the Legislature which is to perform that act. It is independent of every thing except the Constitution of the United States. The constitution of a State cannot bind it. The State constitution prescribes who shall compose the Legislature ; but that body, or those bodies thus composing the Legislature of the State, being the agent appointed by the Constitution of the United States to perform an act, is not under the slightest obligation to regard any of the provisions in the State constitution on the subject, because the State constitution has nothing to do with it, or any previous provisions of State law in reference to it. But while it is thus independent and may disregard those provisions, being the mere agent of the Constitution of the United States, still it must necessarily act as a Legislature in the performance of that duty, because, the power is not committed to the Legislature individually or collectively, but committed to "the Legislature" of the State ; and therefore, being committed to the Legislature of the State, the Legislature, in carrying out this provision of the Constitution, must act as a Legislature ; that is, there must be a legislative act.

The Legislature to elect, is the one in existence when the vacancy occurs, and if it fails, the election goes over to the next.

Mr. Stockton, of New Jersey, followed, saying, that it belonged to the State constitution to define of what the Legislature should consist. This question was raised in New Jersey, before the formation of the constitution of that State in 1846, and the constitution was made to declare the joint meeting also to be the Legislature. An act done by a plurality vote, authorized by a majority, was done by virtue of the majority vote. No one doubted at the time, that his election was legal. The members were bound to that result by every rule both of law and honor. The custom of the joint meeting, pre-

scribing its own rules, has long existed in New Jersey.

Mr. Johnson, of Maryland, in reply to the Senator from Maine (Mr. Fessenden), urged that the Constitution of the United States did not pretend to say how the Legislature of a State should be organized, but left that matter to the Constitution and laws of the State, and gave to no department of the Federal Government the slightest jurisdiction over that matter. By the constitution of New Jersey, the collective body in joint meeting had the power to do what they severally do in their separate bodies by a concurrent vote. After a lengthy debate, the question was taken, and the amendment of Mr. Clark rejected—yeas 19, nays 21.

The question then recurred on the resolution reported by the Judiciary Committee, with the following result :

YEAS—Messrs. Anthony, Buckalew, Cowan, Davis, Foster, Guthrie, Harris, Henderson, Hendricks, Johnson, Lane of Kansas, McDougall, Morgan, Nesmith, Norton, Poland, Riddle, Saulsbury, Stewart, Trumbull, and Willey—21.

NAYS—Messrs. Brown, Chandler, Clark, Conness, Cragin, Creswell, Fessenden, Grimes, Howe, Kirkwood, Lane of Indiana, Nye, Pomeroy, Ramsey, Sherman, Sprague, Sumner, Wade, Wilson, and Yates—20.

Mr. Morrill (to the Secretary): "Call my name."

The Secretary: "Mr. Morrill."

Mr. Morrill: "I vote nay."

Mr. Stockton: "Mr. President, I have a colleague, and my colleague has telegraphed me that he has paired off with the Senator from Maine (Mr. Morrill). I telegraphed to him yesterday morning that the Senator from Maine did not wish any longer to be bound by his arrangement for pairing off. I received an answer this morning by telegraph from my colleague, stating that he could not regard the arrangement as at an end. I think it my duty on Mr. Wright's account to state this fact to the Senate, because when he was last in this chamber he told me as he left the hall that he would not go home if it were not for the fact that he had paired off with the Senator from Maine. Mr. President, I ask that my name be called."

The President *pro tempore*: "The Secretary will call the name of the Senator from New Jersey."

The Secretary called Mr. Stockton's name, and he voted in the affirmative.

Mr. Morrill: "Perhaps the statement of the honorable Senator requires that I should say that the fact is substantially as he states. The fact changes no result, however. Some seven weeks ago, perhaps, when this question was expected to be called up, Mr. Wright being here in his seat, I agreed to pair off with him. This week, when the question was expected to come up, I felt embarrassed by the arrangement, and I advised Mr. Stockton on Wednesday evening of that embarrassment and desired him to notify his colleague. This is Friday

A sufficient time, a reasonable time having elapsed, I think, within which the Senator's colleague might have returned, and after the great lapse of time since the original arrangement was made, and in view of the changes that have taken place in the Senate, I felt constrained upon the whole to vote upon the question."

Mr. Nye: "It is proper for me, being a new member here, to inquire whether upon a question of this kind the person claiming the seat is entitled to a vote according to the rules of this body."

The President *pro tempore*: "There is no rule of the Senate upon the question, and the Chair has not the prerogative of settling any question of the kind except to hold that the name of every Senator on the list may be called, and it is the privilege of every person whose name is on the list to have his vote recorded."

The result was announced—yeas 22, nays 21; so the resolution was agreed to.

On the next day Mr. Sumner, of Massachusetts, moved to amend the journal of the Senate by striking out the vote of Mr. Stockton on the question of his seat.

Mr. Saulsbury, of Delaware, said: "I rise to another question of order. The journal is correct, the vote having been taken, and cannot be amended, I apprehend, by a resolution contrary to the fact. The vote was given by Mr. Stockton. The journal is correct. No one denies that the journal states the truth, and therefore to undertake to correct it now in this way would be to make it speak that which is false. The vote of Mr. Stockton was given. My point of order is that this motion cannot be entertained in the Senate, being out of order."

Mr. Sumner, of Massachusetts, replied: "There are two ways, I believe, if there are not three, but there are certainly two ways of meeting the question which is presented to us by the vote of Mr. Stockton. One is by a motion to disallow the vote; the other by a motion such as I have now made to amend the journal. Perhaps a third way, though not so satisfactory to my mind, would be by a motion to reconsider; but I am not in a condition to make this motion, as I did not vote with the apparent majority. I call your attention, however, at the outset, to two ways: one by disallowing the vote, and the other by amending the journal; but behind both those ways, or all three ways, arises the simple question, had Mr. Stockton a right to vote? To this I understand it is replied that his name was on the roll of the Senate, and accordingly was called at the desk by our Secretary. To which I reply, and to my mind the reply cannot be answered, the rule of the Senate is to be construed always in subordination to the principles of natural law and parliamentary law, and therefore you are brought again to the question with which I began, had Mr. Stockton a right to vote?"

He then proceeded to prove that by the principles of natural law and parliamentary law no man could be a judge in his own case.

He said: "If the interest of a Senator appeared only by evidence *aliunde*, by evidence outside, as, for instance, that he had some private interest in the results of a pending measure by which he was necessarily disqualified, his vote could be disallowed only on motion; but if the incapacity of the Senator to vote on a particular occasion appears on the journal itself, I submit that the journal must be amended by striking out his vote. The case is patent."

Mr. Johnson, of Maryland, replied: "What have those of us who voted in accordance with the vote cast by the honorable member from New Jersey done? We have sat still, heard his vote recorded, heard the result announced, and not an objection was made by any member of the Senate, except by the honorable member from Nevada (Mr. Nye) and the honorable member from Massachusetts himself, who, in a moment of excitement, told us it was against the law of nature, not of nations, as he is represented. Against the law of nature to do what? That a man should sit in judgment in his own case. Is it his own case within the meaning of the principle upon which the honorable member from Massachusetts relies? It is the case of the State of New Jersey, and not of Mr. Stockton. He stands here claiming to represent her. He in the past has voted in that capacity, and in casting his vote the other day he represented, not himself individually, but the State of New Jersey. Whether he properly represents New Jersey may be a question; but in the vote he cast, he cast it claiming to be the representative of New Jersey, and his name stands on your files as the representative of New Jersey. How are you to get it off? Every resolution that has been before the body, whether proposing an amendment to the Constitution or otherwise; every bill which has been submitted to the body and upon which the body voted, no matter what the nature of the bill was, he has been permitted to vote upon, his vote has been recorded. When has he ceased to be a member of the body? Never."

Mr. Trumbull, of Illinois, said: "I believe, as I said before, that the Senator from New Jersey is entitled to his seat, but I do not believe that he is entitled to hold his seat by his own vote. He would have held his seat without his own vote. The vote upon the resolution was a tie without the vote of the Senator from New Jersey; and that would have left him in his seat, he already having been sworn in as a member. It is not necessary that the resolution should have passed. He is here as a Senator, and it would require an affirmative vote to deprive him of his seat as a Senator."

Mr. Davis, of Kentucky, said: "Mr. President, I am authorized to come to the conclusion that this is not a *bona fide* examination of the right of the Senator from New Jersey to a seat here according to his vote and the law and the Constitution. It is not intended to examine into and ascertain, upon the principles of law and the facts of the case, whether he is entitled

to his seat or not. That is not the object. The object is to gain party power, to acquire a power in the body sufficient to achieve a two-thirds vote of the Senate for the party objects of the party that is now in the ascendancy in the two Houses of Congress; and no man is so blind as to wink his eyes against the truth of that proposition. If this issue had been made before a tribunal irrespective of party considerations and the necessity, real or supposed, of a party majority of two-thirds, we should never have heard, in my judgment, of the right of Mr. Stockton being seriously contested, or at least such contest would only have been by a very small minority of the body.

"Mr. President, will not the same party excuses and the same need for party ascendancy and for party strength in this and in the other House come about in the future? In future Senates, when the House may be divided, as it may well be divided, equally in the case that I put, what will be the effect of this precedent and of party impulses generally? It will be for one of the parties to contest the seat of a member of the other party in the House, without any regard to the merits of the case, but simply to grasp at and reach party power.

"Now, Mr. President, if Mr. Stockton is to be deprived of his right to vote on the present question, it must be by some rule or by some law. Will the honorable Senator from Massachusetts point out any rule or any law that contravenes, much less that overrules the positive provision of the Constitution, that each Senator shall be entitled to one vote? That is the law of the Constitution in the organization of the Senate."

In the progress of the debate, Mr. Stockton rose to withdraw the vote given by him on the previous day. He said: "Mr. President, I rise to withdraw my vote, with the permission of the Senate, and I am exceedingly anxious that I shall make my position in doing so perfectly clear. At the moment that I voted on the resolution of the Judiciary Committee, no man had questioned my right to vote in this body when my name was called, from the moment I entered the chamber, upon any subject whatever. I had been, on the contrary, told by Republican as well as Democratic Senators, by gentlemen of different politics, that in their opinion I was entitled to vote. None of them with whom I spoke on the subject had examined that matter particularly. The question of the validity of that vote never crossed my mind. I believe today, I believe this moment, that that vote was a valid vote under the Constitution of the United States."

After an extended debate, Mr. Sumner withdrew his motion for an amendment of the journal, and Mr. Poland, of Vermont, moved a reconsideration of the vote of the previous day on the resolution reported by the committee, which was agreed to. Various propositions were now made to meet the difficulty before

the Senate, among which Mr. Sumner, of Massachusetts, offered the following:

Resolved, That the vote of Mr. Stockton be not received in determining the question of his seat in the Senate.

A motion to refer this resolution to the Judiciary Committee was lost, and the resolution was then agreed to.

The question on the original report of the committee, which closed with the resolution.

Resolved, That John P. Stockton was duly elected, and is entitled to his seat as a Senator from the State of New Jersey, for the term of six years from the 4th day of March, 1865,

was postponed until the next day. When it came up on March 27th, Mr. Clark, of New Hampshire, moved to amend the resolution by striking out all in it after the word "Stockton," and inserting "is not entitled to a seat as Senator from that State for the term of six years from the 4th day of March, 1865."

Mr. Stockton, in opposition to the motion, addressed the Senate in extended remarks, and concluded as follows: "Mr. President, from the foregoing examination, I think I have proved the following propositions:

"1. Senators of the United States are to be 'chosen' by the Legislatures of the several States.

"2. The 'manner' of the choice is to be prescribed by the Legislature thereof.

"3. The Legislature of New Jersey, by statute, indicated the 'Senate and Assembly in joint meeting assembled' as the 'manner' in which the duty imposed upon them by the Constitution of the United States should be performed.

"4. The constitution of New Jersey recognizes 'the Senate and Assembly in joint meeting assembled' as the Legislature of the State.

"5. 'The Senate and Assembly in joint meeting assembled' have full power to determine the 'the manner' of the election of the United States Senate, by the authority derived from the Constitution of the United States; the constitution of the State; by virtue of the statute law of the State; by parliamentary usage, and by universal custom.

"6. That if the joint meeting had not the power to prescribe the manner of choice, yet the 'manner' being determined by the statute of the State, 'the Senate and Assembly in joint meeting assembled' were authorized to indicate their choice by such rules as they might adopt.

"7. The election of Mr. Stockton under the rules adopted by the joint meeting of 1865 was not a plurality election, but was the choice of the majority, expressed by the method indicated by them, so declared in the resolution previous to the election, and subsequent to it by the silence and acquiescence of all the members.

"8. That the whole body confirmed the legal election of Mr. Stockton, and authorized the Governor, under the statute, to commission

him as United States Senator for six years from the 4th of March, 1865, and thereby the matter is concluded."

The amendment was then adopted, and the resolution as amended was agreed to by the following vote:

YEAS—Messrs. Brown, Chandler, Clark, Conness, Cragin, Creswell, Fessenden, Grimes, Howard, Howe, Kirkwood, Lane of Indiana, Nye, Pomeroy, Ramsey, Riddle, Sherman, Sprague, Sumner, Wade, Williams, Wilson, and Yates—23.

NAYS—Messrs. Anthony, Buckalew, Cowan, Davis, Doolittle, Guthrie, Harris, Henderson, Hendricks, Johnson, Lane of Kansas, McDougall, Morgan, Nesmith, Norton, Poland, Saulsbury, Trumbull, Van Winkle, and Willey—20.

ABSENT—Messrs. Dixon, Foot, Foster, Morrill, Stewart, Stockton, and Wright—7.

On March 29th Mr. Sumner, of Massachusetts, said: "I move that the Secretary of the Senate be directed to communicate to the Governor of New Jersey a copy of the resolution in reference to the seat of Mr. Stockton."

The motion was agreed to.

In the Senate, on July 11th, Mr. Clark, of New Hampshire, moved to consider a bill to regulate the time and manner of holding elections for Senators in Congress. Mr. Clark thus explained the bill: "The object of this bill is to secure uniformity in the manner of electing Senators of the United States, that we may avoid the questions and differences that have sometimes existed. The bill provides that the Legislature chosen next preceding the expiration of a senatorial term, shall, on the second Tuesday of its session, each House by itself, vote for some person to represent the State in the Senate by *viva voce* vote, and shall enter upon the records the name of the person who shall have a majority in each House. On the next day of the session the two Houses are to assemble in joint convention, and if it be found that the same person has been chosen by the two Houses he is then the Senator; but if the two Houses have not selected the same person by the vote of each House, then the two Houses, in joint convention, are to proceed to ballot for a Senator, and to continue so to do until they have chosen. It provides first for an attempt to elect by a concurrent vote of the two Houses; and if the two Houses fail to do it, then they meet the next day in joint convention, and by joint ballot elect. I think this statement embraces the provisions of the bill. Its object is to secure uniformity in the election of Senators in all the States. It has been reported from the Committee on the Judiciary."

A debate ensued on the necessity of the measure, when, after some verbal amendments, it passed the Senate by the following vote:

YEAS—Messrs. Anthony, Clark, Conness, Cragin, Edmunds, Fessenden, Foster, Grimes, Harris, Howard, Howe, Johnson, Lane of Indiana, Morgan, Morrill, Nesmith, Nye, Poland, Pomeroy, Stewart, Sumner, Trumbull, Wade, Willey, and Williams—25.

NAYS—Messrs. Cowan, Davis, Doolittle, Guthrie,

Henderson, Norton, Riddle, Saulsbury, Sherman, Sprague, and Van Winkle—11.

ABSENT—Messrs. Brown, Buckalew, Chandler, Creswell, Dixon, Hendricks, Kirkwood, Lane of Kansas, McDougall, Ramsey, Wilson, Wright, and Yates—13.

It was taken up in the House on July 24th, and passed without amendment—yeas 78, nays not counted.

In the Senate, on March 12th, a bill for the admission of Colorado as a State in the Union, was considered. A protest was presented against the admission; and a reply to the protest, by the representatives of the State. The following extract from the latter will explain both documents:

Your memorialists having been chosen to represent the people of Colorado in Congress, and having been requested by their State Legislature-elect to present their application for the admission of the State into the Union, respectfully represent:

That the people of Colorado desire said admission in accordance with the provisions of the enabling act of Congress, approved March 21, 1864, as is provided in Senate bill No. 74, now pending.

That the protest presented to your honorable body against such admission, purporting to be from colored citizens of Colorado, is without signatures, the names being printed thereon. And your memorialists have satisfactory assurances that many of said names were thus used without the knowledge or consent of the parties, and that they have expressed dissatisfaction therewith. And further, that the leading man among them regrets his inconsiderate action, and has since expressed in writing a desire for the admission of the State notwithstanding his protest.

Your memorialists would further call your attention to the fact that this petition makes several misrepresentations in its statements. It represents that the framing and adoption of the Constitution were "accomplished by the utmost recklessness and disregard of law, and in many cases by actual fraud."

The truth is, the convention that framed the constitution was composed of a large body of the best men in the Territory. Its deliberations were conducted in good order, with care and marked ability. This is shown by its journal of proceedings and the admirable constitution it adopted, which has challenged universal approbation, excepting the franchise clause, on account of its retaining the word "white" in its qualifications. The elections were held and conducted in compliance with the laws regulating elections in the Territory by an ordinance of the convention. Instead of having been carried by fraud, the vote on the constitution was universally received as a fair verdict, and all parties yielded a ready assent to it. They all acted in good faith in the subsequent proceedings under the constitution. After the vote on its adoption was known, the elections for member of Congress, State officers, and members of the Legislature, were participated in by all parties, in all parts of the Territory, in good faith, proving a hearty assent to the adoption of the constitution. And the Legislature-elect met to choose United States Senators, as provided for by ordinance, every member being present and participating in its proceedings.

And further, it is not true, as the language of the protest implies, that there is any thing in the constitution excluding colored children from public schools. Nor is there any thing in its provisions restricting the colored man from the full enjoyment of all the immunities, rights, and privileges of white men, excepting the privileges of the elective franchise; and for this, and all of its provisions, the constitution provides a ready mode of amendment.

Mr Sumner, of Massachusetts, in opposition to the bill, said: "It seems to me that there are three distinct objections at this moment to the admission of Colorado as a State, and I will speak of them in their order: first, the irregularity of the proceedings which have ended in the seeming adoption of the constitution presented to us; second, the small number of people constituting the population of that Territory, not being sufficient, as I submit, to justify us in investing it with all the great prerogatives of a State; and in the third place, it does not come before us now according to the requirements of the enabling act, with a constitution republican in form and consistent with the Declaration of Independence."

Relative to the third objection, he further said: "The requirement of this very enabling act under which they have pretended to proceed, but which, as I have shown, was already exhausted before they entered upon these proceedings, is as follows:

That the constitution, when formed, shall be republican, and not repugnant to the Constitution of the United States and the principles of the Declaration of Independence.

"Now, what is the constitution? Article three, entitled 'Suffrage and Elections,' begins as follows:

Sec. 1.—Every white male citizen of the age of twenty-one years and upward, who is by birth, or has become by naturalization or by treaty, or shall have declared his intention to become a citizen of the United States according to the laws thereof, and who shall have resided in the State of Colorado for six months preceding any election, and shall have been a resident for ten days of the precinct or election district where he offers to vote, shall be deemed a qualified elector and entitled to vote at the same.

"There you have the requirement, 'every white male citizen;' in other words, nobody who is not 'white' under this constitution is recognized as entitled to the elective franchise. Now, sir, I insist, and on that head I challenge a reply from any Senator on this floor, that such a constitution does not comply with the requirement, that it is not republican, and that it is repugnant to the principles of the Declaration of Independence.

"Again, sir, I submit that at this moment, when the whole country is agitated by the great question, what shall be done for the protection of the colored race, to what extent we shall exercise the high powers of Congress in order to carry that protection into the rebel States, it will hardly be decent for us in reviewing the constitution of a new State not to apply to it the highest possible test. It will not do for us now to recognize this constitution of Colorado as republican in form. We owe it to ourselves to set an example and to require that in a State now organized under our influence a good example shall prevail. How many of us heard with regret the result last autumn in Connecticut, and again in Wisconsin, by which suffrage to the colored race was denied! We felt that by those two votes liberty had suffered, that an

enfranchised race was placed in jeopardy, that its rights were dishonored by those who ought to have upheld them; and now, sir, you have cast upon you in this chamber that same identical responsibility."

Mr. Sumner then offered the following amendment:

Insert at the end of the second section the following proviso:

Provided, That this act shall not take effect except upon the fundamental condition that within the State there shall be no denial of the elective franchise or of any other rights, on account of color or race, but all persons shall be equal before the law; and the people of the Territory shall by a majority of the voters, at public meetings to be convened by the Governor of the Territory, declare their assent to this fundamental condition, and the Governor shall transmit to the President of the United States an authentic statement of such assent, whenever the same shall be given, upon receipt whereof he shall by proclamation announce the fact, whereupon without any other proceedings on the part of Congress this act shall take effect.

Mr. Stewart, of Nevada, in reply, said: "The construction of the Constitution from the earliest time down has left that matter to the States. Whether they allow negroes to vote or not, is a matter for themselves, and their action either way is not in conflict with the Constitution of the United States. We have no right to make a constitution for a State. If their constitution has in it any thing in conflict with the Constitution of the United States, we can say to them, 'you must agree not to enforce it;' but we are not here to make a constitution for the State of Colorado. We are here with power to restrain her from violating the Constitution of the United States, and that is all. If you can make this part of the constitution of Colorado, you can make an entire constitution for her. If you can say she shall come into the Union on an equal footing with the other States, provided she shall not have the power to regulate the question of suffrage as the other States have, you can say she shall come in on an equal footing, provided she would pass some other favorite law of yours, and you could carry it through and make her come in with a constitution made for her by you. I think this would be a very dangerous precedent for the Congress of the United States to set. It would be making constitutions for the States by the Congress of the United States."

Mr. Pomeroy, of Kansas, said: "In reference to their want of population, all I can say is that they proximate toward and are in the neighborhood, at any rate, of that number of population that we have always required. No specific number has ever been required. These people are now regularly organized. All parties in the Territory acquiesce in the State government. There is no party there, as far as I can learn, hostile to it. I know I have just received a letter from Judge Wilcox, a distinguished citizen who went there from my own State, in which he says there is not a public man there, unless he holds an office under the

territorial government, opposed to it. I presume no question will be raised here as to the loyalty of the people of Colorado, because they volunteered largely, they helped us through the war, and they have sent here two of the most loyal, consistent, and earnest Republicans (if that is any test of loyalty) that they have in the Territory."

Mr. Saulsbury, of Delaware, said: "I shall occupy the attention of the Senate but a moment. I wish simply to say that if I could vote for the admission of Colorado under the circumstances, I should do so with great pleasure; because I find one fact connected with the history and character of that people that commends itself to my most favorable consideration. I find that there are at least eight or nine sensible men in that Territory to one of a contrary character; because when the proposition to allow negro suffrage was submitted to the people of that Territory, there were 4,192, according to the statement laid on our tables, opposed to it, and only 476 lunatics in the whole Territory in favor of it. That is a fact that commends itself to my most favorable consideration; and had Colorado, in my judgment, a sufficient number of inhabitants to be entitled to admission into the Union, I would most cheerfully vote for her admission, because I think she has presented in this vote the evidence of the good sense of her people."

Mr. Grimes, of Iowa, in opposition, said: "It appears that a census was taken in 1861, when there was a total population in Colorado of 25,329. Of these, the adult males were 18,233; minors, 2,622; and females, 4,484. In all the Territories there is a large preponderance of adult males, and especially is that so of Colorado; and although I am told by my fellow-citizens of Iowa who are in the habit of going to Montana, some of them almost monthly, that there has been a considerable increase of females in that Territory, yet there is a very large preponderance of adult males there yet. In 1861, when that enumeration was made, there was a vote taken, and the correct aggregate vote was 10,580. Out of a population of 25,329 there were 10,850 voters. In 1862 there was another election. What was the number of voters then? Eight thousand two hundred and twenty-four."

"In 1864, the vote of Colorado was 5,769. On the adoption of the constitution on the 12th of September, 1864, the total vote was 6,192. They had at that time a very exciting election. I was in correspondence with some of the gentlemen who were interested in that election. Every effort was made to bring out every possible voter that could be found within the limits of the Territory, and I suppose they were all brought out; and the total vote polled was 6,192. Now, just examine and see, if you please, what relation 6,192 voters bear to the total population of the State if the same ratio still exists between males and females as existed in 1861. Why, sir, you have got a population

of somewhere in the neighborhood of from twelve to fifteen thousand, not more."

"Then, again, on the 5th of September, 1865, there was another exciting election on the question of the adoption of a State constitution, and what was the result then? The total vote was 5,895, less than in 1864, and the majority in favor of the adoption of the State constitution was only 155. Now it is seriously proposed here that we shall admit a State into this Union which, in an exciting election over the question whether she shall come in at all or not, when all the office-seekers who expect to be Senators and Representatives and Judges and Governors are arrayed on one side and are using all their influence to bring men to the polls, and when the tax-payers, who were conscious that they are to be oppressed with the burdens of taxation if they come into the Union, are arrayed on the other side, can only poll 5,895 votes, and that a mining State where there is a vast preponderance of males over females! I confess that it strikes me as the sublimity of impudence for the State to come here and ask to be admitted into the Union and be entitled to the same power and influence in this body as the State of Ohio or New York or Pennsylvania."

Mr. Lane, of Kansas, said: "Would the Senator have voted for the admission of Kansas with 4,600 voters, with the knowledge that that constitution not only confined suffrage to the whites, but actually excluded blacks from the State? The same day that the people of Kansas voted for the constitution confining suffrage to the whites, they voted, by a vote of 4,000 to 400, to exclude blacks from the State; and the Senator from Massachusetts, and every Republican in both branches of Congress, indorsed that constitution, and the Republican party throughout the Union indorsed it."

Mr. Wade, of Ohio, in explanation, said: "I ought to say, in justice to the committee that passed this enabling act two years ago, that the proof before us then convinced us that some very rich mines had lately been discovered in Colorado; that there was great excitement all over the country on the subject, and that people were flocking in there from all parts of the United States as they did in California when the precious metals were first discovered there; and we were assured by those who ought to know, that by the time we should get this State into the Union there would be the usual number of people there that Territories had ordinarily at the time of their admission; for as far as I know we have not been very particular as to the exact number of people that should be sufficient to constitute a State. The old rule was (and it was a very good and intelligible one), that there ought to be about as many as would furnish a Representative, whatever the ratio of apportionment should be at the time. That is a kind of gauge, but then that is departed from frequently, according to circumstances. If it is a State that is not fill-

ing up very fast, and there is no reason to suppose that a large population will go into the Territory, that is a reason why we should require more when they are admitted; for certainly, in order to admit a State into the Union, there should be some criterion as to population.

"In my judgment this Territory is not in such a condition as that in justice to her own people and in justice to the other States of the Union, she should now be admitted into the Union.

"As to this word 'white' in the constitution, I have but one word to say. In my judgment that of itself constitutes a very great reason why she should not be admitted. It will not do to tell me that I have voted heretofore for the admission of States with the word 'white' in their constitutions, excluding the colored population. I have no doubt that every Senator who has been here long has done it. Why, sir, the man who has made no progress upon the great subject of human rights within the last five or six years belongs to the fossil race; he must be clear down to the old red sandstone. We are now demanding free suffrage everywhere. How long have we been doing so? How long is it that slavery has been abolished throughout this whole Union? How could a man five years ago stand upon this floor and claim that the black population should have the right of suffrage in every Territory admitted into this Union? We were contending then, not for the admission of the blacks to the right of voting in the Territories, but we were endeavoring to fence out slavery itself in the Territories. We were fighting in a death struggle to keep slavery out. It would have been preposterous then to talk about admitting one with the right of the colored people to vote, and the man that would have insisted upon it would have been an impractical man."

Mr. Trumbull, of Illinois, said: "I think it wholly out of place to go into this question of population now. The Senate is committed, Congress is committed, by its previous action, and the question of population has nothing to do, as it seems to me, with our votes on the present occasion; we are bound by our action on that question."

Mr. Doolittle, of Wisconsin, said: "Now, as it seems to me, dealing in perfect good faith with the Territory of Colorado and with ourselves, in the belief that they had a population of forty or fifty thousand at the time, and in the belief that that population would increase, we authorized them to hold a convention, form a constitution, and submit the question to the people whether they would have a State government or not. All that was done and the people said no. As it seems to me, all power under this act was expended when that thing was accomplished; and now the question returns as an original proposition. I do not feel that we are bound by what we have done to close our eyes to the fact of the present condition of the people of Colorado, and that it does come before

us substantially as a new and original proposition for us to consider whether in our opinion Colorado is this day now to assume the position and the responsibilities, and discharge the duties of a State in this Union. I come to this conclusion against my hopes and against my wishes in relation to Colorado, for I had hoped she would have the requisite population at this time."

Mr. Sumner withdrew his amendment.

Mr. Williams, of Oregon, said: "I shall vote for this bill expressly on the ground that Congress has passed an enabling act authorizing the people of this Territory to form a State constitution. I know it has been said here, and there is force in the statement, that the enabling act has exhausted itself, and that the people had no right to proceed to form a State constitution not in accordance with the provisions of that act; but the main objection made to the passage of this bill is that the population of the Territory is insufficient. That, sir, was a legitimate argument to urge against the passage of the enabling act; and that argument was then adduced, or ought to have been adduced, to show that Congress should not authorize the people of the Territory to form a State constitution. But Congress at that time determined that question. Congress then decided that the population of the Territory was sufficient to authorize the people to form a State constitution; and I say that the people of the Territory had a right to expect that that question was settled by the action of Congress. And now when this application is made for admission, they ought not to be met and defeated upon the ground that the population of the Territory is not sufficient to authorize the formation of a State government."

The vote was then taken on the bill, and it was rejected, as follows:

YEAS—Messrs. Chandler, Cragin, Kirkwood, Lane of Indiana, Lane of Kansas, McDougall, Nesmitt, Norton, Pomeroy, Ramsey, Sherman, Stewart, Trumbull, and Williams—14.

NAYS—Messrs. Buckalew, Conness, Creswell, Davis, Doolittle, Fessenden, Foster, Grimes, Guthrie, Harris, Hendricks, Morgan, Morrill, Poland, Riddle, Sprague, Stockton, Sumner, Van Winkle, Wade, and Wilson—21.

ABSENT—Messrs. Anthony, Brown, Clark, Cowan, Dixon, Foot, Henderson, Howard, Howe, Johnson, Nye, Saulsbury, Willey, Wright, and Yates—15.

On April 17th, Mr. Wilson, of Massachusetts, moved to reconsider this vote. He said: "I voted the other day against that admission, but I must confess that in doing so I did not feel satisfied that I was dealing fairly with the people of Colorado. I do not think it is fair play, after we passed the bill, which we did pass in 1864, and after the most enterprising and vigorous men in that Territory, who agreed with a majority of us in this Chamber, have framed a constitution, and came here for admission, for us to refuse their application on the ground of a distinction which they have made in their constitution, when we did not ask them to

refrain from making such a distinction; when we imposed no conditions on them; when we did not suggest any. After this course of legislation it seems to me too late now to raise a question upon that point."

A debate, extending through several days, took place on this motion to reconsider. The vote was finally taken on April 25th, and resulted in yeas 19, nays 13. The bill was then ordered to be engrossed, read a third time and passed, as follows:

YEAS—Messrs. Chandler, Clark, Conness, Cragin, Creswell, Howard, Howe, Kirkwood, Lane of Indiana, Nye, Pomeroy, Ramsey, Sherman, Sprague, Stewart, Trumbull, Van Winkle, Willey, and Wilson—19.

NAYS—Messrs. Buckalew, Davis, Doolittle, Edmunds, Foster, Grimes, Guthrie, Hendricks, McDougall, Morgan, Poland, Riddle, and Sumner—13.

ABSENT—Messrs. Anthony, Brown, Cowan, Dixon, Fessenden, Harris, Henderson, Johnson, Lane of Kansas, Morrill, Nesmith, Norton, Saulsbury, Wade, Williams, Wright, and Yates—17.

In the House, on the same day, it was passed without debate, by the following vote:

YEAS—Messrs. Ames, Anderson, Delos R. Ashley, James M. Ashley, Baker, Banks, Barker, Beaman, Benjamin, Bidwell, Bingham, Blow, Brandagee, Bromwell, Buckland, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cullem, Defrees, Deming, Dixon, Dodge, Donnelly, Driggs, Dumont, Eckley, Farquhar, Ferry, Garfield, Grianell, Abner C. Harding, Hart, Henderson, Holmes, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, James R. Hubbell, Ingersoll, Jenckes, Kasson, Kelso, Ketchum, Latham, George V. Lawrence, William Lawrence, Loan, Longyear, Marston, McClurg, McKee, Mercur, Miller, Moorhead, Moulton, Myers, O'Neill, Orth, Patterson, Plants, Alexander H. Rice, Rollins, Sawyer, Schenck, Shellabarger, Smith, Spalding, Francis Thomas, Trowbridge, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Warner, Welker, Whaley, and Williams—81.

NAYS—Messrs. Allison, Alley, Ancona, Baxter, Bergen, Blaine, Bontwell, Boyer, Broomall, Chanler, Cuffroth, Darling, Dawson, Denison, Eldridge, Eliot, Finck, Glossbrenner, Grider, Griswold, Aaron Harding, Harris, Higby, James Humphrey, Julian, Kelley, Kirkendall, Le Blond, Lynch, Marshall, McCullough, McKoer, Morrill, Morris, Newell, Niblack, Paine, Perham, Pike, Raymond, John H. Rice, Ritter, Ross, Rousseau, Shanklin, Stevens, Stillwell, Strouse, Taylor, Thornton, Elihu B. Washburne, Henry D. Washburne, James F. Wilson, Windom, Winfield, Woodbridge, and Wright—57.

NOT VOTING—Messrs. Baldwin, Cook, Culver, Davis, Dawes, Delano, Eggleston, Farnsworth, Good-year, Hale, Hayes, Hill, Hogan, Hooper, Demas Hubbard, John H. Hubbard, Edward N. Hubbell, Hubbard, James M. Humphrey, Johnson, Jones, Kerr, Marvin, McDoe, Nicholson, Noell, Phelps, Pomeroy, Price, Radford, Samuel J. Randall, William H. Randall, Rogers, Schofield, Sitgreaves, Sloan, Starr, Labor, Thayer, John L. Thomas, Trimble, Ward, William B. Washburn, Wentworth, and Stephen F. Wilson—45.

On May 16th the President returned the bill to the Senate, with his objections, as follows:

To the Senate of the United States:

I return to the Senate, in which it originated, the bill which has passed both Houses of Congress, entitled "An act for the admission of the State of Colorado into the Union," with my objections to it becoming a law at this time.

1. From the best information which I have been

able to obtain, I do not consider the establishment of a State government at present necessary for the welfare of the people of Colorado. Under the existing territorial government all the rights, privileges, and interests of the citizens are protected and secured. The qualified voters choose their own legislators and their own local officers, and are represented in Congress by a Delegate of their own selection. They make and execute their own municipal laws, subject only to revision of Congress—an authority not likely to be exercised, unless in extreme or extraordinary cases. The population is small, some estimating it so low as twenty-five thousand, while advocates of the bill reckon the number at from thirty-five thousand to forty thousand souls. The people are principally recent settlers, many of whom are understood to be ready for removal to other mining districts beyond the limits of the Territory if circumstances shall render them more inviting. Such a population cannot but find relief from excessive taxation if the Territorial system, which devolves the expense of the executive, legislative, and judicial departments upon the United States, is for the present continued. They cannot but find the security of person and property increased by their reliance upon the national executive power for the maintenance of law and order against the disturbances necessarily incident to all newly-organized communities.

2. It is not satisfactorily established that a majority of the citizens of Colorado desire or are prepared for an exchange of a territorial for a State government. In September, 1864, under the authority of Congress, an election was lawfully appointed and held for the purpose of ascertaining the views of the people upon that particular question. Six thousand one hundred and ninety-two votes were cast, and of this number a majority of 3,152 was given against the proposed change. In September, 1865, without any legal authority, the question was again presented to the people of the Territory with the view of obtaining a reconsideration of the result of the election held in compliance with the act of Congress, approved March 21, 1864. At this second election 3,905 votes were polled, and a majority of 155 was given in favor of State organization. It does not seem to me entirely safe to receive this last-mentioned result, so irregularly obtained, as sufficient to outweigh the one which had been legally obtained in the first election. Regularity and conformity to law are essential to the preservation of order and stable government, and should, as far as practicable, always be observed in the formation of new States.

3. The admission of Colorado at this time as a State into the Federal Union appears to me to be incompatible with the public interests of the country. While it is desired that Territories sufficiently matured should be organized as States, yet the spirit of the Constitution seems to require that there should be an approximation toward equality among the several States comprising the Union. No State can have more than two Senators in Congress; the largest State has a population of four millions, several of the States have a population exceeding two millions, and many others have a population exceeding one million.

A population of one hundred and twenty-seven thousand is the ratio of apportionment of Representatives among the several States. If this bill should become a law, the people of Colorado, thirty thousand in number, would have in the House of Representatives one member, while New York with a population of four millions, has but thirty-one. Colorado would have in the electoral college three votes, while New York has only thirty-three. Colorado would have in the State two votes, while New York has no more.

Inequalities of this character have already occurred, but it is believed that none have happened where the inequality was so great. When such inequality has been allowed, Congress is supposed to

have permitted it on the ground of some high public necessity, and under circumstances which promised that it would rapidly disappear through the growth and development of the newly admitted State. Thus, in regard to the several States in what was formerly called the "Northwest Territory," lying east of the Mississippi, their rapid advancement in population rendered it certain that States admitted with only one or two Representatives in Congress would in a very short period be entitled to a great increase of representation. So when California was admitted on the ground of commercial and political exigencies, it was well foreseen that that State was destined rapidly to become a great, prosperous, mining, and commercial community. In the case of Colorado, I am not aware that any rational exigency, either of a political or commercial nature, requires a departure from the law of equality which has been so generally adhered to in our history.

If information submitted in connection with this bill is reliable, Colorado, instead of increasing, has declined in population. At an election for members of a Territorial Legislature held in 1861, 10,580 votes were cast. At the election before mentioned, in 1864, the number of votes cast was 6,192; while at the irregular election held in 1865, which is assumed as a basis for legislative action at this time, the aggregate of votes was 5,905. Sincerely anxious for the welfare and prosperity of every Territory and State, as well as for the prosperity and welfare of the whole Union, I regret this apparent decline of population in Colorado, but it is manifest that it is due to emigration, which is going out from that Territory into other regions within the United States, which either are in fact, or are believed by the inhabitants of Colorado to be, richer in mineral wealth and agricultural resources. If, however, Colorado has not really declined in population, another census or another election under the authority of Congress would place the question beyond doubt, and cause but little delay in the ultimate admission of the Territory as a State, if desired by the people. The tenor of these objections furnishes the reply which may be expected to an argument in favor of the measure derived from the enabling act which was passed by Congress on the 21st day of March, 1864. Although Congress then supposed that the condition of the Territory was such as to warrant its admission as a State, the result of two years' experience shows that every reason which existed for the institution of a territorial instead of a State government in Colorado at its first organization still continues in force.

The condition of the Union at the present moment is calculated to inspire caution in regard to the admission of new States. Eleven of the old States have been for some time, and still remain, unrepresented in Congress. It is a common interest of all the States, as well those represented as those unrepresented, that the integrity and harmony of the Union should be restored as completely as possible, so that all those who are expected to bear the burdens of the Federal Government shall be consulted concerning the admission of new States, and that in the mean time no new State shall be prematurely and unnecessarily admitted to a participation in the political power which the Federal Government wields—not for the benefit of any individual State or section, but for the common safety, welfare, and happiness of the whole country.

ANDREW JOHNSON.

WASHINGTON, D. C., May 15, 1866.

The message was read, and with the bill laid on the table, and ordered to be printed.

On May 21st, Mr. Hendricks, of Indiana, moved to take up the bill. After much debate, the motion was agreed to, and the consideration of the bill postponed one week. It was not acted on during the session.

On December 18th, a joint resolution passed both Houses of Congress, expressing a desire to testify their sensibility upon the occasion of the public bereavement by the tragic death of President Lincoln, and a purpose to meet on February 12th, in the hall of the House, and listen to an address upon the life and character of the deceased.

At twelve o'clock and ten minutes P. M., on February 12th, the members of the Senate, following their President *pro tempore* and their Secretary, and preceded by their Sergeant-at-Arms, entered the Hall of the House of Representatives and occupied the seats reserved for them on the right and left of the main aisle.

The President *pro tempore* occupied the Speaker's chair, the Speaker of the House sitting at his left. The Chaplains of the Senate and of the House were seated on the right and left of the presiding officers of their respective Houses.

Shortly afterward the President of the United States, with the members of his Cabinet entered the Hall and occupied seats, the President in front of the Speaker's table, and his Cabinet immediately on his right.

Immediately after the entrance of the President, the Chief Justice and the Associate Justices of the Supreme Court of the United States entered the Hall and occupied seats next to the President, on the right of the Speaker's table.

The others present were seated as follows:

The Heads of Departments, with the Diplomatic Corps, next to the President, on the left of the Speaker's table;

Officers of the Army and Navy, who, by name, have received the thanks of Congress, next to the Supreme Court, on the right of the Speaker's table;

Assistant Heads of Departments, Governors of States and Territories, and the Mayors of Washington and Georgetown, directly in the rear of the Heads of Departments;

The Chief Justice and Judges of the Court of Claims, and the Chief Justice and Associate Justices of the Supreme Court of the District of Columbia, directly in the rear of the Supreme Court;

The Heads of Bureaus in the Departments, directly in the rear of the officers of the Army and Navy;

Representatives on either side of the Hall, in the rear of those invited, four rows of seats on either side of the main aisles being reserved for Senators.

The Orator of the Day, Hon. George Bancroft, at the table of the Clerk of the House;

The Chairman of the joint Committee of Arrangement at the right and left of the orator, and next to them the Secretary of the Senate and the Clerk of the House;

The other officers of the Senate and of the House, on the floor at the right and the left of the Speaker's platform.

When order was restored, at twelve o'clock and twenty minutes P. M., the Marine band

stationed in the vestibule, played appropriate dirges.

At twelve o'clock and thirty minutes the two Houses were called to order by the President *pro tempore* of the Senate.

Rev. Dr. Boynton, Chaplain of the House of Representatives, offered a prayer. After which the President *pro tempore* of the Senate, in introducing the orator of the day, said:

"No ordinary occasion could have convened this august assemblage. For four weary years the storm of war, of civil war, raged fiercely over our country. The blood of the best and bravest of her sons was freely shed to preserve her name and place among the nations of the earth. In April last the dark clouds which had so long hung heavily and gloomily over our heads were all dispersed, and the light of peace, more welcome even than the vernal sunshine, gladdened the eyes and the hearts of our people. Shouts of joy and songs of triumph echoed through the land. The hearts of the devout poured themselves in orisons and thanksgivings to the God of battles and of nations that the most wicked and most formidable rebellion ever known in human history had been effectually crushed and our country saved.

"In the midst of all this abounding joy, suddenly and swiftly as the lightning's flash, came the fearful tidings that the chief Magistrate of the Republic, our President loved and honored as few men ever were, so honest, so faithful, so true to his duty and his country, had been foully murdered, had fallen by the bullet of an assassin. All hearts were stricken with horror. The transition from extreme joy to profound sorrow was never more sudden and universal. Had it been possible for a stranger, ignorant of the truth, to look over our land, he would have supposed that there had come upon us some visitation of the Almighty not less dreadful than that which once fell on ancient Egypt on that fearful night when there was not a house where there was not one dead. The nation wept for him.

"After being gazed upon by myriads of loving eyes, under the dome of this magnificent Capitol, the remains of our President were borne in solemn procession through our cities, towns, and villages, all draped in the habiliments of sorrow, the symbols and tokens of profound and heart-felt grief, to their final resting-place in the capital of his own State. There he sleeps, peacefully embalmed in the tears of his countrymen.

"The Senate and House of Representatives of the United States have deemed it proper to commemorate this tragic event by appropriate services. This day, the birthday of him whom we mourn, has properly been selected. An eminent citizen, distinguished by his labors and services in high and responsible public positions at home and abroad—whose pen has instructed the present age in the history of his country, and done much to transmit the fame and renown of that country to future ages—

Hon. George Bancroft—will now deliver a discourse."

Mr. Bancroft (who, on coming forward, was greeted with warm demonstrations of applause) then proceeded to deliver an oration.

In the Senate, on May 8th, Mr. Sumner, of Massachusetts, from the Committee on Foreign Relations, reported the following joint resolution, which had previously passed the House:

Resolved, etc., That the Congress of the United States of America has learned with deep regret of the attempt made upon the life of the Emperor of Russia by an enemy of emancipation. The Congress sends their greeting to his Imperial Majesty and to the Russian nation, and congratulates the twenty million serfs upon the providential escape from danger of the sovereign to whose head and heart they owe the blessings of their freedom.

The first amendment of the Committee on Foreign Relations was to strike out the word "their" before the word "greeting," so that it would read: "The Congress sends greeting to his Imperial Majesty," etc.

The amendment was agreed to.

The next amendment was to add as an additional section the following:

And be it further resolved, That the President of the United States be requested to forward a copy of this resolution to the Emperor of Russia.

The amendment was agreed to.

Mr. Sumner said: "The public prints have informed us that an attempt was made on the life of the Emperor of Russia by a person animated against him on account of his divine effort to establish emancipation. That report, I am inclined to think, has not disclosed completely the whole case. It does not appear, from what we are told, that the special ground of animosity to the Emperor, at the present moment, is so much the original act of emancipation as the courage and perseverance and wisdom which he has displayed in carrying it forward to its practical results.

"I have had occasion, formerly, to remind the Senate how completely the Emperor has done his work. Not content with issuing the decree of emancipation, which was in the month of February, 1861, he has proceeded, by an elaborate system of regulations, to provide, in the first place, for what have been called the civil rights of all the recent serfs; then, in the next place, to provide especially for their rights in court; then, again, to provide for their rights in property, securing to every one of them a homestead; and then, again, by providing for them rights of public education. Added to all these, he has secured to them also political rights, giving to every one the right to vote for all local officers, corresponding to our officers of the town and of the county. It is this very thoroughness with which he has carried out his decree of emancipation that has aroused against him the ancient partisans of slavery, and I doubt not it was one of these who aimed at him that blow which was so happily arrested.

The laggard and the faithless are not pursued by assassins.

"The Emperor of Russia was born in 1818, and is now forty-eight years of age. He succeeded to the throne on the death of his late father in 1855. Immediately after his accession he was happily inspired to bring about emancipation in his great country. One of his first utterances when declaring his sentiments, was, that it was important that this great work should begin from above, to the end that it should not proceed from below. Therefore he insisted that the Imperial Government itself should undertake the blessed work, and not leave it to the chance of insurrection or of blood. He went forth bravely, encountering much opposition; and now, that emancipation has been declared in form, he is still going forward bravely in order to crown it by assuring all those rights without which emancipation is little more than a name. It was, therefore, on account of his thoroughness in the work that he became a mark for the assassin; and, sir, our country does well when it offers its homage to the sovereign who has attempted so great a task, under such difficulties and at such hazards, making a landmark of civilization."

Mr. Saulsbury, of Delaware, said: "I move to amend the resolution by striking out the words 'by an enemy of emancipation;' and upon this amendment I will submit a remark. The Senate of the United States, sir, is called upon to vote for this resolution as it stands, and to assert by its vote that the attempt made upon the life of the Emperor of Russia was 'by an enemy of emancipation.' Now, sir, I ask you, I ask any member of the Senate, whether there is one particle of evidence before this body, or whether there is a particle of evidence extant in this country, and accessible to the people of this country, which shows that such an attempt was made by an enemy of emancipation. I have seen none such. The statement that I have seen in the papers is that it was by a man in the humble walks of life, and I presume by a man that did not own many acres. If it be the fact that this attempt at the assassination of the Emperor of Russia was made by an enemy of emancipation, that fact can be easily ascertained, for Russia is represented here by a minister. Inquiry could have been made of that minister; and if the fact be as alleged in the resolution we could have had knowledge of that fact from a proper and reliable source."

The amendment was rejected and the resolution passed. It was subsequently agreed to, as amended by the House. The resolution was transmitted to the Emperor in the iron-clad steamer *Miantonomah*.

In the House, on May 14th, Mr. Chanler, of New York, submitted the following resolutions:

Resolved, That the independent, patriotic, and constitutional course of the President of the United States, in seeking to protect by the veto power the rights of the people of this Union against the wicked

and revolutionary acts of a few malignant and mischievous men meets with the approval of this House and deserves the cordial support of all loyal citizens of the United States.

Resolved, That this House believes the Freedmen's Bureau unnecessary and unconstitutional, and hereby directs the chairman of the committee having charge of that bureau to bring in a bill to repeal all acts and parts of acts inconsistent with this resolution.

Mr. Stevens, of Pennsylvania, raised the question of reception, which was decided by the following vote:

YEAS—Messrs. Bergen, Chanler, Denison, Eldridge, Finck, Goodyear, Grider, Aaron Harding, Kerr, Le Blond, Niblack, Ritter, Rogers, Ross, Shanklin, Sitgreaves, Strouse, Tabor, and Trimble—19.

NAYS—Messrs. Alley, Allison, Ames, Delos B. Ashley, James M. Ashley, Baker, Baldwin, Banks, Baxter, Benjamin, Bingham, Blaine, Blow, Boutwell, Bromwell, Broomall, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Darling, Dawes, Dawson, Defrees, Deming, Donnelly, Dumont, Eggleston, Farnsworth, Ferry, Garfield, Abner C. Harding, Hart, Hayes, Henderson, Higby, Holmes, Hooper, Asahel W. Hubbard, Chester D. Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, Jenckes, Julian, Kasson, Lafin, George V. Lawrence, William Lawrence, Loan, Longyear, Lynch, McKee, Mercur, Miller, Moorhead, Morrill, Orth, Paine, Patterson, Perham, Pike, Plants, Alexander H. Rice, Rollins, Sawyer, Schenck, Spalding, Stevens, Van Aernam, Burt Van Horn, Ward, Warner, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, Williams, James F. Wilson, Windom, and Woodbridge—84.

In the House, on May 14th, Mr. Stevens, of Pennsylvania, introduced the following resolution, on which he demanded the previous question:

Resolved, That a committee of three members be appointed by the Speaker, whose duty it shall be to proceed, without unnecessary delay, to Memphis, in the State of Tennessee, to make an investigation into all matters connected with the recent bloody riots in that city, which began on the 1st instant, and particularly to inquire into the origin, progress, and termination of the riotous proceedings, the names of the parties engaged in it, the acts of atrocity perpetrated, the number of killed and wounded, the amount and character of the property destroyed, and report all the facts to the House; and the Sergeant-at-arms or his deputy, and the stenographer of the House, are directed to accompany said committee; and that all the expenses of this investigation be paid out of the contingent fund of the House. The said committee shall have power to send for persons and papers, and examine witnesses under oath.

It was passed by the following vote:

YEAS—Messrs. Alley, Allison, Ames, Delos B. Ashley, James M. Ashley, Baker, Baldwin, Banks, Baxter, Benjamin, Bidwell, Bingham, Blaine, Blow, Boutwell, Bromwell, Broomall, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Darling, Davis, Dawes, Defrees, Delano, Deming, Donnelly, Dumont, Eckley, Eggleston, Farnsworth, Ferry, Garfield, Abner C. Harding, Hart, Hayes, Henderson, Higby, Holmes, Hooper, Asahel W. Hubbard, Demas Hubbard, John H. Hubbard, James R. Hubbell, Hulburd, Jenckes, Julian, Kasson, Kayser, Ladin, William Lawrence, Loan, Longyear, Lynch, McKee, Mercur, Miller, Moorhead, Morrill, Orth, Paine, Patterson, Perham, Pike, Plants, William H. Randall, Alexander H. Rice, Rollins, Rousseau, Sawyer, Schenck, Stevens, Van Aernam, Burt

Van Horn, Ward, Warner, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, Williams, James F. Wilson, Windom, and Woodbridge—87.

NAYS—Messrs. Bergen, Chanler, Dawson, Denison, Eldridge, Finck, Goodyear, Grider, Aaron Harding, Kerr, Latham, Le Blond, Niblack, Ritter, Rogers, Ross, Shanklin, Sitgreaves, Spalding, Strouse, Tabor, and Trimble—22.

In the House, on May 21st, Mr. McClurg, of Missouri, offered the following resolution and called the previous question :

Whereas it is clearly manifest that the continued contumacy in the seceding States renders it necessary to exercise Congressional legislation in order to give to the loyal citizens of those States protection in their natural and personal rights enumerated in the Constitution of the United States, and, in addition thereto, makes it necessary to keep on foot a large standing army to maintain the authority of the National Government and to keep the peace; and whereas the country is already overburdened by a war debt incurred to defend the nationality against an infamous rebellion, and it is neither just nor politic to inflict this vast additional expense on the peaceful industry of the nation : Therefore,

Resolved, That it be referred to the joint committee of the Senate and House to inquire into the expediency of levying contributions on the seceding States to defray the extraordinary expenses that would otherwise be imposed on the General Government; and that said committee be instructed to report by bill or otherwise.

It was agreed to by the following vote :

YEA—Messrs. Allison, Ames, Anderson, James M. Ashley, Baker, Beaman, Bidwell, Boutwell, Brannan, Reader W. Clark, Cobb, Cook, Cullom, Dawes, DeFrees, Deming, Donnelly, Driggs, Dumont, Eckler, Eliot, Abner C. Harding, Henderson, Higby, Holmes, Hooper, Asahel W. Hubbard, Demas Hubbard, John H. Hubbard, Hulburd, Julian, Kelley, Keao, Ketcham, George V. Lawrence, William Lawrence, Loan, Longyear, Lynch, McClurg, McKee, Mercur, Moorhead, Morrill, Morris, Moulton, O'Neill, Faine, Patterson, Perham, Pike, Plants, Price, John H. Rice, Rollins, Sawyer, Schenck, Schofield, Sloan, Spalding, Stevens, Trowbridge, Upson, Van Aersam, Ward, Henry D. Washburn, William B. Washburn, Welker, Williams, James F. Wilson, Stephen F. Wilson, Windom, and Woodbridge—78.

NAYS—Messrs. Ancona, Chanler, Davis, Dawson, Denison, Eldridge, Glossbrenner, Goodyear, Grider, Hale, Aaron Harding, Hogan, Edwin N. Hubbell, James M. Humphrey, Kerr, Laffin, Le Blond, Marston, McCullough, McRuer, Myers, Niblack, Nicholson, Phelps, Samuel J. Randall, Ritter, Rogers, Ross, Sitgreaves, Tabor, Taylor, Thayer, Whaley, Winfield, and Wright—25.

NOT VOTING—85.

On the same day the following resolutions, offered by Mr. Henderson, of Oregon, were adopted :

Resolved, That it is the sense of this House that all just and righteous governments are intended, not to confer rights and privileges upon the subjects thereof, but to secure to each and every individual the full, free, and untrammelled exercise and enjoyment of all those rights which God has bestowed upon him.

Resolved, That the safety, prosperity, and happiness of the people require that just and adequate penalties be annexed to the violation of law, and that those penalties be inflicted upon transgressors, not for the purpose of retaliation or revenge, but to insure subordination and obedience.

Resolved further, That we will stand by and sustain the President in executing the laws of the United States upon a sufficient number of leading rebels in each of the States lately in insurrection against the National Government, to vindicate the majesty of the law, to sustain the confidence of loyal people, and warn the refractory for all time to come.

The vote was not officially reported.

In the House, on December 20th, Mr. Lawrence, of Ohio, offered the following resolutions, which were laid on the table and ordered to be printed :

Resolved, That public justice and national security demand that, so soon as it may be practicable, Jefferson Davis, a representative man of the rebellion, should have a fair and impartial trial in the highest appropriate civil tribunal of the country, for the treason most flagrant in character by him committed, in order that the Constitution and the laws may be fully vindicated, the truth clearly established and affirmed that treason is a crime, and that the offence may be made infamous; and at the same time that the question may be judicially settled, finally and forever, that no State of its own will has the right to renounce its place in the Union.

Resolved, That public justice and national security demand that in case of the conviction of said Jefferson Davis, the sentence of the law should be carried into effect in order that the Constitution and the laws may be fully vindicated and faithfully executed, the truth clearly established and affirmed that treason is a crime, and that traitors should be punished.

Resolved, That in like manner, and for like reasons, such of the most culpable of the chief instigators and conspirators of the rebellion, as may be necessary to satisfy the demands of public justice and furnish security for the future, and those criminally responsible for the murder and starvation of Union prisoners of war, should be tried and punished for the high crime of which they have been guilty.

Resolved, That justice should not fail of its purpose, and that all who are guilty of or responsible for the assassination of the late President, and the great offenders during the recent rebellion guilty of and responsible for the murder and starvation of Union prisoners of war, as well as those guilty of or responsible for other unparalleled violations of the laws of civilized warfare, are amenable to and should be tried, convicted, and punished by military tribunals authorized by law, and sanctioned by the common law of war and the usage of civilized nations, whenever and so far as may be necessary to secure the ends of justice.

Resolved, That the Committee on the Judiciary be instructed to inquire what legislation, if any, may be necessary to provide juries for trials for treason, for writs of error, and to carry into effect the purposes of the foregoing resolutions; and that said committee report by bill or otherwise.

In the Senate, on December 21st, Mr. Howard, of Michigan, offered the following, which was agreed to :

Whereas the Constitution declares that "in all criminal prosecutions the accused shall enjoy the right of a speedy and public trial by an impartial jury of the State or District wherein the crime shall have been committed;" and whereas several months have elapsed since Jefferson Davis, late President of the so-called Confederate States, was captured and confined for acts notoriously done by him as such, which acts, if duly proved, render him guilty of treason against the United States, and liable to the penalties thereof; and whereas hostilities between the Government of the United States and the insurgents

have ceased, and not one of the latter, so far as is known to the Senate, is now held in confinement for the part he may have acted in the rebellion except said Jefferson Davis: Therefore,

Resolved, That the President be respectfully requested, if compatible with the public safety, to inform the Senate upon what charges or for what reasons said Jefferson Davis is still held in confinement, and why he has not been put upon his trial.

The reply to the preceding and to all other resolutions calling for information on the same subject was, that it would be incompatible with the public interest to furnish the same.

In the House, on April 9th, Mr. Raymond, of New York, offered the following resolution, which was referred to the Committee on the Judiciary:

Whereas the President of the United States has, by proclamation, declared the insurrection in the State of Virginia to be at an end; and whereas the reasons which have hitherto prevented the holding of a court of the United States in said State for the trial of persons charged with treason against the United States have been thereby obviated and removed: Therefore,

Resolved, That the President of the United States be requested to take steps for the speedy trial of Jefferson Davis, who has been duly indicted in said State for said crime of treason, unless he shall be, with reasonable dispatch, indicted for said crime, and put on trial in some other district in which he may be legally liable for trial.

On July 11th, Mr. Boutwell, of Massachusetts, offered the following resolution:

Whereas it is notorious that Jefferson Davis was the leader of the late rebellion, and is guilty of treason under the laws of the United States; and whereas by the proclamation of the President of May, 1865, the said Davis was charged with complicity in the assassination of President Lincoln, and said proclamation has not been revoked nor annulled: Therefore,

Be it resolved, As the opinion of the House of Representatives, that said Davis should be held in custody as a prisoner, and subjected to a trial according to the laws of the land.

The resolution was adopted by the following vote:

YEAS—Messrs. Alley, Allison, James M. Ashley, Baker, Baldwin, Banks, Baxter, Beaman, Bidwell, Bingham, Blaine, Boutwell, Bromwell, Buckland, Bundy, Reader W. Clark, Sidney Clarke, Cobb, Conkling, Cook, Cullom, Darling, Davis, Dawes, Defrees, Donnelly, Eckley, Eliot, Farnsworth, Farquhar, Ferry, Garfield, Grinnell, Griswold, Hale, Abner C. Harding, Hart, Hayes, Henderson, Higby, Holmes, Hooper, Hotchkiss, Chester D. Hubbard, John H. Hubbard, James R. Hubbell, Julian, Kelso, Ketcham, Kuykendall, Laffin, Latham, George V. Lawrence, William Lawrence, Loan, Longyear, Lynch, Marshall, Marvin, McClurg, McKee, McRuer, Mercur, Miller, Moorhead, Morrill, Morris, Moulton, Myers, O'Neill, Orth, Paine, Perham, Phelps, Pike, Plants, Pomeroy, Price, William H. Randall, Raymond, Alexander H. Rice, Sawyer, Schenck, Schofield, Shellabarger, Sloan, Smith, Spalding, Thayer, John L. Thomas, Thornton, Trowbridge, Upson, Van Aernam, Ward, Warner, Henry D. Washburn, Welker, Whaley, Williams, James F. Wilson, Stephen F. Wilson, Windom, Winfield, and Woodbridge—105.

NAYS—Messrs. Ancona, Boyer, Coffroth, Eldridge, Finck, Glossbrenner, Grider, Harris, Hogan, Johnson, McCullough, Niblack, Samuel J. Randall, Ritter, Rogers, Sitgreaves, Tabor, Trimble, and Wright—19.

On July 27th, Mr. Boutwell offered the following, which was agreed to:

Resolved, That there is no defect or insufficiency in the present state of the law to prevent or interfere with the trial of Jefferson Davis for the crime of treason or any other crime for which there may be probable ground for arraigning him before the tribunals of the country.

Resolved further, That it is the duty of the executive department of the Government to proceed with the investigation of the facts connected with the assassination of the late President, Abraham Lincoln, without unnecessary delay, that Jefferson Davis and others named in the proclamation of President Johnson of May 2, 1865, may be put upon trial and properly punished if guilty, or relieved from the charges against them if found to be innocent.

In the Senate, on April 30th, the House bill making appropriations for the service of the Post-office Department and other purposes, being under consideration, Mr. Henderson, of Missouri, had offered an amendment providing that persons appointed to office, but not confirmed by the Senate, should not receive any salary until such confirmation.

Mr. Trumbull, of Illinois, also offered the following amendment, which was accepted by Mr. Henderson:

And be it further enacted, That no person exercising or performing, or undertaking to exercise or perform the duties of any office which by law is required to be filled by the advice and consent of the Senate, shall, before confirmation by the Senate, receive any salary or compensation for his services unless such person be commissioned by the President to fill up a vacancy which has happened by death, resignation, or expiration of term, during the recess of the Senate and since its last adjournment.

Mr. Johnson, of Maryland, in opposition to the amendment, said: "I should like to know the reasons why the honorable member from Illinois supposes a provision of that sort is constitutional. There was a period in the beginning of the Government when the President's power to remove was considered somewhat questionable. It was, however, decided by the Senate to be a clear power; and from that time to the present I do not know that the legality of the power has ever been questioned. Mr. Webster, many years ago, when there was a contest between the then President of the United States and the Senate—a contest just as angry or just as excited as the contest which may be supposed to exist now between a majority of the Senate and the President—was disposed to call in question the power of removal; but the Senate will find that, in a letter written by Mr. Madison, in the paper we have recently published, in reply to Mr. Coles, who had been his former secretary, he enters into an argument on the subject and considers it a question no longer open for controversy. The Senate were very anxious at that time to prevent, if they could do it, the power which President Jackson was from time to time exercising, but they had to abandon it. I think the Supreme Court have more than once, the question being presented, recognized the

power to remove, and they have done it even in relation to a judicial officer. The members of the judicial department of the Government provided by the Constitution hold their office during good behavior. But, notwithstanding that, the judges of territorial governments, it was held, were always liable to be removed by the President; and a case was brought into the Supreme Court by a judge who had been removed, claiming his salary on the ground that he could not be removed, not because there existed no power to remove in relation to officers generally, but because of the particular character of his office; and the Supreme Court, as well as I recollect—I do not speak with positive certainty on the subject—decided that a judge in a Territory was not to be considered as a judge within the judicial department of the Government, and was therefore just as liable to be removed as any other officer appointed under the Constitution and laws."

Mr. Trumbull, of Illinois, replied: "Mr. President, I do not think that the question of the power of the President to remove from office an incumbent and appoint another in his place during the recess is necessarily involved in the amendment which I have offered. That is a controverted point and has been from the foundation of the Government. The practice, I am aware, has been for the President to exercise the power to remove from office by making new appointments; and this has generally been acquiesced in.

"The laws upon this subject have not, however, been uniform. In 1863 there was created an officer called the Comptroller of the Currency, and in the law establishing the Currency Bureau it was provided that 'there shall be appointed a chief officer to be styled the Comptroller of the Currency, who shall be under the general direction of the Secretary of the Treasury.' The law further provided that he shall be appointed by the President, on the nomination of the Secretary of the Treasury, by and with the advice and consent of the Senate, and shall hold his office for the term of five years, unless sooner removed by the President by and with the advice and consent of the Senate."

"That law, passed in 1863, provided that the Comptroller of the Currency should be removed from office by and with the advice and consent of the Senate alone, and according to that statute it is not competent for the President of the United States to remove the Comptroller of the Currency except by the advice and consent of the Senate. The legislative construction which was put upon the President's power in 1863 by this act was that it was competent for Congress to provide that persons could be removed from office only by the advice and consent of the Senate when they are appointed by that advice and consent.

"But, sir, the amendment which I have proposed does not involve that question. According to my understanding, the President

has no authority to fill a vacancy which exists in an office, by himself, without the advice and consent of the Senate, unless that vacancy occurs while the Senate is not in session; and one object of this amendment is to prevent appointments of that character. I deny that if a vacancy exists in an office while the Senate is here, the President has any power to fill up that vacancy without the advice and consent of the Senate. It takes the President and the Senate both to make an officer; but he may make a new appointment in case that officer dies during the recess of the Senate, or resigns his office, or in case the term for which he was appointed expires during the recess of the Senate so that a vacancy occurs, though I am not quite sure that he would have authority to appoint in the case of an expiration of the term, because that may not be the happening of a vacancy, inasmuch as the term expires at a fixed period, there is no uncertainty about it, and it is competent for the President to anticipate that period by sending the nomination of an officer to the Senate while it is in session for its confirmation. I am by no means clear that he has authority to appoint in that case, for then it becomes an appointment to an original office when the term has expired. However, it is provided in this amendment that in either of these cases the President may make an appointment or may fill up the vacancy, and the party will receive his salary. He has the constitutional authority to do this.

"But, Mr. President, the control of the revenues of the country and of the money of the country is not in the hands of the President; without the authority of Congress, he has no control over one dollar; he cannot draw his own salary except by authority of law; and the Senator from Maryland will observe that this provision does not go to the appointing power at all; it is merely a provision in regard to the salaries of officers or the compensation they are to receive. It is entirely competent for Congress to provide just as much compensation as it pleases, or no compensation. It may authorize an appointment of an officer without attaching any salary or any fees to the discharge of the duties of the office. I think there is a bill now pending, reported by the Senator from Massachusetts, the chairman of the Committee on Foreign Relations, that provides for the appointment of certain commissioners without any salary whatever. It is entirely competent for Congress to make such provision. There is, therefore, no constitutional question involved in this amendment which I have offered."

Mr. Johnson, of Maryland, again said: "Mr. President, I am aware that the money of the Government is placed under the control of Congress; and in one sense, therefore, Congress has the right to refuse to pay salaries. They may refuse to pay the President his salary, now fixed by law. They may refuse to appropriate at all for the payment of the compen-

sation which the laws give, or which the laws ought to give, to the officers who may be appointed from time to time by the appointing power. But the honorable member, I am sure, will see that the ground upon which he places the constitutionality of this legislation, as far as that particular ground is concerned, is one which will not bear examination. If the President has the power to appoint, and the appointee has the right to go into office under the Constitution, although Congress may have the power to say that they will not pay, have they the moral right to say that they will not pay? And if there is no moral right to deny payment in such a case, are they not warring against the spirit of the Constitution, though not against its letter, by refusing to pay?

"The Senate of the United States, or both branches of Congress, may become so dissatisfied with the President of the United States as to be exceedingly anxious to get rid of him. His remaining in office may interfere with some favorite policy of Congress; Congress may look to political measures upon which, as they suppose, the welfare of the country depends, and find that they cannot accomplish their purpose in having such measures adopted as long as the incumbent of the presidential office is in his seat. There are two ways to get rid of him. One is to impeach him. That requires, to be successful, a vote in the body of two-thirds. Another is to starve him out, and that may be accomplished by refusing to pay his salary; and the honorable member's argument would be just as solid in a case of that description in support of legislation such as I have supposed, as it is in relation to the case before the Senate, provided the President has the authority to remove and to appoint.

"Mr. President, in all good temper, I caution my friends, or rather the member who offers this amendment, against what may be the consequences of this precedent in the future. It may answer the temporary purpose for which he avows it now to be designed; but it may be relied upon hereafter to answer a temporary purpose which the honorable member from Illinois would be the last man to wish to see accomplished. The precedent may return to plague the inventor. The dominant party now in each House of Congress may, in the course of time, become a minority. They may have elected their President, and he may be an officer who is willing to carry out their particular policy. These seats, however, and the seats in the other House may be filled by a majority of members who think that the policy which the minority and the President for the time being may desire to carry out, is dangerous to the country, and then they may propose just what the honorable member proposes now, not to take away the power of appointment, as he says, but to refuse to appropriate; not to declare that he shall not appoint, but to declare that if he does appoint, his appointment will be futile; and they may go further and say, fol-

lowing the principle for which this may be cited as a precedent, that the President for the time being stands in the way of the true interest and honor of the country, or stands in the way of some party aspiration; but as he cannot be got rid of by impeachment, they strike at his appointing power, and if they cannot get rid of him by taking from him, practically, the benefit of his appointing power, they accomplish the same thing by providing that no money shall go out of the Treasury to compensate his appointees."

Mr. Sumner, of Massachusetts, said: "The proposition is very simple; it needs no commentary or no explanation. All familiar with public offices know that there are unquestionably abuses that have occurred in the executive department from the habit, after the adjournment of the Senate, of filling vacancies which had existed during the session of the Senate but which the Senate had chosen not to fill. Is Congress wrong if it undertakes to provide by legislation that in such cases the party nominated shall not be entitled to any salary or compensation until he is afterward confirmed by the Senate? It may be, as the Senator from Maryland suggests, that we may not interfere with the power of removal; but there is one power which Congress has—and the Senate is a part of Congress—and that is the power over the purse-strings; and all that this proposition undertakes to do is to exercise power over the purse-strings in certain cases, so as to impose a check, a constitutional check, which recent events show ought to be imposed upon the Executive. The proposition is so simple that it hardly justifies argument, and I will not take any further time about it."

Mr. Sherman, of Ohio, said: "I dislike very much to see these propositions attached to our appropriation bills. They are in the nature of conditions to what we ought freely to grant, appropriations to meet the expenses of the Government. I do not like to see them put on in that way; but if the Senator from Illinois or the Judiciary Committee will frame a bill which will limit and restrain the power of the President to remove from office, so that when a man is appointed for four years he shall hold that office during those four years, unless he is removed for cause, to be submitted to the Senate. I will vote for such a proposition, and I say there never was a time when this great question could be more fairly met than now. It is admitted on all hands that at least a jealousy exists between the President and Congress; I will not say war, because I do not think there is a war, but there is a jealousy and a watchfulness probably on the part of the President and on the part of Congress. What is to prevent Congress now from passing such a law as I have indicated? The majority here is overwhelming. We have no object to accomplish of a mere partisan purpose. The majority in Congress is perhaps two-thirds in a party sense. What is to prevent now the Judiciary Commit-

tee from carefully framing a law prescribing the term of office of the various classes of officers of the Government, and declaring that the President shall not remove any one of those officers except for such and such causes?"

Mr. Henderson, of Missouri, in favor of the amendment, said: "Mr. President, no man can read the debate of 1789, as I have done within the last two or three days, without coming to the same conclusion. Mr. Madison and those who contended with him, it seems to me, were in favor of leaving this power in the hands of the President by their legislation, simply because they had entire confidence in the Father of his Country. I have looked at this question of removal, and I find that during the whole eight years of the administration of General Washington, after this debate in Congress, and after the admission that the power rested in the Executive to make removals without cause, there were but nine removals made. I do not say that they were made without cause, but I mean that there were but nine removals made by the Executive. Mr. Adams succeeded General Washington, and there were but ten removals during his term of four years. Jefferson was in the presidency for eight years, and he removed but forty-two men. The whole eight years of the administration of Mr. Madison show but three removals. Mr. Madison claimed the power to exist, I admit, as fully as the Senator from Maryland; but how did Mr. Madison exercise that power when he had the control of it himself? In the whole eight years of his administration he saw fit to make but three removals. Mr. Monroe was in the presidency for eight years, and he made but nine removals. John Quincy Adams, during his four years of administration, made but two removals. Forty years of the Government show but seventy-five removals, not two a year. But when General Jackson came in, the first year showed some two hundred and thirty, and after that, I believe, some four or five thousand; and from that day to this it has been the continual practice of the Executive to seize upon the offices of this country for the purpose of increasing their power and patronage. When we come to examine the Constitution we clearly come to the conclusion that the President has no power to remove an officer. Why should he have the power? He may nominate, and by and with the advice and consent of the Senate may appoint an officer, but where does he get the power, as was very properly said by Mr. Calhoun, to remove an officer after he had once been placed in office?"

Mr. Trumbull now modified his amendment to make the latter part read as follows:

Which has happened during the recess of the Senate and since its last adjournment, by death, resignation, expiration of term, or removal for acts done or omitted in violation of the duties of his office: the cause, in case of removal, to be reported to the Senate at its next session.

Mr. Johnson, of Maryland, again opposed the

amendment, saying: "The question is whether, under the Constitution, the President has the power to remove officers without the consent of the Senate; and the question, as it is presented by the amendment proposed by the honorable member from Illinois, comprehends every class of officers whom he may appoint with the advice and consent of the Senate. It embraces, consequently, the members of his Cabinet who are called around him for the very purpose of aiding him in the administration of his office, in whom he is to confide, in whose sincerity of friendship, political as well as personal, he ought to rely; and if the Senators will look to what was said in both Houses of Congress at the period when the several Departments were organized, they will see that it never entered into the imagination of any of the statesmen of that day that the President could be compelled to retain in his Cabinet officers in whom he had ceased to confide, no matter upon what ground his confidence was lost. If he suspected a want of integrity, without having any positive proof, nobody doubted that it would be not only his right but his duty to remove. If he suspected or believed a want of fitness, the same was the universal opinion. If he suspected that they were hostile to what he believed to be a proper discharge of his duty, nobody questioned that he would have a right to dispense with them and to get around him men who would, with himself, be a unit with reference to all the executive functions intrusted to that department of Government. But if you adopt this amendment as it is now altered by my friend from Illinois, you to a certain extent deny to him the right to remove a Cabinet officer, because the amendment as it now stands provides that if he does remove he must at the next session of the Senate report to the Senate the reasons upon which he removes. What is to be the effect of that, provided you have the authority to impose it? Suppose the reasons are not satisfactory, is the Cabinet member who has been removed to be reinstated? The amendment does not say so; and if it did say so, what would be the principle which the Senate would have adopted? That of forcing upon the President of the United States a Cabinet officer in whom he has no confidence, whom he believes to be untrue to duty, incompetent to the discharge of his office. The Senate may think differently from the President; they may believe that he has been true to duty, that he has every competency necessary to the discharge of the duties of the office, and so decide; is that to reinstate the minister who has been removed? This amendment does not say so. If it does not say so, what is to be the effect of the amendment? To get before the Senate some ground upon which the other branch of Congress may impeach the President of the United States.

"Now, I speak knowingly, Mr. President, when I say that whatever doubt was expressed during the session of the Congress of 1789 in

relation to the incidental power of the President to remove, no member of that body (and many of them had been members of the Convention by whom the Constitution was framed) ever suggested that the President could be compelled to keep around him any Cabinet officer whom he desired to displace.

"Now, let me stop for a moment to inquire, if there was no such power of removal, what would be the condition of the country, and what would be the condition of the President? He is sworn to see to the faithful execution of the laws; and how can he do it? Not personally; it can only be done through the instrumentality of subordinate officers named in the Constitution, or officers appointed under the authority conferred upon Congress by the Constitution. He finds that the laws are not being executed, that an incumbent disregards his duty, is guilty of excesses; is dishonest, is appropriating the public money to his own purposes; what is he to do? He cannot execute the laws except by means of officers; he cannot go into the country himself and collect the revenue; he cannot be at every custom-house in the country and see to the collection of imposts; he cannot go himself personally throughout the country and collect the internal tax, whatever that may be; he cannot execute the judgments of the courts; he cannot go with your Indian agents and see that they properly apply the money set aside by Congress for that purpose. He is obliged to do it through the instrumentality of subordinates, and he finds that they are faithless; what is he to do? You adjourn on the 4th of March; you cannot sit longer at the second session; you do not meet again until December. According to this amendment, although he may turn out (for the amendment does not deny that), he cannot supply the places of those who may be dismissed; or unless he can find anybody disposed to take the place upon the contingency that the Senate will thereafter approve of the appointment, the place is not to be filled.

"Well, then, your imposts are not collected; your tax remains in the hands of those who are liable to pay it; the duties which you owe to the Indians and the execution of your treaties with them remain unperformed. The Government, in a word, comes to a stand-still; and my honorable friend from Missouri thinks it would be pregnant with great public mischief to give to a President of the United States, elected by a majority of the people of the United States, a power of removal because he may abuse it. Certainly he may. Cannot we abuse our power? Are we individually better than he is? I do not speak of the present members of the Senate or of the House of Representatives, or of the present incumbent of the presidential office; but looking into the manner in which they are respectively elected, is it a bit more probable that the President of the United States will be corrupt or prejudiced, almost to the point of practical corruption, than

it is that some members of Congress may be corrupt; or to put a more respectable supposition, is it probable that they will be more enlightened and more able to see the true interests of the country than the President of the United States? I think not.

"As far as my knowledge extends, nobody has ever impeached the personal integrity of any President of the United States. As to that, each has been spotless in the public estimation. Errors of judgment have been imputed to them; imbecility was imputed to him who preceded President Lincoln; that is to say, an imbecility which unsuited him for the exigencies in which he was placed; but in point of personal integrity his character never was assailed. Members of the Senate have been charged with improper conduct, and have been expelled; members of the House of Representatives have been charged with improper conduct, and have been expelled. So then in point of fact, looking to the experience of the country, it is just as likely that misconduct may be found in the halls of Congress as that it may be found in the Executive chamber.

"But what is to supply the evil consequent upon the inability of the President to execute the laws because the officers placed under his charge are not fit, either morally or intellectually, to execute the laws? Above all, when you charge him, as a Congress would have the right to charge him; when the judgment of the country would charge him with having abandoned his duty in seeing the laws faithfully executed, and he comes before you and defends himself upon the ground that his officers were incompetent, you would, at one time, and every Senate will hereafter, if that should be the ground of impeachment, tell him in reply, 'It was your duty to remove the incompetent.'

Mr. Fessenden, of Maine, said: "I object to this last clause requiring the President in case of removals to give his reasons to the Senate. I do not think we have a right to require that. If the President in the exercise of this power chooses to remove persons, we have a right to say that those appointed in their places shall not be paid until the Senate has chosen to act upon their nominations; but to put the President to the necessity in all cases of telling the Senate, if he nominates another person for an office, the reason why he does it, is a new thing. Such a proposition was offered once in the time of General Taylor by my immediate predecessor. He brought it up over and over again in a very strongly Democratic Senate. I do not remember whether they finally voted it down or not, but if not, they got rid of it; they would not pass it at any rate, holding to the doctrine that the President, having the power of removal, so long as he had it he must exercise his own discretion about that, and that with reference to his appointments the Senate would consider whether they were proper appointments to be made.

"I see no impropriety whatever in saying that when appointments are made during the recess, especially those which might as well be made to the Senate when it is in session, payment to those appointees shall be deferred until they have been confirmed. I do not think there is anything personal or offensive in making that rule. The doctrine which has been broached lately, and a matter conversed about under the administration of President Lincoln, was carried as far as this: that the President might nominate an officer during the recess of the Senate, which would hold up to the conclusion of the next session, and if then he was rejected or turned out, or at least not acted upon, it was again a vacancy arising in the recess of Congress, and the President might immediately put the same man in that the Senate had refused to confirm; and thus, in spite of the Senate, in spite of the constitutional provision, the power of appointment would rest entirely in the President, and the Senate was a nullity. I do not know, and do not presume that President Johnson would attempt to do any thing of that description. It is to be presumed he would not; but President Lincoln did, certainly in one case. I thought at the time it was exceedingly improper, and if the doctrine was followed out and the practice became fixed, that in reality the Senate would amount to just nothing at all."

Mr. Howe, of Wisconsin, in support of the amendment, said: "I hold, Mr. President, that this amendment is one of the most important, if not the most important, proposition that I have been called to vote upon since I have had the honor of a seat on this floor. It is nothing less than whether a hundred millions of money is to be placed in the hands of the President of the United States, and always kept there, to be used in propagating political opinions with the people of the United States. I never saw an opinion, I never heard of a political opinion that I would be willing to propagate at that expense. I think if we confine this missionary work to the proper organs, all political opinions which are proper to be inculcated upon the American people may be inculcated at a much less expense."

"I will not vote for this amendment; I will not vote for any other proposition which is calculated either to restrict the powers which the Constitution confers upon the President, or which are calculated to embarrass him in the exercise of those powers; and I say once more, if the Constitution does delegate to the President of the United States the right or the power to make these removals, it is our duty to acquiesce in that construction, to recognize the vacancies thus created, to cooperate cheerfully with the President in filling them, and appropriate regularly and annually the money necessary to pay the officers thus appointed; but I say that that power never was given to the President by the Constitution and never ought to be vested in him by the Constitution."

"This question has been treated as if all the officers whose duty it is to collect the customs, whose duty it is to collect the internal revenue, whose duty it is to act as marshals and deputy marshals of the several districts, all these subordinate officers were the mere assistants, aids, waiters, personal attendants upon the President to help him discharge his duties, and as though he were individually and officially responsible for all their acts."

Mr. Guthrie, of Kentucky, followed, saying: "My objection to this measure is, that the question was settled in 1789, settled when a great many of the men who had participated in making the Constitution were here in Congress, settled at the instance of Mr. Madison, who, perhaps, better understood the Constitution than any one else, and who regarded the power of removal as a power incidental to the executive duties which the Constitution conferred upon the President. This power of removal was acquiesced in during the Administration of Washington. I think the Senator from Wisconsin attributes more deference to Washington on the part of Congress than was felt or acted upon. However that may be, the power was exercised by Jefferson, by Madison, by Monroe, and by Adams, in a greater or less degree. It has been the settled doctrine of the Constitution since 1789 to the present time. My objection to this species of legislation is that it is an attempt to change the settled construction of the Constitution, which has been acted upon and sanctioned by the American people; it is a revolution in relation to the appointing and removing power, a civil revolution inaugurated by the members of Congress, who go back and criticise the action of their predecessors in coming to the resolution arrived at in 1789, and it is done obviously and clearly because these gentlemen do not agree that the President shall not have the power of removing certain men who support them and their measures in opposition to him. We all know that there are very few of them who, when they come to make a speech, can deny it."

"I am unwilling to change by vote of mine or to sanction a change of the construction of the Constitution in this particular as it has existed ever since the days of Washington, and has been exercised by all the Presidents. There may be dangers, there may be inconveniences in adhering to it; but I believe this Government cannot be carried on successfully and advantageously without the power of removal being invested in the Executive. I believe the power of Congress and public sentiment will always restrain the Executive in the direction in which he ought to be restrained. I advise and counsel no unjust or improper deference to the President; but I do advise that we will let the landmarks settled by our fathers and adhered to by all succeeding Administrations stand where we found them. I do not want to put it in the power of the President to say that Congress is making war upon him by de-

nying to him a power that all the Presidents of the United States have exercised, or curtailing it as far as possible."

The amendment of Mr. Trumbull was adopted by the following vote:

YEAS—Messrs. Clark, Conness, Creswell, Harris, Henderson, Howard, Howe, Kirkwood, Morrill, Nye, Poland, Pomeroy, Ramsey, Sprague, Sumner, Trumbull, Wade, Williams, and Wilson—19.

NAYS—Messrs. Davis, Dixon, Doolittle, Fessenden, Guthrie, Johnson, Morgan, Saulsbury, Sherman, Van Winkle, and Willey—11.

ABSENT—Messrs. Anthony, Brown, Buckalew, Chandler, Cowan, Cragin, Edmunds, Foster, Grimes, Hendricks, Lane of Indiana, Lane of Kansas, McDougall, Nesmith, Norton, Riddle, Stewart, Wright, and Yates—19.

The bill, with this and other amendments, was, on May 2d, passed.

On May 7th the Senate resumed the consideration of the bill, on a motion of Mr. Poland, of Vermont, to reconsider the vote by which the amendment of Mr. Trumbull had been passed.

Mr. Poland said: "I voted for the amendment to this bill, and for the bill itself, with great hesitation, and with the design, if I could not become better satisfied with it, to move to have it reconsidered. Subsequent reflection satisfied me that the amendment ought not to be adopted, and I therefore made the motion to reconsider.

"The amendment proposed by the Senator from Illinois to this bill is very general and comprehensive in its terms, and denies any payment of salary or compensation to officers appointed by the President before confirmation by the Senate, unless appointed to fill vacancies happening during the recess of the Senate by death, resignation, expiration of term, or removal for official misconduct.

"It is said that one of the mischiefs which this amendment is designed to prevent is the filling of vacancies which exist while the Senate is in session, and where there is an opportunity to submit nominations for their advice and consent, and this is omitted, or the nomination is rejected by the Senate, and the same person reappointed after the Senate adjourns. If the amendment went no further than this I could very cheerfully support it, for the language of the Constitution is clear that the President's power of appointment without the advice and consent of the Senate is confined to vacancies that happen during the recess of the Senate.

"But the amendment has a scope and meaning far beyond this. The power of the President to fill all vacancies that happen during the recess of the Senate is not denied. But this amendment declares that unless the vacancies happen in a particular way, the person appointed shall receive no salary or compensation until confirmed by the Senate.

"I have not examined or considered whether the exceptions cover every possible occasion of vacancy which can occur, except removals for

other reasons than for misconduct or malfeasance in office.

"This is the class of cases which the amendment is designed to reach, and I think its distinguished mover will not deny that the main object and purpose of the amendment is to declare that if the President makes removals from office for mere political reasons, and thus causes vacancies during the recess of the Senate, the persons he appoints to fill them shall receive no payment for their services in office until confirmed by the Senate. In such cases the real question is not on the power of the President to fill a vacancy, but as to his power to thus make a vacancy. This brings up the old question of the power of the President to remove from office persons to whose original appointment the advice and consent of the Senate was necessary.

"The Senator from Missouri (Mr. Henderson), with his usual straightforwardness and frankness, boldly avows that in his judgment the President's power of removal in such cases is commensurate only with his power of appointment; and that the consent of the Senate is as necessary to the removal as to the appointment. The able and learned argument of the Senator went far toward convincing me that if the question could now be considered an open one, that was the true construction of the Constitution.

"The Senator from Maine (Mr. Fessenden) declared his willingness to support the amendment, except for the clause requiring the cause of removal to be reported to the Senate; but he admitted the power of the President under the Constitution to make removals without the consent of the Senate. In urging the necessity of the amendment, however, he dwelt wholly upon the abuse of the appointing power, by making appointments after the adjournment of the Senate, which might have been made and submitted to the Senate while in session. I should be doing that Senator great injustice to suppose that he did not fully understand that the matter aimed at was altogether a different and broader one. Other Senators have fought shy upon this question, and have argued in favor of the amendment, not exactly denying the power of removal, but under protestation, as a special pleader would say, that they do not admit it. They have said, conceding that he has the power of removal, we have the power to say whether his new appointees shall receive the salaries and compensations provided by law for those holding the offices. So we have the power to refuse any appropriations to pay the salary of the President, or to carry on any and every department of the Government, and thus destroy it. Although we may have such power, it is one which can only be justified in use in the last resort, to prevent usurpation or the destruction of the liberties of the people.

"But if we believe that the President has not the legal and constitutional power of removal

why not say so directly? If we are prepared to adopt the doctrine of the Senator from Missouri, why not do it in as open and manly a way as he declares it? After a uniform exercise of the power by every Administration since the formation of the Constitution, to some extent, although for a considerable time doubted and questioned, and after at least thirty years of undoubted and unquestioned use, by a sweeping change of political appointments, with every political change of administration, and by both political parties, if we design now to declare a different rule, and change the whole action of the Government in this respect, does it behoove us to do it in the indirect and sinister way this amendment proposes?

"I have asked if that was the design, to deny to the President the power to remove, why not declare so, and make the needful and proper legislation on the subject, and I have been told that we could not pass such a law. Why not, let me ask? It must be, I suppose, because a majority of this body, or of both Houses, do not believe in the principle. If that be so, is it exactly open and honest dealing to undertake to bolster up this amendment by affecting to believe the President transcends his power by making such removals and new appointments? I must be allowed to say that it is a mode of accomplishing a purpose that does not commend itself to me.

"But notwithstanding the argument in support of the amendment has been mainly that such political changes were beyond the legal and constitutional power of the President, the amendment upon its face concedes it, and provides that those appointed to fill vacancies caused by removals for misconduct in office shall be excepted from this prohibition of payment. It cannot be said that he has the power of removal for one cause, and has not for another. If by the Constitution he has the power of removal at all, of necessity he must be the sole and exclusive judge of the cause and necessity of removal. The validity or legality of the appointment of the officer appointed to fill such a vacancy could not be inquired into by going back to inquire for what cause his predecessor was removed. In the exhaustive discussions which this subject received from the eminent statesmen of the early days of the Government, it was never suggested but that the President was the only judge of the cause of removal, if he possessed the power in any case. This amendment virtually broaches a wholly new doctrine. It concedes the power of removal by the President, but assumes that we may go back behind that, and inquire into the reasons, for the purpose of determining whether the new appointee shall have pay. It is certainly an anomaly that a man may legally fill and perform the duties of an office, but his right to compensation shall depend upon the reasons that influenced the appointing power in making the appointment.

"The last contest on this subject of the Pres-

ident's power of removal was during President Jackson's administration, and the great Whig leaders of that day made a powerful effort to bring the Government back to what they claimed was the true construction of the Constitution, and deny the President the power of removal. But they did not succeed, and all parties have acted without question since upon the other theory. But it seems not to have occurred to those eminent statesmen that though the President could legally remove officers and fill their places with other persons, that they could make it a barren honor of depriving the holders of all compensation. It has been reserved for this financial generation to discover this new mode of curing either a defect in the Constitution or a wrongful interpretation of it. To me, the idea is strange and monstrous that a man who legally holds an office, and properly performs its duties, should not be paid because the reasons for his appointment were politically unsatisfactory. I believe such a position to be wholly indefensible; wrong in principle; one upon which no party can stand. In offering the motion to reconsider the vote passing this bill, I happened to say that such a doctrine seemed to me to be almost revolutionary. I have since learned that a radical Unionist has no right to use that word, that it belongs wholly to persons and papers of opposite political proclivities. I therefore take leave to withdraw the word.

"What is the real purpose and object of this amendment? I suppose we may as well speak of things as they exist and as we all know them to be, as to pretend to be thinking and talking of something else.

"A difference has arisen between the President and the Congress in relation to the proper policy to be pursued in relation to the States lately in rebellion, who separated from us and formed themselves into a separate government and between whom and us a fierce war raged for four years before we succeeded in conquering them. The President insists that, as the rebellion is put down and new State governments have been set up in those States, they are now entitled to be represented in the two Houses of Congress (if the members sent are loyal) and to participate in all respects in the administration of the General Government as if they had not rebelled. Congress, on the other hand, claim that all the legal relations between these States and the General Government having by the rebellion and war consequent upon it been severed, it rests with Congress as the law-making department of the Government to restore them again, and that, in doing so, it is their right and their duty to exact such assurances and guaranties as will protect the loyal part of the nation against all danger from those who have shown such a determination to destroy it.

"Neither the President nor Congress as yet show any disposition to yield to the views and policy of the other, and apparently the ques-

tion must be determined by an appeal to the people in the election of the next Congress.

"The President, and the majority in both Houses of Congress, were elected by the same political party, the great Union party of the country, which carried us so gloriously through the great rebellion; and the Federal offices of the country are generally filled by members of the same party, who were appointed by the President, or his predecessor, Mr. Lincoln. I suppose it to be true that the great majority of those persons now holding office, as well as the great mass of the Union party, concur with Congress in the proper policy to be pursued in the restoration of these rebel States. I suppose it is feared that in this contest before the people, as to which of these respective policies shall prevail, the President will attempt to strengthen his position by the use of his patronage, that is, that he will displace men who believe in and advocate the congressional policy, and fill the positions with either Union men, or Democrats who will advocate the policy of the President. And I do not know but it is feared that men now holding office, who really believe with Congress, will, for fear of losing their offices, profess to believe and act with the President. Now, I have no knowledge that the President designs any such course of action; he may or may not.

"Now, if this amendment is adopted, will it have the effect to prevent the President from making changes in office for political causes? If he has no such purpose or intention, then there is certainly no need of such an extraordinary provision being attached to this bill. And I may be allowed to say that I am not prepared to believe that he designs to do any such foolish thing. But assuming that he has such a wish and purpose, will the adoption of such an amendment as this be likely to prevent him from accomplishing it? On the other hand, will it not look like daring and defying him to do it, and be very likely to produce the very result we desire to avoid? It is very reasonable to suppose that the President would feel great reluctance to remove men of his own party, appointed either by himself or his martyred predecessor, even if they did not believe in or advocate his policy. If we attempt to prevent it by the use of such questionable, if not unwarrantable legislation, as this amendment proposes, is there not danger, not only that he will accept the challenge, but that this very amendment will be accepted by the people as a sufficient justification for that course, and furnish a ground for saying that Congress was the aggressive party? Situated as we are, it seems to me that the adoption of this amendment will be more likely to produce than to prevent what we all hope to avoid.

"But suppose that I am mistaken in my views, and in consequence of a failure to adopt this amendment, the President undertakes to help his case before the people by turning good Union men who believe with Congress out of

office, and fills their places with men, either Republicans or Democrats, who believe in his policy, is there any such ground of alarm in this as should frighten us out of our propriety, and drive us to doubtful and desperate expedients?

"The whole thing is founded in a mistaken lack of faith in the people. This has been a common error of politicians and public men always, but the mistake is greater now than ever before, and especially in regarding any past experience of the effect and power of political patronage as applicable to the present condition of things.

"In former times, when the people regarded politics merely as a trade by which certain men obtained a living; when the issues between the parties were about internal improvements, the public lands, banks, tariffs, and the like, subjects the real merits of which the masses of the people really knew but little about, and cared less; when they had no real belief that the success or defeat of either party would make a farthing's difference with them or the country, then a body of stirring, active office-holders, to circulate documents, harangue the people, and get out the voters, could produce a very important influence upon an election. But this state of things has no existence now, and no reliance can be placed now upon the experience of those days. For four long years we were engaged in a most desperate and bloody war, which perilled the very existence of the nation itself. The attention of the whole country was roused and was kept most painfully intent upon the cause and course of the war till it ended in the overthrow of the rebellion. Almost every family throughout the loyal North was represented in the army of the Union by some father, or brother, or son, and mourning and sorrow were carried into almost every Northern home by the death of some dear relative in the army by disease or on the battle-field, or the still more cruel mode of starvation in prison. In this way the people have come to comprehend every thing pertaining to the subject as fully and completely as the first statesmen in the land. Nor have they, since the close of the war, lost any of their interest in it, and will not until the whole matter is put at rest.

"I have heard it said here, I have read in the public press, that the great anxiety of the people was to have the matter settled, and get all the States once more into the Union together. The people are anxious to have the Union restored and all act again together, but that is not their great anxiety. What they fear, and about which they are earnestly anxious, is that they should not again be admitted until it is made perfectly certain that they are not again to come under Southern domination, and that not even by combination with their old allies in the North can they again control the Government. The Union people of the North are not revengeful or malignant, but they cannot forget their martyred brothers and sons, or

their own anxieties and sorrows; they cannot forget the immense burden of public debt imposed upon them; and they are too often reminded of it by the tax-gatherer, all of which has been brought upon them by the conduct of the people of these States, to feel over-anxious for their return to participate in ruling the nation without the best and strongest assurances that they are safe in doing so. Another reason which keeps them watchful and careful is that almost every Union man in the whole North, who has any considerable property, is the holder of the bonds of the Government, which they feel would be put in peril if the Southern men, even with Northern help, could ever again hold the control of this Government. It is not true, sir, that the Union people of the North are dissatisfied with the policy or the action of Congress on this subject. What they do fear is that we shall not stand firm to the end; they fear the effect of patronage on us, and they have far more reason to than we have to fear for them. Now, Mr. President, what luck do you suppose some postmaster, or marshal, or assessor, made by the President out of a copperhead or limping Republican, would have among these people arguing for the immediate and unconditional admission of the rebel States?

"The idea is simply ridiculous. The truth is, that the Union masses of the loyal States stand firmly with Congress in this matter, and will do so to the end if we do not allow them to make issues against us by the adoption of untenable measures. Our platform is firm and strong, and all the Union party will stand with and by us upon it, unless we by our own folly let in a weak timber or rotten plank to frighten them from it. In this particular matter of the political patronage of the President, if we do nothing that can be made an excuse or cover for it, if the President turns out good Union men because they sustain Congress and concur with the mass of their party, and puts in others because they agree with him, he will raise such a storm of indignation against himself among Union men as has not been witnessed before. The truth is, that the President, if he entertain any such design, cannot build up for himself, against the Union party, a presidential party of any considerable numbers without having in it the men who opposed every measure for the putting down the rebellion, who discouraged enlistments, opposed the draft, voted the war a failure, and many other things of that character. This very fact will destroy his party if he endeavors to make one. Where those men go the people will not. The people look upon this thing now as they did during the war, not as an ordinary question of politics, but as a question of loyalty or treason; and if the President abandons the great Union party to form one for himself, and his party is made up, as it must be in the main, by the men who opposed the war, they will soon be the only ones left in it.

"If the President is ambitious to have such a party as this, shall we deny him the benefit of a few hired mercenaries in the shape of Federal office-holders if he desires? If he chooses to make changes, so far as my own State is concerned he will have to make them from men who do not belong to the Union party, if he must have men who support his policy, for I have never yet heard of a Union man there who does not most cordially support Congress. And I believe my State is not singular in this respect, but that the same will be found true of every loyal State. Let us then have faith in the people, stand firmly upon our principles, avoid all false and doubtful expedients, leave to the President the full and free exercise of every constitutional right and prerogative, so that any action of his hostile to the party that elected him, if he be guilty of any, shall be without excuse. If we can keep from killing ourselves, I have no fear of the President being able to do so, even if he entertains any such wicked purpose."

Mr. Trumbull, in reply, said: The Senator from Vermont tells us that from the foundation of the Government this power of the President to remove and appoint at pleasure has been recognized. I would like to inquire of that Senator if it has been recognized in the army and navy. Has it not rather been denied? Will he point to the clause of the Constitution that restricts the power of the President in the appointment and removal of army and navy officers any more than it does in the appointment and removal of civil officers? Has not Congress from the foundation of the Government denied the authority of the President to remove, except as provided by law, a very large class of officers, both in the army and in the navy? Have we not denied it also in relation to civil officers? It is not true that the President has from the foundation of the Government exercised this power *ad libitum*. I am not disposed to go into that argument. The Senator from Missouri (Mr. Henderson) exhausted that subject the other day. He showed how many removals had been made under the different Presidents, and I was astonished at the few that were made by the earlier Presidents. I shall not go over the argument to show whether the power to remove exists or not. I think that subject has been sufficiently argued. But, sir, if the President has not the authority to remove during the recess of the Senate, as a general proposition, does the Senator deny that we may give him that authority? I take issue with the Senator from Vermont as to the authority of Congress in this respect. I insist that we may confer upon the President the power to remove in vacation by law, and wherever he does make a removal in vacation in pursuance of law, and makes an appointment in pursuance of law in vacation, it is proper we should pay the appointee; but because we by statute confer upon the President authority for cause to remove and appoint in vacation, does it there-

fore follow that without legislation he can remove and appoint in vacation? Why, sir, we confer upon the President this power to appoint officers by creating the office. We establish a new department of the Government; we increase the number of judges; we establish a judicial district; and how does the President get authority to appoint a judge or a marshal or an attorney? He gets it in pursuance of the law that creates the office; it is in pursuance of an act of Congress that he gets the power to make the appointments at all.

"Just so in regard to the removal and appointment of incumbents in office. We may provide by a statute that for cause he may remove a man from office during the vacation and substitute another in his place, and submit to the Senate when the Senate convenes the question of whether they will advise and consent to the new appointment. Congress may go further. They may authorize the President to appoint and remove inferior officers without asking the advice and consent of the Senate, and we have often done so. The Constitution expressly authorizes Congress by law to invest the appointment of inferior officers either in the President alone, or in the judges of the courts, or in any of the heads of departments; and in pursuance of this authority the appointments of various minor officers all over the country have been vested in the President alone and heads of departments. Now, would it not be competent to provide in one of these statutes, when we give him the power of appointment without consulting us, that he should not have the power of removal without cause?

Mr. Sherman, of Ohio, said: "We ought to meet at the outset every effort to attach these political or disputed problems to an appropriation bill. There is no excuse, let me say to my fellow-Senators, for this proposition at this particular time, because we in Congress, representing the great Union party of the United States, supported, as I believe we are, by the great mass of the people, probably ninety-nine out of every hundred of those who sent us here, have the power to pass the laws we think necessary, without attaching them as qualifications to an appropriation bill. We can pass any law which meets the sanction of our political party, by the requisite vote, either of a majority, or, in case of a clear proposition, by a two-thirds vote. There is, therefore, no occasion, in order to accomplish any political object, to attach this as a condition to an appropriation bill. If, however, only a majority of both Houses of Congress could agree upon any bill that might be proposed, that shows that we ought not to attach that opinion of a majority of each House to an appropriation bill, because we should not force upon the President any provision of law against his deliberate judgment unless we have the power to do it by the constitutional vote of two-thirds of both Houses. We should not make the public necessities which demand that certain departments of the Gov-

ernment be supplied with public funds a reason for forcing upon the President a provision that might not meet his sanction if it stood alone. It is impossible, it seems to me, to combat this plain proposition.

"But, sir, beyond that—and upon this point alone I rested my argument before—I was willing to meet the object embraced by the amendment of the Senator from Missouri; but upon an examination it was found, and I think very clearly proved, that the law of 1863 met all the difficulty that he proposed to meet, and that was an attempt on the part of the President to fill offices the vacancies in which occur during the session of the Senate. The law of 1863 provides for that case. If the President after the adjournment of the Senate undertakes to fill an office the vacancy in which occurred during the session of the Senate, he does it without the authority of the Constitution. He has no power to fill vacancies which occur during the session of the Senate, except by and with the advice and consent of the Senate; and if he attempts in violation of the Constitution to exercise a power not conferred by the Constitution, we are then perfectly justified in withholding appropriations; indeed, we should not do our duty unless we did withhold the appropriations, because if we should pay officers thus illegally appointed we should consent to a violation of the Constitution on his part. But now in the case provided for by this amendment there is no denial of the power of removal, but a denial of the right of the officer to receive his money. The Constitution provides for two classes of appointments: one class where a vacancy occurs during the session of the Senate; it must be filled by and with the advice and consent of the Senate; the other is the case of a vacancy which occurs during a recess of the Senate, and then the President from the nature of things and by the express provision of the Constitution has the power of appointing a man to office to fill that vacancy, but the vacancy is only filled by such an appointment until the end of the following session of the Senate. The officer thus appointed by the President is a legal officer. As I said the other day, there is no power conferred by the Constitution upon the President to remove any one from office. That power is only inferential. That power may be regulated by law. That power is not limited or restrained in the least by the amendment of the Senator from Illinois. The amendment does not say that a Union man shall not be removed from office and a rebel put in. That seems to be the proposition he debated; but that is not the proposition he has submitted to us. He says that no man shall be removed from office except for such and such causes; that is, a man who during this whole war has enjoyed the honors and emoluments of office shall not be turned out and a loyal Union soldier put in. That is one effect of his amendment."

Mr. Trumbull: "Except by and with the advice and consent of the Senate."

Mr. Sherman: "That is after the session is over. If there is a man who has held an office during all the years of the war, and received its emoluments, he shall not be turned out and a Union soldier without a leg or an arm put in, or if put in, that soldier shall not draw his pay until the Senate meets and passes upon the reasons for the removal; and then if the Senate does not think the removal is sufficiently justifiable by the reasons stated, he shall not have any pay at all. That is the effect of this provision. This, therefore, does not reach the purpose contemplated by the Senator from Illinois. His purpose, I know, is to prevent the President from removing men for their political opinions; that we all know to be the purpose; but the President has, by the very terms of the amendment, the power to remove. All he has got to do is to give us a reason, whether that reason is wise or unwise, sufficient or insufficient. He may give us a reason, and turn us off with a reason. Reasons are as plenty as blackberries. He may say he removes a man because he is a civilian and the person he appoints was a soldier.

"Well, take the case of an assessor or a collector or a consul or a diplomatic minister, and the thousands of officers covered by this amendment. Cabinet officers cannot be removed and anybody put in, rebel or loyal, except at the risk of not getting any pay in case the Senate disapproves the reasons for the removal. This amendment does not prevent the President from removing any man he chooses, and he may give us a reason or not just as he pleases; the removal is complete and perfect by the will of the President; so that the amendment accomplishes nothing. It is true, the man who takes the office cannot draw his pay until the Senate meets; but do you punish the President, do you cripple his power, do you limit his control over the public officers? Do you accomplish what you desire to accomplish? Not at all. You may punish some poor devil who is compelled to exercise the duties of an office and not get any pay for it; but you do not hurt the President or hurt his feelings. The result will be that good men, poor men, may be deterred from accepting office under these conditions, while bad men or rich men may be indifferent to the salary attached to the office. I say, therefore, with due deference to the Senator from Illinois, that the amendment does not accomplish the purpose that he has in view; it does not limit or control the power of the President over the public officers, but simply aggravates a controversy which may never arise.

"Now, sir, there is a way, I think, in which this matter can be accomplished—not by an amendment to an appropriation bill; not by a limitation of this character; but by the exercise of the power of Congress over the duration and term of the various public officers. Although it has been somewhat questioned at

different times since the foundation of the Government, yet, as I have said before, I do not believe it has ever been successfully controverted that Congress may regulate the duration and term of a public officer, may limit the power of the President to remove him, may declare that such and such an officer shall not be removed except for such and such a cause. But a bill of that kind must be made with many discriminations, must be made after much care. There are certain officers that the President ought to have the absolute power of removing; I can name Cabinet officers: it would be intolerable that the President should be expected to carry on the business of this great Government with a Cabinet council over whose members he had not the power of removal, the complete and absolute power. For that reason, hostile political parties have often confirmed the Cabinet ministers of a President of opposite politics, on the ground that the President, from the very necessity of the case, must have the power of removing Cabinet ministers and appointing such as he chooses. He must administer those great offices through his personal friends, and no party would require him to appoint any but personal friends around him to these great offices. He must, therefore, have power over the Cabinet ministers. So, too, he must have a power over the diplomatic corps in a great measure. Those are officers appointed to represent our country abroad, holding confidential relations with the Secretary of State, and therefore the power over those officers ought not to be limited or controlled or crippled by Congress. But there are classes of officers who ought to hold their offices independent of the power of removal by the President—assessors, collectors, postmasters, and other officers who really may exercise political power; that ought by the law to be secured from unjust and arbitrary removal; and there is nothing in the Constitution to prevent Congress from passing a law on the subject, securing those officers in the discharge of their duties.

"Mr. President, Congress has power over this subject much more ample than is generally supposed. Congress may prescribe that the judges of the Supreme Court or heads of Departments or courts of law may make a great variety of appointments. The provision of the Constitution is that 'Congress may by law vest the appointment of such inferior officers as they think proper in the President alone, in the courts of law, or in the heads of Departments.'"

The motion to reconsider was agreed to as follows:

YEAS—Messrs. Cowan, Davis, Doolittle, Edmunds, Fessenden, Foster, Guthrie, Lane of Kansas, McDougall, Morgan, Nesmith, Norton, Poland, Riddle, Saulsbury, Sherman, Stewart, Van Winkle, Willey, Williams, and Wilson—21.

NAYS—Messrs. Anthony, Chandler, Clark, Conness, Creswell, Harris, Henderson, Howard, Howe, Lane of Indiana, Morrill, Nye, Pomeroy, Ramsey, Sprague, Sumner, Trumbull, and Wade—18.

A motion was now made and passed to strike out the last clause of the amendment; whereupon Mr. Trumbull offered as amendment to the amendment his original proposition, which was as follows:

Sec. — And be it further enacted, That no person exercising or performing, or undertaking to exercise or perform, the duties of any office which by law is required to be filled by the advice and consent of the Senate, shall before confirmation by the Senate receive any salary or compensation for his services, unless such person be commissioned by the President to fill up a vacancy which has happened by death, resignation, or expiration of term, during the recess of the Senate and since its last adjournment.

This was agreed to. An extended debate now ensued on the policy of the Administration, etc., in which Messrs. Wilson of Massachusetts, Cowan of Pennsylvania, Doolittle of Wisconsin, and others engaged. Subsequently the amendment was rejected by the following vote:

YEAS—Messrs. Anthony, Chandler, Clark, Harris, Henderson, Howard, Howe, Lane of Indiana, Morrill, Nye, Pomeroy, Ramsey, Sprague, Sumner, Trumbull, and Wade—16.

NAYS—Messrs. Buckalew, Cowan, Davis, Dixon, Doolittle, Edmunds, Fessenden, Foster, Guthrie, Johnson, Lane of Kansas, McDougall, Morgan, Nesmith, Norton, Poland, Riddle, Saulsbury, Sherman, Stewart, Van Winkle, Willey, and Wilson—23.

ABSENT—Messrs. Brown, Conness, Cragin, Creswell, Grimes, Hendricks, Kirkwood, Williams, Wright, and Yates—10.

In the House, on May 7th, Mr. Julian, of Indiana, offered the following resolution:

Resolved, That the Judiciary Committee be instructed to inquire into the expediency of reporting a bill providing that hereafter the elective franchise shall not be denied or abridged in any of the Territories of the United States on account of race or color; and providing further, and thereby giving notice of the fact, that henceforward no State which the people of any of said Territories may organize shall be admitted into the Union whose constitution shall sanction such denial or abridgment of the elective franchise.

A motion was made to lay it on the table, which was lost by the following vote:

YEAS—Messrs. Delos R. Ashley, Boyer, Coffroth, Dawson, Delano, Denison, Eldridge, Finck, Glossbrenner, Grider, Griswold, Aaron Harding, James R. Hubbell, Kerr, Latham, Le Blond, Marshall, Newell, Niblack, Radford, Samuel J. Randall, William H. Randall, Raymond, Rogers, Shanklin, Sitgreaves, Taylor, Thornton, and Whaley—29.

NAYS—Messrs. Alley, Allison, Ames, Anderson, James M. Ashley, Baker, Baldwin, Baxter, Beaman, Benjamin, Bidwell, Bingham, Boutwell, Bromwell, Broomall, Buckland, Reader W. Clark, Conkling, Cook, Cullom, Deming, Dixon, Donnelly, Driggs, Dumont, Eckley, Eliot, Farnsworth, Ferry, Garfield, Abner C. Harding, Hart, Henderson, Holmes, Hooper, Asahel W. Hubbard, Jenckes, Julian, Kasson, Ketcham, Ladin, William Lawrence, Longyear, Lynch, McClurg, McKee, McRuer, Mercur, Miller, Morrill, Morris, Myers, O'Neill, Paine, Perham, Pike, Plants, John H. Rice, Rollins, Sawyer, Schenck, Schofield, Stevens, Francis Thomas, Trowbridge, Upson, Van Aernam, Warner, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, Williams, James F. Wilson, Windom, and Woodruff—76.

The resolution was then adopted. The session of Congress closed on July 28th. Three hundred and eighteen acts and one hundred and eight resolutions were passed. Those relating to the finances of the Government, taxation, the system of weights and measures, etc., are noticed elsewhere in this volume.

CONNECTICUT. The political canvass in this State commenced early in the year, and, from causes unconnected with local questions or issues, assumed toward its close an interest and importance which fixed upon it the attention of the whole country. On February 7th, the Democrats met in convention at Hartford, to nominate candidates for Governor and other State officers. Origen S. Seymour, who had been the candidate of the party for Governor at the two previous elections, declined a renomination; and lest this act should be imputed to a change of views by him, he announced in a letter to the convention that, in his judgment, "the position of the Democratic party on all the great questions of the day was never more satisfactory than at present." "We are all, I take it," he added, "for preserving the Constitution as it is; for healing the wounds of the Union; and for treating every part of our common country with fairness and justice. We are I suppose, united in opposition to the sectionalism of the party in power—in opposition to the assaults by that party upon the Constitution, and in opposition to the recent outrage by that party, in Congress, upon the sacred right of representation." The convention nominated for Governor, James E. English, who had represented the second Congressional district in the Thirty-seventh and Thirty-eighth Congress, and had voted for the Constitutional Amendment abolishing slavery; for Lieutenant-Governor, Ephraim H. Hyde; for Secretary of State, Jesse Olney; for Treasurer, Heman H. Barbour; and for Comptroller, Thomas H. O. Kingsbury. The resolutions adopted by the convention affirmed that Congress possesses no power under the Constitution to determine who shall be eligible to the right of suffrage, and that any attempt to force upon the people of a State a class of inhabitants as citizens and voters is a violation of the spirit and letter of the Constitution, and an infringement of State rights; that the States which attempted to secede were never out of the Union, and having recently declared null and void their pretended acts of secession, and expressed their devotion to the Union and the Constitution, are of right entitled to all the privileges and powers of States belonging to and exercised by them previous to their attempted secession; that the late Confederate States, having adopted the amendment to the Constitution abolishing slavery, and the Government of the United States having, in consequence, recognized said States, any attempt by Congress to prevent the representation of such States in the national councils is "deserving of the severest reprehension of the people of each and every State;" and that "the distinguished

citizen now occupying the presidential chair, by his earnest efforts for the restoration of the Union upon its proper basis—by his manly and statesmanlike position in opposition to negro suffrage—by his resistance to the insane and unwise efforts of a Congressional majority, who seek to destroy the Constitution of our fathers by mischievous amendments—has deserved well of his country; and a courageous perseverance in the course so taken will place the name of Andrew Johnson high upon the roll of renown, and second to none of the great statesmen who have illustrated the annals of the Union."

The Republican State Convention met at Hartford on February 14th. It numbered over four hundred delegates, comprising a large number of the leading men of the party, and was distinguished by harmony and ability. William A. Buckingham, who had been the Republican candidate for Governor for the seven previous years, having declined a renomination, Joseph R. Hawley, late a brigadier-general of volunteers in the United States Army, was nominated for Governor in his stead on the first ballot, and accepted the nomination in a speech to the convention. F. Winchester was then nominated for Lieutenant-Governor; L. E. Pease for Secretary of State; Henry G. Taintor for Treasurer; and Robbins Battell for Comptroller. Among the resolutions adopted was one expressing confidence in the wisdom and patriotism of the Republican majority in Congress, and one heartily approving the recent order of General Terry, approved by the President, for the protection of the freedmen of Virginia against the legislation of that State. The two following expressed the sentiments of the convention respecting Presidents Lincoln and Johnson:

Resolved, That we unite our lamentations with those of the nation over the grave of the honest, unflinching, patriotic, and great-hearted Abraham Lincoln, whose name will stand by the side of that of Washington while the Republic endures.

Resolved, That we gladly express our confidence in the integrity, ability, and patriotism of his successor, Andrew Johnson, who braved secession in the Senate, and defied armed rebellion in Tennessee; who sprang from the people, and is identified with all their interests; and we do pledge him our hearty support in his labors for a just, complete, and permanent restoration of the Union.

On February 19th, less than a week after the meeting of the Republican Convention, President Johnson returned the Freedmen's Bureau bill to Congress with his veto. Although not wholly unprepared for this act, the party which had elected him, and had hitherto given him its support, was at first uncertain what course to pursue—whether to break with the President, or to endeavor to reconcile the differences between himself and Congress. And in no State was this more noticeable than in Connecticut, where a strong conservative element had always existed in the Republican ranks. The Democrats, on the other hand, avowed themselves heartily in favor of the political views em-

bodied in the President's veto message, and of his whole plan of restoring the Southern States to their relations with the Union. For several weeks after the State canvass commenced, both parties, as represented by their platforms, supported the President's restoration policy, and many of the Republicans who sided with Congress on the Freedmen's Bureau question were inclined to believe that the differences between that body and the Executive were merely differences of opinion as to the best means to be employed in reconstructing the Union, and not as to the end to be attained, and could eventually be reconciled. Others, however, were prepared, if necessary, to break with the President, should a reconciliation prove to be impossible. Under these circumstances the election began gradually to assume an importance which lifted it from the arena of local politics. The success of the Democratic ticket, it was supposed, would indicate an unqualified approval by the people of Connecticut of the Executive policy, while the return of the Republican candidates would leave the issue undecided.

Rumors meanwhile began to be circulated that the President would throw the weight of his influence in favor of Mr. English, the Democratic candidate, and would require all Connecticut officeholders to vote for him. This was denied by Mr. Johnson in an interview with a delegation of Connecticut Republicans, headed by General Hawley, in which he also said that, though by no means desirous to interfere with the local elections of any State, he would be pleased, in the present instance, to see his political friends successful. Equally strong evidence respecting the President's sympathies was afforded by James F. Babcock, Collector of New Haven, and an intimate personal friend, who, on hearing the rumor that Federal officeholders would be expected to vote for English, went to Washington, and sought an interview with Mr. Johnson. "I told him," he observed in a speech delivered at a public meeting in New Haven shortly afterward, "if this rumor were true, I must, of necessity, resign my position, feeling it incompatible with honor to retain it under such a condition. This statement the President assured me was totally false. Instead of demanding votes for Mr. English, he was opposed to his election, because he represented the principles of the party which had opposed the nation in its struggle for self-preservation." The following communication, addressed by Mr. Babcock and another citizen of Connecticut to the *Washington Chronicle*, may be considered to represent the views of a considerable number of the party with which they were affiliated:

WASHINGTON CITY, March 22, 1866.

In an editorial article of the *Chronicle* of this morning, we understand you to favor the idea that the result of the New Hampshire election is in some respects a verdict against the Union policy of President Johnson, and an approval of the action of Congress, so far as that action is at variance with the desires of the President; and you also intimate, as we understand you, that the election of General Hawley is

Connecticut may be justly interpreted in the same way.

If this be your meaning, we beg leave to say, in advance, that such an inference and such a use of the election of General Hawley would be a gross perversion of the truth, and wholly contrary to the assurances publicly and privately given by General Hawley, who, it is admitted, could not be elected but by the aid of the friends of the President and his policy.

Yet we do not claim that this policy is involved in the issue of this election, and we therefore protest in advance against any such inference; and if such a use is made of that election, we assure you that the effect will be injurious to the Union organization.

The question may be asked why the Conservatives of Connecticut do not act with the other organization which has unreservedly avowed its support to the President's policy? Our answer is, that we have more confidence in the men who have proved their loyalty on the fields of battle, and by their efforts to sustain the Government in the darkest periods of the war, than in those who sought to discourage enlistments, destroy the credit of the Government, and give aid and comfort to the rebels; and whom we cannot trust with their cheap professions, even though they head their ticket with a gentleman whose war record is not so objectionable, but whose accommodating temper is such that he allows himself to be used to advance the interest of a party whose loyalty was tried and found wanting.

We are also firm in our belief that the President prefers to settle this contest inside of the Union party, giving those of the opposite side who are sincere in their professions the opportunity of throwing their strength where it most properly belongs, namely, into that portion of the Union party which is confessedly in harmony with their views.

JAMES F. BABCOCK,
F. W. SMITH, Jr.

The Democrats were not less desirous than their opponents to obtain an expression of opinion from the President respecting the State election, and on March 23d, a delegation of the party, consisting of A. E. Burr and O. M. Ingersoll, had a long interview with him, of which, on the succeeding day, they published an account in the newspapers. From their statement it appears that the President complained that his remarks had not been correctly reported by the Republican delegation which had recently visited him. He desired, he said, the success of the Union party, meaning by the Union party at that time the party which supported his Union restoration policy, and no others. Those who opposed his policy he regarded as not belonging to that party, and upon the success of his policy, he said, depended the welfare of the Union. The following passages from the report of Messrs. Burr and Ingersoll, further illustrate the views of Mr. Johnson:

The President then remarked that Messrs. Owen and Griswold [of the Republican delegation] should have reported him as saying that he was the friend of those who supported his policy, and the opponent of those who oppose it. "The question," said he, "of my restoration policy is now the paramount question, and all who oppose it are my opponents."

We assured the President that if those gentlemen had so telegraphed his remarks, we should not have been here this evening.

The President then said: "The principles of my restoration policy are fundamental. No man can approve of my policy and that of Congress at the same time. That is impossible." In New Hampshire it was claimed that both policies were supported, which,

of course, could not be; but after the election it was claimed that a radical victory had been achieved. He trusted the people would not now be deceived.

At that interview the following letter from E. S. Cleveland, postmaster at Hartford, and recently a member of the Republican party, was communicated to the President:

Post-Office, Hartford, Conn., March 22, 1864.

To President Johnson:

SIR: I am now engaged in publicly advocating the election of James E. English as candidate for Governor of Connecticut—a gentleman who is openly committed to the support of your veto, to the defence of your 22d of February speech, and of your policy of restoration in opposition to the disunionists of Connecticut.

I am opposing the election of General Joseph R. Hawley, who openly disapproved of your veto and of your 22d of February speech, and declines to support your policy as opposed to the radical majority in Congress. If my political action is not satisfactory to you, I beg you to receive my resignation as postmaster of this city.

I have the honor to be, your obedient servant,
E. S. CLEVELAND.

This was immediately returned to Messrs. Burr and Ingersoll, with the following indorsement:

EXECUTIVE MANSION, March 23, 1864.

Your political action in upholding my measure and policy is approved. Your resignation is, therefore, not accepted, but is herewith returned.

ANDREW JOHNSON.

From the middle of March the interest in the election was greatly enhanced, and it soon became the absorbing topic of discussion or conversation throughout the State. Both parties sought the services of their most effective speakers from all parts of the country, and a more thorough canvass of a State was probably never attempted. Connecticut, politically speaking, had for a number of years been classed among the doubtful States; for, notwithstanding she had annually been carried by the Republicans since the formation of that party, the majority was often very small in proportion to the total vote. In the present instance the result seemed more than ever involved in doubt. At the presidential election of 1864 the majority for Lincoln did not reach 2,500 in a total vote of nearly 87,000; and although in 1865 Governor Buckingham had a majority of over 11,000, there was no relative increase of the Republican vote, while the total vote was upward of 13,000 less than in the previous year. As the day of election (April 2d) approached, the current of opinion in the Republican party was observed to tend more strongly toward the views of reconstruction held by Congress, though many voters still wavered between the Congressional and the Executive policy. On March 15th the Civil Rights Bill, having passed both Houses of Congress, was sent to the President for his approval. Almost immediately rumors of another veto became prevalent, which were verified on the 27th by the return of the bill to Congress without the Executive approval. This act seemed for the moment almost to demoralize the Republican party in Connecticut. But six days

intervened before the election, and in that time Congress took no action upon the veto by which party movements could be controlled, nor was any opportunity afforded for consultation among the leaders. The act of the President was, however, considered to have practically severed his relations with the Republican party, and it was believed that the election of Hawley would, under the circumstances indicate that the Executive policy was distasteful to the people of Connecticut. During these last six days of the canvass the efforts of either party to bring out their full strength were redoubled, and, amidst almost unparalleled excitement, the election took place with the following result:

COUNTIES.	GOVERNOR, 1866.		PRESIDENT, 1864.	
	REP.	DEM.	REP.	DEM.
	Hawley.	Englsh.	Lincoln.	McClellan.
Hartford.....	8,618	8,937	8,693	8,688
New Haven.....	8,630	10,784	8,761	9,638
New London....	5,610	4,607	5,662	4,919
Fairfield.....	7,094	7,837	7,868	7,193
Windham.....	3,566	2,144	3,668	2,173
Litchfield.....	4,771	4,653	4,998	4,423
Tolland.....	2,479	2,032	2,430	2,152
Middlesex.....	3,206	2,989	3,113	3,107
Total.....	43,974	43,438	44,693	42,288
Maj. for Hawley, 541.		For Lincoln, 2,405		

The total vote, 87,407, was the largest ever cast in the State, being 426 in excess of that of 1864, and 13,690 larger than the vote for Governor in 1865. The Republican vote was 719 less than that of 1864, and the Democratic vote 1,145 greater, showing a net gain to the latter of 1,864 votes. The Republican candidate for Lieutenant-Governor received a majority several hundred higher than General Hawley, and the remaining candidates of the party were elected by majorities of 1,200 and upward. The average Republican majority was therefore about 1,000. The political complexion of the Legislature, returned at the same election, was as follows:

	Senate.	House.	Joint ballot.
Republicans.....	13	141	154
Democrats.....	8	95	103
Rep. maj.....	5	46	51

The Legislature convened on May 2d, and was organized by the choice of John T. Wait as president *pro tem.* of the Senate, and David Gallup as Speaker of the House of Representatives. On the same day Governor Hawley and the other State officers elect were inducted into office. In his inaugural address, Governor Hawley entered somewhat fully into national affairs, declaring that, though the nation looked forward with impatience to the time when all the late insurgent States should be restored to their relations with the Union, it would never consent that any but loyal men should receive its favor, or sit among its rulers. "When States declare themselves," he said, "out of the Union,

and bring their citizens with great unanimity to make desperate war during four years upon the republic, and then failing only through lack of physical force, declare themselves in the Union, truly devoted to its principles and entitled immediately to the exercise and enjoyment of all their previous powers and rights, we may and do give honorable heed to their words; but it is the nation's right and duty to examine fully the new organization of those States, learn the purposes of the new rulers thereof, and test the whole by the legislative action they take, and by the security and happiness enjoyed by the steadfastly and unquestionably loyal among them. * * * The war having been a success, we must affirm that it effected the destruction of slavery in fact as well as in name, the abandonment, as a rule of action, of the perpetually disorganizing doctrine of secession, security against any taxation to pay debts contracted in aid of treason, and full protection, safety, and honor everywhere for the rights of all loyal citizens, without distinction of race or color. These things were fairly won; they look to security for the future, and are not a part of any idle claim to indemnity for the past; they are not selfishly sought for a class or a party, but demanded for all mankind; and they are essential to the success and glory of a Christian democratic government."

Governor Buckingham, upon retiring from office, after seven years' tenure of the gubernatorial chair, sent a valedictory message to the Legislature, giving some account of the expenditures of the State during the war, and of the means taken to settle the outstanding claims against the General Government. He declined to accept the sum of \$3,000, voted to him by a previous Legislature, in consideration of extra personal services rendered by him during the war. He took strong grounds against President Johnson's policy of reconstruction, urging that the reorganized governments of the rebel States should secure to every citizen equal rights and equal protection before the law, and that these governments should be administered in such a manner as to give liberty to each member of the body politic in accordance with the advancing spirit of Christian civilization.

The Legislature adjourned on June 30th, after a session of fifty-nine days, which was fourteen days longer than that prescribed by law, during which the members are entitled to receive pay. On May 23d, Orris S. Ferry, late a brigadier-general of volunteers, was elected a United States Senator, to succeed Lafayette S. Foster, whose term would expire on March 4, 1867. The chief competitors of General Ferry, in the Republican caucus, were Senator Foster and Governor Buckingham. On June 25th the Constitutional Amendment, adopted by Congress, was ratified by the Senate of Connecticut by a vote of eleven to six, and on the 27th by the House of Representatives, by a vote of one hundred and twenty-five to eighty-eight. The vote was a party one in both branches of the

Legislature. The Democrats opposed the amendment on grounds of expediency and policy, and contended that Congress was powerless to change the Constitution during the enforced exclusion of certain Representatives from Congress. This view was repelled by the Republicans, who held that Congress has against conquered rebels all the powers of conquest.

Among the bills passed was one empowering the voters of any town to consolidate the school districts of such town into one, and appoint a committee to manage them. The towns were also required to raise a tax of four-tenths of a mill for school purposes instead of three-tenths, the rate previously established. Bills were also passed legalizing eight per cent. interest on money contracts, appropriating \$10,000 in aid of a homeopathic hospital, to be paid when an equal amount shall be expended upon it by the friends of that practice; and chartering new lines of railroad. Among the latter was a bill for a branch line from Salisbury, to connect the Harlem and Housatonic roads. Resolutions were adopted appointing a commission to report to the next Legislature the opinions of the city authorities of Hartford and New Haven upon the subject of accepting the present State-houses in those cities, and building new ones; and proposing an amendment to the constitution providing for one capital, to be selected by a plurality vote of the people. A bill prescribing that "eight hours of labor, done and performed in the day by any one person, shall be a lawful day's work, unless otherwise agreed by the parties," passed the Senate, but was defeated in the House. A project to construct a bridge for the Shore Line Railroad across the Connecticut River at Lyme, near its mouth, was urged with great persistence, but failed in both Houses toward the close of the session. A bill taxing interest on United States bonds was rejected; also a resolution changing the session of the Legislature to January. The House bill, chartering the Derby and State Line Railroad, to run parallel with the New Haven road, was lost in the Senate. The Governor vetoed two bills, one of which, chartering an Accident Insurance Company at Hartford, was passed over the veto. The other bill, vetoed late in the session, required judges, in case of appeals, to certify to the evidence. The veto was sustained by an almost unanimous vote, and the bill was defeated.

On May 1, 1866, the total State debt amounted to \$10,400,000, of which \$8,206,288 were over and above assets. The taxable property of the State increased from \$231,000,000, in 1860, to \$290,000,000 in 1865, exclusive of money invested in national securities, and the general financial condition was such as to justify the conclusion that the annual expenditures of the State government, including the payment of interest on the debt, can be kept within \$1,000,000. At the present rate of taxation the annual receipts are estimated at \$1,625,000,

which would leave about \$600,000 to be applied to the extinguishment of the debt, in addition to the accumulations of the sinking fund already provided for, which amounted to \$72,000 in 1866.

The school fund, according to the last computation of the State Auditor, amounted to \$2,046,532.23, a part of which is unproductive, and the total revenue from the fund for the year ending April 30, 1866, was \$136,471.94, of which \$130,658 was expended upon the education of 118,780 children, or \$1.10 per child. The increase of children over the previous year was 8,955. "Public education," says Governor Hawley, "received a marked impulse by the important modification of the school laws enacted last year, vesting the supervision of the Normal School, and of the entire system of common schools, in a State Board of Education, and imposing upon the Secretary of the Board the ordinary duties of the Superintendent of Common Schools."

The catalogue of Yale College shows that at the close of 1866, 709 students were attached to that institution, of whom 500 belonged to the undergraduate department, and the remainder followed special courses of theology, medicine, law, philosophy, and the arts. The staff of the college comprises the president, 35 professors, nine tutors, four instructors, a librarian, and a demonstrator of anatomy. The libraries, exclusive of the 2,500 volumes of the Oriental Society, contain 77,500 books, besides a large number of pamphlets. In October, 1866, Mr. George Peabody, of London, made a donation to the college of \$150,000 for the purpose of establishing a Museum of Natural History. Of this sum \$100,000 are to be immediately expended in the erection of a suitable building; \$20,000 are to be invested until a fund of \$100,000 is accumulated, which is to be employed in completing the museum; and \$30,000 are to be devoted to the care of the museum and the increase of its collections; three-sevenths of the sum being devoted to zoology, three-sevenths to geology, and one-seventh to mineralogy.

During the year ending April 1, 1866, 41 banks, with an aggregate capital of \$12,087,930, were organized under the national banking law, in addition to those which had previously taken this course, leaving but eight State banks, with an aggregate capital of \$1,985,920, and a circulation of \$1,275,732. The capital of all the banks of Connecticut, State and national, ninety in number, amounted in April, 1866, to \$26,182,243. On January 1, 1866, there were 51 savings banks in operation, 50 of which reported assets amounting to \$28,891,454.71, and deposits amounting to \$27,319,013.59. The higher rate of interest paid by adjoining States, and especially by the General Government, reduced the deposits \$1,823,274.99 during the past year, and gradually led the trustees to invest more than a quarter of the whole in national bonds.

The State charities were at the date of the last report in good condition, and contained inmates as follows: Deaf and Dumb Asylum, 35 (State beneficiaries); Retreat for the Insane, 200; School for Imbeciles, 42. Forty-two children had by April, 1866, been received into Fitch's Home, an institution established at Darien by Benjamin Fitch of that place, for the reception and education of "disabled soldiers, and orphans of soldiers who have lost their lives in defence of the country." The number of inmates of the State Prison was 195, of whom 130 were received during the year. More than half of these are natives of the United States. Seventeen of the convicts are serving life sentences. The commitments to the county jails during the year amounted to 1,576, and the number of prisoners in all the jails on April 1, 1866, was 216.

The Adjutant-General's report shows that under all the calls for troops, except that of December, 1864, for which no assignment was ever received by the State authorities, Connecticut was required to furnish a total number of 47,622 men. The State actually furnished 54,882 men for different terms of service; or, computed on a basis of three years' service, 48,181 men of all arms. The total quota, reduced to a three years' standard, amounts to 41,483, and the State had thus a surplus of 6,698 men over all calls, without reference to her quota under the call of December, 1864. From the table of casualties to the Connecticut volunteer force, it appears that 5,626 officers and men were killed in action, died of wounds or disease, or were never accounted for; that two officers and 6,281 men deserted the service, and that 27 men were executed for various crimes. The last body of State troops in the national service was the Thirteenth Veteran Battalion, which was mustered out in April, 1866, at Savannah. The claims of the State against the General Government, arising out of the war, amounted at the time of Governor Hawley's inauguration to \$1,948,688.79, of which \$216,581.56 had been rejected, and \$75,806.95 was still pending. The organized militia force consisted of 38 companies of infantry, one light battery, two sections of batteries, and two batteries drilling as infantry, forming an aggregate of 8,461 officers and men, which showed an increase of 1,485 over returns for the previous year. Uniforms for the militia were supplied by the State at a cost of \$74,532.54, and \$20,000 were expended for camp equipage. Very little of the quartermaster's stores accumulated during the war has been disposed of.

The record of births, marriages, and deaths, in Connecticut, prepared by the State librarian, shows that in 1865 there were 10,202 registered births, or 468 more than in the previous year, and that the excess of births over deaths was 2,252, or ten less than in 1862. This result was not in accordance with the expectation of those interested in vital statistics, as the number of marriages in 1864 had been greater than in the

eight previous years. The excess of males born over females was 9.81 per cent., and 98 cases of births of illegitimate children were reported. The births of colored children numbered 119 against 133 for 1864, and 174 for 1863. The marriages numbered 4,460, or 358 more than in 1864. There were 7,950 deaths, or 1,159 less than were registered in 1864. Of this number 4,069 were males, and 3,795 females, or 107.22 males to 100 females—a ratio which will probably diminish now that the war is over. The principal causes of death were consumption, 1,108; typhus fever, 548; dysentery, 410; apoplexy, 326; cholera infantum, 321; and diphtheria, 224.

The tobacco crop, which forms an important part of the agricultural products of Connecticut, has proved during the last two years of very inferior quality, the cause of which has not yet been ascertained.

CONOLLY, JOHN, M. D., D. C. L., an English physician, psychologist, and author, born at Market Rasen, Lincolnshire, in 1795, died in Hanwell, March 5, 1866. He was educated at the University of Edinburgh, where he graduated M. D. in 1821. He was for many years consulting physician to the Hanwell Lunatic Asylum, and of the Asylum for Idiots at Earlswood, and it is principally due to his teaching and example that kindness and solicitude in the treatment of those afflicted with mental maladies have taken the place of harshness and force, thus mitigating the sufferings of the patients, and affording a better chance for recovery. He was a man of deep feeling, and was thoroughly enthusiastic in this department of his profession. His advocacy of the humane or non-restraint system of treatment of the insane; his adoption of the system in its fullest extent in the largest asylum in England, in 1839, under his own personal care and responsibility, and his many and most important works on the subject, have long placed his name in the foremost ranks of the benefactors of the human race. Dr. Conolly took an interest in the efforts for the training and instruction of idiotic and imbecile children at a very early day, and by his writings and personal labors did much to call the attention of the medical profession and the public to the necessity of establishing special schools for their education. He invited Dr. Guggenbühl to England; examined in person the institution for Cretins at Interlachen, and the schools of Seguin and Voisin in Paris, and succeeded in creating such an interest in the matter in England as to lead to the establishment of the temporary school for idiots at Colchester, and subsequently of the Royal Asylum for Idiots at Surrey, of both which he was an active manager. In addition to his profound medical studies, Dr. Conolly was gifted with unusual literary abilities, and his works are not less remarkable for the charm and elegance of the style than for his masterly treatment of the subjects to which they relate. Among his most prominent works may be mentioned, "An In-

quiry Concerning the Indications of Insanity ; " "The Construction and Government of Lunatic Asylums ;" and extensive contributions on this class of subjects to the "Cyclopædia of Practical Medicine," the "Transactions of the Provincial Medical and Surgical Association," and to the "Lancet," and "British and Foreign Medical Review."

COREA, a dependency of China, which, in 1866, became noted for a French expedition against it. It is an extensive peninsula, bounded east by the Sea of Japan, south by the Strait of Corea, and west by the Whanghai or Yellow Sea and the Gulf of Leaotong. It is governed by a king, who, though tributary to China, exercises virtually an absolute power. The prevailing religion is Boodhism. Confucius also has many followers. Area, about 87,550 English square miles; the population, according to a census of 1793, was 7,342,361, and is now estimated at 9,000,000. In February, 1866, two Roman Catholic bishops and seven priests, all natives of France, were put to death by order of the king, for preaching a forbidden religion. Three others succeeded in concealing themselves, and one of them arrived at Chefoo in a Corean junk, having been sent by the other two to communicate the sad intelligence. The escaped missionary asserted that there were fifty thousand Christian converts in the Corea, and that great consternation was produced among them by the compulsory renunciation of their faith, of the destruction of books and dictionaries, and of the sacred vessels of the priests. He proceeded to Peking, to invoke the aid of the French ambassador. A preparatory expedition was dispatched to explore the river, on which is situated the capital, Sayool, about sixty miles above its embouchure. The river was found to have a current of five miles an hour, and to be navigable without much difficulty as far as Konghoa, forty miles from its mouth; gunboats were able to ascend twenty-six miles higher up—to within sight of the wall of the royal city, Sayool—but with difficulty, owing to shoals, rocks, abrupt curves, and the rapidity of the current by which the explorers were several times brought to a stand. Stone forts of rude construction were met with, on which useless guns were mounted. Military officers there first presented themselves, who were on the eve of obstructing the progress of the French by sinking a fleet of junks, but relinquished their object as soon as the gunboat sent a shot among them. Mandarins then came on board and presented the French with presents of provisions—a fat ox among other things—and requested the French to withdraw, which they did, after taking drawings, soundings, and plans. On their return down the river they were fired upon from several points, but in each instance a few shots seemed to disperse the timid Coreans, access to whose strongholds thus for the first time became known to the outer world. The squadron then returned to the Chinese port of Chefoo, from whence it had

sailed. On the 11th of October Admiral Roza again set sail for Corea, this time prepared to inflict punishment. His fleet consisted of seven vessels, having on board four hundred riflemen. Three days' easy steaming brought him to the coast of the peninsula. The gunboats of the expedition proceeded up the river, taking position before eleven forts, which proved to be without defenders. There was no movement of any kind in the forts, and not a soul in the way of garrison was visible, although the muzzles of guns could be seen in the embrasures. On the following day the fleet ascended higher, and landed the riflemen without encountering resistance, although they were ready to fire. They entered a village which was wholly deserted: the inhabitants in their flight had taken with them their portable valuables, leaving in their houses furniture, clothing, and a quantity of provisions. A number of muskets, gingsals, some bows and cannon, and a powder magazine, were the useless trophies, together with poultry, pigs, and vegetables, which were useful.

Next morning, October 15th, the riflemen advanced three miles higher, which brought them to the city of Konghoa, which is situated on an island, and regarded by the natives as one of their strongest places, but which the French found wholly indefensible.

Captain D'Orzery went into the city to dislodge a firing party which was posted on the ramparts at a distance of over 1,800 yards, but who fired too high for effect. The fire was returned by the French riflemen, when the garrison fled, and sought refuge in an archway of one of the city gates, from which they were driven, when the gate was forced with axes. The captain did not care to retain possession of the city, although eighty men would have proved a sufficient garrison for its defence. After surveying the place and burning the defences of the gates, he retired to the river banks, carrying with him a flag which was seized on the walls. No Frenchman was wounded, and only three Coreans were killed. On the 16th the admiral entered Konghoa, and found that the inhabitants had all fled to the hills during the previous night, taking with them all that they could carry. A few persons were taken prisoners, who stated that the mandarins, on quitting, had directed the inhabitants to leave also. The French soldiers scattered over the city, and took some bed-covers, pigs, fowls, and like curiosities. The officers penetrated the public offices, and swords, arrows, and other weapons, and at last the government chest were discovered, containing 190,000 francs in silver ingots, carefully wrapped up in paper. One company garrisoned the city, the remainder returning to the headquarters on the banks of the river. Konghoa is described as a small, poor, and filthy city, of about 10,000 inhabitants. The fortifications were utterly insignificant. The success of the French brought out the Christians of the neighborhood. Before the capture of that city a mandarin waited on Ad-

miral Roze and boldly vindicated the course of the Korean Government in killing missionaries; he was abruptly dismissed, and not well pleased with the reception accorded to him. On the second day after the capture a dispatch was received, written in Chinese, from the viceroy and military commandant of Corea, who wrote in behalf of the king. The contents were vague and diffuse, and treated at great length of the punishment which had befallen the late missionaries, concluding by a request to the admiral to come up to the capital and enter into negotiations. The admiral in reply extolled the missionaries and laid down his claims, which were, the punishment of the three principal ministers who instigated the execution of the missionaries, and that an officer invested with full powers be sent to treat with him.

A few days later a convert brought intelligence that a Korean army, 15,000 strong, was advancing from the capital to attack the French, and that stone-laden junks had been sunk in the river to obstruct the passage of the men-of-war. Dates from Hong-Kong, December 1st, stated that the French expedition had been beaten off at Kongho, with the loss of forty-five men, and that the fleet had returned to Shanghai.

It was also reported that, in October, the American schooner, General Sherman, had been

seized by pirates in the river leading to the capital. They set fire to the vessel after tying to the masts the crew and two English passengers, all of whom perished.

COSTA RICA. (See CENTRAL AMERICA.)

COTTON. The product of this great staple in the United States has been large, notwithstanding the disasters of the war. The receipts at the various seaports, which furnish the only means for estimating the crop, were, during the twelve months ending September 1, 1866, the close of the cotton year, about 2,241,222 bales. The receipts since the close of the war to September 1, 1865, were 421,000, making an aggregate to the close of the last cotton year of 2,662,222 bales. Various estimates have been made of the amount of the old crop in the South not brought forward at that date. By some it has been put at 150,000 bales, which would make the grand aggregate of the cotton supply of the Southern States since the close of the war to September 1, 1866, about 2,812,222 bales. The following table shows the amount of bales received at the respective places named during the year ending September 1, 1866, the amount exported to foreign countries, and the balance on hand at those places, after deducting the coastwise export, together with the exports for the year 1860-'61:

RECEIPTS AND EXPORTS OF COTTON (BALES) FROM SEPT. 1, 1865, TO SEPT. 1, 1866, AND STOCKS AT LATTER DATE.

PORTS.	Received.	Exports.				Exports in 1860-'66.	Stocks, Sept. 1, 1866.
		Great Britain.	France.	Other foreign.	Total.

Baltimore.....	6,709	6,709	8,545
Other ports†.....	62,000
Total.....	2,241,222	1,258,277	222,598	71,817	1,552,457	3,127,568	281,179

Thus it appears that the exports from all the ports for the year were 1,552,457 bales. If these bales are estimated to weigh on an average 400 lbs., the value in gold of the cotton exports of the year exceeded \$230,000,000.

The average annual increase of the crop during the forty years preceding the war was four and a fraction per cent. If there had been no war, and this rate of increase had continued, the crop of 1865-'66 would have been 4,916,000 bales, and for the six years from 1861 to 1866 inclusive, 26,714,000 bales.

The statements made relative to the efficiency

of free negro labor were somewhat discordant. The first trials made after the war were highly discouraging. But the modifications in the system made by planters, with a favorable co-operation of the Freedmen's Bureau, led to better fruits than were anticipated. In some parts of the Southern States no such indications existed. It was thus concluded that with general favorable indications the crop for 1866-'67 would be larger than the previous one, although some sections would not produce one-third or one-fourth of the ordinary yield. The high price of the staple, however, presents an extraordinary stimulus to exertion, and will have a favorable influence on the result.

The following are the comparative prices of midland cotton at New Orleans on the first day of each month during a period of five years:

* These are the shipments from Tennessee, Kentucky, &c., not otherwise counted.

† Estimated.

‡ The receipts included under this head are the estimated amount manufactured in Virginia, the West, &c., together with the amount burned in New York.

On February 23d, orders were issued from the Treasury Department to close up all agencies for the seizure of cotton or other property belonging to the late Confederate States Government, and to settle up all accounts at once. But Congress soon after laid a tax of three cents per pound upon all cotton produced. The tendency of this measure was unfavorable to the crop, by the embarrassments caused in its collection, and by burdening it with an additional charge in its competition with the foreign staple. The embarrassments arising under the assessment and collection of the tax caused very serious and extensive complaints. Apprehensions were also awakened of an unfavorable effect from this tax upon the cotton manufactures of the country. These manufactures are practically confined to the consumption of the American staple. Their machinery is not adapted for the use of the short staple of other countries, and, if it were, there would be the necessity of adding to the price paid at Liverpool the cost of transporting the India article here. The Lancashire manufactures of England have a variety of staples to which they can resort rather than pay the tax. By mixing a certain proportion of Eastern cotton with American, they can set off the extra price of

the latter arising out of the tax, and yet on many heavy goods, and on dyed goods especially, produce an article as marketable as though made wholly from Southern cotton. Hence the tendency of the tax would be to divert cotton manufacturing to Lancashire, and to give to English cotton goods the ascendancy over American, not only in foreign countries, but in this market.

It was suggested that if the tax deprived the planter of a profit on his crop, he must necessarily purchase so much less of home products. If one portion of the country suffered, the other could not expect to be prosperous. On a crop of two million bales the tax is thirty millions of dollars, in addition to a personal income tax. The labor of the South might also be diverted from cotton-growing to the cultivation of breadstuffs, of which her broad cotton lands would produce a large surplus and make her a competitor with the West for the foreign markets.

The disturbances in this country have had a very stimulating effect on the culture of cotton in foreign countries. This is shown by the importations into Great Britain, where the importations during the ten months ending October 30th, were as follows:

The American consul at Alexandria reports the advance in quantity and value of the cotton exported from the valley of the Nile as follows:

1861..... 60,000,000 lbs. | 1863..... 129,000,000 lbs.
1862..... 82,000,000 " | 1864..... 174,000,000 "

The increased value of the staple, as exhibited by the custom-house returns of Egypt, was in dollars as follows:

1861..... \$7,154,400 | 1863..... \$46,782,450
1862..... 24,603,300 | 1864..... 74,213,500

The Chamber of Commerce of New York, in a memorial to Congress relative to the tax on cotton, urged the following facts relative to its cultivation in other countries:

1. That the cotton interests in India, Brazil, and Egypt, have accumulated large capitals from the high prices of the last three years, while our plantations, as a rule, have lost all theirs.
2. That nothing has yet occurred to arrest the extension of cotton production in those countries, and nothing will arrest it short of material and permanent decline in prices hereafter.
3. That in the last five years railroads have been opening to traffic in India, and other means of transportation have been improved; and as the Indian Government guarantees an annual dividend of not less than five per cent. to railway stockholders, we must suppose branch railroads will be made wherever they are likely to pay.
4. That during the four years' famine of United States cotton in Europe, great improvements have been made in the manufacture of yarns and fabrics from India cotton, so that eminent manufacturers, who thought formerly that they could only use American in making their standard fabrics, have found that a mixture of four-fifths India and one-fifth American, or over nine-tenths India and one-tenth American, produced the requisite quality; at least, so it is stated on authority which your committee are forced to respect, without being competent to indorse it.
5. That the expenses in the United States of producing, transporting, and selling at the ports, exclusive of tax, must be estimated this year at not less than thirteen cents per pound in case of a yield of 5,000,000 bales, and about two cents more if the yield is less.

COTTON, Right Rev. GEORGE EDWARD LYNCH, Lord Bishop of Calcutta, and Metropolitan of India and Ceylon, born at Chester, England, October 29, 1832, was accidentally drowned in the Ganges, while disembarking from a steamer, October 6, 1866. When a little more than eleven years of age he entered West-

minster School, and in 1832, Trinity College, Cambridge, as a "Westminster scholar," taking with him a high character for scholarship. Here he studied hard, and was always found in the first class in the examinations, bearing away several prizes. Having taken his degree of A. B. in 1836, he was appointed to a mastership in Rugby School, where he had charge of a boarding-house and a form of fifty boys. Shortly after he was elected to a fellowship at Trinity College, but he did not allow his university life to tear him away from his work at Rugby. About 1841 he succeeded to the mastership of the fifth form, the highest but one. He sympathized with his pupils in not only all their studies, but also in their sports and pleasures, so that the bond of affection between master and pupil was strong and enduring. In 1852 Mr. Cotton was elected head-master of Marlborough College, which was then at a very low ebb, financially and otherwise, but which, under his management, soon rose to a high position among leading public schools. In 1856 he preached the consecration sermon of the present Bishop of London at Whitehall, and in 1858 was nominated to the Metropolitan See of Calcutta, where his high personal character and powers, his strength of mind, and tolerant views, rendered him widely and extensively beloved.

CRAIK, GEORGE LILLIE, LL. D., a Scottish author and belles-lettres writer, born in Fife-shire, in 1798; died in Belfast, Ireland, June 25, 1866. In his fifteenth year he entered the University of St. Andrew's, and passed through the divinity course, though he never applied for a license as a preacher. In 1816 he began the world for himself as a tutor, and was not long after editor of a local paper. From that time his intellectual labors were unceasing. Endowed with a powerful memory, his capacity for work was only equalled by his avidity and delight in its exercise. In 1826 he went to London, delivering on his way a series of lectures on poetry at Glasgow, Dublin, Belfast, and Liverpool. Arriving in London he early became associated with Charles Knight, the publisher, and was a prominent contributor to many of his literary undertakings, especially the "Library of Entertaining Knowledge," begun in 1830 by the Society for the Diffusion of

Useful Knowledge. His life was now wholly that of a literary man, whose work lay in the solid sphere of learning and criticism, rather than in the more profitable line of light literature. In 1849 he was appointed professor of English Literature and History at Queen's College, Belfast, whither he removed with his family, and which post he filled with honor until his death. In 1859 and 1862 he was appointed examiner of the Indian civil service, and in this capacity made frequent visits to London. While delivering one of his lectures at the college, a few months since, he was stricken with paralysis, from which he only temporarily recovered. Among his works may be mentioned his "Pursuit of Knowledge under Difficulties," for the Library of Entertaining Knowledge, the "Pictorial History of England," "Sketches of Literature and Learning in England, from the Norman Conquest to the Accession of Elizabeth," "History of British Commerce," "Spenser and his Poetry," "The English of Shakespeare," and "The Romance of the Peerage." He also wrote a valuable pamphlet on the "Representation of Minorities," a subject upon which he had bestowed much thought. One of his latest important works was a "History of the English Language and Literature."

ORETE. (See CANDIA.)

CUMMING, ROUALEYN GEORGE GORDON, a Scottish sportsman and author, known as the African Lion Hunter, born in Scotland, March, 1820, died at Fort Augustus, Inverness-shire, March 24, 1866. He was the second son of Sir William Gordon Gordon Cumming of Gordonstone, and from an early age had abundant experience in deer-stalking in the Highlands. He was trained for the military service, became an officer in the Madras Cavalry, and in the Cape Mounted Rifles, and, leaving the army in 1843, soon brought his daring and courage into more exciting exercise by joining hunting expeditions into the South of Africa. An account of these adventures he gave to the public in his "Hunter's Life in South Africa," published in London, in 1850, and republished in the United States. In 1851 he first exhibited the trophies of his skill and daring at the Great Exhibition in London, and since that period had shown the collection in different parts of the country. His profits from the sale of skins, tusks, &c., have been very large. Though well deserving the title of "The Mighty Hunter," some of his accounts of personal encounters with the fierce and blood-thirsty denizens of the forest are considered somewhat exaggerated. For the last eight years he had located himself at Fort Augustus, where his museum of curiosities formed a source of attraction to passengers by the route of the Caledonian Canal. In person Mr. Cumming was remarkable for his great height and massive symmetry of build, with handsome Highland features and the eye of an eagle; he was physically a king of men.

CUMMINGS, JEREMIAH W., D. D., a Roman Catholic clergyman and author, pastor of St. Stephen's Roman Catholic Church in New York City, born in Washington, D. C., April 5, 1823; died in New York City, January 4, 1866. He was of Irish descent, his ancestors having emigrated to this country in 1782. He was early destined to the church, and having pursued his preliminary studies in Washington and Georgetown College, he proceeded to Rome, where he studied for fourteen years in the College of the Propaganda, and graduated with high honors. On his return to the United States in 1848 he was at first attached to the Cathedral in Mulberry Street, but in 1856 he built St. Stephen's Church in East Twenty-eighth Street, of which he continued to be the pastor until his death. He was a profound scholar, especially in the classics and belles-lettres, and cultivated literature with greater zeal and success than most of the Catholic clergy; and his eminent attainments caused him to be regarded as an authority in Catholic literature. While taking a leading part in all the Catholic movements in his diocese, he was very social and genial in his intercourse with his Protestant fellow-citizens. He was the author of several works, one, "Italian Legends," published not long after his return from Europe; another, "Spiritual Progress," in 1864. He was a very considerable contributor, in biography and other topics connected with his church, to the "New American Cyclopædia." He took great delight in sacred music, and under his administration the choir of St. Stephen's was not surpassed by any in the city.

CUMMINS, Miss MARIA S., a distinguished author, born in Salem, Mass., about 1834, died at Dorchester, Mass., October 1, 1866. Her literary career commenced in 1853, when her *Lamp-lighter* was published, and within eight weeks, so great was its popularity, over forty thousand copies were sold, and as it has passed through numerous editions, both in this country and England, its sale has probably exceeded one hundred thousand copies. In 1857 she produced *Mabel Vaughan*, and in 1860 *El Fureidis*, published simultaneously in this country and England. Subsequently she wrote another work, entitled "Haunted Hearts." Her late productions have been chiefly for the "Atlantic Monthly," and "Young Folks." A short time since she prepared a catalogue of books suitable for the Sabbath-school of the Unitarian church, with which she was connected; the result of careful examination upon her part of several hundred volumes. She was a writer of great power; her characters were drawn with skill, and there was always a motive in her productions aside from their general interest. For many years her literary labor had been performed while suffering more or less from ill-health.

COURTIS, Major-General SAMUEL R., U. S. Vols., born in Ohio, February, 1807; died at

Council Bluffs, Iowa, December 26, 1866. He graduated from the U. S. Military Academy at West Point, July 1, 1831, as brevet second lieutenant in the Seventh U. S. Infantry, and resigned his position June 30, 1832, engaging in the profession of civil engineering in his native State from that time to 1837. In this latter year he was made chief engineer of the Muskingum River improvement, and held this position until May, 1839. He also became a counsellor-at-law in Ohio in 1842. He connected himself with the Ohio militia, being first captain and then colonel of a regiment, and finally Adjutant-General of the State. He served during the Mexican war as colonel of the Third regiment of Ohio Volunteers. After the discharge of his regiment he served on the staff of Major (then Brigadier) General John E. Wool, and was made the civil and military governor of Camargo, Monterey, and Saltillo. Upon his return from Mexico he resumed the practice of the law in Missouri and Iowa, until called to the performance of important labors as engineer in improvements of harbors and the construction of railroads. He was elected from Iowa to the House of Representatives of the Thirty-fifth Congress, and reelected to the Thirty-sixth, Thirty-seventh, and Thirty-eighth Congresses. During the Thirty-sixth Congress he served on the Committee on Military Affairs, and in 1861 was a delegate to the Peace Convention. He was also an earnest and able advocate of all schemes for internal improvement, and was chosen president of one of the first national conventions held to consider the expediency of a Pacific Railroad.

When the war broke out he at once ten-

dered his services, and was appointed brigadier-general of volunteers in the first list sent to the Senate. Assigned to duty at St. Louis, he first took charge of the large camp of rendezvous and instruction near that city. Succeeding to the command of the Department of Missouri, he became distinguished in 1862 by winning a decisive victory at Pea Ridge over the invading forces of the rebels. He was also engaged in several minor operations which he conducted with great ability. General Curtis was subsequently appointed commander of the Department of "Kansas and the Territories," and of the Department of the Northwest, the latter of which he held until he received his appointment as railroad commissioner for inspecting the Union Pacific Railroad, when he was mustered out of his rank as major-general of volunteers. General Curtis was a brave and gallant soldier, and faithfully discharged the duties of the various posts to which he was called.

OUTLER, Major-General LYSANDER, U. S. Vols., born in Maine, about 1806, died in Milwaukee, Wis., July 30, 1866. Having had some military training, he offered his services to the Government when the war broke out, and was given the command of the Sixth Wisconsin regiment, which he speedily brought into a state of discipline, and rendered one of the best in the service. Subsequently he was in command of the Iron Brigade of the Army of the Potomac, to which his regiment was attached, and by his faithfulness and gallantry won the promotion of brigadier, and afterward major-general, proving himself an excellent commander both of brigade and division. He was twice wounded on the field.

D

DAVIS, EMERSON, D. D., a Congregational clergyman and author, born at Ware, Mass., July 15, 1798; died in Westfield, Mass., June 8, 1866. He graduated at Williams College in the class of 1821, with the highest honors, and was engaged as preceptor of the academy at Westfield for one year; the following year was tutor in the college, and at the expiration of that time engaged as a permanent preceptor of the academy, which position he retained until June 1, 1836, when he was settled as pastor of the First Congregational Church in Westfield, continuing in that service until his death. During the thirty years of his ministry there were but two Sabbaths when he was unable to preach. Through his whole life he manifested a deep interest in common-school education, and was an active member of the school committee of his town. Upon the organization of the State Board of Education he was appointed one of its members. He was also vice-president of the corporation of Williams College. Though a critical and accurate scholar, Dr. Davis made few ventures in authorship. In 1852 he pub-

lished a work of great labor and research, entitled "The Half Century," giving in a condensed form very interesting facts relative to the intellectual, moral, physical, and mechanical progress and discoveries of the first half of the nineteenth century. This work had a large circulation and was reprinted in Great Britain. Aside from this, he published a number of occasional sermons, addresses, educational essays, etc.

DE LA RUE, THOMAS, an eminent English printer, stationer, and promoter of the useful arts, born in Guernsey in 1793, died in Hyde Park, Eng., June 7, 1866. He began his career as a printer, and subsequently made use of his special knowledge of this art in the application of improvements in the manufacture of playing-cards. About 1826 he published the New Testament printed in gold, and on the occasion of Queen Victoria's coronation in 1838, he aided in printing the *Sun* newspaper in gold. Among the various patents he took out, was one for fixing the iridescent colors of thin films. He was well known as a collector of articles of

vertu and the possessor of some of the most rare specimens of Wedgwood ware, being one of the first to stimulate the collection of this beautiful ware by his early appreciation of its intrinsic and artistic merits. Few, indeed, have done more for the promotion of the arts connected with his pursuits than Mr. De La Rue. He was one of the deputy chairmen in the London Exhibition of 1851, and, in the Universal Exhibition of Paris, in 1855, was a juror, receiving as an acknowledgment of his services the grand gold medal of honor and the distinction of Knight of the Legion of Honor.

DELAWARE. The election in this State during the year was for the choice of State officers, members of the Legislature, and a member of Congress. It took place on the second Tuesday in November. The total vote cast was 18,408. For Governor, Saulsbury, the Democratic candidate, received 9,810, and James Riddle, the Republican candidate, 8,598. For Congress, J. A. Nicholson, Democrat, received 9,933, and J. L. McKim, Republican, 8,553. The Legislature chosen was divided as follows: Senate—Democrats, 6; Republicans, 3. House—Democrats, 15; Republicans, 6.

The session of the Legislature commences on the first Tuesday of January in each year. The session commencing in January was occupied chiefly with local affairs. After the passage by the Lower House of Congress of the bill granting suffrage to the negroes in the District of Columbia, on January 22d the following resolutions were offered in the lower House of the Legislature, and at once adopted by a strict party vote, as also subsequently in the Senate:

Resolved, By the Senate and House of Representatives of the State of Delaware in General Assembly met: That we, the General Assembly of the State of Delaware, do hereby express our unqualified disapprobation of the bill lately passed by the lower House of Congress, now pending before the Senate, conferring upon the negroes of the District of Columbia the right of suffrage, and consider the passage of such a law would be a lasting stigma and disgrace to the free white men of this country, and a sad commentary upon their intelligence.

Resolved, Further, That the immutable laws of God have affixed upon the brow of the white races the ineffaceable stamp of superiority, and that all attempt to elevate the negro to a social or political equality of the white man is futile and subversive of the ends and aims for which the American Government was established, and contrary to the doctrines and teachings of the Father of the Republic.

Resolved, Further, That, in our opinion, the passage of such a law by Congress is but the key-note of other wrongs and outrages to be hereafter inflicted upon the white people of the States.

Resolved, Further, That we tender to the white people of the District of Columbia our deep and sincere sympathy for them in their distress, and denounce the act as a violation of their popular rights recently manifested by an election.

The Republican members voted against the resolutions, regarding it to be "improper for them to pass judgment on Congress for its action." Had the question then related to negro suffrage in the State, the sentiment of the

Legislature, it was believed, would have been unanimous against it.

The State was out of debt at the commencement of the war, but at its close bonds exceeding \$1,000,000 had been issued to meet the calls of the Federal Government for soldiers. The receipts from railroads and other sources had been heretofore sufficient to meet expenditures, with a small surplus. The Governor, in his message, on January 3, 1867, urged upon the Legislature to incur no further debt until the present one was paid, and approved the railroad improvements within the State as works of incalculable benefit. By the interference of the Federal Government the laws of the State proved to be insufficient to punish crime committed by free negroes, and the Governor recommended the sale of this class into slavery as a punishment effecting the most salutary restraint against crime. He also urged the passage of restrictive laws against the immigration of negroes from other portions of the country, who were, with few exceptions, fugitives from justice in other States. His views of the constitutional amendment proposed by the Federal Congress are thus expressed: "Whatever may have been the expectation or object of Congress, the rejection of this amendment is demanded alike by every consideration of justice, patriotism, and humanity."

In the latter part of the year, the judge of the U. S. District Court (Hall) rendered a decision releasing from imprisonment in Fort Delaware four persons who had been arrested, tried, and convicted by the military authorities of the United States in South Carolina, in December, 1865. The prisoners had been found guilty before a court-martial, of which General Devens was president, of having voluntarily aided in the assault made on the United States troops stationed at Brown's Ferry, S. C., in October, 1865. Judge Hall ordered the discharge of the prisoners on a writ of *habeas corpus*, on the ground that the military commission was without jurisdiction in the case; declaring it as his opinion, that the rebellion had ceased in April, 1865; and inasmuch as the President's proclamation, issued in June, appointing a Provisional Governor for South Carolina, ordered "the district judge for the district in which that State is included, to proceed to hold courts," the State was in the exercise of all its civil functions before the issuing of the order for the organization of the commission by which the prisoners had been tried and condemned.

DENMARK, a kingdom of Europe. King Christian IX., born on April 8, 1818, succeeded King Frederick VII. on November 15, 1863. Heir-apparent, Prince Frederick, born June 3, 1843. Area of Denmark Proper, 14,698 English square miles; of the dependencies, Faroe, Iceland, Danish settlements in Greenland, the islands of St. Croix, St. Thomas, St. John, in the West Indies, 40,214 English square miles. Population in Denmark Proper, according to the census of 1860, 1,608,095, and in the de-

pendencies 124,020. The increase of population in Denmark Proper, from 1855 to 1860, was 6.71 per cent. An equal increase from 1860 to 1865 would have swelled the population to 1,701,200 inhabitants. All the inhabitants of Denmark belonged, in 1860, to the Lutheran State Church, with the exception of 12,907, of whom 4,214 were Jews, 1,240 Roman Catholics, 1,761 Reformed, 2,657 Mormons, 2,270 Baptists, 114 Episcopalians, 202 Adherents of the Apostolic, and 142 of the Evangelical Free Lutheran Congregation. The budget for 1866-'67 estimates the receipts at 26,443,996 rix-dollars, and the expenditures at 26,482,113. The public debt, on March 31, 1865, amounted to 132,110,820 rix-dollars. The army consisted, in 1855, of 22,000 infantry, of 3,300 cavalry, of 4,200 artillery, 500 engineers. The fleet, in March, 1866, was composed of three frigates and one floating battery, iron-cased, carrying a total of 44 guns; one steamship of the line, 64 guns; four steam-frigates, with an aggregate armament of 162 guns; three steam-corvettes, with 44 guns; four corvettes, mounting 12 guns; six paddle-wheel vessels, carrying together 38 guns; and seven iron gunboats, with an aggregate of 13 guns. Of sailing vessels, Denmark possesses two ships of the line, of 84 guns each; one frigate, of 48; one corvette, of 20; and one brig, of 16, besides a receiving ship, transports, and a flotilla of row-boats. In addition to the iron-plated vessels enumerated above, one is in progress of construction, with double screws, 360-horse power, and to carry two guns of 300 lbs. The marine force amounted to 1,308 men. The merchant navy consisted, in March, 1865, of 3,079 vessels, having together 74,140 lasts.

The draft of a revision of the State Constitution of 1846 having been deliberated upon in three successive sessions of both the *Rigsrad* (representation for Denmark and Schleswig), and the *Rigsdag* (representation for Denmark Proper), held in 1865 and 1866, the king, in closing the third session of the *Rigsdag*, on July 29th, announced that on that day he had signed the revised constitution, and that it had thus become a law of the land. Schleswig having been separated from Denmark, the new constitution abolishes the *Rigsrad*. The election for a new *Rigsdag*, which took place in June, resulted in strengthening the "peasants' party." In the "Folkething," or Lower Chamber, of 100 members elected 60 belong to it. The new *Rigsdag* was opened on November 12th. The following are the most important points referred to in the speech from the throne: A bill for the dowry of the Princess Dagmar (who, on October 25th, had been betrothed to the heir-apparent of the Russian throne) will be laid before the chambers. By the treaty of peace concluded between Austria and Prussia at Prague, the latter power has undertaken to restore Schleswig to Denmark in so far as the population may by free voting pronounce themselves in favor of such a step.

Although it has not yet taken place, still the text of the treaty and the national direction in which European relations are now being developed are a guaranty that Denmark also shall obtain the natural frontiers necessary for her. This is the object toward which, since the treaty of Vienna, the hopes of the Government have been directed. The justice of these hopes has been recognized by friendly powers, and especially by the Government of the Emperor Napoleon, who has testified a warm interest in Denmark. The Government sees in the proposed settlement of the question a proof of the friendship of Prussia. The king further stated that preparations were being made for the defence of the kingdom, notably with regard to fire-arms, which were being placed upon an improved footing. The questions connected with the finances of the Duchies were mainly settled, and the general financial position of the entire monarchy gave rise to no apprehensions for the future. A report that the United States had demanded permission to construct a naval station at the island of St. Thomas was officially denied by the Danish Government.

DEWEY, HON. CHARLES A., Judge of the Supreme Court of Massachusetts, born in Williamstown, Mass., in 1798; died at Northampton, Mass., August 22, 1866. He was a son of the late Hon. Daniel Dewey, M. C. from Berkshire in 1813, was educated at Williams College, where he graduated in 1811, and studied law with the distinguished jurist, Theodore Sedgwick, of Stockbridge. After practising his profession in Williamstown from 1815 to 1824, he removed to Northampton and formed a copartnership with a distinguished lawyer of that town. Provision was made by the Legislature, in 1837, for enlarging the number of the judges of the Supreme Court from four to five; and Governor Edward Everett appointed Judge Dewey to the position. For many years there had been a sharp discussion, running through a portion of the press, relating to the constitution of the Supreme Court; the opinion being held by one side that the court was too much inclined in its decisions to favor the Unitarians. Governor Everett fortunately quieted that feeling by the judicious and acceptable appointment of Judge Dewey, who was well known to hold opposite religious opinions. Judge Dewey held his seat through the long period of twenty-nine years. He was ever a working member of the court—always performing, intelligently and well, his full share of its labors, and never avoiding any of its greater responsibilities. Judge Dewey was not what is called a brilliant or showy man; but was distinguished for practical common sense in the consideration of all questions that engaged his attention. With the whole body of statute laws he had great familiarity, as also with mercantile law and the law of charitable trusts, which to some extent engaged the public thought at the time of his appointment. As a judge he was always affable

and courteous to all who were brought into connection with him.

DICK, Prof. WILLIAM, a veterinary surgeon, teacher, and author of works on veterinary science, born in Edinburgh, May, 1793; died in that city, April 4, 1866. He received his medical training at Edinburgh University, and took his diploma as a veterinary surgeon at the London College. In 1818 he founded the Edinburgh Veterinary College, an institution which from the first has enjoyed the highest reputation as a school for that branch of science and practice. In 1823 the college received the patronage of the Highland and Agricultural Society of Scotland, who conferred on him the title of professor. At the public exhibitions of that society his skill was in constant requisition, and as a judge of horses he was probably unrivalled. He had also an extensive acquaintance with all kinds of cattle disease, and on the outbreak of the rinderpest he was called extensively in consultation, and was at once appointed inspector for the County of Edinburgh. Prof. Dick was for a long period secretary and treasurer of the Royal Physical Society. He contributed many valuable papers to the Highland and Agricultural Society's "Transactions," and to the Royal English Society's "Transactions;" also to several sporting journals, and was the author of the article on veterinary science in the seventh edition of the "Encyclopædia Britannica," which has since passed through two editions in book form. His appointments were numerous, and embrace that of veterinary surgeon to the queen, and veterinary inspector to the ports of Leith and Granton.

DICKINSON, Hon. DANIEL STEVENS, an American statesman, born in Goshen, Litchfield County, Conn., September 11, 1800; died in New York City, April 12, 1866. He removed with his father's family in 1807 to Chenango County, N. Y., and, with no better advantages for obtaining an education than those derived from common schools, he qualified himself for the duties of a school-teacher at the age of twenty-one years, and, without the aid of an instructor, mastered the Latin language, and became well versed in the higher branches of mathematics and other sciences. In 1822 he married Miss Lydia Knapp, a lady of fine intellectual attainments, and soon after turned his attention to the study of law, was admitted to the bar in 1828, and removing to Binghamton, N. Y., at once entered upon an extensive practice, in which he met and successfully competed with the ablest lawyers of the State. In 1836 he was elected to the State Senate for four years, and, though one of the youngest members and inexperienced in politics, he speedily became the leader of his party—the Democratic Jacksonian. During this time he was also judge of the Court of Errors, and subsequently president of that court. In 1840 he was a candidate for the Lieutenant-Governorship, but was defeated. In 1842 he received the nomination for the same

office, and was elected by a large majority. As Lieutenant-Governor, he was presiding officer of the Senate, which was then a court for the correction of errors, and Mr. Dickinson gave frequent opinions on the grave questions which came before that court for final adjudication, many of which may be found in the law reports of the day.

In 1844 Mr. Dickinson was a State elector of the Democratic party, and as such cast his vote for James K. Polk and George M. Dallas, as President and Vice-President of the United States. At the expiration of his term of office as Lieutenant-Governor, in December, 1844, he was appointed by Governor Bouck to fill a vacancy in the United States Senate, and on the meeting of the Legislature the appointment was not only ratified, but was extended so as to embrace a full term of six years. During the period of his service in the Senate, he took an important part in the debates of that body, and held for a number of years the important position of chairman of the Finance Committee. Upon the exciting questions of the day Mr. Dickinson always adhered to the Conservative side, and advocated non-intervention on all matters relating to slavery. In the National Democratic Convention held at Baltimore in 1852 he received the vote of Virginia for President, but being himself a delegate favoring the nomination of General Cass, he withdrew his own name, in a speech which has been universally commended for its elevated tone and classic beauty of style. In the same year (1852) President Pierce nominated Mr. Dickinson for Collector of the Port of New York, and he was soon after unanimously confirmed by the Senate without reference; but this honorable and lucrative position Mr. Dickinson declined.

At the close of his term in the Senate, Mr. Dickinson returned to the practice of his profession with renewed energy. On the breaking out of the war he indicated his determination to sustain the Government, regardless of all party considerations, and for the first three years he devoted himself to addressing public assemblages on the question of the day, advising his hearers to ignore all party lines and to defend by word, act, and united efforts the laws, the Constitution, and the country. An estimate of the herculean task he imposed on himself may be formed when it is known that during the period referred to he delivered in New York, Pennsylvania, and the New England States over one hundred addresses, each presenting prominent and distinctive features. In the performance of this labor Mr. Dickinson displayed the unlimited resources of his intellect, and enriched the records of American eloquence. On the formation of the Union party in 1861, Mr. Dickinson was nominated for Attorney-General of his State, and was elected by about 100,000 majority. President Lincoln nominated Mr. Dickinson to settle the Oregon boundary question, and the nomination was confirmed, but the po-

sition was declined. In December of the same year, Governor Fenton, learning that Hon. Henry R. Selden's resignation would leave a vacancy in the Court of Appeals, tendered the position to Mr. Dickinson; but this was also declined. One of the last acts of President Lincoln was to tender Mr. Dickinson the office of District Attorney for the Southern District of New York—a post which was accepted, and the duties of which he continued to perform almost up to the day of his death, the last case he was engaged in being that of the United States vs. the Meteor and owners.

As a debater, Mr. Dickinson occupied a front rank. In argument, he was clear, profound, and logical, and not unfrequently overwhelmed his opponents with scathing satire. His speeches were embellished by graceful allusions to classic poetry and mythology, and were delivered apparently without effort. As a writer, Mr. Dickinson was not undistinguished, and he occasionally wooed the muse with success, his lyrical effusions possessing a charming purity and simplicity. Socially Mr. Dickinson was one of the most entertaining of companions, abounding in anecdote and reminiscences of his early career; and his genial nature and strong personal attachments, as well as his marked integrity, won him the respect and love of all with whom he came in contact.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. *The Monroe Doctrine.*—Mr. Seward, in his letter of June 2, 1868, defines the position of the United States in reference to wars waged by foreign powers against American Governments. He draws a very clear distinction between wars carried on for the gratification of ambition, for the purpose of substituting another form of government, or the desire of conquest, and those originating in the causes which create breaches with friendly powers. The letter is as follows:

DEPARTMENT OF STATE, WASHINGTON, June 2, 1868.

To *Julien Kilpatrick, Envoy Extraordinary and Minister Plenipotentiary:*

SIR: Your dispatch of May 2d, No. 7, has been received. I appreciate your solicitude that the course of proceeding which this Government has pursued in regard to the war between Chili and Spain should be understood and appreciated. Perhaps, however, the difficulty in the way of such appreciation results from the peculiar circumstances of Chili. Her statesmen and people, like the statesmen and people of all countries, may be expected to interpret not only the rights of that republic, but the capacities and duties of other States, in the light of their own interests and wishes.

The policy of the United States in regard to the several Spanish-American States is, or ought to be, well known now, after the exposition it has received during the last five years. We avoid, in all cases, giving encouragement to expectations which, in the varying course of events, we might find ourselves unable to fulfil, and we desire to be known as doing more than we promise, rather than of falling short of our engagements. On the other hand, we maintain and insist, with all the decision and energy compatible with our existing neutrality, that the republican system, which is accepted by the people in any one of those States shall not be wantonly assailed, and

that it shall not be subverted as an end of a lawful war by European powers. We thus give to those republics the moral support of a sincere, liberal, and we think it will appear a useful friendship. We could claim from foreign States no concession to our own political, moral, and material principles, if we should not conform to our own proceedings in the needful intercourse with foreign States to the just rules of the laws of nations. We therefore concede to every nation the right to make peace or war for such causes, other than political or ambitious, as it thinks right and wise. In such wars as are waged between nations which are in friendship with ourselves, if they are not pushed, like the French war in Mexico, to the political point before mentioned, we do not intervene, but remain neutral, conceding nothing to one belligerent that we do not concede to the other, and allowing to one belligerent what we allow to the other.

Every complaint made by the Chilian agents of an attempt on the part of Spain to violate the neutrality of the United States has been carefully and kindly investigated, and we have done the same—no more, no less—in regard to the complaints instituted against the neutrality of the agents of Chili. We certainly thought it was an act of friendship on our part that we obtained assurances from Spain at the beginning, and at the other stages of the present war, that in any event her hostilities against Chili should not be prosecuted beyond the limits which I have before described. We understand ourselves to be now and henceforth ready to hold Spain to this agreement, if, contrary to our present expectations, it should be found necessary. In this we think we are acting a part certainly not unfriendly to Chili. It was thought to be an act of friendship when we used our good offices with both parties to prevent the war. We have thought that we were acting a friendly part, using the same good offices to secure an agreement for peace without dishonor or even damage to Chili.

Those who think that the United States could enter as an ally into every war in which a friendly republican State on this continent became involved, forget that peace is the constant interest and unswerving policy of the United States. They forget the frequency and variety of wars in which our friends in this hemisphere engage themselves, entirely independent of all control or counsel of the United States. We have no armies for the purpose of aggressive war, no ambition for the character of a regulator. Our Constitution is not an imperial one, and does not allow the executive Government to engage in war, except upon the well-considered and deliberate decree of the Congress of the United States.

A Federal Government, consisting of thirty-six equal States, which are in many respects self-governing, cannot easily be committed by its representatives to foreign wars, either of sympathy or of ambition. If there is any one characteristic of the United States which is more marked than any other, it is that they have, from the time of Washington, adhered to the principle of non-intervention, and have perseveringly declined to seek or contract entangling alliances, even with the most friendly States.

It would be pleasant to the United States to know that the Government and people of Chili have come to a correct understanding of our attitude and feeling toward them. Nor do we fear that injurious misapprehensions can long prevail among the enlightened and spirited people of that State.

I am, sir, your obedient servant,

WILLIAM H. SEWARD.

The condition of affairs in Mexico and the presence of the French troops in that country, formed during the year the basis of an extended diplomatic correspondence.

Under date of February 12th, Mr. Seward, in

a lengthy communication to the Marquis de Montholon, reviews the position assumed by the United States in protesting against the action of the French Government in Mexico. April 5th, M. Drouyn de Lhuys communicates to the Marquis de Montholon the fact that "the emperor has decided that the French troops shall evacuate Mexico in three detachments, the first being intended to depart in the month of November, 1866; the second in March, 1867, and the third in the month of November of the same year."

Information reached the Department of State of a movement, having for its object the enlistment of Austrians for embarkation to Mexico, and on the 16th and 19th of March Mr. Seward calls the attention of Mr. Motley, the United States Minister to Austria, to the fact, and urges the earnest and emphatic protest of the United States to such a proceeding. In a subsequent dispatch of the 6th of April, he says: "It is thought proper that you should state that in the event of hostilities being carried on hereafter in Mexico by Austrian subjects, under the command or with the sanction of the Government of Vienna, the United States will feel themselves at liberty to regard those hostilities as constituting a state of war by Austria against the republic of Mexico, and in regard to such war waged at this time and under existing circumstances the United States could not engage to remain as silent or neutral spectators."

April 16th. Mr. Seward calls the attention of Mr. Motley to the correspondence between the Governments of the United States and France upon the subject, and says: "These papers will give you the true situation of the question. It will also enable you to satisfy the government of Vienna that the United States must be no less opposed to military intervention for political objects hereafter in Mexico by the government of Austria than they are opposed to any further intervention of the same character in that country by France. You will, therefore, act at as early day as may be convenient. Bring the whole case in a becoming manner to the attention of the imperial royal government."

May 6, 1866. Mr. Motley communicated the views of the United States Government to Count Mursdorff, who, in reply on the 20th of the same month, writes that "the necessary measures have been taken in order to suspend the departure of the newly-enlisted volunteers for Mexico."

May 31, 1866. Mr. Bigelow reports the French Minister of Foreign Affairs as saying: "That they were but too anxious to withdraw their troops from Mexico; that they would be withdrawn certainly not later, but probably sooner, than the time proposed."

June 4, 1866. Mr. Bigelow, detailing a conversation with the French Minister of Foreign Affairs, says: "He said that the imperial government proclaimed its intention to retire from Mexico, because it suited its convenience and interests to retire, and for no other reason.

When, therefore, it announced formally, not merely to the United States, but to all the world, that the army would be withdrawn from Mexico within a specified time, he thought it should be deemed sufficient. The government made its declaration in good faith, and means to keep it. It means to withdraw its army within the time prescribed, and it does not intend to take one or two hundred in the first detachment and one or two hundred more in the second, leaving the great body of them to the last, though it had not deemed it necessary to specify with minuteness details of this kind, which depend upon hygienic and climatic considerations, of which it was the best and the only competent judge;" and explained that the shipment of French troops to Mexico was for the purpose partly of replacing soldiers missing, and without augmentation of the number of standing troops: "He went on further to say that it was the intention of the government to withdraw the army entirely from Mexico within the time specified in his dispatch to you at the very latest—sooner if climatic and other controlling considerations permitted; and it was not its intention to replace them with other troops from any quarter."

August 16, 1866. Mr. Seward, to the Marquis de Montholon, says: "The President thinks it proper that the Emperor of France should be informed that the assumption of administrative functions at this time by the aforementioned officers of the French expeditionary corps, under the authority of the Prince Maximilian, is not unlikely to be injurious to good relations between the United States and France, because it is liable to be regarded by the Congress and people of the United States as indicating a course of proceeding on the part of France incongruous with the engagement which has been made for the withdrawal of the French expeditionary corps from that country."

August 17, 1866. Mr. Kay reports the assurance of the French Minister of Foreign Affairs, that "there had been no modification of our policy in that matter, and there is to be none; what we announced our intention to do, we will do."

August 24, 1866. Mr. Seward forwarded to Mr. Bigelow, for his information, the following:

A PROCLAMATION.

By the President of the United States:

Whereas, A war is existing in the Republic of Mexico, aggravated by foreign military intervention; and

Whereas, The United States, in accordance with their settled habits and policy, are a neutral power in regard to the war which thus afflicts the Republic of Mexico; and

Whereas, It has become known that one of the belligerents in the said war, namely, the Prince Maximilian, who asserts himself to be the Emperor of Mexico, has issued a decree in regard to the port of Matamoras and other Mexican ports which are the occupation or possession of another of the said belligerents, namely, the United States of Mexico, which decree is in the following words:

The ports of Matamoras, and all those of the Northern frontier which have withdrawn from their obedience to the government, are closed to foreign and coasting traffic during such time as the laws of the empire shall not be therein reinstated.

ART. 2. Merchandise proceeding from the said ports on arriving at any other where the excise of the empire is collected, shall pay the duties on importation, introduction, and consumption, and on satisfactory proof of contravention shall be irrepressibly confiscated.

Our Minister of the Treasury is charged with the punctual execution of this decree.

Given at Mexico the 9th of July, 1866.

And Whereas, The decree thus recited, by declaring a belligerent blockade, unsupported by competent military or naval force, is in violation of the neutral rights of the United States, as defined by the law of nations as well as of the treaties existing between the United States of America and the aforesaid United States of Mexico:

Now, therefore, I, Andrew Johnson, President of the United States, do hereby proclaim and declare that the aforesaid decree is held, and will be held by the United States, to be absolutely null and void as against the Government and citizens of the United States, and that any attempt which shall be made to enforce the same against the Government or citizens of the United States will be disallowed.

In witness whereof I have hereunto set my hand, and caused the seal of the United States to be affixed.

Done at the City of Washington, on the seventeenth day of August, in the year of our Lord one thousand eight hundred and sixty-six, and of the independence of the United States of America the ninety-first.

ANDREW JOHNSON.

By the President:

WM. H. SEWARD, Secretary of State.

Mr. Bigelow to Mr. Seward.

LEGATION OF THE UNITED STATES,
PARIS, October 12, 1866.

SIR: The Marquis de Moustier received the diplomatic body yesterday for the first time. In reply to a question of mine, he said that the policy of his government toward the United States and Mexico would not undergo any change in consequence of the change of his department. His excellency wished me to understand and report to you that he saw the emperor at Biarritz; that his majesty expressed his desire and intention to retire from Mexico as soon as practicable, and without reference to the period fixed in the convention with Maximilian, if shorter time will suffice. His excellency then went on to say that the "dissidents," according to late reports, are gaining ground, but that it is not the intention of the emperor to undertake new and distant expeditions to reduce them; that there was some talk of retaking Tampico, but what was decided upon had not yet transpired in Paris. He said the position of France was a delicate one, and that there was nothing the emperor desired more than to disembarass himself of all his engagements with Mexico as soon as he could with dignity and honor, and that with our aid—upon which he counted—the time might be very much shortened.

The instructions to Mr. Campbell, the minister to Mexico, dated October 20, 1866, ordering him to proceed on his mission with Lieut.-Gen. Sherman, direct "that, as a representative of the United States, you are accredited to the republican government of Mexico, of which Mr. Juarez is President. Your communications as such representative will be made to him, whosoever he may be, and in no event will you officially recognize either the Prince Maximilian, who claims to be emperor, or any other

person, chief, or combination, as exercising the executive authority in Mexico, without having first reported to this department, and received instructions from the President of the United States. Secondly, assuming that the French military and naval commanders shall be engaged in good faith in executing the agreement before mentioned for the evacuation of Mexico, the spirit of the engagement on our part in relation to that event will forbid the United States and their representative from obstructing or embarrassing the departure of the French. Thirdly, what the Government of the United States desires in regard to the future of Mexico is not the conquest of Mexico, or any part of it, or the aggrandizement of the United States by purchases of land or dominion; but, on the other hand, they desire to see the people of Mexico relieved from all foreign military intervention, to the end that they may resume the conduct of their own affairs under the existing republican government, or such other form of government as, being left in the enjoyment of perfect liberty, they shall determine to adopt in the exercise of their own free will, by their own act, without dictation from any foreign country, and of course without dictation from the United States. It results, as a consequence from these principles, that you will enter into no stipulation with the French commanders, or with the Prince Maximilian, or with any other party, which shall have a tendency to counteract or oppose the administration of President Juarez, or to hinder or delay the restoration of the authority of the republic. On the other hand, it may possibly happen that the President of the Republic of Mexico may desire the good offices of the United States, or even some effective proceedings on our part, to favor and advance the pacification of the country so long distracted by foreign combined with civil war, and thus gain time for the reestablishment of national authority upon principles consistent with a republican and domestic system of government. It is possible, moreover, that some disposition might be made of the land and naval forces of the United States without interfering within the jurisdiction of Mexico, or violating the laws of neutrality, which would be useful in favoring the restoration of law, order, and republican government in that country. You are authorized to confer upon this subject with the republican government of Mexico and its agents, and also to confer informally, if you find it necessary, with any other parties or agents, should such an exceptional conference become absolutely necessary, but not otherwise. You will by these means obtain information which will be important to this government, and such information you will convey to this department, with your suggestions and advice as to any proceedings on our part which can be adopted in conformity to the principles I have before laid down. You will be content with thus referring any important propositions on the subject of reorganization and restora-

tion of the republican government in Mexico as may arise to this department, for the information of the President. The Lieutenant-General of the United States possesses already discretionary authority as to the location of the forces of the United States in the vicinity of Mexico."

Mr. Bigelow to Mr. Seward.

LEGATION OF THE UNITED STATES, PARIS, Nov. 8, 1866.

SIR: The Minister of Foreign Affairs informed me on Thursday last, in reply to a question which newspaper rumors prompted me to address him, that it was the purpose of the emperor to withdraw all his troops from Mexico in the spring, but none before that time. I expressed my surprise and regret at this determination, so distinctly in conflict with the pledges given by his excellency's predecessor (M. Drouyn de Lhuys) both to you, through the Marquis de Montholon, and also to myself personally. The marquis assigned considerations of a purely military character, overlooking, or underestimating, as it seems to me, the importance which this change might possibly have upon the relations of France with the United States. I waited upon his majesty yesterday, at St. Cloud, repeated to him what the Marquis de Moustier had told me, and desired to know what, if any thing, could be done by me to anticipate and prevent the discontent which I felt persuaded would be experienced by my country-people, if they received this intelligence without any explanation. The emperor said that it was true that he had concluded to postpone the recall of any of his troops until spring, but that in doing so he had been influenced by entirely military considerations. At the time he gave the order the successors of the disidents, supported as they were by large reinforcements from the United States, seemed to render any reduction of his force then perilous to those who remained behind. His majesty went on to say that he sent General Castelnau to Mexico, charged to inform Maximilian that France could not give him another cent of money, nor another man. If he thought he could sustain himself there alone, France would not withdraw her troops faster than had been stipulated for by M. Drouyn de Lhuys, should such be his desire, but if, on the other hand, he was disposed to abdicate, which was the course his majesty counselled him to take, General Castelnau was charged to find some government with which to treat for the protection of French interests, and to bring all the army home in the spring. His majesty appeared to realize the importance of having an understanding with the President upon the subject, and I left with the impression that he intended to occupy himself with the matter at once. There is but one sentiment here about the determination of France to wash her hands of Mexico as soon as possible. Nor have I any doubt that the emperor is acting in good faith toward us. The fact which the emperor admitted in this conversation, that he had advised Maximilian to abdicate, has prepared me to expect every day the announcement of his abdication; for such advice, in Maximilian's dependent condition, is almost equivalent to an order. That it would be so regarded is, I think, the expectation of the emperor, and ample preparations for the early repatriation of all the troops have, I believe, already been made by the Ministers of War and Marine. The emperor stated that he expected to know the final result of Castelnau's mission toward the end of this month.

November 23, 1866. Mr. Seward, in a dispatch to Mr. Bigelow, protested against this change on the part of the emperor of the plans of the French Government in withdrawing its troops.

The efforts of General Santa Anna to enlist

the Government in his views in reference to Mexico, received no further recognition than the information that the Executive Government holds intercourse affecting the international relations of the United States and Mexico only with accredited representatives of the republic of Mexico.

CANADA.—The action of the Government in reference to the conviction of persons taken prisoners during the Fenian invasion of Canada, is set out in the following:

TO THE PRESIDENT: The Secretary of State, to whom were referred two resolutions of the House of Representatives, passed on the 23d of July instant, in the following words, respectively:

Resolved, That the House of Representatives respectfully request the President of the United States to urge upon the Canadian authorities, and also the British Government, the release of the Fenian prisoners recently captured in Canada.

Resolved, That the House respectfully request the President to cause the prosecutions instituted in the United States courts against the Fenians to be discontinued, if compatible with the public interests.

has the honor to report in regard to the first resolution that the Government of the United States holds no correspondence directly upon any subject with the Canadian authorities mentioned in the said resolution, or with the authorities of any colony, province, or dependency of any other sovereign State, and that, on the contrary, all its correspondence concerning questions which arise in or affect or relate to such colonies, provinces, or dependencies, is always conducted exclusively with such foreign governments.

On the 11th of June last a note was addressed by this Department to the Hon. Sir Frederick W. A. Bruce, her majesty's minister plenipotentiary residing in the United States, of which a copy is herewith annexed. It is proper to say, in relation to that note, first, that the reports mentioned therein, to the effect that prisoners had been taken on the soil of the United States and conveyed to Canada, and threatened by Canadian agents with immediate execution, without legal trial, were found on examination to be untrue and without foundation in fact. It is due to the British Government to say, in the second place, that the representations made in the said note have been received and taken into consideration by the British Government and by the Canadian authorities in a friendly manner.

The resolution of the House of Representatives first recited, harmonizing as it does with the spirit of the aforesaid note, will be brought to the attention of her majesty's government and of the Canadian authorities, with the expression of a belief on the part of the President that affairs upon the frontier have happily come to a condition in which the clemency requested by Congress may be extended without danger to the public peace, and with advantage to the interests of peace and harmony between the two nations.

I have already received your directions that the second of said resolutions be taken into consideration by the proper departments of the Government, with a desire that it may be found practicable to reconcile the humane policy recommended with the maintenance of law and order, the safety of the public peace, and the good faith and honor of the United States. Respectfully submitted,

WILLIAM H. SEWARD.

Mr. Seward to Sir Frederick W. A. Bruce, British Minister.

DEPARTMENT OF STATE, WASHINGTON, June 11, 1866.

SIR: The Secretary of War has laid before the President several dispatches, which were received yesterday and to-day from Major-General Meade, who is

commanding the United States forces on the Canadian frontier. These communications warrant the President in believing that the so-called Fenian expedition is now entirely at an end, and that order and tranquillity may be expected to prevail henceforth upon that border. I regret, however, that I am obliged to connect with this gratifying information the further statement that reports have reached Major-General Meade to the effect that some of the Canadian or British troops have crossed the line and entered within the territory and jurisdiction of the United States. It is even said that this entry took place after the disturbers of the peace under the command of the leader Spear had relinquished their forbidden enterprise, and withdrawn within the boundary line of the United States. The reports go so far as to say that prisoners have been taken on the soil of the United States, and conveyed to Canada, and that the Canadian agents have threatened that these prisoners, together with such stragglers as may now be found within the Canadian lines, will be executed without legal trial. It is believed that these reports are exaggerated. Care has been taken by Major-General Meade to have them promptly investigated.

In the mean time I am instructed by the President to represent to you, and through you to the British and Canadian authorities, that this Government would not look, without serious concern, upon the practice of any unnecessary severity, especially on the exercise of retaliation or other illegal proceedings upon the persons of such of the offenders as have fallen or shall hereafter fall into the hands of the Canadian authorities. I respectfully invite your attention to this subject, with the confident expectation that no proceedings that are not authorized and in conformity with law will be taken against persons of that class, and in the hope that even the customary administration of the law will be tempered with special forbearance and clemency. In view of the effective proceedings which this Government has adopted in regard to the disturbances on the frontier now so fortunately ended, these representations would have been made by me without waiting to be moved from another quarter. They are now made, however, with the approval of Major-General Meade, and I believe that they will receive the concurrence of the Congress and people of the United States.

I have the honor to be, sir, your obedient servant,
WILLIAM H. SEWARD.

The Hon. FREDERICK W. A. BRUCE.

DISINFECTANTS. This term, in its broadest sense, includes all agents which, on the one hand, destroy or render harmless the products of putrefaction or infection, or, on the other, induce in organic bodies a condition such that they are temporarily or permanently prevented from undergoing putrefactive change.

Thus, such agents are divisible into two tolerably distinct classes: those which prevent putrefaction in bodies to which they are applied, are distinguished as *antiseptics*; and those which in any way so act on the escaping products of putrefaction, or of certain diseased actions, as effectually to remove these or render them innocuous, and hence to purify air, water, clothing, or apartments that have become contaminated with them, are termed *disinfectants*, in the more strict and proper sense. Agents which merely disinfect, thus neutralize or destroy the noxious emanations or discharges of decomposition or disease, but have no power to protect still sound and healthy organic substance against the continuance or renewal of decomposition; and, in many cases, as those of

the examples just named, they tend even to expedite the destructive process, at the same time that they oxidize or remove its products. Substances which remove deleterious or offensive odors, are called *deodorizers* or *deodorants*.

Besides that air serves as a diluent and mechanical medium for the removal of noxious emanations, its oxygen also, and especially when, through any cause, present in the active form, or as *ozone*, directly acts on many forms of such diffused matters, oxidizing and decomposing them into products of more innocent nature. Both in the air of the country, and in that of the streets and open spaces of towns, and of course even within apartments, this beneficial action of oxygen is more or less, but continually going on. And the consumption of the active oxygen itself in this process is doubtless one chief reason why the air of the central parts of large cities usually shows little ozone. Indeed, Dr. R. Angus Smith states, in reference to the city of Manchester, that a wind of some fifteen miles an hour becomes quite exhausted of ozone before passing to the distance of a mile within (we may suppose) its denser portions.

Many chemical agents, and some of which will be again referred to, simply act to supplement or rapidly consummate, upon deleterious emanations or other products of putrefaction or disease, this action which the air partially, or at least more slowly, effects; doing this either in the way of furnishing oxygen, and often in the ozonic condition, or of yielding some similarly active element, as chlorine. The extent and variety of relations of the subject will render it evident that the space here occupied does not contemplate a systematic view of methods and materials generally such as, under a great diversity of circumstances, are resorted to for purposes of disinfection; and, in fact, little will further be attempted beyond calling attention to a few of the more effectual, and in particular of the more recent, of such agencies. The reader may profitably consult also the articles on this subject in the *NEW AMERICAN CYCLOPEDIA*, and in the *SUPPLEMENT to Ure's Dictionary*, and the pamphlet of Dr. E. R. Squibb, on *Disinfectants*, New York, 1866.

Summary of Important Disinfectants, Oxidizing, and Reducing.—Among important disinfectants of an oxidizing character should be named the *nitrites of zinc, iron, and lead* (the last in solution known as "Ledoyen's Fluid"); both the *sulphates of iron*, which, like the nitrites named, part with oxygen in large quantities, destroying the products of putrefaction—the sulphates becoming reduced to sulphides, but having meantime the disadvantage of sometimes evolving sulphuretted hydrogen (sulphidric acid gas); *quicklime*, the action and uses of which are generally familiar; the "*Calc Powder*"—quicklime 2 or 4 parts, charcoal 1 part; a compound recommended by Dr. Squibb, and employed by the Board of Health of New York, being a modification of the formula (1

part peat charcoal, 1 part quicklime, and 4 parts sand or gravel, to insure dryness) adopted by the British Sanitary Commission in the Crimean war; solution of *sulphates of zinc and copper* ("Lanaude's Disinfectant"), and the *permanganate of potash or soda*, in solution known in England as "Condy's Fluid"—sp. gr. about 1.055, and containing some 6 per cent. of the salt—the compounds named being such as freely give off oxygen, as ozone, and which in due quantity and with time to act, disinfect very efficiently, oxidizing even sulphuretted and phosphuretted hydrogen, and attacking all forms of organic matter, so that their prolonged application may prove injurious to clothing or other fabrics; while being expensive, they are perhaps generally best suited to the purification of drinking water—adding till they impart a faint pink tinge, letting the water stand awhile, and then filtering.

The agents now named being slightly or not at all volatile, their action is mainly limited to the matters to which they are applied, although, by being sprinkled or set at different points, or suspended in shallow vessels within a room, they may act advantageously on the air. *Nitric acid*, however, or rather the *nitrous acid* fumes, yielded by it, as when a piece of copper is immersed in the former acid, or when sulphuric acid is allowed to act on nitre, proves a very efficient volatile disinfectant, though the fumes cannot be breathed with safety. It may here be added that a strong solution of permanganate of potash has been found beneficial as a local application to carbuncle, ulcers, and gangrene; though, in case of the last, *bromine* is perhaps more efficacious.

As disinfectants generally acting in the way of *deoxidizing* or *reducing* gases or putrid matters, should be named—first, those which chiefly abstract oxygen, as *sulphurous acid*, present in the fumes of burning sulphur (this acid, however, sometimes parting with its oxygen and precipitating sulphur), and which, in itself and in its compounds, acting under certain circumstances to prevent decomposition, preserves instead of destroying the valuable ingredients of manures. Among the compounds of sulphur also proving useful, are the *sulphites of soda, magnesia, and lime*, and, again, the element *phosphorus*, a stick of which partly immersed in water gradually gives off fumes to the air at ordinary temperatures, thus destroying offensive emanations in rooms, in which it is so exposed—a material, however, which requires care in handling, and the action of which should not be carried to excess. Secondly, those agents which chiefly act by abstracting hydrogen, as the elements *bromine* and *iodine*, that volatilize spontaneously from an open vial or dish, but that also require to be watched in the respect of quantity, while the former at least is a very prompt and powerful antiseptic; and *chlorine*, a gaseous disinfectant very commonly availed of, yet, like those just named, liable in ex-

cess to prove irritant—this gas being freely liberated by a mixture of common salt and binoxide of manganese (finely ground), and to which a little dilute sulphuric acid is added, cold; or from the so-called *chloride of lime* (mixed hypochlorite, chlorinated lime, or bleaching powder), treated with the same acid or with vinegar; and which is also slowly given off to the air, or more rapidly to organic matters the latter are brought in contact with, by the *hypochlorite of soda* ("Labarraque's Disinfecting Liquid"); by the *chloride of zinc* ("Burnett's Fluid," or "Drew's Disinfectant"), a material scarcely used for ordinary disinfection, except for the discharges of the sick, and then sufficing usually in the quantity of a table-spoonful; by the *protochloride* and *sesquichloride* (chloride, or perchloride) of *iron*, in reference to which some authorities adopt a like view; by the *chloride of manganese*; and by a solution of a mixture of this with the corresponding salt of *iron* (the neutralized refuse liquors from the manufacture of chlorine), one gallon of which is said to disinfect 10,000 gallons of ordinary sewage. The action of chlorine and the chlorides, now explained, is one by which certain nitrogenous matters prominent among the products of putrefaction are destroyed; but for a like reason such agents are generally unsuitable for mixture in any considerable quantity with the material of manures.

Besides quicklime, strong acids also, as the *sulphuric, hydrochloric, and nitric*, are sometimes directly applied to putrescent matters which it is desired to correct, and the latter agents, not merely by reason of their property of combining with and removing ammoniacal and other bases, but also for their action in the way of rapidly carbonizing or otherwise destroying the materials referred to; but the tendency of these agents to generate, during the destructive process, and so to fill the air with large amounts of offensive gases, requires to be borne in mind. Of acid disinfectants, Dr. R. A. Smith prefers *vinegar*, and especially wood-vinegar (impure pyroligneous acid), as containing a little creosote. Vinegar is also, like sulphurous acid, highly suitable for fumigations; but both, and the latter very especially, are liable to tarnish bright metallic surfaces.

Carbolic and Cresylic Acids, and their Combinations.—From very early times, not only the smoke of burning pitch or tar, but also these bodies in substance, and it appears certain products obtained from distillation either of pitch or wood, among the latter being pyroligneous acid (known, among other names, also as wood-spirit, and, when pure, methylic alcohol), and creosote, have been employed in various ways and to good purpose as antiseptic and disinfectant agencies. Indeed, not only wood and coal tar, but several also of the components separable in more or less pure form from these—some of them, like the methylic alcohol, characterized by properties which ally them to common alcohol, also an antiseptic

—are bodies which powerfully act to resist, if not also to correct, the putrefactive change in organic matters.

Creosote, first distinctly determined as separated from wood-tar, but now, perhaps, chiefly procured by distillation of coal-tar—the product distilling over between about 400° and 480°—is found when pure, at least from the source last named, to consist almost entirely of *creosylic acid* ($C_{11}H_8O_2$), its specific gravity at 68° being 1.037. Much of what is now called creosote, however, is but an impure form of *carbolic acid* ($C_6H_5O_2$), a substance homologous with the former, obtained from the portion of coal-tar distilling between about 300° and 400°, and having at 64° a specific gravity of 1.066. Indeed the carbolic acid and the creosote (properly *creosylic acid* in the main) of commerce, are alike seldom pure, each being usually mixed with some portion of the other, and also with some naphthalene, chinoline, etc., and to which latter their coal-tar odor is largely due; while Dr. Letheby states that other coal-tar acids, the value of which is less, are also to some extent sold as carbolic acid.

Other names somewhat commonly applied to this substance are those of *phenic acid*, *phenol*, and *phenylic alcohol*. Pure carbolic acid is a white crystalline solid, melting at about 93° F., and distilling at about 356° [370°, Uxg]; but very little oily impurity or water suffices to liquefy it, and for disinfecting purposes it is usually supplied in the liquid form. *Creosylic acid* is liquid at ordinary temperatures, boiling at 397°. The commercial creosote dissolves by agitation in water in the proportion of about one part to eighty, by measure. It appears to be established that, for purposes of disinfection, carbolic and *creosylic acids* have about equal value, and far surpass other coal-tar products, so that they may indeed be regarded as the active antiseptic principles of the tar. The experiments of Mr. Wm. Crookes go to prove that these acids do not (at least chiefly) act, like sulphurous acid, by taking up oxygen—though the tendency of both of them in presence of bases to oxidize into *rosolic acid*, would intimate that in some cases such action may take part in degree; while in others of those experiments, incipient putrefaction in flesh was slowly corrected, and both such flesh and that which was fresh, being, after soaking for an hour in a one per cent. aqueous solution of carbolic acid, hang up in the air of a warmed room, dried, and kept indefinitely; as, by a like application, animal membranes were preserved; and small quantities of the acid sufficed to prevent decomposition in animal size and glue, even in hot weather. Generally, indeed, according to most authorities, carbolic and *creosylic acids* exert little effect as disinfectants—that is, in the way of correcting fetid gases or other products of putrefaction, their chief value consisting in their strictly antiseptic power. Dr. Smith considers their action in this respect one of presence or contact, though in the way of inducing a stable

rather than an unstable condition, and as the opposite of *catalysis*. Dr. Squibb regards these acids as in use liable to the disadvantage of sometimes themselves undergoing changes of a chemical character.

In respect to the disinfectant value of carbolic acid, Dr. Letheby does not wholly coincide with the other authorities cited; and he states that it is used (in London) as the sole agent of disinfection for privies, drains, and sinks, and for the sewers and public roads. For the former, it is poured in in a concentrated state; for the latter, diluted with 2,000 times its bulk of water, and sprinkled on the public way by means of the water-carts. The acid thus finding its way to the sewers, the usual decomposition of the sewage is arrested, putrefaction and evolution of offensive gases being replaced by an air slightly charged with carbonic acid and light carbide of hydrogen (marsh-gas). He mentions also a carbolate of lime, believed to be a chemical compound, and containing about 20 per cent. of the acid, but the value of which is destroyed by mixing it with the so-called chloride of lime. The carbonic acid of the air, slowly acting on the former salt, sets free the carbolic acid, which is thus diffused through the air in sufficient quantities to act as a disinfectant, without destroying the colors of clothing. In summing up, Dr. Letheby recommends as best for the disinfection of sick-rooms, chlorine and the chlorinated lime; for that of drains, middens, and sewers, carbolic acid and carbolate of lime; and for that of discharges from the human body, carbolic acid, chloride of zinc, and sesquichloride of iron.

Dr. Gibbon, health officer of the Holborn district, during the season of cholera in 1866, in order to avoid the danger of spreading the disease, practised plunging the infected clothing, within the rooms of patients, into a mixture of boiling water and carbolic acid. The use of this disinfectant is stated also to have been ordered in the British navy, to take the place of Burnett's chloride of zinc, and partly because of the number of deaths occurring from the swallowing of the latter solution through mistake; but at least one death in a similar manner from solution of carbolic acid is already reported, and other cases of injury from incautious use of it have occurred. M. Bobœuf patented in France, in 1861, an alkaline solution of carbolic acid (*Phénol sodique Bobœuf*), as a local hæmostatic and antiseptic, its chief use being for stopping the flow of blood from wounds, and which obtained the Montyon prize of the French Institute. Carbolic acid lozenges have also been prepared for use as an internal antiseptic, their flavor being sufficiently biting to prevent their being consumed as confectionery by children. Indeed, Dr. Sanson adopted at the University College Hospital, London, a treatment of cholera which may be characterized as both externally and internally antiseptic. He argues in favor of

the use of agents of such character as *sulphites* and *carbolic acid* or *carbates*, in place of the chlorides (as of mercury) commonly employed. He administered internally the sulphite of soda, and also carbolic acid (one drop, with three of chloroform); and though the practice was still under trial, the author speaks favorably of its results. The 18th volume of the *Chemical News* (January to June, 1866) contains several notices of the use of disinfectants in connection with the arrest or prevention of the *rinderpest*, in which, it may be added, the editor believes that carbolic acid serves as the best agent of disinfection.

For general use during seasons of epidemic cholera, Dr. Squibb strongly recommends, on the score both of efficiency and cheapness, the two familiar agents, *quicklime* (ground to a coarse powder, and used in mass, and as a whitewash), and *charcoal* (recently burned, dry, and also ground coarsely), and the mixture of these already named, the "calx powder." The quicklime and calx powder, and also chloride of lime, sulphate of iron (copperas), permanganate of potash, and Labarraque's solution, are the agents which were chiefly employed and recommended by the Board of Health of New York, during the existence of cholera in that city and suburbs in 1866, the copperas being used in strong solution for water-closets, bed-pans, etc., and the permanganate for disinfecting clothing and towels, when not convenient to boil such at once; and the success of the board in controlling the epidemic as well as low fevers by these agencies, and preventing their spreading, are known to have been very decided and satisfactory. Dr. Squibb urges also the value of fumigation with a strong smoke of green wood for the disinfection of empty tenement houses, hovels, stables, cellars, etc., such a smoke carrying with it carbon, creosote, pyroligneous acid, carbonic oxide and acid, etc., and thus proving powerfully antiseptic and disinfectant; while its effects may often be completed by afterward cleansing and whitewashing. Finally, besides quicklime, charcoal, and their mixture already named, and even before them in importance as general disinfectants, he ranks *heat*, and the various means of disengaging and applying *chlorine*; and he urges the propriety generally of occasionally intermitting or changing the disinfectant agents used.

Charcoal should be of recent burning, dry, and coarsely powdered. Water heated to 212° proves a decided disinfectant. To destroy the infectious poisons in clothing, etc., Dr. Squibb would heat in an oven to 280°; while Dr. Tanner and others declare that 220° suffices. For dwellings and public buildings a complete disinfection may doubtless usually be maintained by means of four natural or simple agencies: sunlight, cleanliness, ventilation, and a properly—but not over—drying heat.

Several disinfecting compounds of a special character besides those already named, and

many of them protected by patent, have also come into use. McDougall's "Disinfecting Powder" contains sulphurous and carbolic acids, or the former and creosote, and is used in correcting dampness and putrefaction or offensive matters in stables, cow-houses, water-closets, etc. In England, also, various other preparations, as disinfecting soaps, and Condry's "Patent Ozonized Water" for the bath, toilet, and purification of drinking water, etc., are employed.

A compound disinfecting powder known as the "Phoenix Disinfectant," invented by Mr. Henry Napier, is now manufactured by the Phoenix Chemical Company, at Elizabeth, N. J. The inventor describes the compound as a *sulphocarbonate of alumina*, with addition of a small percentage of *sesquichloride of iron*, and of *sulphite of magnesia*. The alumina base serves, not merely while the preparation is kept in bulk, to aid in retaining its active constituents, but also when the powder is applied, to absorb gases, especially the sulphuretted, phosphuretted, and ammoniacal, so commonly evolved in connection with decomposition, the sulphite contained aiding also in the removal of such gases; while further, when applied or exposed, the mixture gives off both carbolic acid and chlorine, for disinfection of the air. This preparation is recommended for the prevention of putrefaction in animal or vegetable matters or refuse, or arresting it where commenced—actions chiefly effected by the carbolic acid; and for the correction or absorption of gases given off by putrid, fecal, or other matters—an object chiefly attained by action of the sesquichloride of iron. The mixture may be applied in private dwellings, cellars, streets, hospitals, sick-rooms, etc., and for drains, cess-pools, stables, shipping, etc. The inventor states that the compound gives off no injurious gas; that it does not injure manures, but acts to absorb and retain their fertilizing ingredients; that it effectually removes noxious and offensive emanations, and that it is not expensive; though his statement further, that it is "not poisonous," can of course be understood only in a relative and qualified sense. The disinfectant has been already approved by the boards of health of three or more cities, by proprietors of several public buildings, and others.

Finally, the reader is referred, as especially connected with the subject of disinfection (besides sources previously named), to the treatise of Dr. A. E. Sansom, entitled "*The Arrest and Prevention of Cholera, being a Guide to the Antiseptic Treatment*," London, 1866; to a communication of Dr. Letheby, Health Officer of London, "*On the Practice of Disinfection*," republished in the *Chemical News* of December 7, 1866; and to the "*Reprint from the Appendix to the Third Report of the Cattle Plague Commission*," London, 1866," by Mr. William Crookes, and some extracts from which have here been presented.

DRAPER, SIMEON, a distinguished citizen of New York, and a leading politician, born, 1804; died at Whitestone, L. I., November 6, 1866. He was educated for mercantile life, and was for many years a prominent merchant of New York. Being unfortunate in business, he became an auctioneer, in which position he was eminently successful.

In the political affairs of the State and nation Mr. Draper took a deep interest and active part. He held a prominent place in the old Whig party of his State, and was for many years the personal and political friend of William H. Seward. In later years the political relations of the two were broken up—Mr. Draper, soon after the formation of the Republican party, becoming a decided opponent of Mr. Seward's policy. Mr. Draper was several times a member of the Whig State Central Committee, and in 1864 was chairman of the Union State Central Committee.

For many years before the war he was president of the Board of Ten Governors having charge of the city charities. When the law creating this board was repealed, he was appointed a Commissioner of Public Charities and Corrections, and retained that post until 1864, when he resigned the position, to which Comptroller Brennan succeeded. His administration of these offices was almost universally commended. In 1862 he was appointed Provost Marshal for the city. In 1864, by appointment of President Lincoln, he succeeded Mr. Barney as Collector of the Port of New York. He resigned this position in 1865. At the time of his death Mr. Draper was the Government cotton agent, having charge of all the cotton received at the port of New York. He was a man of much ability, and exerted a marked influence in the circles in which he moved, whether of politics or trade. He had a very thorough knowledge of political affairs, and had many warm political adherents. He was a man of generous impulses and the strictest integrity.

DUTTON, SAMUEL WILLIAM SOUTHWAYD, D. D., a Congregational clergyman and writer, born in Guilford, Conn., March 14, 1814, died at Millbury, Mass., January 26, 1866. His ancestry upon both sides were distinguished for piety and substantial intelligence, and his early training was well calculated to develop the best faculties of his nature. He graduated at Yale College in 1833, and spent the following year in teaching in Mount Hope College, Baltimore, Md. In September, 1834, he was chosen rector of the Hopkins Grammar School, in New Haven, and held the position one year. From 1836 to 1838 he was a tutor in Yale College, and from 1835 to 1838 pursued his theological studies in the seminary there.

Having accepted a call to become the pastor of the North Church in that city, he was ordained June, 1838, and remained in this relation until his death, a period of more than twenty-seven years, with an influence extend-

ing widely beyond the limits of his parish. As a preacher, he was characterized by plainness, directness, and simplicity. He was also widely known for his whole-souled generosity and humanity, and his house was the resort of the poor, the widow, and the fatherless, who, without respect to color or nation, were sure of the needed help. Very early in his ministry he took an open and decided anti-slavery stand, holding firmly his position through evil report and through good report till the day of triumph and deliverance. In 1842 he published a history of the North Church in New Haven during the last century. In 1843, upon the establishment of the *New Englander*, he became one of the associate editors, and from that time contributed to its pages more articles than any other writer save Dr. Bacon. He also published various addresses and sermons. In 1856 Mr. Dutton received the title of D.D., from Brown University.

DWIGHT, THEODORE, an editor and author, born in New Haven, Conn., 1797; died in Brooklyn, October 16, 1866, from injuries received by a railroad accident. He was the son of the late Hon. Theodore Dwight, member of Congress from Connecticut, and nephew of Dr. Timothy Dwight, President of Yale College. He entered Yale College at the age of fourteen, and graduated with high honors in 1814. Having been converted during this period, he resolved to study theology, and devote his life to the ministry, but his studies were interrupted by a severe attack of hemorrhage of the lungs, and he was ordered abroad by his physician. He visited Great Britain, where he spent a year, and in 1821 again went abroad, and this time travelled over the greater part of Europe. On his return he wrote his first book, entitled "A Tour in Italy." His hopes of entering the ministry having been frustrated, he henceforth devoted his life to literary and philanthropic pursuits, occasionally giving instruction to both young ladies and gentlemen. In 1838 Mr. Dwight removed to Brooklyn, where he identified himself with the greater part of the public enterprises instituted for the good of the city. In the origination and organization of the public schools he was one of the principal and most energetic movers, often inviting to his house boys whom he met in the streets, and interesting them in study. He was engaged in several magazines and periodicals, and at one time was publisher and editor of the *New York Presbyterian*. Through the greater part of his life he was accustomed to write for the leading daily and weekly newspapers, and for the best periodicals. He was a most highly cultivated man, being familiar with most of the languages now spoken, conversing with great ease in French, Italian, Spanish, and Portuguese, besides Greek and Hebrew. He was also conversant with German—though he never liked it—and Arabic, in which he conversed quite readily. He was a member of several scientific and philosophical societies, among which were

the Ethnological Society of New York and the Historical Society of Brooklyn. At the time of his decease he was engaged in the work of introducing our customs and books into the schools of the Spanish American States, and the

translation of our works of instruction into that language. He was a man of the most sensitive uprightness and sincerity, and was ever ready to lend a helping hand in the advancement of any good cause.

E

EASTERN CHURCHES, or **ORIENTAL CHURCHES**, is the collective name given to a number of churches in Eastern Europe, in Asia, and Northeastern Africa, which hold to the doctrine of the apostolical succession of bishops. These churches are: 1. The Greek Church. (See **GREEK CHURCH**.) 2. The Armenian Church. 3. The Syrian or Jacobite Church. 4. The Nestorian, or Chaldean Church. 5. The Coptic Church, in Egypt. 6. The Abyssinian Church. 7. The Christians of St. Thomas, in eastern India. The Maronites, another of these communions, has for several centuries been united with the Roman Catholic Church. Of all the others, the last-mentioned has gained over a portion, which have embraced her doctrines, but have retained some usages which differ from those of the Catholic Church, as the use of an Oriental instead of the Latin language at divine service, and the marriage of priests. Thus, there are "United Greeks" (and within a few years, "United Bulgarians"), "United Armenians," "Chaldeans" (united Nestorians), "United Syrians," "United Copts." More recently, an "Eastern Church Association" has been established in England for the purpose of bringing about a reunion between the Anglican and all the Eastern churches. This association last year published its first annual report, from which it appears that among its patrons are several Greek bishops of Servia. The report also states that negotiations are pending for a reunion between the Greek and Armenian Churches, and an account of these negotiations, written by the Greek Metropolitan of Ohios, is published in the report. The association presented a letter of Christian and brotherly greeting to the Synod of the Armenian Patriarchate assembled at Constantinople for the election of a new "Catholicos" (head of the Armenian Church) at Etshmiadzine. The Patriarch of Constantinople received the letter with great kindness and courtesy. (See **ANGLICAN CHURCHES** and **GREEK CHURCH**.)

At the election of a new "Catholicos" (head of the Armenian Church) at Etshmiadzine, a convent in Asiatic Russia, held in 1866, the candidate favored by the Russian Government was chosen over the one favored by the Turkish Government. There was, in 1866, a great excitement among the Armenian community in Constantinople. The Patriarch was reported as being eager to undermine the old predominance of the laity in the government of the "nation," and to secure for the

clergy a similar ascendancy and immunities to those enjoyed by the priesthood in Catholic countries. The attempt was as firmly resisted by most of the lay heads of the community, with whom, also, the greater part of the lower clergy have sided. The Sultan's Armenian subjects are mainly governed by a representative "national" assembly, with a secular and clerical *medjlis*—sub-committee—the whole chosen according to a fixed electoral law by the Armenians themselves. Finding himself successfully resisted by the liberal majority of the people and clergy the Patriarch resigned. The minister A'ali Pacha refused to accept his resignation, and abolished both the secular and clerical *medjlises*, naming a new mixed one of eleven members, chosen by himself to revise the constitution. In December, 1866, an American missionary at Constantinople wrote on the reformatory movements among the Armenians as follows:

For some time past a party in the Armenian Church has been laboring quietly for a thorough reform. The American missionaries in Turkey have labored among these people for thirty years, and have succeeded in carrying the Bible into every village. But church and nation are so confounded in Turkey that thousands have hesitated to leave their church, although they were convinced of its errors. Now these thousands are combining to compel the church to renounce these errors, and go back to the simple teachings of the Bible. They propose to retain the Episcopal form of church government as better adapted to Turkey than any other. Their Central Committee is in constant communication with Protestant pastors and missionaries, and is drawing up a creed as a basis for their party to act upon. An Armenian paper this week declares that all the young men are joining this new movement, and prophesies that it will succeed. I am not quite so sure about immediate success, for the corrupt ecclesiastical hierarchy has unlimited power for evil; but the movement is a striking evidence of the success of the American missionaries in bringing the people back to the Bible as their only sure guide.

The position of the Nestorians in Persia was greatly improved in 1866, consequent upon the English intervention in their behalf. The *Levant Herald*, of Constantinople, thus refers to their improved condition.

The sectarian quarrel between the Nestorians round Oorumiah has ended in the Roman Catholic party ousting the Protestants from a church which the latter had long occupied, and so leaving them (in the village concerned) without any place of public worship. As in every way the best means of smoothing over the quarrel, Mr. Alison recently set on foot a subscription to build the ejected Protestants a span new church of their own, and on the matter being mentioned to the Shah, his majesty most

generously and tolerantly headed the list with one hundred pounds, and the total amount is four hundred and sixty-two pounds four shillings. The Nestorians will thus, after all their sufferings, be gainers in the end; that is, the Persian Nestorians, for much remains to be done for those of them who live across the Turkish frontier. The Shah, as a farther mark of his favor, has appointed General Gehangir Kahn, an Armenian gentleman of distinguished merit, to represent the interests of the community.

ECUADOR, a republic in South America. President, Geronimo Carrion, since August 4, 1865. Vice-President, Dr. Rafael Carvajal; Minister of Finances, of the Interior and Exterior, Dr. Manuel Bustamante; Minister of War and of the Navy, Colonel Ignacio Veintimilla. The republic is now divided into the following ten departments; Pichincha, Imbaburas, Leon, Chimborazo, Esmeraldas, Oriente, Guayas, Manavi, Cuenca, Loja. Area, about 284,660 English square miles, but, as the eastern frontier is not yet fixed, others estimate it at from 190,890 to 343,602 English square miles. Population in 1858, 1,040,371, among whom 600,000 were descendants of Europeans. The capital, Quito, has about 76,000 inhabitants. The public revenue consisted, in 1865, of 1,401,300 piastres, and the expenditure of 1,399,672 piastres. The public debt, in 1865, amounted to 2,390,554, the interior debt to 3,692,955 piastres. The exports from the port of Guayaquil in 1864, amounted to 2,953,649 piastres (increase over 1863, 119,304 piastres); and that in 1865 to about 4,000,000 piastres. The number of entries, in the port of Guatemala in 1864, was 50 British mail steamers, and 171 other vessels (42 Ecuadorian, 78 Peruvian, 7 Chilean), together making 14,999 tons. In January, 1866, the Government of Ecuador joined the alliance of Chili and Peru against Spain, and subsequently, like the other allied republics, expelled all the Spanish residents from her territory. On November 26, President Carrion replied to the proposition of General Mosquera, of the United States of Colombia, relative to the convocation of another South American Congress, approving of the suggestion and declaring his readiness to send a delegate to the Congress.

EDGAR, JOHN, D.D., LL.D., an Irish Presbyterian clergyman and professor, born in County Down, Ireland, in 1797; died at Dublin, August 26, 1866. He was the son of the Rev. Samuel Edgar, D.D., a seceding minister of Ballymahinch, County Down. He received his elementary education in his father's academy; studied classics, science, and philosophy, in the Belfast College; theology in the Divinity Hall, under his father; and was ordained pastor of the Second Seceding Congregation, Belfast. On the death of his father, though young, he was chosen his successor in the divinity chair; and happily disappointed the fears of many, and realized the hopes of more, by the tact and judgment with which he conducted the class, the sound and extensive knowledge he imparted

to it, and the skilful training for ministerial service through which he led his pupils. On the union of the Secession Church with the Synod of Ulster, he continued to exercise his professorship in conjunction with Dr. Hanna, who had been professor of the latter body, till the death of that gentleman, after which he was sole professor in his department in the Assembly's College, till his death. Dr. Edgar did not confine his labors, in the cause of religion, to the duties of his professorship. He was the author of the temperance reformation in Ulster, and in the autumn of 1829, issued his first publication on the subject, which was followed at intervals by others, amounting to nearly one hundred, of which hundreds of thousands were circulated; and not only from the press, but from pulpits and platforms, in Scotland and England, as well as in Ireland, he ably and eloquently advocated the noble cause. Dr. Edgar was decidedly and intensely devoted to the Presbyterian system, but he loved and maintained Christian friendship for all good men. The plans for building manse and churches, and increasing ministerial support, had in him one of their most successful supporters, and to advance these, his liberality and influence were unfailingly devoted. All the missions of the church, foreign, Jew, and colonial, had in him a powerful advocate, but that to his Celtic countrymen was quite absorbing. The North Connaught Mission, whose centre is Ballinglen, with its missionaries, preachers, schools, industrial, and scriptural, colporteurs, etc., owed its origin and success mainly, under the blessing of God, to his exertion. In politics he was a Liberal, and ardently advocated the abolition of West India slavery. He also took a deep and abiding interest in the education of the deaf, dumb, and blind.

EGYPT, a dependency of Turkey in Africa. The Government of Egypt has, since 1841, been hereditary in the family of Mehemet Ali, according to the Mohammedan law of succession, which passes the throne from one member of the family to another in order of seniority. In May, 1866, the present viceroy of Egypt, Ismail Pacha (born 1816, succeeded his brother, Said Pacha, on January, 1863), prevailed upon the Turkish Government to grant him the right of succession in direct line, and the son of Ismail Pacha, Mechmed Yefwik Pacha, born in 1861, is, therefore, the presumptive heir to the throne. The territory subject to the viceroy of Egypt, embracing Nubia, the provinces of Kordofan and Takale, Taka, the territory of the Bareah, and other parts of Egyptian Soodan, extends on the White Nile as far as Helle-e-Deleb; on the Blue Nile, as far as Fazogl. Altogether its area is estimated at 657,510 English square miles, and the population at 7,465,000, of whom 4,806,691 belong to Egypt proper, 1,000,000 to Nubia, 400,000 to Kordofan and Takale, 88,000 to Taka, 20,000 to the territory of the Bareah, 1,700,000 to other parts of Egyptian Soodan. The population set down for Egypt proper is at-

cording to a census of 1862, when the country was divided as follows: 1. *Lower Egypt* (without the cities of Cairo, Alexandria, Rosetta, Yanta, and Suez), consisting of the provinces of Behereh, Rodat-el-Barein, Dakaliyyeh, Kaljoobiyyeh, Gizah, had, in 3,205 villages, 2,117,954 inhabitants. 2. *Middle Egypt*, divided into the provinces of Minyeh (and Beni-Mazar), Fayoom, and Beni-Suef, had, in 554 villages, 519,582 inhabitants. 3. *Upper Egypt*, embracing the provinces of Siout, Girge, and Kenne (and Esne), had, in 620 villages, 417,876 inhabitants. 4. The large cities and towns had the following population: Cairo, 256,700; Alexandria, 164,400; Damietta, 87,100; Rosetta, 18,900; Suez, 4,160; Yanta, 19,500. Among the inhabitants are about 150,000 Copts, 5,000 Syrians, 5,000 Greeks, 2,000 Armenians, 5,000 Jews. The yearly revenue of the Government is estimated at £8,000,000. The yearly tribute of the Turkish Government was formerly about £360,000, but was largely increased in 1866, when the porte granted to the viceroy the right of changing the law of succession. The army consisted, in 1863, of 21,000 men. The number of vessels was, in 1862, 7 ships of the line, 6 frigates, 9 corvettes, 25 smaller vessels, and 27 transports. The imports of Alexandria amounted, in 1864, to 492,987,258 Turkish piastres (20 Turkish piastres are equal to one dollar); and the exports to 1,146,905,253 piastres. The value of the exported cotton alone was \$74,213,500, against \$7,154,400 in 1860. The number of vessels entering, in 1864, the four Egyptian ports of Alexandria, Port-Said, Damietta, and Suez, amounted to 6,009 (of which 1,124 were steamers). The number of passengers was 68,678.

In November the Council of Ministers, under presidency of the viceroy, determined the basis and organization of a council of representatives, the creation of which had been for some time decided by the viceroy. The statute determining the electoral regulations is a follows:

ART. 1. The duty of the Assembly will be to deliberate upon the internal interests of the country, and to pronounce upon the matters which the Government may consider as coming within its functions. On such matters the opinion of the Assembly will be submitted to the approbation of the viceroy.

ART. 2. Every individual, not under twenty-five years of age, will be eligible for election, on condition of being honest, loyal, and capable, and certified as a native of the country.

ART. 3. No person can be elected whose property may be under sequestration by decree in consequence of bankruptcy, unless the insolvent has obtained a regular and complete discharge; also, no person having no means of existence, or who, during the year preceding his election, may have received public charity, nor any who may have undergone a criminal penalty, or been dismissed from the public service in consequence of a legal sentence.

ART. 4. The electors will be chosen among the inhabitants whose property shall not have been sequestered in bankruptcy, those who having been insolvent may have obtained a regular discharge, those who shall never have undergone a criminal penalty, who shall not have been dismissed the public service, and finally those who are not in active military service.

ART. 5. No person can be elected who may be in the Government service, and this regulation applies equally to the notables and heads of the villages as to those who may be in the service of any of them. All persons in the military service, either on the active or reserve list, fall under the same disqualification. On the other hand, every official having quitted the Government service without reprehensible motive, and every soldier whose term of service fixed in the reserve list shall have expired, may be elected if they satisfy the preceding conditions.

ART. 6. The election of the members of this Assembly having to take place in the provinces in proportion to the population, one or two persons will be elected in each district, according to the number of inhabitants; but at Cairo three representatives will be nominated, at Alexandria two, and at Damietta one only.

ART. 7. The inhabitants of every village assembling and choosing their Sheiks, the latter will naturally have the right to elect in the name of the population, provided they fulfil the required conditions. These Sheiks will meet at the Prefecture, each will write upon a balloting paper, which is to be kept secret and closed, the name of the person for whom he votes, and will deposit the paper in the electoral urn of his district.

ART. 8. The examination of the ballot, after the voting of the Sheiks, will take place in the presence of the Mudir, his officer, the chief of the police office, and the Cadi of the prefecture. The candidate who may obtain a majority of votes will be nominated representative of his district. In those cases where the votes may be equally divided between two candidates, they will decide the matter by drawing lots, and he who is successful will become the representative. In both cases the Sheiks present will sign a statement of the result of the election. At Cairo, Damietta, and Alexandria, the election of representatives will be determined by a majority of votes among the notables of the three cities.

ART. 9. The deputies are elected for a period of three years, at the expiration of which time new members will be elected according to regulations of Arts. 7 and 8.

ART. 10. The members of the Assembly will not exceed seventy-five in number.

ART. 11. The presence of two-thirds of the members is necessary to constitute a quorum. In the event of any member being unable to attend the Assembly from some important motive, he will notify the president to that effect one month before the opening of the session. If the Assembly do not consider the cause assigned a valid reason for non-attendance, the member will be notified to that effect. Should the member persist in not taking his seat in the Assembly a fresh election will be held to replace him in the mode prescribed.

ART. 12. The members will sit in person, and cannot in any way be represented in the Assembly.

ART. 13. As soon as the Assembly meets a committee will be appointed among the members which will proceed to verify the elections and ascertain that all the legal conditions have been duly fulfilled in the case of each deputy returned. Those elections found to be in order will be definitely confirmed. Those deputies whose elections may not fulfil all the conditions prescribed by law will be replaced by other persons chosen and duly elected in the same localities.

ART. 14. After this verification the committee will pronounce upon the validity of each election, and will make its report to the president, who will submit it to the viceroy, in order that each member may afterward receive a personal decree confirming him in his quality of representative for three years.

ART. 15. A regulation fixing the extent of the functions of the Assembly, as well as the rules to be observed in the debates, will be delivered to the Assembly, according to the customary usage in similar circumstances.

Art. 16. The Assembly will meet this year on the 16th of the month Hatour (November 18th), and will sit until the 10th of the month Touba (January 17, 1867). In the following years, however, the season will open on the 15th Kiahk (December 28th), and terminate the 15th Amcher (February 21st).

Art. 17. The viceroy will assemble, adjourn, prorogue, and dissolve the Assembly, and will notify the period for a convocation of a new Assembly within a certain fixed time.

Art. 18. The members of the Assembly can in no case receive petitions.

The opening of the first Council (which contained several Christian delegates) was subsequently postponed until November 27th. When the Viceroy, in his opening speech, reminded the delegates that his grandfather had put an end to the disorders which prevailed in Egypt, restored public security, and founded institutions which secured to the country a prosperous future. "My father (he added) continued the work which had thus been begun, aiming at the creation of an order of things in harmony with the state of modern society. Since my accession the constant object of my thoughts has been the development of public prosperity. I have often thought of establishing a representative council to consider important questions of an exclusively internal character. Such an institution possesses great advantages, constituting a safeguard and a protection of all interests. I have great satisfaction in now opening this council, and thank Providence for having permitted me to perform so solemn an act. I confide in your wisdom and in your patriotic sentiments. May God assist our efforts! In Him let us put our trust."

The address of the Egyptian delegates, in reply to the speech of the Viceroy, praises his administration, and expresses satisfaction that the Sultan, under the guidance of Divine inspiration, had granted to the present dynasty the right of direct hereditary succession to the vice-regal throne—a measure which the delegates consider to be the surest safeguard of the country's tranquillity, and the best guaranty for its future welfare. The delegates also thank the Viceroy for having established a National Assembly, and express their conviction that its deliberations, being inspired by earnest devotedness and enlightened patriotism, will conduce to public concord and to the prosperity of the land. The address concludes by invoking the blessing of the Almighty upon the Viceroy and his son.

The convention between the Viceroy of Egypt and the Suez Canal Company, relating to all the hitherto pending questions in connection with the construction of the canal, was signed on February 5th. The decision of the Emperor Napoleon as arbitrator has been strictly adhered to by the Viceroy. The Sultan telegraphed his approval of the convention.

ELECTRICITY. This is the science from which, above all others, mankind expect great things. To it belongs the most important scientific achievement of the year, the practical

annihilation of time and space between the Old and New Worlds. (*See TELEGRAPH, ELECTRIC.*) Since it can do so much, why cannot it do more? Why not light our streets, heat our houses, drive our locomotives and steamships, and heal our diseases? Really, there is no saying what would be visionary in our anticipations of the future of this science, for it is still in its infancy. Now that the electric telegraph has been brought to perfection, or, what is the same thing, made as good as the world requires, the men who have addressed their skill for some years to the improvement of that one useful application of electricity to the wants of the race, will naturally investigate more fully the other, perhaps more wonderful, possibilities of the mysterious power. To investigate in science, is to discover.

Paradoxical Phenomena in Electro-Magnetic Induction, a New and Powerful Apparatus.—At the April meeting of the British Royal Society, H. Wilde, Esq., reported a discovery which he had made of a means of producing dynamic electricity in quantities unattainable by any apparatus hitherto constructed. He has found that an indefinitely small amount of magnetism, or of dynamic electricity, is capable of inducing an indefinitely large amount of magnetism; and, again, that an indefinitely small amount of dynamic electricity, or of magnetism, is capable of evolving an indefinitely large amount of dynamic electricity. The apparatus with which the experiments were conducted consisted of a compound hollow cylinder of brass and iron, termed by the author a magnet-cylinder, the internal diameter of which was 1½ inch. On this cylinder could be placed at pleasure one or more permanent horseshoe magnets, each magnet weighing about 1 lb., and sustaining a weight of 10 lbs. An armature was made to revolve rapidly in the interior of the cylinder, in close proximity to its sides, but without touching. Around this armature 168 feet of insulated copper wire was coiled, 0.03 of an inch in diameter. The direct current of electricity was then transmitted through the coils of a tangent galvanometer; and as each additional magnet was placed upon the magnet-cylinder it was found that the quantity of electricity generated in the coils of the armature was very nearly in direct proportion to the number of magnets on the cylinder. When four permanent magnets, capable of sustaining collectively a weight of 40 lbs., were placed upon the cylinder, and when the sub-magnet was brought into metallic contact with the poles of the electro-magnet, a weight of 178 lbs. was required to separate them. With a larger electro-magnet, a weight of not less than 1,080 lbs. was required to overcome the attractive force of the electro-magnet, or 27 times the weight which the four permanent magnets used in exciting it were collectively able to sustain. It was also found that this great difference between the power of a permanent magnet and that of an electro-magnet, excited through its agency,

might be indefinitely increased. When the wires forming the polar terminals of the magneto-electric machine, were connected for a short time with those of a very large electro-magnet, a bright spark could be obtained from the electro-helices 25 seconds after all connection with the magneto-electric machine had been broken. Hence the author infers that an electro-magnet possesses the power of accumulating and retaining a charge of electricity in a manner analogous to that in which it is retained in insulated submarine cables, and in the Leyden jar. When four magnets were placed upon the cylinder, the current from the machine did not attain a permanent degree of intensity until after an interval of 15 seconds had elapsed; but when a more powerful machine was used for exciting the electro-helices, the current attained a permanent degree of intensity after an interval of four seconds.

Mr. Wilde then instituted experiments with a large electro-magnet excited by means of a small magneto-electric machine. The magnet-cylinders—two in number—had a bore of $2\frac{1}{4}$ inches, and a length of $12\frac{1}{4}$ inches. Each cylinder was fitted with an armature, round which was coiled an insulated strand of copper wire, 67 feet in length and 0.15 of an inch in diameter. Upon one of the magnet-cylinders 16 permanent magnets were fixed, and to the sides of the other magnet-cylinder was bolted an electro-magnet formed of two rectangular pieces of boiler-plate, enveloped with coils of insulated copper wire. The armatures of the $2\frac{1}{4}$ -inch magneto-electric and electro-magnetic machines were driven (by steam-power) at a velocity of 2,500 revolutions per minute. When the electricity from the magneto-electric machine was transmitted through a piece of No. 20 iron wire, 0.04 of an inch in diameter, a length of three inches was made hot; when the direct current from the magneto-electric machine was transmitted through the coils of the electro-magnet of the electro-magnetic machine, 8 inches of the same size of wire were melted and 24 inches made red hot. When the electro-magnet of a 5-inch machine was excited by the $2\frac{1}{4}$ inch magneto-electric machine, 15 inches of No. 15 iron wire 0.070 of an inch in diameter, were melted. A 10-inch electro-magnetic machine was then constructed, the weight of the electro-magnet being nearly 3 tons, and of the machine $4\frac{1}{2}$ tons. The machine was furnished with two armatures—one for “intensity” the other for “quantity” effects; the intensity armature was coiled with 876 feet of No. 11 copper wire, weighing 282 lbs., and the quantity armature was enveloped with the folds of an insulated copper-plate conductor, weighing 844 lbs. These armatures were driven at a uniform velocity of 1,500 revolutions per minute. When the direct current from the $1\frac{1}{4}$ -inch magneto-electric machine, having on its cylinder six permanent magnets, was transmitted through the coils of the 5-inch electro-magnetic machine, and the direct current from

the latter transmitted to the electro-magnet of the 10-inch machine, an amount of dynamic electricity was evolved from the quantity armature sufficient to melt pieces of an iron rod 15 inches long, and fully one-fourth of an inch in diameter. With the same arrangement the electricity from the quantity armature melted 15 inches of No. 11 copper wire, 0.125 inches in diameter. When the intensity armature was placed in the magnet-cylinder, 7 feet of No. 16 iron wire were melted, and 21 feet of the same wire made red hot. The illuminating power of the electricity from the intensity armature was so great as to cast shadows from the flames of the street lamps a quarter of a mile distant. When viewed from that distance, the rays proceeding from the reflector were said to have all the rich effulgence of sunshine. A piece of ordinary sensitized paper, when exposed to the action of the light for 20 seconds, at a distance of two feet from the reflector, was darkened to the same degree as when a piece of the same paper was exposed for one minute to the direct rays of the sun on a clear day in the month of March.

These extraordinary powers of the 10-inch machine are all the more remarkable, because they have their origin in six small permanent magnets, weighing only 1 lb. each, and capable collectively of sustaining only 60 lbs., while the electricity from the magneto-electric machine is of itself incapable of heating to redness the shortest length of iron wire of the smallest size manufactured.

Thermo-Electricity.—M. Becquerel has recently published an elaborate memoir on the thermo-electric power of different alloys and the construction of thermo-electric batteries. For thermo-piles of low temperatures he recommends an alloy consisting of equal equivalents of antimony and cadmium, with one-tenth the weight of bismuth for the positive metal, and an alloy of ten of bismuth to one of antimony for the negative metal. For piles of a high tension, the negative should be of German silver, and the positive may be either the above mixture of antimony, cadmium, and bismuth, or fused and annealed sulphide of copper; the latter stands the greatest heat, but also gives the highest resistance. Sulphide of copper being a very bad conductor of heat, it will scarcely be found necessary to cool the other ends; but this should be done when a metal is used, and the length of the bar should in that case be increased. Thermo-electric piles, on account of their low tension, cannot yet replace hydro-electric batteries, but for special purposes, and particularly for the study of radiant heat, they offer new facilities.

Electric Conductivity of Gases under feeble Pressures.—M. Morren communicates to the *Annales de Chimie et de Physique*, some account of his experiments on the electric conductivity of certain gases. For each gas there is a certain pressure, at which the conductivity is at its maximum, as follows:

	Max.	Millims.
Hydrogen.....	174 under pressure of	2.0
Oxygen.....	174 " "	0.7
Air.....	173 " "	0.7
Carbonic Acid....	168 " "	0.8
Nitrogen.....	162 " "	1.0

M. Morren remarks that the conductivity of compound gases which the current decomposes is generally very small, and commences late. Thus carbonic oxide commences to allow the current to pass only under a pressure of 11 millims; carburetted hydrogen of 16 millims; and sulphurous acid of 5 millims. Cyanogen allows the current to pass under a pressure of 5 millims. The passage of electricity through rarefied cyanogen is accompanied by brilliant luminous phenomena.

The Passage of the Spark of an Induction Coil through Flame.—M. A. Kundt contributes to *Pogg. Annalen* for May, his observations on this subject. He says that when the spark is passed through the flame the latter is intensely luminous in the path of the spark, and under certain circumstances a brightly luminous path of sparks is traversed by dark cross bands. During the transition of a spark the flame is always extinguished above; but the part below the spark is always constant and steady. The extinction of the upper flame at each spark is supposed to be due to the fact that the spark causes a very rapid combustion of the gases in its path, and then, by the mechanical pressure which the spark thereby exercises on all sides, the access of gas from below is prevented for a moment. The author viewed the phenomenon through a rotating disk, in which there were several narrow slits. Viewed at right angles to the direction of the passing spark, the flame above the spark seemed formed of bright and dark layers; viewed in the direction of the spark, layers in the proper sense were not seen, but dark circles continuously rising from the flame. It is left for the latter observation if one electrode is in the flame, the other remaining outside.

Voltaic Conduction.—The *Philosophical Magazine* for January, 1866, contains a note from J. J. Waterston, giving the results of an experiment made by him to determine whether the electric force of the voltaic pile is conveyed by the entire thickness of the conductor, or by the external surface only. He provided two polished steel cylinders exactly alike, three inches long and one-tenth of an inch in diameter. One he covered with bright copper wire one-hundredth of an inch in diameter, and the other with steel wire, one-fiftieth of an inch in diameter. The two cylinders were connected end to end by a thin copper wire, the interval bridged by the wire being about one-fourth of an inch. The other ends of the cylinders were similarly connected to the polar terminals of a Bunsen cell half charged. These terminals were made from a rope of No. 16 copper wire twisted together, each wire about eighteen inches long. After waiting two or three minutes this steel-covered cylinder was found to be much hotter

than the copper-covered one. It was possible to keep the copper-covered one pressed to the lips for a second or two, but not so the steel-covered one. The temperatures were persistent. Taking copper as having one-eighth the resistance of steel, and the rise of temperature to be in the inverse ratio of the fourth power of the diameter of the cylinders, or conducting wires, the temperature of these two cylinders ought to be nearly the same, if the force is conducted by the whole thickness, instead of by the surface alone; whereas, if by the surface alone, the rise of temperature in the steel-covered one ought to be three or four times that in the copper-covered one.

St. Elmo's Fire.—Captain Briggs, commander of the steamer Talbot, furnished to Professor Frankland an account of a splendid exhibition of this rare electrical phenomenon, which occurred in the Irish Channel on the 7th of March, 1866. During a snow-storm, which lasted three hours, a blue light appeared at each masthead of the steamer, and one from each gaff-end; one was also seen on the stemhead, which the captain examined. He found that the light was made up of a number of jets, each of which expanded to the size of half-a-crown, of a beautiful deep violet color, and making a hissing noise. Placing his hand in contact with one of the jets, a sensible warmth was felt, and three jets attached themselves to as many fingers, but he could observe no smell whatever. Sometimes these jets went out, returning again when the snow was heaviest. This was from one to three, A. M.; at daylight the captain carefully examined the place, but discovered no discoloration of the paint. The stem in that part was wood, with iron plates bolted on each side, and it appeared to him that the jets came between the wood and the iron. The barometer stood at 29.10 in. The ship was an iron one, but he did not observe any effect upon the compass. He had seen the same phenomenon abroad, but never before in these latitudes.

An Electrical Paddle-Engine.—Count de Molin is the designer of an electrical paddle-engine which is adapted for a small boat intended to ply on the large lake of the Bois de Boulogne, and constructed as follows: There are two upright hoops, about two feet six inches in diameter, placed three inches apart, in the periphery of each of which are encased sixteen electromagnets, placed opposite to each other. Between these there is another hoop, or wheel, of soft iron, of the same diameter as the others, and so articulated as to receive, when alternately attracted by the magnets, at each side, a sort of rolling motion from side to side. To this wheel is fixed an axis about seven feet long, which forms the prime moving shaft of the machine. When the wheel between the magnets takes its rolling motion, it causes the ends of the axis to describe circles; one end turning the crank of a fly-wheel, and the other being adapted to a framework, on the same principle as the pantograph, which enlarges the motion

received from the central disk, and communicates it in the form of a stroke by a connecting rod to a crank on the paddle-shaft. The end of the moving bar also sets to work the distributors for alternately establishing and cutting off the electric communication between the magnets and the battery. In all there will be sixteen elements of Bunsen's, and the force of the machine is about one man power. The paddle-wheels are two feet six inches in diameter. —*Popular Science Review*, July, 1866.

Application of Electricity to Sounding at Sea.—M. Hedouin, of Lyons, has invented a sounding apparatus, consisting of a line within the whole length of which run two conducting wires, the upper ends of which are connected respectively with the poles of a galvanic battery placed in the ship. The lower ends are never connected, and, consequently, the circuit is never complete until the lead touches bottom. When this occurs, the lower portion of it, which slides into the upper, presses a small piece of metal against the two lower ends of the wires. The instant the circuit is thus completed, a bell is rung by an ordinary electro-magnetic apparatus, and thus the attention of the sounder is drawn to the fact that the lead has touched bottom. Besides this, a ratchet is, by similar means, thrown into action, and instantly arrests the descent of the line from the reel on which it is coiled; and thus, even the attention of the sounder is rendered of less importance. If there is danger of the vessel getting into shallow water, or among sunken rocks, a sounding line of given length, suspended from the vessel, will give instant notice of danger.

Improved Electrotypes Process.—Christoffe and Bouillet of Paris have introduced great improvements into the electrotypes process. They add to the silver bath sulphuret of carbon or an alkaline sulphuret which produces a small quantity of sulphate of silver, and this, for some unexplained reason, causes the silver deposit to be as brilliant as if it had been carefully burnished. They add to the common sulphate of copper bath a moderate quantity of gelatine, which causes the copper deposit to be as compact and dense as the best rolled sheet-copper. They also secure great economy in their operations by attaching plates of lead to the platinum wire which forms the interior skeleton of the mould used for the production of articles in relief.

New Electric Fire Alarm.—M. Robert Houdin has invented an electric alarm of extreme delicacy. It is formed by soldering together a blade of copper and another of steel, fixing one end of the compound blade to a board, along which it lies parallel but not in contact. Near the free extremity of the blade is a metallic knob in conducting communication with one pole of a galvanic battery, the free end of the compound blade being in connection with the other. When the temperature of the surrounding air (from a fire breaking out) is increased, the blade becomes curved, and, com-

ing in contact with the metallic knob, the battery connection is complete. This causes a small bell to ring. The apparatus is so sensitive that a lighted cigar or taper placed within a few inches of it will cause a ringing of the bell.

Cheap Electric Battery.—M. Gerardin, in a note to the French Academy of Science, proposes to obtain a battery of feeble tension, but of considerable quantity, and cheap, by substituting in the Bunsen battery, chippings of wrought or cast iron in place of zinc. An iron plate in contact with them serves as a conductor, and the exciting liquid is ordinary water. In the porous cell, the Bunsen carbon, made of gas coke, pulverized and cemented by paraffine, is immersed in a solution of perchloride of iron, to which some aqua regia is added. The pile can be made of large dimensions, and it is said that great quantities of electricity can be obtained from it at a very small price.

The Holtz Electrical Machine.—This is a recent invention for the production of electricity. Two glass plates—made of thin plate-glass varnished with shellac—are placed in close proximity to each other, one of them being permanent and the other movable and rotated by the ordinary winch and pulley-wheel. The movable plate is a little smaller than the other, and supported on an axle which passes through a large central hole in the other. The latter plate, besides the central hole, has four other holes, of a circular shape. At the side of each of these openings is pasted a strip of paper with a point of card projecting into it. The rotation of the movable plate is in the direction from point to base of the card projections. Opposite to each of the paper strips (but with the revolving plate) is a brass comb or collector supported in a crosspiece of vulcanite by appropriate brass rods. The four brass collectors may be united in various ways by bent wires for different effects. The movable plate being put in rotation, the paper strips are charged by touching them with a piece of vulcanite, excited by a stroke over a rabbit-skin, and at once the whole machine is in activity and giving out sparks of great volume and intensity, which may be continued for an indefinite time without further charging. There are no rubbing parts in the machine, the whole effect being developed by induction, or the disturbance produced in the electric fluids by the repulsion of like and attraction of unlike kinds. Yet this machine exhibits all the effects of frictional electricity. A torrent of sparks can be produced between the terminal balls, each giving a report like the explosion of a torpedo; and, by a different adjustment, a continuous jet of electric fire is displayed, seeming to pass in a tassel of purple light trimmed with golden beads, and emitting a hissing sound like that of escaping steam. The Geissler tubes are operated by the Holtz machine with fine effect. —*Jour. Frank. Institute*, October, 1866.

Papers on the subject.—Contributions to the literature of electricity during the year have been few, and, for the most part, unimportant. The *American Journal of Science* for July contained an essay on the *Production of Thermo-Electric Currents by Percussion*, by Professor O. N. Rood; and the same magazine for November and January (1867), an elaborate paper by Mr. Herman Haug, entitled, *Experiments on the Electro-Motive Force, and the Resistance of a Galvanic Circuit*. At the August meeting of the American Association for the Advancement of Science, E. B. Elliott read a paper on *The Mutual Action of Electrical Currents*, and Dr. Bradley one on *The Galvanic Battery*.

ELY, ALFRED, D. D., a Congregational clergyman, born in West Springfield, Mass., November 8, 1778; died at Monson, Mass., July 6, 1866. Leaving his home at the age of fifteen, he resided first at Springfield, then at Hartford, until his twenty-first year, when, soon after, he began the study of Latin grammar with a view to prepare himself for college and the work of the ministry. In October, 1802, he entered the junior class at Princeton, where he graduated in September, 1804, and was immediately elected a tutor in that college, where he remained one year. He then returned to West Springfield and commenced the study of divinity with the pastor of his youth, the celebrated Dr. Lathrop of that place. He was licensed to preach in February, 1806, and in June of that year he preached his first sermon at Monson and was ordained the following December. His pastorate was as remarkable for its success as for its great length. Living always in one place of service, which he never desired to leave, he became identified with all its interests, ecclesiastical and temporal. He was a trustee of Monson Academy from 1807 till his death, and he was only a few days previous elected, the forty-seventh time successively, to the office of president of the board. He was one of the earliest trustees of Amherst College, and in that office assisted in sustaining the institution in all the difficulties and discouragements of its early history. He was elected in 1840 a corporate member of the American Board for Foreign Missions, and in that great enterprise has always been an ardent and efficient helper. Several of his sermons have been published.

ESTERHAZY, Prince PAUL ANTOINE, a Hungarian nobleman, born March 10, 1786; died at Ratisbon, May, 1866. He was the representative of the oldest branch of an illustrious Hungarian house, and in some respects was one of the most widely known of the Magyar nobility in Europe. In the first quarter of the century he was acting as ambassador to Dresden. In concert with the Princes de Metternich and de Schwartzenburg, he contributed to the arrangement of the marriage of Napoleon I. with Maria Louisa. In 1814, during the Congress of Châtillon, he accepted a secret mission to Napoleon,

with a view to induce the emperor to make peace. Afterward he was ambassador of Austria at Rome, and acted as representative of that power at the coronation of Charles X. He was also for several years Austrian ambassador at London, where he took a prominent part in the negotiations which brought about the creation of the kingdoms of Greece and Belgium. In 1841 he withdrew for a time to private life, but in 1848 he occupied for a few months a position in the Hungarian ministry, under Count Louis Batthyanyi, but retired when he saw that a rupture with Austria was inevitable. His landed possessions were immense. Owning hundreds of manors, chateaus, villages, and estates in Hungary, he possessed besides large manors in Lower Austria, in Baden, and in Bavaria. His grandest palace was at Eisenstadt, on his Hungarian possessions. His collections of works of art and precious stones were such as to rival those of kings. It is said that when some one was calling attention to a fine specimen of lapis lazuli he looked at it indifferently and remarked, "I have a mantelpiece made of that at home." His last appearance in a foreign court was as representative of Austria in 1856, at the coronation of Alexander II., emperor of Russia.

EUROPE. According to the latest and most accurate statements the area of Europe amounts to 3,778,561 English square miles, and the aggregate population, according to the censuses taken up to the end of the year 1865, to 285,000,000.* We give in the present volume of the ANNUAL CYCLOPEDIA an article on every European country, with the exception of the following: *Andorra*, a little republic lying between Spain and France, area about one hundred and seventy English square miles, population about twelve thousand; *San Marino*, a little republic within the bounds of Italy, area about twenty-two English square miles, and five thousand seven hundred inhabitants (in 1850), and the principality of *Monaco*, which after the sale of Mentone and Rocca-bruna to France (in 1861) contains only the community of Monaco, with an area of about six square miles, and one thousand eight hundred and eighty-seven inhabitants.

The year 1866 will be noted in the history of Europe for the most important war which has been carried on since 1815 (*see GERMAN-ITALIAN WAR*); and for the most important territorial change which has yet been made in the map of Europe, as arranged by the Congress of Vienna. The Germanic Confederation was declared to be dissolved, and the large majority of the States belonging to it formed a new one, called the North German Confederation.

* These totals are given in Brehm's *Geographisches Jahrbuch* (Gotha, 1866), the completest and most trustworthy source of information on all matters of geography. In some articles, as for instance France, we are able to give later statistics of population, but do not change the totals, as the difference is not considerable, and at the time of this page going to press we cannot yet ascertain from which countries we may get later statistics.

tion, which is entirely under the control of Prussia. Four of the old German States, Hanover, Hesse-Cassel, Nassau, and Frankfurt, as well as the Duchies of Schleswig and Holstein, were entirely incorporated with Prussia, whose population thus rose from nineteen millions to twenty-three millions five hundred thousand, while the whole of the North German Confederation counts only twenty-nine millions. Austria was altogether excluded from the new confederation, and so were Bavaria, Württemberg, Baden, Lichtenstein, and a part of Hesse-Darmstadt. Bavaria, Württemberg, Baden, and Hesse-Darmstadt, which together have a population of about eight millions, were at liberty to form a South German Confederation, but none of those governments found it expedient to make any advances in this direction, and that of Baden even expressed a wish to be admitted as soon as possible into the North German Confederation—a wish which was supported by nearly all the members of the Legislature. (See GERMANY.)

The treaty concluded between Austria and Italy gave to the latter power the long-coveted Venetia, thus reducing the population of Austria from thirty-five millions to thirty-two millions five hundred thousand, and increasing that of Italy from twenty-two millions to twenty-four millions five hundred thousand. The annexation was made dependent upon the popular vote, which, as everybody expected, resulted in an almost unanimous decision in favor of that measure. Thus the unity of the Italian nation has become nearly complete; only the Papal dominions, the southern districts of the Tyrol, with a small portion of Istria, and the Island of Corsica remaining for the present disconnected from the main trunk of the nation. The most important of these disconnected fragments, the Papal States were, in December, 1866, evacuated by the French troops, in accordance with the stipulations of the Franco-Italian convention concluded in 1864. Negotiations were resumed, after the evacuation, between the Pope and the Government of Italy. (See ITALY and PAPAL STATES.)

Besides the great German-Italian war, several other wars disturbed the public peace of Europe. At the beginning of the year an insurrection broke out in Spain, headed by General Prim, but the Government succeeded in quelling it before it had become general. (See SPAIN.) In Turkey, the inhabitants of the island of Candia, a large majority of whom are Christians, rose against Mohammedan rule, and an assembly of representatives decreed the annexation of the island to Greece. Great sympathy with the movement was manifested in Greece, in Russia, and in the Christian provinces of Turkey; but as the insurgents received little material aid from abroad, the object of the insurrection had at the close of the year not been achieved. Insurrectionary movements and symptoms were, however, manifesting themselves in most of the

Christian provinces of Turkey and threatening new troubles for 1867. (See CANDIA and TURKEY.) Ireland, in the latter months of the year, was greatly agitated by the Fenian movement. The statesmen and papers of England were compelled to admit that the immense majority of Irishmen are in sympathy with it, and that nothing but force prevented the success of the Fenians. No serious outbreak occurred, but, on the other hand, no progress was made toward a lasting pacification of the discontented island.

The result of the German-Italian war was the complete success of the nationality principle, as far as Italy is concerned; and, therefore, gave a powerful impulse to the nationality movements in every country. The most important scene of this movement will, henceforth, be Germany, where the disconnected elements in South Germany and in Austria are yearning for a future reunion of all Germans. The opinion that this can henceforth only be accomplished under the leadership of Prussia, was rapidly gaining ground in the latter months of the year, although the most determined among the opponents of Prussia endeavored to counteract the advance of those union tendencies by proposing a union with the German cantons of Switzerland. (See GERMANY.)

Hungary carried its point against Austria, and the Magyar nationality reoccupies a conspicuous position in Europe. But the success of the Magyars gave at the same time a powerful impulse to the Pan-Slavic tendencies in Austria and Turkey, which aim at separation from Hungary no less than from Austria and Turkey, and at the establishment of new Slavic empires. (See AUSTRIA, HUNGARY, and TURKEY.) Another great victory of the nationality principle was gained in Roumania, to the people of which country the Turkish Government had, with great reluctance, to concede the permanent union of the formerly separated provinces (Wallachia and Moldavia) under a prince of the House of Hohenzollern and his descendants. (See ROUMANIA.)

The conflict between the Progressive party—which demands a larger share in the administration of States for the representatives of the people—and the Conservatives—who oppose any further extension of popular rights—was carried on in every country of Europe with great animation. In Sweden, the new constitution—which in 1865, had been adopted by the Estates—went into operation, and thus was added another to the number of countries which have a liberal representation of the people. In England, the Liberal ministry was defeated on the reform question, and succeeded by a Tory ministry; but in consequence of this unexpected defeat in Parliament, the Reform party resumed the agitation among the people with renewed vigor, and called forth the greatest popular demonstrations in favor of reform which England has ever witnessed. A visit of John Bright to Ireland brought on a better understanding between the English Reformers and

the National party in Ireland—an event which may contribute to the speedier victory of the movement in both countries. The Liberal party in France showed an increased strength at some supplementary elections for the legislative body, and in the latter part of the year it greatly gained in popular favor by the failure of the Imperial schemes in Mexico and Italy. In Italy, the party of action (Democratic party) was more numerous in Parliament than at any former period, and was steadily gaining ground among the people. In Spain, the Government abolished the liberty of the press and suspended the Constitution; but the Progressive party was cheered by the hope that the madness of the Government would hasten the triumph of Liberalism. In Prussia, the Liberals deemed it necessary to support the Government in the national question, and in return received many important concessions. The Austrian Government, in order to allay popular discontent, again made the most liberal promises, but as usual, delayed their execution.

EVANS, ROBERT WILSON, archdeacon of Westmoreland, an eminent clergyman and author, born at Shrewsbury in 1789; died at the vicarage, Westmoreland, March 10, 1866. He

was educated at Shrewsbury School and at Trinity College, Cambridge, where he graduated with high honors in 1811. Having obtained his fellowship he soon became classical tutor of his college, but even the strong attractions of Cambridge, and the companionship of literary men, failed to satisfy his higher aspirations. He longed to devote himself to parish work. In 1836 he accepted the vicarage of Tarvin, Cheshire, and after a few years of faithful labor here, was called in 1842 to the vicarage of Haversham, Westmoreland. Having been designated to the archdeaconry of Westmoreland by the Bishop of Carlisle, only a few days before the death of that prelate, the appointment was confirmed by his successor, and Mr. Evans held that position to the great satisfaction of the clergy and laity of the district until 1864, when he resigned on account of his advancing years. Of his published works, which are numerous, those which are best known are "The Rectory of Valehead," "Scripture Biography," "Biography of the Early Church," "The Bishopric of Soula," "The Ministry of the Body," and his "Parochial Sermons." His writings are characterized by genius, scholarship, and sound theology.

F

FAIRHOLT, FREDERICK WILLIAM, F. S. A., an English author and artist, born in London in 1814; died at Brompton, April 3, 1866. In early life he evinced great aptitude for reading and drawing, and at the age of twenty-one drew several illustrations for the "Pictorial History of England," then being published. Subsequently he prepared illustrations for the "Pictorial Bible," "Penny Magazine," "Illustrated Shakespeare," and a natural history. In 1840 he was employed on the "Antiquities of Egypt," published by the Tract Society. In 1843 appeared his first purely literary work, a "History of Lord Mayor's Pageants." Some of the finest examples of his engravings are found in the "Archæological Album." He was draughtsman for the British Archæological Association from 1844 to 1852, when he resigned the office and retired from the society. In 1846 appeared his history of "Costume in England," a work of much labor and research, which was republished in 1860. From 1855 to 1857 he compiled and illustrated a "Dictionary of Terms in Art," and in 1858 edited the "Dramatic Works of John Lilly," in two volumes. These and many other contributions to leading publications, especially to the "Art Journal," occupied his later years. In 1856 Mr. Fairholt visited the south of France and from thence went to Rome, an account of which journey he gave in the "Colletanea Antiqua," vol. v. Later he went to Egypt, and upon his return published his "Up the Nile and Back Again." His last work was a "History of Pageantry in the Middle Ages."

Some of his most valuable works he bequeathed to the Society of Antiquaries and British Museum, and the proceeds of his libraries and antiquities to the Literary Fund.

FARINI, CARLO LUIGI, a celebrated Italian author and statesman, born at Russi, in the Roman States, October 22, 1822; died at Genoa, August 2, 1866. Having studied medicine at Bologna, he soon became noted for his knowledge of organic diseases and for his essays in various scientific journals on subjects connected with his profession; but becoming involved in the political movements of 1841-43, he was compelled to quit the Pontifical territory, and practised his profession successively at Marseilles, Paris, Florence, and Turin. Returning to his country after the amnesty proclaimed on the accession of Pius IX., he was appointed Professor of the Clinical Department at Osimo. Subsequently accepting office under the Home Minister, he became deputy for Valenza in 1848, and was appointed director-general of health and of the prisons by Count Rossi. Farini, whose political opinions were of the moderate order, refused to adhere to the proclamation of the Republic, and consequently retired into Tuscany. After the French army had established itself in Rome, he sought to resume his functions, but was opposed by the three cardinals, who conducted the Government in the name of the Pope, and was thus compelled again to go into exile. This time he went to Piedmont, where his great abilities were highly appreciated, and every opportunity afforded him for

exercising them in the public service. After editing for some time the *Risorgimento*, he was appointed Minister of Public Instruction, having a seat at the same time in the Piedmontese Parliament. He played an important part in the stirring events of 1859. On the expulsion of the Duke of Modena, he was chosen Dictator of the Duchy, and aided greatly in bringing about the annexation of Modena and Parma to Piedmont. In 1860 we find him in Naples as Commissioner from the King of Italy, assisting in the arrangement by which Naples was to become part of the new Italian kingdom. He held office as Minister of Commerce and of Public Works in the last cabinet of Cavour, and earnestly defended the policy of alliance between France and Italy. In consequence of the failure of his health, owing to close application to his public duties, he declined entering the Ministry of Ratazzi in 1862, but in December of the same year, he was named by royal decree President of the Cabinet. This post ill health compelled him to resign in March of the following year, his son Minghetti taking his place, the Parliament at the same time voting him a grant of 20,000 francs and a pension of 25,000 francs. His principal works are "The Roman States," a "History of Italy," and "Letters to Lord John Russell and to Mr. Gladstone."

FENIAN BROTHERHOOD. The year 1866 was marked by overt acts of hostility against the British Government in America, on the part of the American Fenians, who, up to that period, had devoted their energies to the raising of money to advance the cause of independence in Ireland. In the early part of the year the dissensions which had been fomenting for some time in the bosom of the brotherhood, resulted in a rupture into two sections, known as the "O'Mahony" and the "Roberts," from the names of their respective chiefs. Charges of incompetency and dishonesty were freely exchanged between the belligerents; but the effect of this war of words, contrary to the general expectation, was to stimulate each party to do something to reinstate themselves more fully in the confidence of those who sympathized in the Fenian movement. This could be done quickest and best by an attack on some exposed point of the British dominions on this continent; for it was conceded by both parties that it would be impracticable to operate directly for the liberation of Ireland after the failure of the insurrection of the previous year. Both parties were successful in obtaining money from their adherents, by means of proclamations, public meetings, and organized private efforts.

The O'Mahony faction were the first in the field. In the month of April an iron steamer was purchased in New York, and manned with a skilful crew, for the purpose of carrying arms to Eastport, Maine, from which point a descent was to be made upon the island of Campobello, belonging to New Brunswick, and only a few miles distant from Eastport. Major B. Doran Killian had charge of the expedition. The men

composing the invading force, numbering about five hundred, quietly gathered at Eastport, coming by rail and steamboat from various points, and then anxiously awaited the arrival of the war steamer with the arms. The sailing of that vessel was, however, countermanded by O'Mahony, who also sent an agent to Boston to order the return home of fifty of the New York men, who were there awaiting transportation to the front. After a delay of some days, which were spent in holding public meetings and parading the streets of Eastport, a schooner arrived from Portland with seven hundred and fifty stands of arms, the offering of Fenian sympathizers in that city. The British consul at Eastport complained, and the arms were seized by order of the United States Government. A large British war steamer anchored off Campobello, but that did not prevent the crossing and landing of small bodies of Fenians, and others who desired to do so from the mainland. Troops were moved to the front from St. John, to prevent an invasion of the province, and a detachment of United States regulars were also sent up from Portland to Calais, at which point a considerable number of the Fenians had assembled. General Meade arrived on the 19th, and telegraphed to Portland for more troops, who were forwarded. A few days later, the Fenians, totally discouraged at the lack of support from their friends in New York, abandoned the enterprise and made their way home as best they could. Thus ended the expedition—the only result of which was to embitter still more the relations between the rival wings of the organization.

On the 10th of May, Head Centre Stephens, who had escaped from a British prison toward the close of 1865, arrived in New York, and met with a warm reception from both the O'Mahony and the Roberts factions, which were each desirous of securing his approval and co-operation. Some days after his arrival, O'Mahony tendered his resignation, which was accepted, and Major Killian was removed. Mr. Stephens apparently exerted himself to the utmost to restore good feeling between the factions, but without success. The Roberts party came to an issue with him on the question of the expediency of invading Canada. To this he was opposed, urging that every effort should be concentrated upon the raising of large sums of money for the "men in the gap" in Ireland. He asserted that these men, numbering hundreds of thousands, needed only money to win their independence. The factions, as before, spared no opportunity to assail each other's motives.

The Roberts party, under the military direction of General Sweeney, began to move in the latter part of May. On the 19th of that month one thousand two hundred stands of arms were seized at Rouse's Point by the United States custom-house officers. The Fenian centre at Ogdensburg claimed them, but they were detained by the United States authorities. On

the 29th, about four hundred Fenians, partly armed and carrying colors, passed through Cleveland, Ohio, going east. A number of Fenians also left Cincinnati for the east; and movements of the body were reported from many points of the west and southwest. On the 30th the Fenians assembled in secret convention at Buffalo, and an immediate descent on Canada was talked of. Ten cases of arms, containing about one thousand stands, were seized on the same day at St. Albans by the United States authorities. On the 31st two hundred Fenians left Boston for Ogdensburg, and several companies started from New York and Boston for the west.

Canada was thoroughly aroused at the prospect of an invasion. The whole volunteer force of Western Canada was ordered to be mobilized and placed under command of Sir John Michel. Companies of regulars and volunteers were moved to the threatened points from Toronto, Hamilton, London, and St. Catharines.

The invasion took place on the 1st of June. A force variously estimated at from twelve hundred to fifteen hundred men crossed the Niagara River at Buffalo in canal boats, and took possession of Fort Erie, an old work then unoccupied. The Fenians were under command of Colonel O'Neil, a graduate of West Point, an officer who had won some reputation during the recent American war. The invaders generally conducted themselves with decorum, though they levied on the people for rations and horses. On the 2d the Fenians and Canadian volunteers, who had marched rapidly to meet them, came into collision, and a sharp skirmish ensued, in which nine volunteers were reported killed and a much larger number wounded. A number of Fenians were taken prisoners. On the same day General Grant arrived in Buffalo, and took steps to prevent any more Fenians from crossing the river. He issued an order to General Meade, directing that General Barry be assigned to the command of the frontier, and intimating that, in the event of further and more serious difficulty, it might be advisable for State troops to be called out. On the night of the 2d the invasion culminated. The Fenians being without supplies, artillery, and reinforcements, left their encampments and attempted to withdraw to the American shore. The United States gunboat Michigan intercepted and arrested about seven hundred of the number.

General Barry, then in command on the frontier, accepted the following parole from over fifteen hundred of the men, belonging to the commands of Colonel Starr, of Louisville; Captain Kirk, of Chicago; Colonel McDonough, of Philadelphia; Captain Donohue, of Cincinnati; Captain Haggerty, of Indianapolis, and others, and provided transportation for them to their homes:

We, the undersigned, belonging to the Fenian Brotherhood, being now assembled in Buffalo, with

intentions which have been decided by the United States authorities as in violation of the neutrality laws of the United States; but being now desirous to return to our homes, do severally agree and promise to abandon our expedition against Canada, desist from any violation of the neutrality laws of the United States, and return immediately to our respective homes.

The destinations of the men were as follows:

Cleveland	28
Detroit	1
Jackson, Mich.	1
Chicago	628
Milwaukee	29
Oil City, Pa.	37
Nashville	5
Danville, Ill.	32
St. Louis	63
Cincinnati	259
Louisville	122
Indianapolis	23
Peoria, Ill.	62
Terre Haute	12
Fort Wayne	31
La Porte, Ind.	15
Pittsburg	146
Meadville	22
Other points	60

Total.....1566

The officers were relieved on giving \$500 bail each to appear at Canandaigua when required to answer for an infraction of the neutrality laws.

Fenians continued to pour into Buffalo to the number of two thousand men, it was said, but were ordered back by their commanding officers. President Roberts issued an order, advising the abandonment of the enterprise for the present.

Brigadier-General Burns, of the Fenian forces, published the following proclamation:

BUFFALO, June 14, 1866.

To the Officers and Soldiers of the Irish Army in Buffalo:

BROTHERS: Orders having been received from President Roberts requesting you to return to your homes, it becomes my duty to promulgate said order in this department. Having been but a day or two among you and witnessing with pride your manly bearing and soldierly conduct in refraining from all acts of lawlessness on the citizens of this city, it grieves me to part with you so soon. I had hoped to lead you against the common enemy of human freedom, and would have done so had not the extreme vigilance of the Government of the United States frustrated our plans. It was the United States, and not England, that impeded our onward march to freedom. Return to your homes for the present, with the conviction that this impediment will soon be removed by the representatives of the nation. Be firm in your determination to renew the contest when duty calls you forth. The cause is too sacred to falter for a moment. Let your present disappointment only prompt you to renewed energy in the future. Be patient, bide your time, organize your strength, and as liberty is your watchword, it will finally be your reward. In leaving this city, where you have bountifully shared the hospitality of its citizens, I beg of you to maintain the same decorum that has characterized your actions while here. In issuing this order I cannot refrain from returning my thanks to General Barry, for his marked courtesy in the performance of his duty as an officer and a gentleman.

M. W. BURNS,

Brig.-Gen. Com. Irish Army at Buffalo.

Simultaneously with the movement from Buffalo, Fenians were reported to be concentrating at St. Albans and Malone, Vt., for the purpose of invading Canada, from that quarter. The Canadian volunteers promptly rallied to repel the expected attack. Steamboats were ordered to be used as gunboats on Lake St. Peter. A Fenian advance in strong force was falsely reported on the 4th of June, and Captain Carter, in command of the troops at St. Armand, fell back to St. Alexander. On the 5th General Meade reached Ogdensburg, and commenced active operations to prevent hostilities. A large number of United States regulars had been ordered up to support him. The Attorney-General of the United States gave orders, by direction of the President, for the arrest of the principal Fenians engaged in the movement. The President also issued a proclamation for the preservation of neutrality.

On the 7th, the Fenians, reported to be from one thousand to one thousand two hundred strong, crossed the boundary and advanced to St. Armand, which had been evacuated by the Canadians.

On the same day, General Sweeney and his staff were arrested at St. Albans, Roberts at New York, and several officers at Buffalo. General Spear, being in command of the invading force, escaped. The Fenians levied on the Canadians for their supplies, but had no occasion to fight. On the 9th, Canadian troops advanced from St. Alexander to St. Armand, and the Fenians retired, fifteen of their number being taken prisoners. General Meade's prompt exertions prevented further trouble. He arrested and turned back two car-loads of Fenians on their way to the scene of action, accepted the paroles of the officers, and provided transportation, for all who required it, to their homes. Mr. Roberts having refused to give parole, or bail, was detained for several days in the New York county jail, and was then released.

In August, it was expected that another and more serious invasion would take place on the occasion of the Fenian picnic at Clinton Grove, near Buffalo, on the 21st. Over 3000 Fenians, mostly from Buffalo and the immediate vicinity, appeared in the procession, many of them organized as companies and armed. At the Grove about 12,000 persons were assembled. After feasting, dancing, and other amusements, the spectacle of a sham fight took place between the "Queen's Own," and the "10th Royals," personated by Fenian companies, and a force of Fenians proper. The battle of Limestone Ridge was fought over again with great effect, minus the killed and wounded. After the mimic conflict, General O'Neil and others made speeches, and thus terminated the day, without harm to the integrity of the British provinces.

"A Fenian Congress," called by President Roberts, convened at Troy on the 4th of September. There was a large attendance, Mr.

Roberts was reelected President, and the following officers were also chosen: Senators, P. J. Meehan, New York; William Fleming, Troy; F. B. Gallagher, Buffalo; A. L. Morrison, Missouri; James Gibbons, Philadelphia; J. C. O'Brien, Rochester; William McQuirk, New Haven, Conn.; John Carlton, New Jersey; Thomas Redmond, Indiana. President of the Senate, P. J. Meehan. Speaker of the House, J. W. Fitzgerald, Cincinnati, Ohio; Clerk, G. G. Carroll, Geneva, N. Y. General Sweeney resigned, and President Roberts appointed Colonel Michael Bailey, of Buffalo, Chief Military Organizer, and Colonel O'Neil, Inspector-General of the Fenian Army. Resolutions of thanks to General Banks and to Congress were adopted, and several improvements introduced in the plan of organization.

The case of R. B. Lynch, a reported Fenian, who had been captured, tried, convicted, and sentenced to death in Canada, excited much sympathy throughout the United States. The Common Council of New York memorialized the President of the United States in his behalf and that of the other Fenian prisoners. The Tammany Hall Democracy took similar steps and appointed a committee to confer with the President.

Secretary Seward soon after addressed a communication to the British minister at Washington advising the exercise of clemency toward the prisoners, and the matter was at last settled to the relief of all concerned, by a dispatch from the British Colonial Office to the Governor-General of Canada, commuting the sentence of those prisoners who had been sentenced to death. For the disposition of the other prisoners taken to Toronto and Swetsburg for trial, *see* BRITISH NORTH AMERICA.

The United States Fenians accomplished nothing more of importance during the year 1866. Meetings were held in the interest of the contending factions, and appeals and addresses issued. Mr. Stephens still expressed his belief that the revolution in Ireland would be triumphant before the end of the year; but his faith was not shared by any considerable portion of the Irish population, and they gradually ceased to contribute to the accomplishment of an end which seemed to them so remote.

FINANCES OF THE UNITED STATES.
At the commencement of the annual session of Congress in December, 1865, the Secretary of the Treasury (Mr. McCulloch) presented in his report a statement of the current receipts and expenditures of the Government for the fiscal year ending June 30, 1866. This statement contained the actual receipts and expenditures for the first quarter of the fiscal year ending September 30, 1865; and estimates for the remaining three quarters. In these estimates the opinion was expressed that the expenditures would exceed the receipts by \$112,194,947. This conclusion was formed by the Secretary under the impression that the measures of taxation would yield a limited revenue

and the expenditures would still continue very large. The following is a statement of the estimated and the actual receipts and expenditures of the United States from October 1, 1865, to June 30, 1866, the last three quarters of the fiscal year:

RECEIPTS.	Estimated.	Actual.	Excess of receipts.
Customs	\$100,000,000 00	\$182,037,068 55	\$82,037,068 55
Lands	500,000 00	532,140 40	32,140 40
Internal revenue	175,000,000 00	212,607,927 77	37,607,927 77
Miscellaneous	30,000,000 00	48,285,125 90	18,285,125 90
Direct tax		1,943,642 82	1,943,642 82
	\$305,500,000 00	\$395,405,905 44	\$89,905,905 44
Cash balance October 1, 1865	67,158,515 44	67,158,515 44	
	\$372,658,515 44	\$462,564,420 88	
EXPENDITURES.	Estimated.	Actual.	Excess of estimates.
Civil service	\$32,994,052 88	\$30,485,500 55	\$2,508,551 83
Pension and Indians	12,256,790 94	11,061,385 79	1,195,505 15
War Department	307,788,750 57	119,080,464 50	188,708,286 07
Navy Department	85,000,000 00	26,802,718 31	8,197,283 69
Interest on public debt	96,812,868 75	96,894,260 19	
Deduct deficiency in estimate for interest on public debt			\$200,809,626 74
			80,391 44
	\$484,858,462 64	\$284,324,227 34	\$200,529,235 30
RECAPITULATION.			
Actual receipts, including cash balance			\$462,564,420 88
Estimated receipts, including cash balance			372,658,515 44
Excess of receipts over estimates			89,905,905 44
Estimated expenditures			484,858,462 64
Actual expenditures			284,324,227 34
Actual expenditures less than estimated			200,529,235 30

The actual receipts and expenditures for the fiscal year ending June 30, 1866, were as follows:

Balance in Treasury, agreeable to warrants, July 1, 1865	\$358,809 15	
To which add balance of sundry trust funds not included in the above balance	2,217,732 94	
Making balance, July 1, 1865, including trust fund		\$3,076,042 09
Receipts from loans		712,851,558 05
Receipts from customs	\$179,048,651 58	
Receipts from land	665,081 08	
Receipts from direct tax	1,974,754 12	
Receipts from internal revenue	309,326,813 43	
Receipts from miscellaneous sources	67,119,369 91	
		\$558,032,620 06
		\$1,273,960,215 20
Redemption of public debt	\$620,321,725 61	
For the civil service	\$41,056,961 54	
For pensions and Indians	18,852,416 91	
For the War Department	284,449,701 82	
For the Navy Department	43,324,118 52	
For interest on public debt	133,067,741 69	
	520,750,940 48	
		\$1,141,072,666 09
Leaving a balance in the Treasury on the first day of July, 1866		\$132,887,549 11

These were the results of the ordinary sources of revenue and expenditure during the fiscal year ending June 30, 1866, leaving in the Treasury a balance of more than 132 millions. The Secretary had anticipated a deficiency exceeding 112 millions, and at the same time he had urged that a system of contraction of the currency should be commenced, which would in a short period greatly reduce its value and aid in a return to specie payments. Congress, however, did not entertain similar views with the

Secretary relative to a deficiency, neither were the majority in favor of such a speedy return to specie payments. An act was therefore passed and approved April 12, 1866, as an amendment to the act of March 3, 1865, mentioned in a former volume, which extended the latter act and so construed it as to authorize the Secretary of the Treasury, at his discretion, to receive any Treasury notes, or other obligations issued under any act of Congress, whether bearing interest or not, in exchange for any

description of bonds authorized by the act of 1863; and also to dispose of any description of bonds authorized by said act either in the United States, or elsewhere, to such an amount, in such manner, and at such rates, as he might think advisable, for lawful money of the United States, or for any Treasury notes, certificates of indebtedness, or certificates of deposit, or other representatives of value used under any act of Congress and to use the proceeds only for retiring Treasury notes, or other obligations of the Government. Nothing herein contained was to be construed as authorizing any increase of the public debt. To this act there was attached a proviso which limited the contraction of the currency, by specifying that not more than ten millions of United States notes might be retired and cancelled within the ensuing six months, and thereafter not more than four

millions of dollars in any one month. This act, while it enabled the Secretary to use with more freedom the extraordinary resources of the Government on hand and unexhausted, also by limiting the contraction of the currency, secured the liberal payment of taxes both under the tariff and internal revenue laws. At the same time these two acts were revised in order to diminish the burden they caused to the people and facilitate the increase of revenue. The consequence was that, at the close of the fiscal year in June 30, 1866, the Secretary was able to show a net decrease of the public debt amounting to \$31,196,387.23, with an increase of the cash in the Treasury over the close of the previous year amounting to \$132,029,239.96. The following statement exhibits the items of increase and decrease of the public debt for the fiscal year ending June 30, 1866:

Amount of public debt, June 30, 1865.....	\$2,682,598,026 53	
Amount of cash in Treasury.....	858,309 15	
Amount of public debt, June 30, 1865, less cash in Treasury.....		\$2,681,734,717 38
Amount of public debt, June 30, 1866.....	\$2,783,425,879 21	
Amount of cash in Treasury.....	182,887,549 11	
Amount of public debt, June 30, 1866, less cash in Treasury.....		\$2,650,538,330 10
Net decrease.....		\$31,196,387 23
This decrease was caused as follows, by payments and increase of cash in Treasury:		
Bonds, 6 per cent., acts of July 21, 1841, and April 15, 1842.....	\$116,139 77	
Treasury notes, 6 per cent., acts December 23, 1857, and March 2, 1861.....	2,200 00	
Bonds, 5 per cent., act September 9, 1850 (Texas indemnity).....	283,000 00	
Treasury notes, 7.30, act July 17, 1861.....	380,750 00	
Certificates of indebtedness, 6 per cent., act March 1, 1862.....	89,381,000 00	
Treasury notes, 5 per cent., 1 and 2 year, act March 3, 1868.....	88,884,490 00	
Compound-interest notes, 6 per cent., act June 30, 1864.....	34,743,940 00	
Bonds, 5 per cent., act March 3, 1864.....	1,551,000 00	
United States notes, acts July 17, 1861, and February 12, 1862.....	200,441 00	
United States notes, acts February 25, July 11, 1862, and March 3, 1863.....	32,068,760 00	
Postal currency, act July 17, 1862.....	2,884,707 88	
Cash in Treasury, increased.....	132,029,239 96	
Gross decrease.....		\$332,525,658 61
From which deduct for increase, by—		
Bonds, 6 per cent., acts July 1, 1862, and July 2, 1864, issued to Central Pacific R. R. Co., &c., interest payable in lawful money.....	\$4,784,000 00	
Treasury notes, 7.30, acts June 30, 1864, and March 3, 1865, interest payable in lawful money.....	184,641,150 00	
Temporary loan, 4, 5, and 6 per cent., acts July 11, 1862, and June 30, 1864.....	30,459,135 25	
Gold certificates, act March 3, 1863.....	4,949,755 00	
Fractional currency, act March 3, 1863.....	10,713,150 00	
Bonds, 6 per cent., act July 17, 1861.....	\$146,050	
Bonds, 6 per cent., act March 3, 1864.....	3,882,500	
Bonds, 6 per cent., act June 30, 1864.....	8,211,000	
Bonds, 6 per cent., act March 3, 1865.....	103,542,500	
Gross increase.....		\$115,782,050 00
Net decrease.....		\$301,329,371 35
		\$1,196,387 23

The rapid progress of liquidation shown by the preceding figures went on with increased momentum during the next quarter, and it became manifest that if the people of the country were able to endure such powerful depletion without serious inconvenience to their industrial pursuits, the arrangements of Congress were complete for an early extinguishment of the ascertained and acknowledged public debt.

The following statement exhibits the items of increase and decrease of the public debt from June 30, 1866, to October 31, 1866.

It shows a decrease of the public debt in four months by \$99,114,208.90, and a decrease of the cash in the Treasury amounting to \$2,560,588.49. The net decrease in the public debt from its highest point in August 31, 1865, to October 31, 1866, was \$206,379,565.71.

Amount of public debt, June 30, 1866.....	\$2,788,425,879 21	
Amount of cash in Treasury.....	182,887,649 11	
Amount of public debt, June 30, 1866, less cash in Treasury.....		\$2,650,538,330 10
Amount of public debt, October 31, 1866.....	\$2,681,636,966 84	
Add amount of old funded and unfunded debt included in debt of June 30, 1866, not in statement.....	114,115 48	
	\$2,681,751,081 82	
Amount of cash in Treasury.....	180,826,960 62	
Amount of public debt, October 31, 1866, less cash in Treasury.....		\$2,551,424,121 20
Net decrease.....		\$99,114,208 90
Which decrease was caused as follows, by payments:		
Bonds, 6 per cent., acts July 21, 1841, and April 15, 1842.....	\$14,500 00	
Bonds, 6 per cent., act of January 28, 1847.....	1,872,450 00	
Bonds, 6 per cent., act March 31, 1848.....	617,400 00	
Bonds, 5 per cent., act September 9, 1850 (Texas indemnity).....	175,000 00	
Bonds, 5 per cent., act March 3, 1864 (Ten-forties).....	149,750 00	
		\$2,629,100 00
Treasury notes, 6 per cent., acts December 23, 1857, and March 2, 1861.....		6,150 00
Temporary loan, 4, 5, and 6 per cent., acts February 25, March 17, July 11, 1862, and June 30, 1864.....		75,172,997 76
Certificates of indebtedness, 6 per cent., acts March 1, 1862, and March 3, 1863.....		26,209,000 00
Treasury notes, 5 per cent., one and two year, act March 3, 1863.....		500,000 00
Treasury notes, Seven-thirty, act July 17, 1861.....		11,200 00
Compound-interest notes, 6 per cent., act June 30, 1864.....		10,500,000 00
Treasury notes, Seven-thirty, acts June 30, 1864, and March 3, 1865.....		82,237,250 00
United States notes, acts July 17, 1861, and February 12, 1862.....		8,804 00
United States notes, acts February 25, July 11, 1862, and March 3, 1863.....		10,691,779 00
Postal currency, act July 17, 1862.....		691,081 76
Gross decrease.....		\$208,652,312 51
From which deduct for increase of debt and decrease of cash in Treasury:		
Bonds, 6 per cent., act July 17, 1861.....	\$7,050,000 00	
Bonds, 6 per cent., act March 3, 1865.....	101,738,500 00	
Bonds, 6 per cent., acts July 1, 1862, and July 2, 1864, issued to Central Pacific Railroad Co., &c., interest payable in lawful money.....	8,840,000 00	
Gold certificates, act March 3, 1863.....	188,800 00	
Fractional currency, acts March 3, 1863, and June 31, 1864.....	1,208,165 12	
Cash in Treasury, decreased.....	2,560,588 49	
		\$109,538,108 61
Net decrease.....		\$99,114,208 90

The following table (see page 292) shows the indebtedness of the United States on the 30th of June, 1866.

The reduction of the paper circulation under the legislation of Congress above mentioned was limited to \$10,000,000 for the six months ending October 12th, and \$4,000,000 per month thereafter. In the mean time the reduction of these notes and of the notes of the State banks was nearly balanced by the increase of the circulation of the National Banks, and the premium on specie was about the same at the close as at the beginning of the year. The Secretary, therefore, devoted his attention to measures looking to an increase of the efficiency of the collection of the revenues, to the conversion of the interest-bearing notes into five-twenty bonds and to a reduction of the public debt. At the same time he endeavored to use such means within his control, as were best calculated to keep the business of the country as steady as possible, while conducted on the uncertain basis of an irredeemable currency. He therefore held a handsome reserve of coin in the Treasury, being convinced by observation and experience that, in order to secure steady-

ness in any considerable degree, while business was conducted on a paper basis, there must be power in the Treasury to prevent successful combinations to bring about fluctuations for purely speculative purposes. The Secretary expressed his conviction that specie payments were not to be restored by an accumulation of coin in the Treasury, to be used at a future day to redeem Government obligations, but by quickened industry, increased productions, and lower prices. Coin was therefore permitted to accumulate when the use or sale of it was not necessary for paying Government obligations, or to prevent commercial panics, or successful combinations against the national credit; and it has been sold whenever sales were necessary to supply the Treasury with currency, to ward off financial crises, or to save the paper circulation of the country, as far as practicable, from unnecessary and damaging depreciation.

The importance of specie payments is urged by the Secretary, and in his remarks on the subject, he thus incidentally describes the condition of the country: "When a paper currency is an inconvertible currency, and espe-

cially when, being so, it is made by the sovereign power a legal tender, it becomes prolific of mischief. Then specie becomes demonetized, and trade is uncertain in its results, because the basis is fluctuating; then prices advance as the volume of currency increases, and require as they advance further additions to the circulating medium; then speculation becomes rife, and 'the few are enriched at the expense of the many;' then industry declines, and extravagance is wanton; then, with a diminution of products and consequently of exports, there is an increase of imports, and higher tariffs are required on account of the general expansion, to which they in their turn give new stimulus and supports, while the protection intended to be given by them to home industry is in a great measure rendered inoperative by the expansion. This, notwithstanding our large revenues and the prosperity of many branches of industry, is substantially the condition of the United States."

The paper circulation of the country on December 1st, consisted of United States notes, National and State bank-notes and certificates of the Government divided as follows:

United States notes, legal tender.....	\$385,441,849
Fractional currency.....	28,620,249
Circulation issued to National Banks....	292,671,753
State bank-notes.....	46,533,060
	<hr/> \$753,266,911

To this should be added a considerable portion of the following items:

Gold certificates of deposit.....	\$19,638,500
Compound-interest notes.....	147,887,140
	<hr/> \$187,025,640
Total.....	<hr/> \$940,292,551

It was also estimated that there were amounts of specie in circulation, as follows:

Specie in actual circulation on the Pacific.....	\$25,000,000
Specie in actual circulation in the Atlantic States.....	15,000,000
Copper and nickel.....	3,000,000
	<hr/> \$43,000,000

If this is added to the paper currency, it makes the whole amount of the circulating medium \$963,290,551. West of the Rocky Mountains, on the Pacific slope, gold and silver maintained its ascendancy, and very little paper was circulated. Indeed, throughout the whole country, and particularly where merchandise was distributed at wholesale, many articles were bought and sold exclusively for gold—no other prices were quoted for them. Instead of coin, gold bars and bullion were largely used by banks and by importers to pay for foreign merchandise. The copper and nickel coinage has been depreciated, so that a five-cent token contains about one cent of real value, or, in the words of the chairman of Ways and Means in the House of Congress (Mr. Morrill), "until it

is almost as light as any paper which can be produced, even by the genius of the hydrostatic power at the Treasury Department, and it once more rises and floats triumphantly over the dirty sea of paper currency in vulgar fractions." The gold certificates of deposit were conveniently and daily used by millions for many purposes, especially to pay for exchange in the liquidation of foreign accounts and among gold operators. Bills of exchange became a currency, and an enormous amount was afloat. The compound-interest notes were largely used, and almost universally, though without authority, took the place of the United States legal tender notes in the reserve required to be held by the national banks. In some instances the seven-thirties took the place of lawful money, and were given and taken in financial transactions at their current value. To some extent also the coupon bonds of the United States were used as money, and remitted to pay balances due—especially balances of trade due abroad. (*See BANKS.*)

Such was the state of the public debt and the circulating medium at the close of the year. It remains, therefore, to present the operation of the internal revenue system, of the tariff, and the commercial condition, to have a complete view of the problem presented for solution to the Government and the people.

Previous to the year 1861, the United States presented the unusual spectacle of a great nation with comparatively no debt. Since then the measures required for the maintenance of the Government have entailed upon the nation a debt rivaling or exceeding in magnitude the accumulated debts of any of the old states of Europe, and rendering necessary the collection of an annual revenue, which may be safely stated as unequalled by the collections of any other nations excepting Great Britain and France. While the accumulation of this debt was in progress the present system of internal revenue was adopted to aid in obtaining the money necessary for military and naval operations. The pressing nature of the circumstances under which it was framed was such as to afford but little opportunity for any careful and accurate investigation of the sources of revenue, and the most suitable measures of developing them. The old methods of taxation in this country, by assessments on real and personal property or capital, were chiefly allowed to remain undisturbed in the States which had hitherto applied them for their own support, and the plan was adopted to obtain this branch of the national revenue from the fruits of capital, or of capital and industry combined. One of the greatest defects which was immediately felt in the system thus put in operation, was its diffuseness, wherein the exemption of an article from taxation was the exception rather than the rule. A system so diffuse necessarily entailed a duplication of taxes, which in turn led to an undue enhancement of prices; a decrease both of production

and consumption, and consequently of wealth, a restriction of exportations and of foreign commerce, and a large increase in the machinery and expense of collection. The duplication of taxes threatened the very existence, even with the protection of inflated prices and a high tariff, of many branches of industry, and, under a normal condition of the trade and currency of the country, would become extremely disastrous. Its tendency to sustain prices was illustrated very forcibly in the manufacture of umbrellas and parasols. The sticks, when of wood, were made in Philadelphia, and in some parts of Connecticut; part of native and part of foreign wood, on which last a duty may have been paid. If the supporting rod was of iron or steel it was the product of another establishment. In like manner the handles of carved wood, bone, or ivory; the brass runners, the tips, the elastic band, the rubber of which the band is composed, the silk tassels, the buttons, and the cover of silk, gingham, or alpaca, were all distinct products of manufacture, and each of these constituents, if of domestic production, paid a tax, when sold, of six per cent. *ad valorem*, or its equivalent. The umbrella manufacturer then aggregated all these constituent parts previously taxed, into a finished product, and then paid six per cent. on the whole. Thus all the parts of the umbrella were taxed at least twice, and in some instances three times—thus adding from twelve to fifteen per cent to the direct cost, while each separate manufacturer doubtless made the payment of the six per cent. tax on his special product an occasion for adding from one to three or more per centum additional to its cost price. Similar illustrations existed in other branches of compound manufactures, showing the sustaining influence on prices, and making the taxes neither definite in amount, equal in application, nor convenient in collection.

Another serious defect of the internal revenue system in its bearing upon the industry of the country was the lack of equalization or adjustment between it and the tariff. Thus the cover of the umbrella or parasol, as a constituent element of construction, represents from one-half to two-thirds of the entire cost of the finished article. The silk, the alpaca, and the Scotch gingham, of which the covers were made, were all imported at a duty of sixty per cent. for the former, and fifty per cent. *ad valorem* for the two latter. But the manufactured umbrella, covered with the same material, whose constituent parts were not taxed, either on the material used in their fabrication or in the sale, were imported under a duty of thirty-five per cent. *ad valorem*; or at a discriminating duty against the American, and in favor of the foreign producer of from fifteen to twenty-five per cent. Imported umbrellas were sold in New York and Boston with the original cost, duty, freight, and charges, paid in gold, for a less price than the American article could be manufactured. Other illustrations

of the lack of adjustment between the excise and the tariff existed in other branches of domestic manufactures.

Notwithstanding these and other imperfections in this system so hastily prepared, it very successfully attained the end designed of raising a revenue greater than was necessary for its legitimate expenditures, and, near the close of the war, Congress, on March 8, 1865, took immediate steps for its revision, by authorizing the appointment of a commission to report upon the subject of raising revenue by taxation. In June, Messrs. David A. Wells, Stephen Colwell, and Samuel S. Hayes, were organized as such commission, and their first report was made to Congress in January, 1866. In this report they take the ground that the increase of the country in population and wealth is without a parallel among nations, being from 1840 to 1850 thirty-five per cent. in population, and eighty-nine per cent. in wealth; and from 1850 to 1860 thirty-five and five-tenths per cent. in population, and one hundred and twenty-six per cent. in wealth.

If the development in any approximate degree can be maintained and continued, the extinguishment of the national debt in a comparatively brief period becomes certain. To secure this development, both by removing the shackles from industry, and by facilitating the means of rapid and cheap communication, they regarded as effecting a solution of all the financial difficulties pressing upon the country. The future revenue policy of the country, they therefore recommended to be, the abolition or speedy reduction of all taxes which tend to check development, and the retention of all those which, like the income tax, fall chiefly upon realized wealth. Asserting this principle as a suitable policy for the Government, it became necessary to inquire into the nature and capacity of the sources of revenue available to the Government, in order to determine the manner and extent to which this policy could be carried out, and insure adequate revenue. Briefly stating the extent of revenue derived from duties on foreign imports, the attention of this commission was chiefly devoted to the capacity of the country to bear internal taxation. The facts brought forward in this connection are too important in the history of the country to be passed over.

The aggregate receipts of internal revenue for the fiscal years 1863 (ten months), 1864, 1865, and 1866, were as follows:

1863 (ten months).....	\$41,003,192 3/4
1864.....	116,650,672 4/5
1865.....	211,129,529 1/2
1866.....	309,326,812 4/5

The following table shows the amount derived from the principal specific sources of internal revenue in the years 1863, 1864, 1865, and 1866, the aggregate annual amounts, and the percentage ratio of the amount derived from each specific source to the whole for the same periods:

TABLE SHOWING THE AGGREGATE RECEIPTS OF INTERNAL REVENUE, ETC.

ARTICLES.	Receipts for fiscal year 1864.	Per cent. of the whole receipts.	Receipts for fiscal year 1865.	Per cent. of the whole receipts.	Receipts for fiscal year 1866.	Per cent. of the whole receipts.	Receipts for fiscal year 1867.	Per cent. of the whole receipts.

‡ The Commissioner of Internal Revenue, in a recent report, gives the aggregate receipts for the fiscal year 1904 at \$117,145,708.

Distilled spirits were regarded as a source of revenue of the first importance. During the fiscal year 1863, under a tax of twenty cents per gallon, the amount of revenue was \$3,229,990.70. In the fiscal year 1864, the tax was twenty cents until March 7th, after which it was sixty cents, and the revenue was \$28,431,737.33. From July 1, 1864, until June 1, 1865, the tax was \$1.50 per gallon, and afterward \$2.00. The revenue of the year amounted to \$15,995,701.66. The average taxable production from Sept., 1862, to July 1, 1865, returned to the Department, was 40,587,371 gallons. The precedents of all countries are uniform in favor of taxing spirits to the maximum, consistent with revenue. While any relaxation of the law, on the one hand, does not benefit the consumer, its stringent enforcement with a regulation of the business will not diminish the amount which appetite, or industrial necessity, demands for consumption. Under a tax of one dollar per gallon, it was estimated that forty millions of dollars might be annually collected from distilled spirits. With fermented liquors the great difficulty has been to determine the proper mode of collecting the tax and preventing fraud. A tax on malt is impracticable, as also the plan of gauging and assessing the liquor during the process of manufacture, or while in the fermenting vats. The most acceptable plan for this object approved by the commissioners and leading brewers of the country, was to collect the tax by means of a stamp, printed on insoluble parchment paper, to be affixed to each barrel sold and removed from the place of its manufacture, with a requirement that the same be cancelled by the retailer or consumer. With a tax of one dollar per barrel of thirty-one gallons, it was estimated that an annual revenue of five millions of dollars would be yielded from this source. —A tax on cotton of three cents per pound was laid by Congress early in 1866, which is noticed under the title *COTTON*. The result of the investigations relative to tobacco, were, that the tax should not be laid on the leaf. The revenue derived from this article was as follows:

	Cigars and Chewing Tobacco.	Chewing and Smoking Tobacco.
1863.....	\$476,589	\$2,576,888
1864.....	1,255,424	7,086,684
1865.....	8,087,421	8,017,020

The average annual taxable product of the different kinds of manufactured tobacco, from September 1, 1862, to June 30, 1865, was 42,809,168 pounds. The income tax was considered as less detrimental to the country than any other form of taxation, with the exception of the excise on spirituous and fermented liquors and tobacco. But the discrimination in the rate levied on incomes above or below \$5,000 was unjust, and in fact a tax on the results of successful industry and enterprise, and should be abrogated and the rate equalized at five per centum. The exemption of six hundred dollars,

at the time it was adopted, was deemed sufficient to enable a small family to procure the bare necessities of life. Under the expansion of the currency, the purchasing power of one thousand dollars declined until it became no greater than that of six hundred dollars when the exemption was adopted. By authorizing the deduction of rental, those of an excessive and unreasonable amount were often deducted, and considerable sums might have been gained to the revenue in cities by allowing a deduction of only a fixed amount. This tax has been assessed on the income of the calendar year and not on that of a fiscal year. Thus the incomes of 1862 were assessed in 1863, and the tax mainly included in the receipts of the fiscal year 1864. The receipts from this source, since 1863 inclusive, have been as follows:

Fiscal year 1863.....	\$455,741
" 1864.....	14,919,279
" 1865.....	20,567,350
First six months of 1866.....	54,549,138

An annual revenue of fifty millions has been estimated from this source. That from banks, in 1865, amounted to \$13,579,594, and it was estimated that a similar amount would be collected in the immediate future. It was also estimated that the receipts from licences by the extension of the revenue laws over the whole country would be greatly augmented. The revenue from stamps proved to be, perhaps, the most easily collected, with small expense, and with comparatively little fraud. It can be readily augmented, without detriment to the industry of the country. The adhesive revenue stamps embraced eight different classes or sizes, and thirty-two denominations, varying from one cent to two hundred dollars. They were engraved on steel in an elaborate manner, and were believed to possess every guaranty against counterfeiting which the best skill and knowledge could afford. To this security was added the safeguards of gumming and perforation, processes necessary to perfect every stamp, and requiring costly and peculiar machinery. No successful counterfeit of them has thus far been made. Six-sevenths of the entire consumption has consisted of the two-cent bank-check and receipt stamps, the various proprietary stamps, and the one-cent stamp required to be affixed to matches. Thus the most important results in this department of revenue flow from the smallest stamp taxes universally diffused. In 1865 one-third of the stamp revenue was derived from bank-check receipts and match stamps. Considering the small actual tax of one cent on each bunch, and the insignificance of the business, as contrasted with many others, this product of industry probably affords the largest comparative revenue accruing under the excise. A legacy and succession tax is based upon the belief that the entire property of the country changes hands once in thirty years. An estimate at the surrogate's office in New York is that the amount of property annually passing

in the city, by will, or inheritance of kin, is about thirty-one millions of dollars. Such taxes when moderate have little influence in checking the development of industry. A tax of one per cent., it was estimated, would yield three millions of dollars annually. The taxes on gross receipts are those mainly levied on transportation and intercommunication. The majority of them, excepting railroads, yield an inconsiderable revenue. The receipts from bridges and toll-gates, in 1865, were \$75,269; from canals, \$92,421; from ferries, \$126,133; from stage-coaches, wagons, etc., \$469,188; and from railroads, \$5,917,298. The tax on sales of stock-brokers was one-twentieth of one per cent., or five dollars on the sales of ten thousand dollars of the par value of the stock sold, which proved to be too heavy to be raised from the whole amount of the business transacted, and was, doubtless, largely evaded. The

stock-brokerage business is otherwise most frequently taxed; a tax being imposed upon every certificate of stock taken, and on every contract for delivery of stock. So that if it had been possible absolutely to enforce the law, the brokerage business for the sale of stocks would have been nearly or quite extinguished. It was suggested that the tax should be made one-hundredth of one per cent. It is a long-recognized and sound commercial principle that large and frequent business transactions, turning on small profits, should be subjected to the minimum specific tax. After some amendments of the internal revenue law on some of the points above noticed, and with an estimate of \$130,000,000 from customs, and \$21,000,000 from miscellaneous sources, the following estimate was presented by the commissioners above mentioned, as the aggregate results for the fiscal year ending June 30, 1867:

Aggregate results for the fiscal year ending June 30, 1867.

From Customs.....		\$130,000,000
“ Excise, viz.:		
“ Distilled spirits.....	\$40,000,000	
“ Fermented liquors.....	5,000,000	
“ Tobacco and its manufactures.....	18,000,000	
“ Cotton (raw).....	40,000,000	
“ Coal-oil, refined petroleum, etc.....	8,000,000	
“ Spirits of turpentine, and rosin.....	2,000,000	
		\$108,000,000
“ Licenses.....	15,000,000	
“ Incomes.....	40,000,000	
“ Salaries.....	2,000,000	
“ Banks.....	15,000,000	
“ Stamps.....	20,000,000	
“ Gross receipts.....	9,000,000	
“ Sales.....	4,000,000	
“ Legacies and successions.....	3,000,000	
		\$103,000,000
Miscellaneous receipts, 1866-'67.....		21,000,000
Aggregate.....		\$2367,000,000

By adding to the above sum the amount received in the fiscal year 1865, from the various direct and indirect taxes on industry, which, excepting the amounts derived from the excise on spirits, beer, tobacco, cotton, petroleum, and naval stores, was estimated at about sixty-eight millions of dollars, and the gross revenue possible from all sources by the above estimate is four hundred and thirty-five millions of dollars. Allowing the annual expenditures to be increased sixteen millions, and setting aside fifty millions for the reduction of the public debt, a surplus would remain of sixty-eight millions applicable to the reduction of taxation. Accepting these results as substantially correct, the possibility of adopting a revenue policy which should consist in concentrating the sources of revenue, and of relieving industry of all those burdens which tend to check its development, was demonstrated. All parties, however, were conscious that in the existing condition of the currency, and of the trade and commerce of the country, any financial estimate which could be made of the future must be somewhat problematical and liable to be affected by causes which the most sagacious

could not foresee. The views of this commission on the course to be pursued for the future were that at this time no such amount as fifty millions should be withdrawn from the revenues for the redemption of the principal of the public debt. On the contrary, they believed it to be the true interest of the government that taxation should be reduced at the earliest possible moment, to its minimum, thereby making sure the future industrial development of the country; and that no considerable sum should be immediately raised by taxation for the reduction of the principal of the public debt. In this view, consideration was had for the fact that the Government had taken to itself nearly every source of revenue except the single one of real estate, which was already burdened with the indebtedness of the State governments, that the people were largely in debt, and that the development of the country had hitherto surmounted every financial embarrassment.

On July 13, 1866, Congress passed an act relative to internal revenue, which provided for an abatement or repeal of the taxation on various articles amounting to nearly fifty millions of dollars. This legislation gave sensible

and timely relief to many branches of industry, especially crude petroleum, domestic sugars, clothing, boots and shoes, books, cordage, railroad freights, and the manufactures of steel, iron, chains, cables, etc. The prices of the articles, however, did not show a reduction corresponding to that of the taxation; but on the contrary, in some instances, owing probably to the fact that heavy taxation had previously diminished production to a point absolutely below the necessary supply, the prices seemed to have been concurrently advanced with the abatement of taxes. The tax on stock-brokers' sales was changed to one-hundredth of one per cent., payable by means of stamps affixed to the bill or memorandum of each sale, with the most satisfactory results. Brewers of fermented liquors were required to make monthly returns of the product of manufacture, and to affix an adhesive paper stamp to each barrel sold, which was to be cancelled by the retailer. This plan proved to be a success in preventing frauds.

But it is necessary to consider the present tariff system of the country and its operation in order to have a full view of all the elements which enter into the financial condition of the Government and country. The rates of duty imposed by the tariff in operation at the beginning of 1866, were about forty per cent. on the total value of imports, and about forty-three per cent. on the values of those paying duty. The following table exhibits the annual imports and exports, and duties of the United States from 1859 to 1866 inclusive:

FISCAL YEAR.	Value of Imports.	Value of Exports.	Duties received.
1859.....	\$338,765,180	\$356,789,462	\$49,565,824
1860.....	362,163,941	400,122,296	53,187,512
1861.....	350,775,835	410,856,818	39,582,128
1862.....	205,819,823	229,790,280	49,056,898
1863.....	252,187,587	331,809,459	69,059,642
1864.....	328,514,659	340,665,580	102,816,158
1865.....	284,434,167	336,697,123	84,928,260
1866.....	437,633,968	179,046,680	

So far as relates to the amount of revenue collected, no satisfactory reasons could be brought forward in support of a demand for an extensive change in the existing rates of duty. Since the revision made in 1864, the revenue has reached a point much larger than was ever anticipated, and beyond which no material increase can probably be obtained except by a large increase of importations. Reasons for a change of the existing rates were, however, urged from the condition and necessities of various industrial interests of the country, especially those brought into competition with similar producing interests of other countries. The condition and necessities of those industrial interests demanding a change in the rates of duty on imports, were not the results of the previous duties imposed, but the consequences of abnormal and unusual occurrences existing in other departments of social affairs, and operating upon those branches of industry affected by

duties on imports. The basis of all values was a paper currency, the influence of which was felt immediately by those manufacturers that came into competition with the productions of other countries, whose basis of all values was gold and silver. The condition into which these industrial interests had been brought is chiefly shown by the advance in prices. The advance in the prices of the leading articles of consumption and in rents indicates an increase of nearly ninety per cent. in 1866, as compared with the mean prices during the four years from 1859 to 1862. The advance in breadstuffs is estimated at about 70 per cent.; coal (anthracite), 60 to 70 per cent.; salt fish, from 60 to 75; pork and beef, from 110 to 120; butter, over 100 per cent.; rice, 100; salt, from 110 to 120; soap, from 80 to 90; brown sugars, from 70 to 80; coffee, from 30 to 40; and teas, 140 to 150 per cent. The currency prices of textile cottons in October, 1866, show a nominal advance over the gold prices of such fabrics in July, 1860, of 172 per cent.; the advance in the gold prices in the same period having been 81 per cent., assuming the premium on gold in October to have been 50 per cent. A portion of this advance in these textiles must be attributed to the advance in raw cotton, which varied from 300 to 500 per cent. above the price in 1860. The advance in the cost of manufacturing goods in one of the Eastern mills in 1866 over the average from the years 1857 to 1861, was 133½ per cent. On the manufacture of woollens suitable for ordinary domestic use, the advance was estimated at 53 per cent. On silk goods in general, the advance was estimated at an average a little over 100 per cent., the lower grades having advanced at a still higher ratio. The average increase in the price of labor since 1860 has been estimated at 60 per cent., although no very exact and comprehensive statement can readily be made, owing to the varying nature of the conditions which affect the estimate. The following data in branches of manufacture show the advance from 1860 to 1866:

BRANCH OF MANUFACTURE.	Advance in wages from 1860 to 1866.
	Per cent.
Agricultural implements.....	55 to 60
Agricultural laborers in the Northern, Middle, and Western States, average.....	50
Book-binding.....	37½ to 50
Boots and shoes—Men's.....	50
Women's and children's.....	25 to 33
First-class custom work.....	nearly 100
Car building—Skilled mechanics, 60 to 75 per cent. } Laborers, and unskilled, 60 per cent. }	60
China decorating.....	60
Clothing—Ready made.....	50
Custom work.....	95
Copper mining.....	100
Cotton manufactures—general average of all branches.....	66½ to 90
Furniture—Cabinet.....	85
Hardware—Files.....	48½
Locks.....	66½
Saws.....	75
Hats, wool and fur.....	60
India-rubber manufactures.....	80
Ink, printing.....	75
Iron—Founding.....	50 to 60
Rolling.....	75 to 80
Wire.....	75

Jute manufactures.....	89
Locomotives and machinery in Paterson, N. J., average.....	98
Machinery, cotton and woollen, average.....	60
Machinery, general average.....	60
Machinists' tools.....	68
Paper hangings—Machine tenders and block cutters.....	50
Hand printers.....	73
Laborers.....	68
Printing—Composition.....	45 to 60
Saddlery and harness.....	62½
Ship-building.....	71
Silk trimmings, etc.....	100
Stereotyping.....	50
Umbrellas and parasols.....	47½ to 60
Woollen goods—Miscellaneous.....	67
Carpetings.....	85

The following estimates of the increased advance in wages (1861-'66), in the cities and States below named, were carefully made at the instance of the Commissioner of Revenue, by intelligent and reliable gentlemen:

BRANCHES OF MANUFACTURE.	Advance in wages from 1860 to 1866. Per cent.
In all the manufacturing establishments in the town of Chester, Penn., the estimate average increase is.....	26
In Canton, Stark Co., Ohio.....	57½
In the city of Worcester, Mass.....	87½
In the city of Baltimore, Md., carpenters.....	100
Plumbers and tinnern.....	75
While in all branches of industry, including laborers as well as mechanics, the general average increase is.....	50
In the State of Ohio, where the large majority consists of farm laborers, the average is.....	50
In Massachusetts the increase in mechanics' wages is.....	60
While that of all employes in this State, male and female, and including farm laborers, is.....	50
In Western New York, the increase of wages of skilled farm laborers has been seventy-six per cent.; for month and day laborers, from fifty to sixty per cent.; for mechanics' labor, from fifty to one hundred per cent.	

By the census of 1860, the average monthly wages of those employed in all branches of manufactures, was, of males, \$27.10, and of females \$12.50; while by the census of New York in 1865, the average monthly wages in the whole State was, for males, \$44, and for females, \$20; being an increase of sixty-two per cent. for males, and sixty per cent. for females. The average advance in the rents of houses occupied by mechanics and laborers in the great manufacturing centres of the country is estimated to have been about 90 per cent.

The effect of this great increase of prices has been a decrease of production and consumption, and a partial suspension of the development of the country. Thus a comparison of the industry of Massachusetts at the two periods of 1855 and 1865, in the articles of cotton goods, calico, woollens, paper, rolled and slit iron and nails, clothing, leather, boots and shoes, mackerel and cod fisheries, it appears that the decrease in the number of hands employed at the latter period is about 11 per cent. Some of this decrease may have arisen from labor-saving machinery. But the gold value of the industrial products above specified, at the latter period as compared with the former, showed a decline of nearly 8½ per cent. The cotton manufactures of the two periods, other than calico, show a decrease in the number of hands employed of 51 per cent., and in the quantity of raw cotton used 56 per cent., while the diminution of product was 47 per cent. and the average value of the cotton goods per yard, showed an increase in gold in 1865 over 1855 of 75 per cent. The following table presents further details:

PRODUCTS.	No. of hands employed in 1864-'5, to 100 in 1854-'5.	Value of products in 1864-'5, to \$100 in 1854-'5.		Amount of capital invested in 1864-'5, to \$100 in 1854-'5.	
		In currency.	In gold at \$2.07.	In currency.	In gold assumed at \$1.25 at dates of investment.
Cotton goods (exclusive of calico).....	69	\$208	\$100½	\$104	83
Calico.....	67	265	128
Woollens.....	183	400	198	202	162
Paper.....	186	218	105	148	119
Rolled and slit iron and nails.....	105	146	71	121	97
Clothing.....	108	196	95	167	134
Leather.....	122	145	70	120	96
Boots and shoes.....	74	141	68
Fisheries (mackerel and cod).....	109	246	145	100½	80
Total products specified.....	89	200½	96½	124	99½

Corresponding illustrations are furnished in other parts of the country. Thus at Pittsburg, Pa., the value of the manufacturing products of the city in 1859-60 were \$42,805,500 in gold, and in 1865-66, \$64,280,069 in currency, which at an average gold premium of fifty per cent. shows nearly similar results.

In consequence of the great advance of the prices of all labor and materials, the products of American industry were exposed to a most unfair competition, both in the home and foreign

markets, with the products of other countries made from untaxed raw materials, having the advantage of cheaper capital and lower wages of labor. In nearly every department of industry the possession of the home market has become seriously interfered with, while the ability to compete with foreign nations in foreign markets is restricted to the sale of a few articles in which the American producer is largely favored by natural or accidental advantages, as in the case of cotton, petroleum, etc. The fol

Following table prepared at the Bureau of Statistics shows the decrease in the exportation of various articles during the fiscal year 1866, as compared with each of the previous five years.

ARTICLES.	Year 1860.	Year 1861.	Year 1862.	Year 1863.	Year 1864.	Year 1865.	Year 1866.

But the decline of the various branches of industry is clearly indicated in the shipping interest. The amount of American registered tonnage engaged in foreign trade in 1865-'66 was 1,492,924 tons, while in 1859-'60 the amount of this tonnage was 2,546,237 tons; which, allowing for the difference between the old and new measurement, indicates a decrease in five years of over fifty per cent. In 1853 the tonnage of the United States was about 15 per cent. in excess of that of Great Britain, whereas at the present time it is estimated at 3 per cent. less. The coastwise and inland commerce, by the official returns, after making allowance for the difference of measurement, shows a decrease of about 12 per cent. In the Brazilian, or South American trade, in 1861-'62, one hundred and ninety vessels were engaged, of which at present only thirty are reported as remaining, while the number of foreign vessels engaged in the same trade, has, during the same time, increased nearly threefold. One cause of this change was undoubtedly the frequent pressure upon this part of the ocean of the Alabama and other privateers. The number of vessels of all classes engaged in the foreign trade which arrived at the port of New York during 1866 was 992, of which 1,658 were American bottoms, and 2,410 British bottoms. The building of ships has to a great extent been transferred from the Atlantic coast of the United States to the British Provinces, where the tonnage, especially in New Brunswick and Nova Scotia, during the five years ending June 30, 1865, has increased

respectively 69 and 71 per cent. The decline of the foreign tonnage of the country has been commonly referred to the war; but since this cause ceased to operate, the declining movement has continued to prevail. The shipbuilding of the country had almost entirely ceased during the latter part of the year. Previous to 1860 about one-half of the product of the copper mines of Lake Superior was exported to France and Germany; now the proprietors of these mines represent that their whole investments are threatened with ruin through failure to secure even the home market. During the year, flour from France and starch from Great Britain were imported into New York and Boston to be sold at a profit. The machinery for the manufacture of cotton and for refining sugar, is now in a very large proportion made abroad, as the price is about one-third less than that for which the same can be constructed in the United States. The value of that in the course of construction in Europe at this time is estimated at three millions of dollars. Notwithstanding the embarrassments to some manufacturing establishments, they were kept in operation at the merest appreciable profit, and every expedient for economizing labor and perfecting profit was resorted to. Other establishments continued to divide large profits among their stockholders, although their exhibits were generally less favorable than for the preceding year. The following were the dividends of some manufacturing companies of Massachusetts:

STOCKS.	Capital.	DIVIDENDS.				Amount January, 1867.

The Special Commissioner of Revenue (Mr. Wells) says: "Although it is an interesting fact, that investigation under such circumstances should reveal any degree of national progress, at the same time the demand for relief from the producing interests of the country, both manufacturing and agricultural, is most urgent and general; and however it may have been heretofore, it is certain that at present, in many descriptions of manufacture, the internal rates of taxation, superadded to the high prices paid for raw materials and for labor, sweep nearly all the profits into the coffers of the Government, and in many instances actually offer a bounty to the foreign competitor."

Those who find their industrial pursuits thus injured, or in danger of destruction by a foreign competitor, were urgent that Congress should advance the rates of duty upon their manufactures. Such a measure might afford them a temporary relief without exerting any beneficial influence upon the great problem before the country. No such advance of duties was required for the necessary increase of the revenue, as has already been stated. Such legislation, therefore, could be sustained only upon the still disputed principle that it was the duty of the Government, in all cases, to protect manufactures.

The special facts thus far stated relative to the operation of the currency, the internal revenue and tariff laws, present a very imperfect view of the condition of the great industries

mass of the community. Before the war the revenue of the Federal Government was about \$60,000,000 annually, chiefly derived from customs and land sales. No direct tax was levied upon the people, except for State and local expenditures, and these were moderate in amount. But during the last year the Government took from customs and internal revenue alone nearly \$500,000,000 from the people, while the State, county, township, and city taxes have also vastly increased. The prices of all articles of prime necessity have also greatly increased, while agricultural products generally have advanced little more than the appreciation of gold. Wages are higher, but the advance is not proportioned to the rise in rent, fuel, and household necessities. The Chairman of the Ways and Means Committee of the House of Congress says: "A printer in Washington now gets \$24 per week, and works but eight hours per day, where he formerly received \$14 per week, and worked ten hours per day, and yet he will tell you that his condition and means to support a family have not been bettered." The industrial classes have been growing worse off, able to purchase less and to save less; this poverty reacts on both traders and manufacturers.

The Commissioner of Internal Revenue thinks there have been three causes for the abnormal condition of the country, and suggests three corresponding remedies. The first cause has been a scarcity of skilled labor, which no legislation can remedy, except by creating encour-

agement to immigration; the second cause has been, as he suggests, the adoption on the part of the Government, as a measure of value, as a medium of exchange, and as a legal tender, of an irredeemable paper currency, the remedy for which is a return to specie payment through the agency of contraction applied to the greatest possible extent, and at the earliest possible moment, compatible with the condition of the industrial interests of the country, and of the public obligations; the third cause, and perhaps the most influential, has been the extent of the burden of national taxation, which is thus illustrated:

	Taxation per capita.	National Debt per capita.
United States.....	\$11.46 gold	\$74.28
Great Britain.....	10.92 "	125.00
France.....	7.97 "	58.00
Belgium.....	5.59 "	26.00
Prussia.....	5.43 "	12.00
Austria.....	5.27 "	45.00

The remedy suggested by the Commissioner is such a reduction of the existing taxes as can now be made compatible with the demands of the treasury for expenditures, interest, and a certain reduction of the national debt.

The Secretary of the Treasury, embracing in his view the currency, as well as the systems of taxation, suggests five measures as remedies for the present condition of the country. In the first place he would compel the national banks to redeem their notes as well at the commercial centres as at their own counters. Without such redemption there would be practically none at all until specie payments are resumed, and where there are no redemptions there is always a constant tendency to inflation and illegitimate banking. The frequent return of their cities is needed to keep the business of the banks in a healthy condition. The second remedy suggested by the secretary is a curtailment of the currency by the withdrawal of the United States notes. The present banks having taken the place of the State banks, and furnished a circulation as free from objection as any that is likely to be provided, they should be sustained, and not compelled to retire their notes. How rapidly the Federal notes may be retired must depend upon the effect which contraction may have on the business and industry of the country, and can be better determined as the work progresses. It could probably be increased to six millions per month in the fiscal year, ending July 30, 1867, and to a millions per month thereafter. The policy of contraction should be definitely and unchangeably established, and the process should go on as rapidly as possible without producing financial crisis, or seriously embarrassing the branches of industry and trade upon which the revenues are dependent. The third remedy suggested was a revision of the tariff for the purpose of harmonizing it with the internal taxes, etc. The question now before the

country he regards as one of adaptation rather than principle. How shall the necessary revenue be raised under a system of internal and external taxes without sustaining monopolies, without repressing industry, without discouraging enterprise, without oppressing labor? In other words, how shall the revenue be raised in a manner the least oppressive to the people without checking the growth and prosperity of the country? To the legislation now required, the Secretary of the Treasury recommended as a guide the following general principles: First, that the fewest number of articles now required, consistent with the amount of the revenue to be raised, should be subjected to internal taxes, in order that the system may be simple in its execution, and as little offensive and annoying as possible to the tax-payers. Second, that the duties upon imported commodities should correspond and harmonize with the taxes on home productions, and that these duties should not be so high as to be prohibitory, nor to build up home monopolies, nor to prevent that free exchange of commodities which is the life of commerce. Nor, on the other hand, should they be so low as to seriously impair the revenues, nor subject the home manufacturers, burdened with heavy internal taxes, to a competition with cheaper labor and larger capital, which they may be unable to sustain. Third, that the raw materials used in building and manufacturing, and which are to be largely enhanced in value by the labor to be expended upon them, should be exempted from taxation, or that the taxes upon them should be low in comparison with the taxes upon other articles. Fourth, that the burdens of taxes should fall chiefly upon those whose interests are protected by taxation, and upon those to whom the public debt is a source of wealth and profit, and lightly upon the laboring classes, to whom taxation and debt are without so many compensatory advantages. With these views upon the manner in which the tariff and internal revenue laws should be modified, the Secretary still further proposed, as a fourth remedy for the condition of the country, an issue of bonds bearing interest at a rate not exceeding five per cent, and payable in Europe, to an amount sufficient to absorb the six per cent. bonds in foreign hands, and supply the European demand for United States securities for permanent investment. The opinion that the country has been benefited by the exportation of its securities, which is founded upon the supposition that real capital has been received in exchange, is to a great extent unfounded. The importation of goods has been increased by nearly the amount of the bonds which have been exported. Not one dollar in five of the amount of the five-twenties now held in England and upon the Continent has been returned to the United States in the form of real capital. Some three hundred and fifty millions of government bonds, not to mention State and railroad bonds and other securities,

are in the hands of citizens of other countries, and may be returned at any time for sale in the United States, and thus seriously embarrass the efforts to return to specie payments. To avoid this embarrassment is the point to be considered. The last general remedy proposed by the Secretary is to restore to their former position in the Union, the ten Southern States.

If these remedial measures should be approved by Congress and enforced by appropriate legislation, the Secretary expressed his conviction that specie payments could be resumed by the time the interest-bearing notes were retired, which would be less than two years. These suggestions of the Secretary looked to an increase of labor, and consequently of production—to a fulfilment of obligations by the government and by the banks—to a reduction of the public debt at the same time that taxes were equalized and lessened—to lower prices, and apparently harder, but really more prosperous times, and to a restoration of specie payments without the financial troubles usually preceding a resumption.

Various views were presented in different quarters respecting the measures necessary for the future financial welfare of the country. Some urged the extinction of the national banks, and the substitution in their place of a government currency. Others urged, with the Secretary, a contraction of the currency. Among these was the Chairman of Ways and Means (Mr. Morrill), in the lower house of Congress, who, in the beginning of 1867, thus closed a speech urging a resumption of specie payments:

From the facts to which I have already called the attention of the House, it would appear to be demonstrated that the simultaneous discovery of new auriferous deposits in various parts of the world, of marvellous extent and richness, has rapidly and forever depressed the standard value of gold, whether as a currency or as a commodity, throughout all civilized nations, and that the United States standard of the precious metals used as currency has been depreciated from time to time, either by alloy or diminished weight, until it compares unfavorably with that of other nations; that while we have already entirely extinguished or propose to extinguish the circulation of State banks, we have supplied its place and much more by the erection of a family of national banks, whose issues alone are \$100,000,000 greater than the circulation displaced—issues everywhere practically irredeemable and inconvertible, and only claiming to be convertible at some time or other into other paper currency of still larger proportions, which government will in some way and at some time redeem, if it does not choose instead to go more deeply into the monopoly of fancy-colored paper money; that deposits, bills of exchange, and checks of individuals really possess in commercial transactions all the functions of bank-note currency, and in modern times are used at least nine times more extensively, and therefore, in proportion to the business of the world, far less money is actually required than formerly; that the rapidity of the circulation of money, or whatever circulates as money, greatly magnifies any currency which may be used in the United States; that the immensity of our paper-money circulation tends to the spread of unthrifty habits, and induces extravagance on the part of Congress and the executive de-

partments as well as the people; that a postponement of the time of resumption will find our people less prepared—more deeply in debt, the banks with a heavier line of discounts, and the credit system more expanded everywhere—than now, for a wise, steady, and prudent adherence to the idea of an early resumption, and without this cardinal idea always in front, we are in danger, in the face of a diminishing revenue, of no resumption at all. A violent or abrupt contraction of the present volume of paper currency might not be advisable, and with the ever-present interest of the Treasury urging the maintenance of an easy money-market, there is no danger of its occurrence; but a moderate and persistent contraction of the flood within its old embankment is advisable, in order to restore health and vigor to languishing industries, and in order to build up our greatness as a nation upon that impregnable foundation for which the material, not more precious than solid, has been placed by Providence within our reach, and in greater abundance than is to be found in all other countries besides. We have just emerged from a most expensive war, and ought to exhibit that spirit which success justly inspires, grappling with the financial difficulties remaining as part of our inheritance with the courage that conquers, and thus secure the vital interests of our own people while we challenge the respect of foreign nations.

From all the facts which have been stated, comprising, as they do, a history of the financial condition of the Government and people, it will be seen that the Federal Government requires large sums of money for the years immediately ensuing; that its systems of revenue being based upon the industry of the people, its receipts are increased or diminished according to the prosperity of the people; that at the close of the year serious depression existed in many branches of industry and threatened to invade all others, and cause to the Government a serious loss of revenue; that this depression was partly a result of the inflated paper-currency of the country; and that the Government, under the reduced scale of business on a specie basis, could not obtain the revenue necessary to its expenditures. In other words, a contraction of the currency would cramp and cripple the Government, but bring healthy prosperity to the people; whereas an expansion of the currency would give the Government temporarily a surplus, but ultimately depress the people. The Secretary hopes to find a medium way between these extremes; others believe the immense richness of the country will float both Government and people into a sea of healthy prosperity.

The following is a statement of the public debt June 30, and October 31, 1866, exclusive of cash in the Treasury:

DENOMINATIONS.	June 30, 1866.	Oct. 31, 1866.
Bonds, 10-40's, 5 per cent., due in 1904.....	\$171,219,100 00	\$171,000,000 00
Bonds, Pacific R. R., 6 per cent., due in 1895 and 1896.....	6,042,000 00	2,532,000 00
Bonds, 5-20's, 6 per cent., due in 1882, 1884, and 1885.....	722,905,500 00	622,944,000 00
Bonds, 6 per cent., due in 1868.....	8,908,841 80	6,291,941 50
Bonds, 6 per cent., due in 1867.....	9,415,250 00	7,742,500 00
Compound-interest notes, due in 1867 and 1868.....	150,012,140 00	148,312,140 00
7.80 Treasury notes, due in 1867 and 1868.....	506,251,550 00	724,014,300 00
Total.....	\$988,587,381 80	\$885,500,151 50

DENOMINATIONS.	June 30, 1866.	Oct. 31, 1866.
Bonds, Texas indemnity, past due, not presented.	\$559,000 00	\$384,000 00
Bonds, Treasury notes, etc., past due, not presented.	8,815,675 80
Bonds, Treasury notes, temporary loan, certificates of indebtedness, etc., past due, not presented.	86,604,909 21
Total.	\$4,874,675 60	\$36,983,909 21
Temporary loan, ten days' notice.	\$120,176,196 65
Certificates of indebtedness, past due, not presented.	26,891,006 00
Total.	\$146,567,196 65
Bonds 6 per cent, due in 1861.	\$265,817,700 00	\$265,824,750 00
Bonds 6 per cent, due in 1860.	18,415,000 00	18,415,000 00
Bonds 5 per cent, due in 1864.	20,000,000 00	20,000,000 00
Bonds 5 per cent, due in 1871.	7,022,000 00	7,022,000 00
Navy pension fund, 6 per cent.	11,750,000 00
Total.	\$1,210,221,800 00	\$1,327,407,100 00
United States notes.	\$400,881,868 00	\$390,195,785 00
Fractional currency.	27,070,876 06	27,583,010 83
Gold certificates of deposit.	10,713,130 00	10,596,960 00
Total.	\$428,675,434 06	\$428,680,775 83
Total debt.	\$2,783,425,879 21	\$2,681,684,966 84
Cash in Treasury.	182,587,549 11	180,824,960 63

The Secretary estimates that the receipts and expenditures for the three quarters ending June 30, 1867, will be as follows:

RECEIPTS.	
Receipts from customs.	\$110,000,000 00
Receipts from lands.	500,000 00
Receipts from internal revenue.	186,000,000 00
Receipts from miscellaneous sources.	20,000,000 00
Total.	\$316,500,000 00

The expenditures, according to his estimates, will be—

For the civil service.	\$37,405,947 89
For pensions and Indians.	12,262,317 21
For the War Department, including \$15,000,000 for bounties.	58,804,657 05
For the Navy Department.	22,144,810 81
For interest on the public debt.	105,551,512 00
Total.	\$237,169,148 96
Leaving a surplus of estimated receipts over estimated expenditures of.	\$79,880,856 40

The receipts for the next fiscal year ending June 30, 1868, are estimated as follows:

From customs.	\$145,000,000 00
From internal revenue.	285,000,000 00
From lands.	1,000,000 00
From miscellaneous sources.	25,000,000 00
Total.	\$456,000,000 00

The expenditures are estimated as follows:

For the civil service.	\$50,067,242 08
For pensions and Indians.	25,858,489 09
For the War Department, including \$64,000,000 for bounties.	110,861,961 89
For the Navy Department.	30,251,605 36
For interest on the public debt.	133,678,243 00
Total.	\$350,247,641 83
Leaving a surplus of estimated receipts over estimated expenditures of.	\$85,752,358 63

In the opinion of the Secretary specie payments may and ought to be resumed as early as the first day of July, 1868; at the same time he expresses the hope it may be brought about at an earlier day.

In the following table (see page 807) are given the daily prices of gold at New York during the year 1866:

The following shows the range of daily closing prices for Government securities, monthly, of the year 1866:

MONTHS.		6's, 1861.		6's (5-20's).		5's (10-40's).		7-30's, 1867.	Certifi- Cates.

FINE ARTS, UNITED STATES. The history of the Fine Arts in the United States during the year 1866 exhibits a steady progress toward a higher standard of excellence, and an activity in the acquisition of old works and the production of new ones, which contrasts significantly with the ignorance and indifference of former years. But with no lack of zeal to encourage native or foreign talent, American collectors cannot be said as yet to have shown that degree of taste or discrimination which is needed to lay broad and deep the foundations of a national school of art. The private galleries of our large cities already contain numerous specimens by European or native masters of repute, and are rapidly increasing in numbers and proportions; but, as is inevitable in a country imperfectly educated in art, the owners, in adding to their collections, are too often influenced by fashion, by caprice, or by a not very elevated spirit of rivalry, rather than by intuitive perception or true knowledge. So far was this the rule during the last two years, that ignorant persons, intent upon the acquisition of large collections of pictures, were frequently imposed upon by works which, though bearing the names of popular French, German, or Belgian artists, were evidently manufactured for a market, and would be pronounced forgeries by competent judges. In proportion as a higher culture is developed by study, observation, or the diffusion of sound canons of art, this species of imposition will prove less likely to succeed. Meanwhile, it is satisfactory to know that, along with much that must be designated merely as rubbish, there is in the country a sufficient number of works of merit to form the nucleus of a national collection, should such a thing be attempted. And when our art collectors begin to imitate the liberality of those of Europe, and throw open occasionally their galleries to public inspection, each chief city will probably be found to contain works adapted to the formation of a correct local taste. As regards the acquisition

of modern European works of art, it is worthy of mention that, with rare exceptions, the continental schools of painting seem to be in most esteem, and the productions of British artists are still practically ignored. The demand for pictures, or even for copies of pictures, by the "old masters," has almost ceased, which of itself may be considered an indication of increasing intelligence. The collectors who now willingly pay large sums for paintings by Rosa Bonheur, Frère, Meissonier, or Gérôme, are no longer capable of being deceived by the so-called Correggios, Titians, Rubenses, or Murillos, which once flooded the auction rooms. But while no little avidity is manifested, and considerable sums are paid for foreign pictures, to the disparagement in some respects of native painters, American sculptors retain the ascendancy early asserted by Greenough, Powers, and Crawford, and the plastic art of the old world is very inadequately represented in our art collections or national edifices of recent construction.—The city of New York has continued during the year to be the chief emporium for the disposal of works of art, and between January and May upward of \$400,000 were realized from auction sales, chiefly of imported pictures. This was a considerable advance over the sales of the previous season, though somewhat less than those of 1863-'64, when several unusually valuable collections were put upon the market, eliciting unprecedentedly high prices from purchasers. The first collection of importance offered for sale was that of the late John Hunter, comprising three hundred and seventy-three pictures, collected mostly between 1800 and 1835, and which realized a sum total of nearly \$30,000, or less than \$80 a picture. This low average was reached in spite of an array of names upon the catalogue which, if representing genuine works, should have given no slight stimulus to the bidding. The highest price obtained was \$1,250 for a picture by Watteau, entitled "The Swing." On March 8th and 9th a consignment of two hundred and

fifty oil and water-color paintings by contemporary European artists, besides a few by American painters, was disposed of for about \$35,000. The average price, \$140, was low in comparison with sales of previous years, a great falling off being noticeable in the competition for works by such popular artists as Frère, Brion, Plassan, Lambinet, Verboeckhoven, Koek-Koek, Meyer von Bremen, Bouguereau, Fichel, Merle, and Wappers. But four pictures fetched over \$1,000 each, including "Au Roi," by Willems, \$3,300, and "Twilight in the Wilderness," by F. E. Church, \$4,300. A water-color drawing by Doré, entitled "The Angels watching over Moses," and which was originally designed by him for the illustrated edition of the Bible, sold for \$300. This was probably the first production of this now celebrated artist ever offered for sale in the United States. A large picture by Baron Wappers, "Italia," brought only \$560, and "Diogenes," by Gérôme, \$590. The chief sale of the season occurred on March 15th and 16th, when a collection of one hundred and sixty-eight paintings, selected by Messrs. Gambart & Co., proprietors of the French gallery in London, and representing most of the favorite contemporary European artists, was sold for over \$100,000. Among the names on the catalogue were those of Ary Scheffer, Meissonier, E. Frère, Gérôme, and others, well known to American connoisseurs, the genuineness of whose works was amply vouched for; and the prices realized were fully up to the standard of 1864. The following are the pictures which sold for \$1,000 and upward:

Arab Hunting, by Schreyer.....	\$1,200
"Good Morning," by E. Frère.....	1,000
Sheep, by Verboeckhoven.....	1,750
The Staff, by E. Frère.....	1,000
Looking after Lambs, by L'Schaygeurg.....	1,250
Amalfi, by Herring.....	1,170
Taking Home the Bride, by Hodgson.....	1,100
Falcon Hunting, by Fromentin.....	1,100
The Jetty, Ostend, by A. Achenbach.....	3,000
Netherland Protestant Family, by Lies.....	1,250
Cardinal's Carriage, by Heilbuth.....	1,210
Landscape, with Cattle, by Volz.....	1,050
The Sick Friend, by Fidemond.....	1,370
Horses Drinking, by Schreyer.....	1,630
The Convalescent, by Willems.....	3,000
The Lady of Fashion, by Willems.....	2,675
Children's Tea, by Plassan.....	1,050
The Breakfast, by E. Frère.....	2,950
The Introduction, by Ruiperez.....	1,950
Youth and Innocence, by Gérôme.....	2,650
Christ and the Three Marys, by Ary Scheffer.....	2,950
Arrest of John Brown, by Eastman Johnson.....	1,900

Meissonier's "Soldiers Playing at Cards" was put up at \$10,000, but withdrawn, as no bids were made.

On March 22d and 23d a large number of pictures by native and foreign artists, belonging to a private collection, was sold for \$30,000. Among the more notable works disposed of were: "Approaching Storm," by A. B. Durand, \$500; "Interior," by Koek-Koek, \$135; "Shorn Sheep," pencil study, by Rosa Bonheur, \$337; "Cosette," by Eastman Johnson, \$430;

"Autumn in the Adirondacks," by J. M. Hart, six inches by four, \$105; "Ryndall Falls," by Kensett, \$320; "The Artist's Studio," by Chavet, \$600; "Landscape and Cattle," by Troyon, \$900; "In the pool browsed the cattle," by James Hart, \$1,675; "The Sheepfold," by Robbe, \$1,010. At an auction sale, held on the 30th of March, a picture by Bierstadt, entitled "The North Branch of the Platte River," and which was painted in 1861, to order, for \$1,500, realized the large sum of \$7,000, and Church's "Volcano of Cotopaxi," \$1,125. Other sales took place in April and May, including a collection of ninety-six American pictures, which realized about \$12,000; but in the quality of the paintings and the prices obtained for them, there was nothing approaching the Gambart collection. One of the most successful sales of the season was that of the pictures painted by Mr. George H. Hall. This collection, which comprised seventy-five paintings, chiefly flower and fruit pieces, produced \$12,000—being an average of \$160 each. Many of these pictures were of small size—not more than three or four inches by five or six inches. During the summer and autumn of 1866 no additional auction sales of pictures were reported, and those occurring in December were too few in number to afford an indication of the probable activity of the art market in the spring of 1867. The annual sale of pictures contributed to the Artist's Fund Society took place on the 21st, and realized \$6,400, an average of over \$115 per picture. At the close of December a collection of less than a hundred pictures, consigned to Mr. J. P. Avery, sold for nearly \$20,000. "Thanatopsis," by Durand, brought \$1,350; and a "Lake Scene," by the same artist, \$1,400.

The first public exhibition of note in New York was that of the National Academy of Design, which, in 1866, entered upon its forty-first year. The number of pictures and drawings exhibited was five hundred and twelve, of which ninety-four were portraits, besides thirty pieces of sculpture, and the exhibitors numbered two hundred and seventy-five, of whom thirty-seven were females. More than three-fourths of these were residents of New York or its immediate vicinity, which shows the firm footing art has taken in that city. These figures, however, afford but an inadequate idea of the numbers or abilities of the artists who make their headquarters in New York, since the exhibition contained no works by Bierstadt, Inness, the two Harts, Mignot, Leutze, Page, Darley, Tait, Staigg, and others of note, and can scarcely be said to have been represented by Church, whose sole contribution was a slight and not very satisfactory sketch in oil. The most prominent exhibitors of landscapes, which, as usual, formed the better part of the collection, both in numbers and merit, were Kensett, Gifford, Cropsey, Gignoux, Durand, Whittredge, Colman, McEntee, and Griswold; and of portraits or figure pieces, Huntington, Eastman Johnson, Gray,

White, Homer, J. F. Weir, Vedder, Hays, Ehninger, May, Hennessy, Elliott, Hicks, Baker, and Stone. Among the noticeable works were "The Gun Foundry," by Weir; "Lear and Cordelia," by May; "Prisoners from the Front," by Homer; "Mount Blanc," by Gignoux; "Sunday Morning," by Eastman Johnson; portraits of Abraham Lincoln and Gulian C. Verplanck, by Huntington; portraits of a lady and her child, by William M. Hunt, of Newport, R. I.; "Flight of the Birds," by McEntee; "Drifting," by Hennessy; and "Gathering of the Herds," by Hays. The exhibition was fully up to the ordinary standard, but can hardly be said to have shown an improvement upon former years, a result inseparable from the practice, which is becoming prevalent among artists, of withholding their best works from public view, and, in some prominent cases, of not contributing at all to the annual exhibitions of the academy. With respect to pictures of *genre*, however, it may be observed generally, that they are gradually encroaching upon the space so long monopolized by landscapes, and are likely soon to become a recognized department of American art. The Academy of Design now consists of eighty members and seventy-eight associates, besides nearly eight hundred members of the fellowship grade established in 1863, and offers excellent opportunities to those wishing to become students of art. The antique school is open day and evening during five days of the week, and the life school three evenings of the week. The former is accessible to all who have mastered the rudimentary elements of drawing, and are able to draw "from the round," and the latter to those students who have proved themselves qualified to profit by study from life. The applications for admission to either school are less than would be supposed, in view of the advantages offered, and during a great part of the year the average attendance of students did not exceed thirty a day. Early in March an exhibition of etchings by the French Etching Club, together with a number of oil paintings, was opened under the auspices of Messrs. Cadart and Laquet, of Paris. The etchings were of no great merit, but the paintings represented a school of French artists, comprising such men as Corot, Ribot, Courbet, Doré, Lambron, Daubigny, and Nazon, comparatively unknown in America, who to strong naturalism add an independent and even wilful and capricious spirit, and are careless of mechanical execution, so that their purpose is sufficiently indicated on the canvas. The most remarkable work in the collection was "The Mountebanks," by Doré, a group of almost fascinating power, in spite of its negative coloring, and the general repulsiveness of the subject. It is one of the artist's earliest productions, painted in his twentieth year. The seventh annual exhibition of the Artists' Fund Society was held at the Academy of Design in November and December, and was one of the most interesting and instructive ever opened in New York. It was specially strong

in the department of water-color pictures, and afforded to most of the visitors their first opportunity to see authenticated and characteristic specimens by such noted English artists as Turner, Prout, Cox, Nash, Rossetti, Copley Fielding, Stanfield, Birket Foster, Richardson, and Absolon. Rossetti, whose works are rarely seen in public, even in England, was represented by two pieces, "Dante meeting Beatrice," and "Before the Battle," and Turner by a small view of "Castle Hill in Edinburgh, and Scott's House." The collection also contained portraits by some of the early American painters in this department, as Trumbull, Copley, Stuart, and Sully, one of Allston's most celebrated works, "Spalatro; or, the Vision of the Bloody Hand," and specimens by Cole and Professor S. F. B. Morse. English painters in oils were represented by Gainsborough, Eastlake, Stanfield, Linton, and Whistler, the last named a highly original artist, of American extraction, whose contribution, a "View on the Thames," though less remarkable for power of color than some of his more recent productions, was full of force and truth, and character. Among noticeable works by contemporary American painters, were portraits of Laboulaye and Gaspari, painted by May for the Union League Club of New York, "Columbus before the Council of Salamanca," by Theodore Kaufmann, and "American Slave Market," by T. S. Noble. The fifth annual exhibition of French, English, and Flemish paintings was opened in December. It comprised over a hundred original works, none of which could be called poor, and some of which were of great value and importance. The Continental Schools were, on the whole, the best represented, and the specimens by Gérôme, Meissonier, E. Frère, Duverger, Rosa Bonheur, Alma-Tadema, and other distinguished painters, were well selected and characteristic of the schools from which they emanated. The most striking picture in the collection was Gérôme's "King Candaules," familiar to many by the fine steel engraving of it recently published. The influence of exhibitions of this kind in forming the public taste, as well as in affording an incentive to American artists, can hardly be overestimated. They lack, however, the element of permanence. Such a thing as a large public gallery of works of art, corresponding in plan, if not in scale, with those of the great European cities, to remain open during the greater part of the year, has not yet been established in New York. The nearest approach to it is to be found in the museum and gallery of art of the Historical Society, which, besides the fine collection of Egyptian antiquities, made by Dr. Abbott, and the Lenox collection of Nineveh sculptures, contains nearly five hundred pictures belonging to the New York Gallery of Fine Arts, and the Bryan Gallery of Christian Art, and some fine sculptures. Among the modern pictures are twelve by Cole, including his "Course of Empire," works by Gilbert Stuart, Copley, Jar-

vis, Vanderlyn, West, Romney, Durand, Huntington, Morse, Chapman, Gignoux, Page, and others, and the original drawings, nearly five hundred in number, made by Audubon for his "Birds of America." The sculptures comprise the "Indian," the "Hunter Boy," "Adam and Eve," "Boy playing at Marbles," and the "Peri," by Crawford, two pieces by H. K. Brown, and upward of fifty busts in marble, among which are works by Canova, Chantrey, Clevenger, Palmer, and Brown. This would undoubtedly form the nucleus of a public collection worthy of the city, and which would have the merit of being to a considerable extent the production of native artists. But owing to the fact that the Historical Society has to be supported chiefly by its annual receipts from members, who have the privilege of access to its museum and gallery, it has not been considered expedient or practicable to open its doors gratuitously to the public. Hence the existence of such a collection of works of art as it possesses is almost unknown. Various plans have been proposed with reference to making these art treasures accessible to the general public, and the society itself has had in contemplation the erection of an edifice in the Central Park, of sufficient capacity to contain its very large and rapidly-increasing library, museum, and historical matter, for the proper arrangement and exhibition of which the present building is wholly inadequate; but inability to raise by subscription the necessary means, has delayed, if not prevented, the design from being carried out. As there is no reasonable prospect of so large and costly an edifice being built for several years to come, and as it is questionable whether that location would not be too remote to be of easy access to citizens and strangers, it has been suggested that the society should erect an addition to its present building, so arranged as to exhibit the modern and ancient paintings and sculptures in separate apartments. The public would then have a permanent and attractive gallery of art, to which, doubtless, valuable additions would from time to time be made. This plan would be more practicable and in the end more economical than to depend upon works temporarily loaned by artists or private collectors; but its adoption is at present purely matter of conjecture.—Exhibitions of single works or groups of works by individual artists have occasionally occurred during the year, and the chief art agencies and the establishments of prominent picture-dealers have generally contained collections of pictures of greater or less merit, open to public inspection. Among single pictures exhibited may be mentioned Bradford's "Crushed by Icebergs," an Arctic scene of great truth and dramatic power; Kellogg's "After the Bath," representing a young Eastern princess asleep on a divan, after performing her ablutions; and a large landscape by Inness, entitled "Peace and Plenty," which is undoubtedly

one of the highest efforts of a painter ranking second to no other in his peculiar walk. Another class of pictures thus exhibited illustrated subjects growing out of the late war. Such were Page's "Farragut Triumphant," a portrait piece representing Admiral Farragut lashed to the shrouds of the Hartford in the passage of the forts guarding Mobile Bay, August 5, 1864; Balling's "Heroes of the Republic," a group of twenty-seven Union generals on horseback; and Fobes's "Behind the Breastwork." Three pictures were also exhibited by Keys, illustrating the bombardment of Fort Sumter, and painted with great truth of detail. Other works by New York artists, illustrating the war, are still in progress, including a picture by De Haas, the marine painter, commemorative of the running of the rebel batteries below New Orleans in April, 1862, by Admiral Farragut, and a large composition by Page, representing Lee's surrender to Grant, at Appomattox Court-house. Of works in progress, not growing out of the war, may be mentioned one by Leutze, representing Mary Queen of Scots going for the first time to mass at Holyrood; and a large allegorical picture by Inness, to be called the "Principle of the Cross," in which the artist attempts to represent the Apocalyptic vision of the New Jerusalem and the River of Life flowing from it for the healing of the nations. It is said to combine deep religious sentiment with elaborate effects of landscape and architecture, and is to be engraved. In the latter part of 1866 the collection of pictures, one hundred and thirty in number, belonging to William P. Wright, of Weehawken, N. J., was purchased by H. W. Derby, founder of the Derby Gallery in New York, for the sum of \$150,000, with a view of exhibiting it in that city. It comprises the well-known "Horse Fair," by Rosa Bonheur; "The Last Honors paid to Counts Egmont and Horn," by Gallait; "The Little Housekeeper," by E. Frère, and many other works by European and American artists of reputation.—The subject of the proper representation of American art at the great Exposition at Paris in 1867, early occupied the attention of those interested in showing to the old world what had been accomplished in this respect by the new. But in view of the limited space allotted in the exhibition building to the fine arts of the United States, the prominent artists of New York, at a meeting convened in February, 1866, unanimously resolved not to participate in the exhibition. This action seems, however, not to have been conclusive, for in the latter part of the year we find a committee of judicious persons actively employed in selecting pictures for the American department of the exhibition, with the assistance of Mr. S. P. Avery, well known in New York as a connoisseur and art agent. This committee has obtained the loan of what are considered the master-pieces of our prominent artists, and there is every prospect that Amer-

icans visiting Paris will be spared the mortification of seeing the art-genius of their country represented by men whose love of notoriety far outstrips their talent. The whole number of works of art chosen is about ninety, by about fifty different artists—the most distinguished having more than one work. The paintings, on the average, are of large size, and their insured value is about one hundred and fifty thousand dollars.—One of the most interesting art-exhibitions of the year in New York was that of the photographic collection of war views and portraits of representative men made by M. B. Brady. The war views, taken on the spot by Mr. Brady and his assistants during the progress of hostilities, illustrated almost every phase of the great struggle, from the first battle to the final surrender of Lee and Johnston, and were not only of great value as correct delineations of scenes and incidents, but illustrated the surprising progress which photography has made during the last two years. The importance of such representations to the future painter of history can scarcely be overestimated, and in view of the fact that many of the prominent personages who figure in them are dead, that the *matériel* from which they are made has, for the most part, ceased to exist, and that the scenes themselves have put on quite another appearance, it has been suggested that they should be preserved as a national historic collection, and placed in the keeping of the New York Historical Society. The latter project was recommended by the Council of the National Academy of Design at a meeting held in January. Although America has never claimed any special preëminence in line engraving, a branch of art believed by many to be in its decline, at least two works in this department have been produced within the past year, by American artists, which are not unworthy to be compared with average European engravings. They are both likenesses of President Lincoln, the one executed by W. E. Marshall, after a portrait painted by himself, and the other by Halpin, after Carpenter's well-known likeness, and both have been commended for fidelity to truth and excellent execution. Though equally good as likenesses they present distinct phases of expression, easily recognizable by those familiar with Mr. Lincoln's physiognomy. A steel plate representing the "Death of President Lincoln," in progress of execution by Richie, was accidentally destroyed by fire in April. In the same conflagration perished reduced copies of Carpenter's "First Reading of the Emancipation Proclamation before the Cabinet," and Huntington's "Republican Court," but the partially finished plates from these, also by Richie, were saved, and the latter was at the close of the year nearly ready for printing. Some attention has recently been given to chromo-lithography, principally in the production of game, fruit, and flower pieces, which have the merit of tolerably exact external resemblance, but fail, as do most works produced by this process, to show the in-

dividual mind of the artist. A copy in colors of Eastman Johnson's "Old Kentucky Home," may be considered an average specimen of what American art has produced in this department.

The activity of New York in matters pertaining to art cannot be said to have been manifested on any thing like a corresponding scale in other American cities. Boston, although the residence of a considerable number of artists, and the seat of much æsthetic culture, has no permanent academy like New York or Philadelphia, and until quite recently has been disposed to subordinate the art element to the literary element in her social life. Of late years several private collections have been commenced, which promise in time to become large and valuable; but their chief works are of foreign production, and the efforts of local artists are represented to be under European influences. Of valuable indigenous work few examples have yet been afforded, and the resident artists most esteemed and encouraged, as Hunt, La Farge, Vedder, or Furness, are not natives of the city or its neighborhood. The reputation of those of New England origin or education is for the most part local. The only approach to a permanent collection of works of art is to be found in the galleries of pictures and statuary annually opened for exhibition by the Boston Athenæum. This institution possesses works of more or less value, by West, Stuart, Trumbull, Allston, Rembrandt, Peale, Inman, Cole, Harding, Sully, Doughty, and others of the older American painters, and by the aid of loans of pictures from private collections is enabled to offer a miscellaneous but interesting exhibition every spring and summer. A characteristic feature of these annual exhibitions is the large number of finished and unfinished pictures, sketches, and studies, by Allston, on view. The sculptures belonging to the Athenæum comprise original works by Powers, Crawford, Clevenger, Greenough, Hughes, and others, and a number of casts from the antique. Exhibitions of a more transient character than this, but more interesting, perhaps, from containing a larger infusion of works by contemporary painters, were held from time to time during the year by the "Boston Art Club," and the "Allston Club," the latter of which was organized in March under the presidency of W. M. Hunt, and in April opened to public view a collection of about one hundred choice pictures. Among these were Courbet's "La Curée," landscapes by Troyon, Rousseau, Daubigny, and Lambinet, "The Sower," by Millet, and works by Rosa Bonheur, Corot, Pissarro, Fichel, Couture, Gérôme, Delacroix, and other European masters, mostly borrowed from private galleries. American art was represented chiefly by Hunt, Gay, Bicknell, Furness, Robinson, Vedder, La Farge, and Ames, residents of Boston or its vicinity. A local journal, referring to the generally-received opinion that the literary atmosphere of Boston is unfavorable to art culture, expressed the hope that the opening of this Exhibition would mark the com-

mencement of a new era in that city. In April the collection of French paintings and etchings, exhibited in New York under the direction of Messrs. Cadart and Luquet of Paris, was transferred to Boston, and attracted considerable attention. Apart from these exhibitions of collected works, the establishments of the picture dealers afforded many opportunities of seeing works of merit, and some single pictures were exhibited, including "The Rescue," by De Haas, Bradford's "Crushed by Icebergs," Bierstadt's "Storm in the Rocky Mountains," and a picture entitled "The Home of the Bees," which is described as a marvel of botanical exactness, but too mechanical in the execution to be considered a work of art. Chester Harding, the portrait painter, whose career has been chiefly identified with Boston, died in that city on April 1st. His last work, an unfinished portrait of Gen. W. T. Sherman, was exhibited a few weeks previous.

The foundations of a school of art in New Haven were many years ago laid by the purchase by Yale College of the paintings known as the Trumbull Gallery, for the reception of which a Gothic building, designed by P. B. Wight, the architect of the New York Academy of Design, was commenced in 1864. At the close of 1866 it was so far completed as to be ready for the reception of the works destined to be placed in it, and which, besides the pictures by Col. Trumbull, comprise a number of portraits and other paintings belonging to the college. To these art treasures an important addition has been made by Professor S. F. B. Morse, a graduate of Yale, who has presented to the college Allston's "Jeremiah," long in the possession of the Gibbs family of Newport, R. I., and purchased by him in New York for the sum of \$7,000.

The chief interest in art matters in Philadelphia centres around the exhibitions of the Academy of Fine Arts, founded in the early part of the present century. The exhibitions of 1866 opened on April 23d, and it is an encouraging proof of the progress of art in Philadelphia, that the Academy building is declared to be inadequate to contain the pictures annually sent to it. It has been suggested also that the infusion of more enterprise into the management of the institution is needed to make it subserve the development of art culture, in accordance with the ideas of its founders. Notwithstanding the absence of works by several prominent local artists, the contributions in 1866 were up to the average standard, and included pieces by Sully, Rothermel, Hamilton, the late John Neagle, Russell Smith and Xanthus Smith, Moran, and Richards. James Hamilton, whose reputation is still for the most part local, is pronounced by Philadelphia critics one of the first marine painters living. Three pictures by him, representing scenes at Niagara Falls, one of which was entitled "Niagara on a stormy day in Autumn," were exhibited in May, in company with Bierstadt's "Yo Semite Valley," and elicited

high praise for the vividness and spirituality with which they depicted the force and grandeur of the great cataract. As in New York and Boston, the general public found many opportunities for art instruction in the galleries and warerooms of the picture dealers. The task of painting a picture of the battle of Gettysburg, on the wall of the new extension to the Capitol at Harrisburg, has been assigned to Rothermel, who probably ranks first among the historical painters of Pennsylvania. The picture is to be on a very large scale, with a supplementary border, in the compartments of which characteristic incidents will be introduced, and the sum appropriated to the artist amounts to \$25,000.

Outside of the localities above specified there is little connected with the history of the fine arts in the United States in 1866 which is worthy of mention. Baltimore, Cincinnati, Chicago, St. Louis, and other large cities, cannot be regarded in any sense as art capitals, or centres, although in all of them men of wealth and intelligence are engaged in forming galleries of pictures or statuary, the influence of which, after another quarter of a century has elapsed, will show itself in an improved public taste. A notable illustration of the zeal animating citizens of the West, in the pursuit and encouragement of the fine arts, was afforded by the collection of over three hundred paintings, including works by Church, Bierstadt, Gignoux, Cropsey, Hart, Eastman Johnson, Inness, Leutze, and many others, belonging to Mr. U. H. Crosby of Chicago, which early in 1867 was distributed by public lottery. The western cities at present are the receptacles, rather than the disseminators or creators of works of art, and in that regard may be said to occupy the relation of provincial towns to New York. The latter, as the metropolis of America, attracts to herself the chief art talent of the country, every year witnessing an increase in the number of her resident artists; and there seems no reason to doubt that for many years to come this supremacy will be maintained as firmly as London and Paris maintain their supremacy over the provincial cities of England or France.

In the department of plastic art, and particularly that branch of it which relates to public monuments, a more than customary activity was manifested in the United States during the past year. Not only is the body of American sculptors, so honorably known both at home and abroad, gaining yearly in numbers and reputation, but it has responded willingly and even enthusiastically to the demands, coming from various parts of the country, for memorials of our recent great struggle and of the prominent actors in it. In comparison with the apathy of former years this eagerness to perpetuate the history of an eventful era, by the aid of one of the most enduring forms of art, is somewhat remarkable, and ought, in one respect at least, to absolve Americans from the

charge of neglect of æsthetic culture so frequently brought against them. It would be too much to expect that any considerable number of the many public statues, monuments, or other forms of memorial or purely ornamental art, recently completed or still in progress, should stand the test of severe criticism, but the desire to possess them indicates an increasing interest in art in the abstract, which in time may ripen into enlightened discernment, and which will induce the critic to overlook their shortcomings. It is worthy of mention also, that within the last few years sculpture in America has sought, more than painting, to identify itself with popular impulses, to symbolize thought and feeling, and to illustrate the active life of the nation. It has, in a measure, become the exponent of our recent history, while painting has been but slightly influenced by the ideas of patriotism, devotion, or unity, which the civil war evolved. Whether this tendency is destined to be of a merely temporary character, or whether it will develop a national school of sculpture, it would be premature to inquire; but that it will produce a healthy reaction against the pseudo-classicism, and the academic conventionalisms which have so long controlled the practice of the art, can scarcely be doubted. It is safe to assert that the influences which could induce a sculptor to model the figure of Washington in the costume of a Roman senator will have little weight with the men who are to produce the statues of our present generation of great men.—The city of New York, which has gained an honorable preëminence as the chief seat of painting in the United States, is less distinguished for its encouragement of plastic art. But a single statue, that of Washington, by H. K. Brown, as yet adorns its streets or squares, and to this solitary specimen no addition seems at present likely to be made. In the embellishment, however, of the Central Park, which is destined at no very remote day to become the field for the display of signal artistic triumphs, something has been done, and much is promised to be done, which will help to compensate for the poverty of the rest of the city in public monuments. The building within this enclosure, formerly used as an arsenal, has recently been appropriated for the reception of gifts of statuary or other works of art, and will doubtless in time assume the proportions of a museum. At present it contains an invaluable collection of eighty-seven casts in plaster of works by Crawford, presented by his widow. Among these are thirty-five statues, including his Orpheus, America, Patrick Henry, Jefferson, and Beethoven, and twenty-two bas-reliefs. The remaining casts are designated as sketches. In addition to these the Park possesses a statue of Flora, in marble, by Crawford; statues, in bronze, of Eve and Commerce, a colossal bust of Schiller, and some small groups in bronze. The bronze cast of Ward's "Indian Hunter," destined for the Park, will be sent to the French Exposition of 1867 for exhibition

before being set up in its final resting-place, and the Shakespeare monument has advanced no further than the foundation, laid some years ago. The gateways for the four southern entrances to the Park, for which Mr. R. M. Hunt, an architect of New York, furnished the plans in the summer of 1863, have never even been commenced. The Park Commissioners, after determining in 1864 to proceed forthwith with the work, decided in the spring of 1865 to take no further action in the matter. In preparing his designs, Mr. Hunt aimed to make the gateways correspond in magnitude and in their general architectural character with the buildings which will hereafter line this portion of the Park. Hence he drew freely upon the resources of monumental art, and employed sculpture and symbolical decoration on a scale seldom attempted in this country. It is understood that the rejection of his plans is based partly on their presumed inconsistency with the fundamental idea embodied in the laying out of the Park, and partly on the great additional expense they will probably entail. An interesting exhibition of statuary, by Larkin G. Mead, Jr., of Vermont, was opened in New York in the beginning of May. It comprised four statues, "Echo," "The Mulatto Girl," "The Battle Story," and "La Contadinella," a statuette of "Sappho meditating the Plunge," several busts, and a plaster model of the national monument to President Lincoln, fifteen feet high, of which a description will be found elsewhere. "The Battle Story" is a group consisting of a returned soldier, holding on his knee a little girl, to whom he relates the story of some hard-fought field. A copy of this, of a size half larger than life, is to be placed on the grounds connected with "Fitch's Home for Disabled Soldiers and Orphans of Soldiers who have Lost their Lives in Defence of the Country," at Darien, Conn. In October and November an exhibition was held of some of Mozier's chief works, including "The Return of the Prodigal Son," "Undine Rising from the Castle Well," and "Jephthah's Daughter." Among the productions of the year may be mentioned three new groups by Rogers, whose genius so happily illustrated characteristic scenes of the civil war. They were entitled "Drawing Rations," "Uncle Ned's School," and "The Charity Patient," and showed no lack of the earnest naturalism manifested by the artist in previous works. A new worker in the same field has appeared in the person of Samuel Conkey, whose statuette, "In the Wilderness," is founded on an incident of the battle-field of the Wilderness. Among new sculptures received from Europe was a figure of Isaac about to be offered up for sacrifice, by Randolph Rogers, besides busts of Washington and Franklin, by Powers, and a statue of Bacchus, by Miss Stebbins. Ideal busts of Mephistopheles, Imogen, and Childhood, of considerable promise, by Thomas Gould, a young sculptor of Boston, whose portrait bust

of Ralph Waldo Emerson has been placed in the library of Harvard University, were exhibited in December. In the spring of 1865 a considerable sum was raised in New York toward the erection of a monument to President Lincoln, but nothing seems to have been done in furtherance of the work.—In the erection of statues and monuments commemorative of the late war, or of eminent public men or events, Boston is considerably in advance of New York or any other American city; and, although the bronze statues of Franklin, Webster, and Horace Mann, which have hitherto constituted her chief public memorials in sculpture, possess no special merit, it is believed that the works of this class by Story, Ball, and others, now in progress, will fitly represent American art. Story is now engaged upon two important works, an equestrian statue of Colonel Shaw, commander of the first Massachusetts colored regiment, who lost his life at the assault of Fort Wagner, and a statue of Edward Everett, the clay model of which has recently been completed. The former is to be placed in the State-House yard, and the latter on Boston Common. The colossal equestrian statue of Washington, by Ball, also destined for the public grounds of the city, is hastening to completion. The same sculptor has produced at Florence, within the past year, a group, consisting of a portrait statue of President Lincoln, and the figure of a kneeling negro, intended to commemorate the overthrow of slavery in America. In November the Common Council of Boston accepted a plan offered by Hammatt Billings for a monument to the soldiers of the city who lost their lives in the war. It contemplates a column of Concord granite, rising from an elaborate base, to the height of 120 feet, and surmounted by a figure of Liberty, and the compartments of the base, four in number, are to contain bas-reliefs representing scenes on the battle-field and the fruits of peace. Ground was broken on Boston Common, preparatory to laying the foundations of the monument early in January, 1867, but the whole project seems subsequently to have miscarried, in consequence mainly of the inadequacy of the sum appropriated, and of the unwillingness of the authorities to increase the appropriation. Another monument, suggested by the war, is to be erected in some public place in Boston by the surviving officers and soldiers of the Second Massachusetts infantry regiment, in honor of their comrades who perished in the struggle. The design and material have not yet been decided upon. To the munificence of one of her citizens, Thomas Lee, the city will also be indebted for a monument, now in course of erection, commemorating the discovery of silver, and which is to be placed in the Public Garden. The design is by Mr. Van Brunt, an architect of Boston, and a pupil of Hunt of New York, and a prominent feature of it will be a group illustrating the parable of the Good Samaritan, by J. Q. A. Ward, of New York, which is described as a masterpiece of sculpture. In

Commonwealth Avenue, adjoining the Public Garden, has recently been placed a granite statue of Alexander Hamilton, by Dr. Rimmer, erected also at the expense of Mr. Lee. In connection with memorial structures relating to the civil war may be mentioned the building about to be constructed at Cambridge, from the designs of Messrs. Van Brunt & Gambrill, which combines, with an alumni hall for Harvard University, and a theatre for commencement exercises, a cloister, of a monumental character externally, which is intended for the reception of busts, statues, pictures, windows, or tablets, commemorating the services of Harvard students in the war. The architecture is of the Italian-Gothic type, and the general effect of the building is imposing. The work on the monument at Plymouth, Mass., commemorative of the landing of the Pilgrims, which was commenced in 1859, and, subsequently suspended for several years, in consequence of the war, has recently been renewed by the aid of additional subscriptions, and, it is supposed, will be brought to a completion in the summer of 1867.—The only memorial to President Lincoln, at present contemplated in Washington, is a full-length, life-size statue of him, to be placed in the capitol. An appropriation of \$10,000 for this object was made by Congress, and the commission was given to Miss Vinnie Ream, a young sculptress from the West, almost wholly unknown in the art world, and whose previous productions are said to comprise only a few busts. Another female artist, Mrs. Ames, of Boston, has finished a bust of Mr. Lincoln, highly commended as a faithful representation of him, which is to occupy a niche in the Senate chamber in the national capitol. The chamber in this building, which was occupied, before the enlargement, by the House of Representatives, has been appropriated to the reception of works of art, illustrating national history, contributed by the States. Few of the latter have as yet sent contributions to this collection. Among those which have taken the initiative, are Massachusetts and Vermont. The former has ordered for the purpose statues of Governor Winthrop, John Adams, and William Lloyd Garrison, illustrating respectively the colonial period, the revolutionary era, and the era of emancipation. The latter will contribute statues of Ethan Allen and the late Senator Collamer.—Of elaborate and costly public memorials to President Lincoln, two at least have been projected, which, when completed, will prove valuable additions to the monumental art of the country. The one is to be erected over his remains at Oak Ridge Cemetery in Springfield, Illinois; the site of the other has not yet been determined. The former, designed by Larkin G. Mead, jr., may be thus described: From a paved circular walk rises by seven steps a circular platform, forty-five feet in diameter, on which rests an octagon base, twelve feet high. From four alternate corners of the octagon base project four pedestals, upon which are as many

groups of statuary, representing the four different orders of the army and navy—infantry, cavalry, artillery, and marine. Between the group, set in the four alternate faces of the octagon, are four basso-relievos, two of which will represent incidents in the early life of Mr. Lincoln, and two portray his greatest achievements in matters of State, as President of the United States. Upon the pedestal of each group is a large tablet upon which to record heroic deeds and points of history during the administration of Mr. Lincoln. It is also proposed to place pedestals on the upper circle formed by the steps, upon which will stand a drummer boy, bugle boy, sailor boy, and flag boy of the engineer corps. Rising out of the octagon base is a Corinthian column, fifty feet in height, surmounted by a colossal figure of Mr. Lincoln, twelve feet in height, represented in his customary costume in the act of signing the Emancipation Proclamation. The architectural part of the monument is to be of granite, and the statuary of bronze. The figures of the four groups of men will be seven and a half feet in height, and those of the boys six feet in height. The other monument, of which the model, prepared in Italy by Miss Hosmer, arrived in America early in December, was originally intended as a memorial of the freedmen to the late President. A considerable sum has already been contributed by them toward the work, but, in view of the great expense which it will entail, there seems little probability that ground will be broken for some years to come, and it is possible that a portion of the funds may be supplied from other sources. In designing this monument to Mr. Lincoln, Miss Hosmer states that she endeavored "to express the idea that the Temple of Fame which we rear to his memory is based upon the two great acts of his administration, viz., the Emancipation of the Slave and the Preservation of the American Union." The four sides of the lower base, sixty feet square, will contain bas-reliefs, representing scenes in Mr. Lincoln's life from his early childhood until his death. The following is Miss Hosmer's description of the remaining part of the monument, which is to be composed of New England granite and bronze:

Upon the circular columns which enclose these bas-reliefs, and crowning the first base of the temple, are placed four statues, representing the condition of the negro as it actually existed at different periods of the President's four years of office: First, as exposed in chains for sale; second, upon the plantation; third, as guide and assistant to our troops; and fourth, as a soldier and a freeman. Above these columns rises an octagonal base, four sides of which contain the inscription:

ABRAHAM LINCOLN,
FIFTEENTH PRESIDENT OF THE UNITED STATES,
Emancipator of Four Millions of Men,
Preserver of the American Union.

Upon this rests a circular base, forming the immediate base of the temple, upon which is represented a bas-relief composed of thirty-six female figures, hand in hand, symbolical of the union of the thirty-six States. Upon this rise the four columns of the

temple, supporting a cornice, upon which are inscribed the concluding words of the Emancipation Proclamation: "And upon this, sincerely believed to be an act of justice, I invoke the considerate judgment of mankind and the gracious favor of Almighty God."

Within the temple a statue of the dead President rests upon a sarcophagus, and the four mourning Victories, with trumpets reversed, which guard and surround the whole, record the great sorrow of the nation, stricken down at the moment of proclaiming its triumphs.

Another public monument, which has been some time in progress, is that in memory of Stephen A. Douglas, at Chicago. It consists of a sepulchre, enclosing a sarcophagus and surmounted by a pedestal twenty-one feet in height, having a base fifteen feet square. On this will be erected a column forty-three feet in length, six feet square at the base, and three and a half feet square at the top. The column will be terminated by a cap six feet high, which forms the base for the colossal statue of Douglas. Surrounding the sepulchre will be placed four seated symbolical figures, life size, sculptured in light marble, representing Illinois, America, History, and Fame. Over the entrance to the sepulchre will stand an eagle, and on the base of the pedestal above will be placed four bas-reliefs, representing the history and progress of the West.—To the list of monuments illustrating the war, must be added that about to be erected by the State of Rhode Island, from the design of John Jackson, a Maine sculptor, residing in Italy. It is to be forty feet high, having four allegorical figures representing Liberty, Justice, Valor, and Fidelity, surmounted by a symbolical figure of Rhode Island, twelve feet in height, holding in one hand a wreath, and resting the other upon the shield of the State. It is proposed to construct the stone work of a pinkish granite, susceptible of a high polish, which is found in Rhode Island, and the figures and ornamental work of bronze. The cost will be \$50,000.—A portrait bust of President Lincoln, by Colonel Henry, a sculptor of Kentucky, which has been much commended as a likeness, was received in Louisville at the close of the year, and has been placed in the United States Court-room in that city. Another likeness of Mr. Lincoln, well spoken of, is in the form of a statuette, by Franklin Simmons, of Providence, R. I., which has been put in bronze by William Miller, of the same city. The latter artist is well known by a series of medallion heads in bronze, of eminent civilians and soldiers. Finally, to the large number of American sculptors practising their art in Italy, we may add the name of Edmonia Lewis, a young woman of mixed negro and Indian parentage, and a native of Ohio, who, besides a portrait bust of Colonel Shaw, of the first Massachusetts colored regiment, has designed a group, entitled "The Freedwoman on first hearing of her Liberty." It is to be executed as a private commission, and is said to tell "with much eloquence a painful story."

GREAT BRITAIN.—The activity which the art market of London usually exhibits in the spring and summer was fully sustained in 1866, although in the character and quality of the works offered for sale, and in the prices which they realized, the year cannot be said to have shown such striking results as its predecessor. In 1865 purchasers seemed to put no bounds to their desire to possess works by artists whom merit, or popular caprice, had brought into prominence. In the succeeding year, prices returned to a scale more in accordance with the actual value of the works disposed of, although they still remained relatively high. The productions most in demand are still those of the modern British school, and particularly of that branch of it which has flourished within the last quarter of a century. The painters who were famous in the latter part of the last century and the beginning of the present are, with some notable exceptions, gradually falling into disrepute, while for good average works by Turner, Ward, Webster, Stanfield, Roberts, or Landseer, from five hundred to two thousand guineas are often obtained. The Continental schools are apparently less known or appreciated than in the United States, notwithstanding their principal seats lie almost at the door of London; and probably as many pictures by French, Belgian, or German painters are annually sold at auction, in New York alone, as in all England. On the other hand, British art is almost unknown on the Continent, and until within a few years it was unsuspected there that such a thing as a national and original school of painting flourished in England. The passion for collecting works by the old masters, and more particularly those of the Flemish and Dutch schools of the sixteenth and seventeenth centuries, for which English connoisseurs were once noted, has very considerably declined, although well-authenticated pictures of this class, in good condition, still command high prices. But where from one thousand to six thousand guineas were once given for such works, probably less than the first-named sum would now be obtained. The auction sales commenced in March, and continued well into July. In April, many fine water-color drawings by W. Hunt, Cox, Roberts, and other popular artists were disposed of at prices far below what their works had obtained in previous years. A collection of twenty sketches by John Leech, brought only £6 15s., and thirty-seven beautifully executed pen-and-ink drawings by Flaxman, to illustrate Hesiod's "Theogony" and "Works and Days," £21. A pair of portraits by Hudson, fetched 10s. 6d.; and the "Deliverance of St. Peter," by Hilton, a once popular painter of history, £225. On May 19th, perhaps the most important sale of the season, so far as prices were involved, took place in London. Turner's "Seventh Plague of Egypt" fetched £1,060; "View of Dort," by Stanfield, £1,450; "Taming of the Shrew," by Landseer, £1,510; Rosa Bonheur's "Labourages Niver-

nais," originally painted for Count Orloff, £2,100; and "The Hay Wain," by Constable, which forty years ago was exhibited in Paris and obtained for the artist a gold medal from the French government, £1,865. A landscape, by Gainsborough, brought £504; and one by Richard Wilson, £42; and a portrait of a lady, by Reynolds, £320. Works by Calcott, Cooper, Collins, Ward, Webster, Etty, Dyce, Müller, Phillip, and others, were also disposed of at prices ranging from five hundred to twelve hundred pounds. In the same month occurred a sale of works by the old masters, an event of so rare occurrence in London now-a-days, that it was singled out for special comment. The highest prices obtained were £609 for a still-life subject, by Weenix, and £504 for a seaport scene by Claude. Pictures by Van der Velde, Cuyp, Berghem, Teniers, Canaletti, Guido, Murillo, and other masters, once in repute in England, fetched from one hundred to two hundred and fifty pounds only, far less than they would have realized a few years ago. In June, another similar sale took place, with very similar results. An "Infant Christ," by Raphael, which has been engraved by Doo, fetched £430; and the "Burial of the Virgin," attributed to Giotto, £178. In the same month a large and admirable collection of etchings and engravings, the property of Mr. Drugulin, of Leipsic, was sold at what were considered fair prices. From among a fine series of the works of Albert Dürer, may be mentioned the "Passion of Christ," £17; "St. Eustachius," £33; and "The Knight, Death, and the Devil," £30. The collection also contained a number of the choicest etchings of Rembrandt, including his famous "Christ Healing the Sick," called "The Hundred Guilder Piece," which fetched £70; the "Ecce Homo," £25 10s.; the "Burgomaster Six," £27; and "St. Francis Praying," £29. The last notable sale of the season was that of the collection of prints and drawings by the old masters, formed by the late Dr. Wellesley, principal of New Inn Hall, Oxford, and which comprised examples of most of the great painters of all the various schools. Those by Claude numbered over one hundred, and were of excellent quality. This remarkable collection produced nearly £9,500, and during the two weeks that it continued, excited among connoisseurs an unusual spirit of competition, which was kept up until the last lot was disposed of. From among the drawings the following may be quoted: "Portrait of Cornelissen," by Vandyke, £20; "Portrait of L. Sforza," by Leonardo da Vinci, £54; "Giovanni Galeazzo, duke of Milan," by the same, £82; "Head of a Young Female," by the same, £43; "Portrait of Philip the Second," by Titian, £18 10s.; "St. Hubert," by the same, £42; "A Landscape, with Waterfall," by the same, £30; "Adoration of the Shepherds," by the same, £17 17s.; "Infant Saviour," by the same, £17 10s.; "Ancient Roman Ruins," by Claude, £65 2s.; "Piazza St. Marco, Venice" an ad-

mirable example by Canaletti, £168; "Portrait of A. del Sarto," by himself, £67; "The Marchioness of Pescara," by Michael Angelo, uniting the grandeur of Michael Angelo with the sweetness of Raphael, £280; "The Almighty appearing to Isaac," by Raphael, £35; "Portrait of Raphael's Sister," executed by Raphael in black chalk, £240; another portrait, of the same quality, £800; another, executed with the metal point on a prepared ground, £470; "Virgin, Child, and an Angel," by the same, a mere outline, but possessing great beauty, £880; "Virgin and Child," by the same, full of grace, loveliness, and refinement, £600, which was purchased for the British Museum. The number of works disposed of at auction during the season numbered between 2,000 and 3,000, and the aggregate sum obtained for them was in the neighborhood of £150,000, which was considerably less than during the previous year.

Of the numerous exhibitions of pictures and works of art held annually in London, that of the Royal Academy naturally occupies the first place. It was opened in the middle of April, and proved so attractive, that at the close of May the money receipts exceeded the total payments of any former year. But if the criticisms of the press are entitled to weight, the pictorial labors of the year were less remarkable than might have been expected. The prominent pictures were Leighton's "Procession of Syracusan Virgins," a replica of Maclise's "Death of Nelson," in the palace at Westminster, and Goodall's "Hagar and Ishmael;" besides which, were works by Armitage, Watts, Frost, Poole, Faed, Phillip, Ward, Frith, Stanfield, Marcus Stone, O'Neill, Landseer, Lee, and Linnell. These artists, however, do not represent the whole intellectual strength of the British school, and some of them failed to send their best works to the exhibition. The contributions of others were so badly hung as to appear to signal disadvantage. The exhibition contained nothing at all from Holman Hunt, Millais, Elmore, Rossetti, or Maddox Brown, the greater part of whom evince thought, originality, and power, but because they are opposed in practice to the prevalent notions, are not encouraged to contribute. Hence the complaint is annually preferred against the Academy, that it fails to make its exhibitions a neutral ground, where ability may prove itself and incompetence find its level, and refuses to recognize ideas of art it does not understand, and power which is not its own. Important reforms, however, are about to be made in this institution, now almost a century old, which promise to add to its usefulness as a fosterer of art. It is proposed to limit the number of academicians to forty-two, the present number, to increase the body of associates indefinitely, and from their ranks to fill the vacancies in the academic body on the ground of merit alone, irrespective of any considerations arising from the length of time during which men have been

Associates. At all elections, whether of Academicians or Associates, the latter are to be entitled to vote. These, with a few other proposed changes, though not so many or important as the public demand, will do something to relieve the Academy of the imputation of narrowness and selfishness which has so long been associated with its career, and to make it less of a close corporation than heretofore. They seem to have been rather reluctantly conceded by the members in return for the grant by Government of a site in the grounds of Burlington House, Piccadilly, on which to erect a permanent building for the uses of the institution. The Academy, long located in a wing of the National Gallery, in Trafalgar Square, will soon occupy a new building of a rich classic type on the site granted to it, to be constructed from the designs of Sydney Smirke. The President's chair, left vacant by the death of Sir Charles Eastlake, has been filled by the election of Sir Francis Grant, principally known as a painter of portraits and sporting scenes, but of no reputation in the higher walks of his art.

Outside of the Royal Academy there are many annual exhibitions in London, during the spring and summer, to which we can refer only very briefly. That of the British Institution, established sixty years ago, was noticeable chiefly for many excellent examples of Reynolds. The directors have announced that, in consequence of the expiration of the lease of their present premises, and of their inability to renew it, they will be unable to open an exhibition in 1867, which is considered equivalent to declaring that the Institution is on the verge of dissolution. In view of the many opportunities it has annually afforded of seeing choice examples of the old masters and of contemporary art, this is regarded as a public misfortune. The exhibitions of the Society of Painters in Water Colors and the Institute of Painters in Water Colors were creditable to those associations, while that of the Society of British Artists was very generally condemned for the ambitious, slovenly, or positively meretricious works, generally by inferior painters, which it contained. Besides these, there were held during the season an exhibition of French, Dutch, and Flemish pictures, under the auspices of the International Society of Fine Arts, one of a series of careful copies of early Italian paintings, made by M. J. H. Wheelwright, and one of a remarkable collection of sketches of scenery in China and Japan, by Edward Hildebrandt. Not the least interesting exhibition of the year was that of a collection of many hundred portraits of conspicuous public characters, illustrating the national history from the era of the Plantagenets to the close of the reign of James II. Of Henry VIII. there were sixteen portraits, with portraits of each of his six wives; of his son, Edward VI., eleven portraits; of Queen Mary, ten portraits; of her sister Elizabeth, twenty-seven; and of Mary Queen of Scots, sixteen. Besides these were portraits of

Lady Jane Grey, Darnley, Rizzio, Raleigh, and the great military chiefs and statesmen of the reign; also of Shakespeare, Ben Jonson, and Spenser. The reign of Charles I. was represented by no fewer than two hundred and forty portraits. The commonwealth was illustrated by Cromwell and his family, with the generals who led the Parliamentary troops, and the chiefs of the Long Parliament. Charles II., his courtiers and favorites, were represented by one hundred and ninety portraits. The leading painters who flourished in England during the epochs covered by these pictures, were severally represented by the following number of works: Holbein, 68; Sir Antony More, 18; Jansen, 38; Van Somer, 15; Vandyke, 61; Lely, 63; and Kneller, 12. The exhibition closed in August, and proved so successful as to justify a repetition of it in future years. During the last fortnight that it remained open, it was visited by many thousands of the poorer classes who were admitted at the very moderate charge of 3d. per head. American art in the British metropolis was represented by several single works which elicited high praise from the critics. Among these were Bierstadt's "Rocky Mountains," a view of Niagara Falls by Mignot, and an ideal landscape with figures, entitled "The Land of the Lotus-Eaters," by R. S. Duncanson. The first of these was pronounced a work of transcendent merit, and the critic of the "Saturday Review" thanked the artist for the lesson in landscape-painting which the picture had taught. A new picture by Holman Hunt, "The Festival of St. Swithin," was exhibited during the summer. It differed in subject from any thing previously attempted by him, representing a flock of pigeons gathered on a rainy day about a dovecote, and was said to render effects of daylight with remarkable truth and power.

Of permanent art collections the first in importance is the National Gallery, which is hereafter to occupy the whole of the building in Trafalgar Square, hitherto jointly used by itself and the Royal Academy. Parliament has voted a large sum for the purchase of additional land, adjoining this site, on which it is proposed to erect an extension to the present building. A spacious building will also be erected here specially for the reception of the Raphael Cartoons, recently removed from Hampton Court to the Museum at South Kensington. The National Gallery now contains 747 works, exclusive of many thousand drawings; and though in point of numbers it falls behind the principal Continental galleries, in respect to the quality of its contents, it takes very high rank. Aided by liberal grants of money from Parliament, it is constantly making additions to its art treasures, and it also receives many valuable bequests and gifts of pictures. Among recent purchases were pictures by Raphael, Velasquez, and Rembrandt, procured at an outlay of nearly £18,000. One of the most important recent bequests was that of Landseer's celebrated "Mem-

ber of the Royal Humane Society," aptly described as the "noblest figure of a dog that ever looked out from canvas." It is matter of regret that many pictures in the Gallery, emanating from the national school, are threatened with destruction from the cracking of the varnish. This arises from a practice common among English painters, up to within thirty years ago, of glazing their pictures with asphaltum; and the destruction is probably hastened by the inferior ventilation of the building, and the humid atmosphere caused by heating it by hot water. The South Kensington Museum continues to receive accessions of a miscellaneous character, and promises in time to become a huge curiosity-shop. That portion of the National Gallery comprising examples by painters of the British school, which is temporarily deposited in it, has proved, as was expected, a great attraction to the public. The art schools have been better attended during the past year than ever before, and the actual results in respect to employment obtained by students trained therein are represented as more than usually satisfactory. The permanent buildings intended for this institution, and for the construction of which Parliament has already appropriated several hundred thousand pounds, are still far from completion. Portions of the façade are to be ornamented with mosaics from original designs, by Leighton and others, for which species of decoration a growing inclination is manifested in England. The overcrowded condition of the British Museum is a subject of frequent complaint in Parliament and elsewhere. Many of the invaluable marbles possessed by it are defaced with dirt, the engravings and drawings unavailable to those who could profit from a study of them, and objects of *virtu* or of antiquarian interest are put away in obscure corners. Every thing, in fact, is said to show slovenly neglect, except the library, which, thanks to the principal librarian, Mr. Panizzi, is in excellent order. An effective display of the riches of the Museum would require a space very far beyond what is now available, but Parliament has done nothing to supply the deficiency, and in all probability nothing will be done for years to come. Among the treasures secured by the institution during the past year was the fine collection of cameos, bronzes, medals, etc., belonging to the Duc de Blacas, which was purchased in Paris for £48,000. It includes a collection of coins, well known to numismatists; the toilet service of a Roman bride of about the year 800; a colossal head of Æsculapius, of the finest period of Greek sculpture, found in the island of Milos; a collection of Greek fictile vases; mural paintings from Pompeii and Herculaneum; manuscripts, inscriptions, and numerous other articles of great interest to antiquaries.

The mural paintings in the Houses of Parliament which, it was once supposed, were to inaugurate a school of high art in England, seem to have fallen far short of that result, partly ir-

consequence of the inability of the artists to master the technical processes of fresco, and partly from the defects of the building in which they were required to revive this species of painting. The series of works left unfinished by Mr. Dyce have made no advance since his death, and it seems unlikely that any living English painter can complete them in accordance with the original designs. Maclise has finished his "Death of Nelson" in the Royal Gallery; Herbert is about to commence his "Judgment of Daniel," and Cope is putting the finishing touches upon the last of the series of eight works undertaken by him. The subject is "Speaker Lenthall asserting the Privileges of a Free Parliament." Many blank spaces, however, remain to be filled; and in view of the defective light and the dampness of the building, which mar the appearance of the completed works, it is possible that they may never be filled. The works of Herbert and Watts, in the "Poets' Hall," are fast disappearing under the influences of the humid atmosphere, which in winter prevails in that part of the building, and no attempts at restoration have availed to overcome this radical defect. Efforts to improve the light in certain corridors, decorated with frescoes, have proved partially successful. The series of designs in these buildings, by Maclise, known as the "Story of the Norman Conquest," together with his "Meeting of Wellington and Blücher after the Battle of Waterloo," and "Death of Nelson," are to be engraved for distribution by the Art-Union of London.—Apart from the numerous specimens of excellent engraving annually put forth in England, there were published in 1866 two works, illustrated by the prolific pencil of Gustave Doré, which are remarkable as his first attempts to render the text of great English poets. These were Milton's "Paradise Lost," and Tennyson's "Elaine." The designs of the former seem to have been hastily and crudely executed; but in those of the latter, which have been engraved on steel, he labored with genuine enthusiasm, wishing to make his performance a monument of his own powers as well as to the poet. The result has been very creditable to him. The Arundel Society pursues its useful career as a promoter of art culture by producing chromo-lithographic facsimiles of the masterpieces of the old painters. The "Annunciation," by Fra Bartolommeo, the "Last Supper," by Ghirlandajo, and the "Adoration of the Magi," by Luini, are among the copies recently executed under its auspices, and it is about to reproduce specimens by the Van Eycks. The "Fine Arts Quarterly Review," a publication of great value to art students, contains also many excellent examples, in color or engraved, of the works of old and modern masters. The limits of this article will not admit of any other than a brief allusion to pictorial art outside of the British metropolis. Almost every considerable provincial town has its school of art, so called, and one or more an-

nual exhibitions, contributed to mostly by local artists. The standard reached in these, if not a high one, is above mediocrity, and there is every reason to believe that under the influences at work throughout the United Kingdom an increasing interest in matters pertaining to art will be manifested, and a higher culture developed. Edinburgh has recently inaugurated a Museum of Science and Art, erected by means of special and successive grants by Parliament since 1854; and in Dublin an Irish National Picture Gallery is reported to be making most favorable progress. The works already collected have cost £10,000, of which £6,000 were raised by local subscriptions.

Plastic art has of late years been very generally employed in Great Britain to commemorate the acts or services of public men, and the past year witnessed no diminution of activity in this direction. Statues, busts, or structures of a purely memorial character are multiplying all over the land, and though in respect to the higher qualities of sculpture these productions will not stand the test of searching criticism, they present good average design and workmanship. Signs of promise may be recognized in the greater attention yearly given to the study of form, in efforts to throw off the conventionalisms with which the schools are overgrown, and in the higher standard of criticism already attained, which has damaged more than one reputation resting on no more solid basis than superficial, showy effectiveness. Of the national monuments in progress, the most important and elaborate is that to the late Prince Consort, in Hyde Park, of which a description was given in our last volume. Only the substructure was completed at the close of the year, but much of the finished material is on the ground, ready to be put in place, and the mosaics and sculptures, on which the best talent of the country is engaged, are understood to be in hand. The popular affection for Prince Albert continues to manifest itself in the number and variety of the memorials erected to him. A copy of Thorneycroft's bronze equestrian statue of him has been placed in front of St. George's Hall, Liverpool. Another is destined for Wolverhampton, and a third for Halifax, besides several for the provinces. The Albert memorial at Manchester is completed. The four colossal bronze lions, from designs by Sir Edwin Landseer, intended for the base of the Nelson monument in Trafalgar Square, after a delay of many years, were announced at the close of 1866 to be ready, and early in 1867 they were actually set up in public. Another work long delayed is the completion of the bas-reliefs in the pedestal of Baron Marochetti's statue of Richard Cœur de Lion, one of which was inserted in the latter part of the year. It is described as puerile in design, and executed with little care or knowledge. A monument to the Duke of Wellington was voted by Parliament ten years ago, but has never been even commenced. This neglect of the Great Duke

has, however, been partly compensated for by a monument 82 feet in height, surmounted by a colossal bronze statue of him at Strathfieldsaye Park, executed by Baron Marochetti. A mural monument to Sir James Outram in Westminster Abbey, is the only other national memorial calling for notice. Of works of this class, erected by private means, or projected, the number is very much larger, and includes a sitting statue of Macaulay, by Woolner, for Trinity College, Cambridge; one of Gladstone, for Liverpool, and one of Mr. Peabody, for London; one of Sir John Franklin, by Noble, recently erected in Waterloo Place, London, one of O'Connell for Dublin; one of Andrew Marvell for Hull, and one of James Watt, by Munro, for Birmingham. No fewer than four monuments are to be raised to Lord Palmerston at London, Southampton, Tiverton, and Romney, and a statue to Cobden will soon be completed in Camden Town, London. Other statues, including some of colossal size, to public men, inventors, benefactors, etc., who are less generally known, might be mentioned. Busts of Gladstone, Cobden, Thackeray, and Mulready, the painter, intended for public sites, are also among the labors of the year. Of a more private character than these are Weekes's recumbent effigy of Archbishop Sumner, in Canterbury Cathedral, a work of great merit, and Woolner's design for a monument to Mrs. Archibald Peel in the church at Wrexham. The latter, which is to be executed in high relief, presents an affecting and beautiful realization of the idea of a mother and child meeting in heaven after death. American plastic art was not represented publicly in England during the year, but some photographs of sculptures, by Mozier, elicited high praise from the critics. Very general complaint is made of the condition of public sculptures in England, and particularly of the bronze statues, which are, for the most part, coated with opaque oxidation, not unfrequently assuming the appearance of a sooty efflorescence. An exposure of two or three years suffices to blacken the most brilliant metal. The cause of this is attributed rather to the indifferent material employed, which is far from being true bronze, than to the influences of the climate. Some consolation, however, is afforded by the fact that many of the statues thus discolored are so bad in design and workmanship, that it is quite as well they should be "left in the dark." It has been suggested that the experiment should be tried of cleansing some of these works, and coating them with fluid compounds, which resist moisture, and set with a surface like transparent enamel. Statues not exposed to the elements seem to fare equally ill in England. Those in St. Paul's Cathedral, in London, are represented to be covered with dust and dirt-stains, and the general condition of the interior of the edifice, where restorations, mural embellishments, and other improvements are proceeding at a snail's pace, is declared to be a public reproach.

FRANCE.—A marked peculiarity of the history of the fine arts in France is the intimate relation which they sustain to the government, and the patronage which it extends to them. On the occasion of the imperial *fête* of August 15th, pictures and statues were sent to no fewer than one hundred and twelve local museums, in addition to the works purchased for the galleries of Versailles and the Luxembourg, and to those presented to churches and chapels in various departments. Over seventy portraits of the emperor and empress were also presented to public institutions, and the total number of works of art thus disposed of was estimated at upward of three hundred. A further stimulus is given to artistic efforts by a system of rewards and honors skilfully adapted to the popular tastes and ambition. Without expressing an opinion whether patronage of this kind can subserve the purposes of æsthetic culture, it is undoubtedly true that in respect to productive art flourishes in France beyond precedent. Immense quantities of pictures and sculptures are yearly produced, the quality of which is, on the whole, above mediocrity. Thus the committee of selection of the annual art exhibition held in Paris, accepted, in 1866, the enormous number of 8,888 works as worthy of exhibition in the Palace of Industry, though it is but proper to add that comparatively few of these were declared to be within the competition for prizes. The remainder were simply deemed worthy of a place upon the walls, and presented almost every phase of quality from respectable to positively bad. The fact, however, that so many pictures and statues are annually produced in the French metropolis, apart from the thousands emanating from provincial artists, is of itself interesting. Gérôme's contribution to the exhibition was a painting representing Cleopatra introducing herself to Cæsar in his tent, while he is writing dispatches; and Courbet was represented by a landscape and a nude female figure, both of which attracted much notice. Of an entirely different character from this was an exhibition opened at the same place in the spring, and composed mainly of works by the old masters. It was entitled the "Exposition Retrospective," and was suggested by the British Institution, which exhibits borrowed works by old painters in conjunction with those of contemporary production. The "Exposition" contained about 200 pictures belonging to sixty owners, and was very rich in examples of the Dutch and Flemish schools. Greuze, the noted French *genre* painter of the last century, was represented by seventeen works. Inspired by the success which attended the great national portrait exhibition at Kensington, the French government is about to form a similar one in a building to be erected in the Champs Elysées, which, it is supposed, will prove an attractive resort during the Great Exposition of 1867. The portraits will be grouped according to the age they illustrate. From an analysis recently made, it appears that the gal-

lery of the Louvre contains upward of two thousand pictures. Among those belonging to the Italian school are twelve Raphael's, three Correggios, eighteen Titians, thirteen Paul Veroneses, etc. Among the specimens of the Flemish are no fewer than forty-two Rubenses, twenty-two Vandykes, seventeen Rembrandts, and eleven Gerard Douws. Of the Spanish great masters there are eleven Murillos and six by Velasquez. The French school possesses but a single specimen of Watteau, but has forty Poussins, sixteen Claude Lorraines and forty-one Joseph Vernets. To the treasures of this famous museum of art has recently been added a collection of over a hundred specimens of stained glass, of Flemish, German, Dutch, and French manufacture, of dates so late as the Fifteenth and Sixteenth centuries.—Sales of pictures are of frequent occurrence in Paris during the spring, and in 1866 the prices realized at them were as a rule very high. The works disposed of are generally of the modern continental schools, those of the national school of course predominating. Landscape art may be said to flourish in France, if we may judge by the fact that a collection of pictures by the late M. Troyon, one hundred and fifty in number, fetched recently at auction nearly half a million of francs.—Of pictures in progress during the year mention may be made of a large composition by Rosa Bonheur representing cattle and drovers in the Scottish highlands. The popularity of Gustave Doré seems unabated, notwithstanding the accumulated demands upon his pencil are beginning to show their ill effects in hasty and crude designs. His illustrated Bible, the first edition of which cost the publisher, M. Mame, over six hundred thousand francs, proved a very profitable undertaking, although the price per volume seemed beyond the reach of most purchasers. The demand for it from Great Britain and the United States has exceeded the utmost expectation of artist or publisher. In 1862 the number of Doré's drawings was said to have reached forty-four thousand, and as he designs for various miscellaneous publications, besides the great works with which his genius is chiefly identified, it must now exceed fifty thousand. Milton and La Fontaine are the authors whom he has most recently illustrated, and report announces him to be now at work on Shakespeare, and projecting the illustration of Homer, Virgil, Ovid, Tasso, Ariosto, and the leading German and Spanish poets.—The propensity to employ plastic art in the erection of monuments to public characters is not less remarkable in France than in England, and in the former country the subjects embrace, perhaps, a wider range. One of the most meritorious works of the year in this department is a full-sized statue of the Empress Josephine, by Vital-Dubray, erected in the open space in front of the bridge of the Alma, in Paris. She is represented in a court dress, holding a medallion of the emperor in her left hand, and resting her

right on a marble shaft. A sitting figure of Rachel by Duret, in the *Comédie Française*, at Paris, has also been highly praised. It represents her in the character of Phèdre, and exhibits no little tragic power both in expression and attitude. One of the most eminent French sculptors, Baron de Triqueti is now executing for Queen Victoria a remarkable series of Biblical scenes for the memorial chapel building in honor of the late Prince Consort. These compositions are executed in a new style of mosaic, the invention of M. Triqueti, and are composed partly of lines cut into the white stone, and filled with color, and partly of pieces of colored marble inserted into the groundwork. Besides this series, the figures in which are nearly of life-size, and which will form the surface of the interior of the chapel, there will be a large number of bas-reliefs, representing saints, prophets, angels, etc., about a foot high, in white marble, which will be inserted in the angles of the borders of the larger pieces, over the doorways, and in panels and cornices. When finished, these decorations will rank among the most exquisite creations of the chisel.

GERMANY.—The forty-fifth exhibition of living artists was opened in Berlin, in September, with 931 works of art, of which 789 were oil paintings. Notwithstanding the interruption caused by the recent European war, the exhibition was larger than the previous one. Among the painters contributing to it were Andreas and Oswald Achenbach, Hermann, Graeb, Hognuet, Carl Becker, Knans, Jordan, Losch, and Paul Meyerheim. In the same city is to be erected a colossal statue of the architect Schinkel, who is represented partially enveloped in a cloak, holding in one hand a scroll, and in the other a pencil. The committee having charge of the completion of the Cologne Cathedral has applied to the Prussian Government for permission to obtain by lottery, the remaining funds required for the work. Judging from the success of a similar scheme in the past year, it is presumed that in nine years more the whole amount needed, about \$2,250,000, will be raised. The Bavarian Government has taken the first steps toward the conservation and ultimate restoration of the ancient Cathedral at Ulm, one of the richest examples of Gothic architecture in Germany. The architects, Schmidt of Vionna, and Denzinger, of Regensburg, have direction of the work. The principal public art undertaking in Munich during the year was the series of frescoes on the Maximilianeum, by Seibert, Pilotz, and Dietz, representing noteworthy events in Bavarian history. At Vienna the decoration of the Arsenal was continued, and a series of frescoes on the Opera House was commenced by Schwind and Engerth. The latter are intended to illustrate scenes from Mozart's operas, "The Magic Flute," and "The Marriage of Figaro." A monument to the memory of Kepler, the astronomer, has been projected in his native town of Weil, situated in

the Black Forest, toward which contributions have been received from all parts of Germany. A. Kreling, Director of the School of Art, at Nuremberg, was commissioned to send in a design, which he has done, and the model is considered so satisfactory that the execution of the casting has been intrusted to the bronze founders, Messrs. Lenz and Herold, at Nuremberg. The principal figure is nine feet high, and the smaller ones in the pedestal five feet, all of bronze, while the pedestal is made of a fine-grained sandstone, and the total height of the monument is twenty-four feet. Glass painting continues to be practised with marked success in various parts of Germany, the chief seats of the art being Munich, Berlin, and Cologne. In the first of these cities were executed by Hübner and Schnorr, the windows for St. Paul's, London, and the Cathedral at Glasgow. The works produced by the other two were chiefly of the ecclesiastical type, and intended for churches, chapels, and cathedrals, in various parts of Germany. Some of them have even found their way to America.

ITALY.—Florence continues to be one of the chief seats of sculpture in Europe, and among those who practise the art there, an honorable place is held by citizens of America. Powers, Ball, Hart, Jackson, Meade, and Henry, are the best known of them, and the first named has, within the past year, added to his reputation by a statue of "Eve after the Fall," which is said to be quite equal to his famous "Greek Slave." The recent works of Jackson and Meade are mentioned elsewhere in this article. The French sculptor, Dupré, also residing in Florence, has produced a mortuary monument of the singer, Catalani, which is to be placed in the Campo Santo, at Pisa, and two statues of Bacchus, emblematic of abundant and scanty grape harvests; and Fuller, an English artist, a group from Bulwer's "Last Days of Pompeii," and one entitled "The Rape of Europa." The "David" of Michael Angelo has recently been successfully cast in bronze in Florence. The Italian Government has, during the year, thrown open to the public a portion of the covered passage connecting the Pitti Palace with the Palazzo Vecchio. The greater part of it is hung with pictures, many hundred in number, which, from want of space, have never before been exhibited. They comprise portraits of the Medici and other Florentine and Italian notabilities, and a long and extremely curious series of historical works, painted of a uniform umber color; and represent, for the most part, various scenes of the great Florence festivities, which took place during many consecutive years, when the Medici were omnipotent in the famous Tuscan city. Rome is scarcely less noted than Florence as a residence of sculptors, among whom are many American, male and female. In the former class may be mentioned Story, Rogers, and Mozier; in the latter, Miss Hosmer, Miss Stebbins, Miss Freeman, Miss Foley, and Miss Edmonia Lewis. Miss Foley has recently been

engaged upon medallion heads of distinguished American authors, and Miss Freeman on subjects taken from Longfellow's poems. Of the later productions of Miss Hosmer and Miss Lewis, we have spoken elsewhere. Pictorial art has also been represented in Rome by Terry, Tilton, Ropes, Miss Church, and the Misses Williams, all Americans. In the summer, a collection of objects of fictile art was exhibited at the museum of St. John Lateran, singularly at variance with the contents of that building. It comprised terra-cotta busts, statuettes and tableaux in alto-relievo, illustrating the history, manners, and customs of the North American Indians, and was said to be executed with great spirit and truthfulness. Excavations continued to be made in the neighborhood of Rome. Among the latest discoveries of antique art was a draped statue of great merit, found near Santa Maria Nuova, on the Appian Way.

FITZPATRICK, Right Rev. JOHN BERNARD, Roman Catholic Bishop of Boston, born in that city, November, 1812, died there February 12, 1866. His early instruction was received in the public schools of Boston, on leaving which he was sent to a college in Montreal, where he remained eight years. From thence he repaired to the Sulpician College, in Paris, where he pursued his studies for three years, when he was ordained a priest, and returned to Boston in 1840. Soon after his return he was appointed pastor of St. John's Church, in East Cambridge, Mass., but remained a short time, being chosen coadjutor to Bishop Fenwick of Boston, and was consecrated March 24, 1844. Two years later, by the death of the venerable Bishop Fenwick, he became bishop of that diocese, entering upon the duties of his office with the zeal and application which had characterized his previous career. In 1854 he visited Europe upon business connected with his church, and again in 1862, for the restoration of his health. Returning to his field of labor, with an increase of strength, he resumed his duties with his usual devotion, which soon dissipated the physical benefit he had received, and after lingering for months in a state of severe bodily suffering, he sank under his fatal malady. He had attained a high rank in scholarship, and was greatly respected by liberal men of all denominations. Bishop Fitzpatrick was a member of the American Academy of Arts and Sciences, and received the honorary degree of Doctor of Divinity from Harvard College in 1861.

FLORIDA. The transfer of the civil authority, held by the Provisional Governor of Florida, appointed by President Johnson, to the Governor elected by the people, was made on January 17, 1866. The Legislature of the State was at the time in session, and General Walker nominated immediately for chief justice of the Supreme Court C. H. Dupont, and for associated justices A. E. Maxwell and J. M. Baker. These nominations were confirmed, without a reference, by the Legislature. The school fund, at the beginning of the year

amounted to \$109,571, at 8 per cent., and \$59,366, at 7 per cent., yielding about \$12,411, or fifty cents yearly to each child between five and eighteen years of age. The counties have not cooperated by levying a tax, and the fund has been of no avail. The direct tax levied by Congress upon the State in 1861, was \$77,522, which the Legislature applied to Congress to authorize its assumption and payment by the former, and a suspension of all proceedings that had been commenced against individuals. In their memorial to Congress they say:

Now, in consideration of these facts, and in order that your honorable body may have all information in the premises, and that the people of Florida have returned to their allegiance and loyalty, and this day they are the firm supporters and adherents of that Union, which they know from past experience is to be perpetual, they show that during the late war many of those persons whose property was sold, resided in the Confederate lines, and amongst those who are the sufferers are many widows and orphans, who from circumstances are unable to subscribe to the required oath. It is therefore from these reasons, and because we believe that your honorable body is the exponent of that magnanimous spirit which has been exhibited toward the States lately in insurrection, and because we believe that said law was passed under the war powers of Congress, and as war no longer exists, but the State of Florida is now in peace with the United States, and through her convention has made, and now through this General Assembly is making every effort to regain her former position in the union of States; and as her people, whether under military rule or the milder sway of civil law, have always shown a willingness to return to the Union unsurpassed by any other of the insurrectionary States, and as her people have been ever noted for their faithfulness in whatever cause they may espouse, therefore, your memorialists ask that the Congress of the United States will allow the State of Florida to assume the payment of said "direct tax," under the same conditions as the loyal States were allowed, and that your honorable body will so change the law now in existence as to do away with the required oath; and that your body will place the State of Florida in the same position to all intents and purposes as that occupied by the loyal States of the Union; and as your memorialists cannot be unmindful of the fact that they represent a State in this Union, and that they are agents of a portion of the great American people, and as the right of petition or memorial has been recognized since the establishment of this great republic: Wherefore, the representatives of the people of the State of Florida ask the Congress of the United States to grant them this right, granted to other States, and to enable her people to enjoy the same privileges as the citizens of other States.

An act was approved by the Governor, on January 12th, which regulated contracts with persons of color. It required all such contracts to be in writing, and to be explained to such person of color who was a party, in the presence of two credible witnesses, one of whom should make an affidavit of such explanation, and that the colored party voluntarily entered into it, and signed it, and that the contract should be filed with a judicial officer of the State or county residing in the county where the contract was made. The person of color willfully neglecting or refusing to perform his contract was made liable to the penalties for vagrancy, and might be ejected—if a tenant—

from the premises of the other party. On the failure of the latter to perform his contract, the colored person could make a complaint before the judge of the criminal court, who was required to proceed to try the same before a jury, who could give such damages as they deemed proper. Any person enticing a laborer to quit the service of another, on conviction might be fined not more than \$1,000, or required to stand in the pillory not more than three hours, or be whipped not more than thirty-nine stripes on the bare back. At the same time the Legislature passed an act establishing a county criminal court, which had concurrent jurisdiction with the circuit court in the trial of assaults, assault and battery, assault with intent to kill, riot, affray, larceny, robbery, burglary, malicious mischief, vagrancy, and all misdemeanors, and all offences against religion, chastity, morality, and decency, provided the punishment does not affect the life of the offender. No presentment, indictment, or written pleadings are required in the proceedings, but the offence is to be set forth in the warrant of arrest. All offences are to be tried by a jury of twelve men. The person upon whom any penalty, fine, or forfeiture is imposed, may, for the non-payment thereof, be put to such labor as county commissioners may direct. At the same time an act was passed requiring all colored persons living together in the relation of husband and wife, and who had not been legally married, to appear before some legally authorized person, and be joined in the bonds of matrimony. This marriage should legitimize all previous issue, and must be recorded with the county clerk. Another act made parties in civil suits witnesses, and their interest in the cause should affect only their credibility. Another act authorized parents to apprentice their children under sixteen years of age, without the consent of the latter; if over sixteen the consent must be written. Another act made the judicial tribunals of the State, with the processes thereof, accessible to all the inhabitants without distinction of color, and repealed all laws previously passed with reference to slaves, free negroes, and mulattoes, except the act to prevent their migration into the State, and the act prohibiting the sale of fire-arms and ammunition to them. Another act provided for the appointment of a superintendent of common schools for freedmen, with assistants in each county where the number of children might justify it, who were authorized to establish schools for freedmen. It ordered a tax of one dollar upon every male person of color between the ages of twenty-one and fifty-five, the proceeds of which should constitute a common-school fund for freedmen. The following preamble and resolution relative to the pardon of Jefferson Davis was also adopted:

Whereas, We feel a deep solicitude for the President of the late Southern Confederacy: And *whereas* we recognize him only as an instrument and as an agent of the Southern people, and guilty only to the

extent of others who have already received the executive clemency for the same offence, and respectfully appreciating the wisdom, magnanimity, and justice of the President of the United States:

As it resolved by the Senate and House of Representatives of the State of Florida in General Assembly convened, That his excellency Andrew Johnson, President of the United States, whose administration has been signalized in a most extraordinary degree by the great virtues of clemency and mercy, be requested to extend a pardon to the said Jefferson Davis.

In the act prescribing additional penalties for the commission of offences against the State, approved January 15th, the 12th section forbids any negro, mulatto, or other person of color, to own, use, or keep in his possession or under his control any bowie-knife, dirk, sword, fire-arms or ammunition of any kind, without a license from the judge of probate, issued on the recommendation of two respectable citizens, etc., etc. The question arose whether this section of the act was not in violation of the Constitution which declared, "all the inhabitants of the State, without distinction of color, are free, and shall enjoy the rights of person and property without distinction of color." The opinion of the attorney-general given to the Governor, says that the liberty to keep and bear arms is a right of person and property, and the Legislature is expressly prohibited from passing any law which makes a discrimination in this respect on account of color. He further said:

The intention of the Convention of this State to make no legal distinction between the white and colored inhabitants of this State, is apparent from the whole tenor of the constitution. Having resorted to the white inhabitants of the State all the political power thereof, the constitution expressly provides that no distinction as to legal rights of person or property shall exist. As to the policy of this provision I have nothing to say. It was the opinion of the Convention that it was best, and it appears in the constitution of our State. The distinctions that have been made in various States of the Union, both North and South, between the legal rights of white and colored persons, have been made under constitutions differing from the constitution of this State in this respect. In some of these States the constitution expressly authorizes the distinction, in others it is silent on the subject. The constitution of this State expressly prohibits it.

About February 1st the Legislature adjourned to November 14th. The question which excited the greatest interest at this session was the amendment to the Federal Constitution, proposed at the last session of Congress. Governor Walker, in his message, thus presented the subject:

The constitutional principle is, that Federal representation and taxation are based upon the census, while the exercise of suffrage is regulated by State laws. The number of representatives due to a State is expressly made to depend on its population, and that alone; while it is expressly remitted to the State's own discretion to say who among its citizens shall constitute the voters or electors to make choice of or appoint those representatives. Accordingly, the States have exercised this function in entire freedom, and, in point of fact, very variously. Some have conferred suffrage upon every male above twenty-one years, without distinction; some on every white male; some have required, in addition, qual-

ifications of residence for greater or less periods; some have required also the payment of taxes, and some possession of freeholds. The proportions of voters to population have therefore been as various as the State laws. Nobody ever conceived that in this any unfairness was operated by one State as against another.

The idea seems to imply that a representative represents merely the voters, instead of the people generally; instead of which the voters, whether few or many, are in fact only the appointing power. Nobody imagines, for instance, that the Senator represents merely the Legislature or Governor that appointed him; or that the President of the United States is the President of the electoral college, instead of the people; or that our wives and children are not represented because they do not vote. Representatives in Congress are based upon population, and represent population, while the designation of the citizens who are to nominate them is matter of State discretion and regulation. This is the whole statement. There is no unfairness in it, and none would ever have been suggested, but for the fact that the liberation of our slaves has incidentally added to our representative population.

Let us look at the consequences of making voters and not numbers the basis of representation. Virginia requires two years' residence for suffrage, while some States, perhaps, require none. Virginia thus reduces comparatively the number of her voters. Suppose the reduction to be one-half—the degree does not affect the principle—can it be said in any fair and equitable sense that she thus gains an advantage over a sister State, and that to meet the evil Virginia's representation must be cut down? Let us take a possible case. Suppose Pennsylvania should conclude that, as she makes her sons fight at eighteen years, she ought to let them vote at the same age, and should thus add to the number of her voters as compared to Ohio; would this give her a right to exclaim as against Ohio that a voter there had more weight than a voter in Pennsylvania, and that Ohio's representation ought therefore to be cut down accordingly?

Take another not only possible, but probable case. Suppose Massachusetts shall adopt female suffrage, and thereby double the number of her voters; will this give her a right to have the representation of Pennsylvania cut down one-half? I think I have said enough to satisfy any reasonable man that it is best to let the basis of representation remain as our fathers fixed it—on the census, and not the voters.

He objected to the third section of the amendment as designed to punish certain classes of citizens, not more guilty than others, by depriving them of their right to hold office under the State and Federal Governments, and said:

Look around you and see how few persons will be left in office after this amendment is adopted, and you will see that to vote for it is to vote for the destruction of your State government. After taking out all the proscribed officers, there will not be enough left to order elections to fill the vacancies, and a military government will become a necessity. And who are those whom we are asked thus to disgrace with official disfranchisement? Are they not those whose experience and abilities are most necessary to the State in this her hour of trouble? Are they not those whom we have always regarded as the very best men in our land? Are they not those whom we have loved and trusted above all other men in the State? Are they not those, in thousands of instances, who witnessed the act of secession with bleeding hearts, and engaged in the rebellion only out of deference to the will of their State? Are they not those who sacrificed themselves to serve their State? And will their State now turn round and repay their devotion by putting a mark of infamy upon

them? Perish forever so base a thought! If they are to be disfranchised, let it be by no act of ours.

The Committee, in the House of Representatives, to whom the subject was referred, reported against the ratification of the amendment, and thus closed their report:

As the representatives of the people of the State of Florida, we protest that we are willing to make any organic changes of a thoroughly general character, and which do not totally destroy the nature of the government. We are willing to do any thing which a generous conqueror even should demand, much less the Congress of our common government. On the other hand, we will bear any ill before we will pronounce our own dishonor. We will be taxed without representation; we will quietly endure the government of the bayonet; we will see and submit to the threatened fire and sword and destruction, but we will not bring, as a peace offering, the conclusive evidence of our own self-created degradation.

Our present relations with the general government are certainly of a strange character. Beyond the postal service, our people derive no benefit from our existence as a State in the Union. We are denied representation even when we elect a party who has never in fact sympathized with armed resistance to the United States, and who can, in good faith, take the oath. We are at the same time subject to the most onerous taxation; the civil law of the State is enforced and obeyed only when it meets the approval of the local commander of the troops of the United States; the Congress of the United States enacts laws making certain lands subject to entry at a small cost by the colored portion of our population, and denies the like privilege to the white man by restrictions amounting to a prohibition.

We are, in fact, recognized as a State for the single and sole purpose of working out our own destruction and dishonor. None of the benefits of that relation exist. In other words, we are recognized as a State for the highest purposes known to the Constitution, namely, its amendment; but we are not recognized as a State for any of the benefits resulting from that relation.

Your committee, for these reasons among others, recommends that the House of Representatives, do not ratify the proposed amendment.

This report of the committee was unanimously adopted by the House.

The bonded debt of the State is about \$370,000, on which there is interest due to the amount of \$100,000. The debt not bonded is \$107,750. This includes the indebtedness before and since the war, without including the scrip issues during the first year of the war, which are regarded as cancelled by the act of the State Convention. This issue of scrip was without value outside of the State, and was chiefly made for the purpose of carrying on the operations of the State, and for the relief of the destitute inhabitants. It was received for home products, even when the Confederate currency was repudiated—through reliance on the good faith of the State. On the principle that all acts or laws impairing contracts are unconstitutional, it is intended yet to bring the subject before the courts for adjudication.

In a proclamation issued by President Johnston on April 2d, it was declared that the insurrection which heretofore existed in the State of "Florida is at an end, and henceforth to be so regarded." Orders from the Secretary

of War, with the approval of the President, issued on April 9th, declared that, although the President's proclamation did not remove martial law, it was not expedient to resort to military tribunals in any case where justice could be attained through the medium of the civil authority. The major-general (J. G. Foster) in command of the department, issued his orders on April 27th, stating these facts, and also saying that, whereas the Constitution had provided that the inhabitants of Florida "are free, and shall enjoy the rights of person and property without distinction of color," and "the courts being organized in the State, and the officers and people in general 'well and loyally disposed,' so that the Constitution and laws can be sustained, and enforced therein by proper civil authority, State or Federal," and the civil rights bill having been passed by Congress, he therefore directed that all persons under military arrest should be turned over to civil authorities for trial, except soldiers and those subject to military law, and that commanders, when requested, should assist the ministerial officers of the civil authorities in making arrests. Governor Walker immediately issued a proclamation announcing the facts to the people, congratulating them upon the restoration of judicial authority, and making the following statements:

Let us constantly remember that every lawless act any individual in our State may commit, and every indiscreet expression that may be uttered, is immediately exaggerated and published broadcast over the Northern States with the view of making it appear that the President is wrong and his enemies are right. We are passing through a fearful ordeal. The eyes of the world are upon us. Let us, therefore, be wise as serpents, and harmless as doves. In times like these, it is the duty of every good citizen not only to obey the Constitution and laws himself, but to see as far as possible that every one else does so, for each now is held responsible for all, and all are held responsible for each. Therefore I charge not only every officer, but also every man in the State, to be vigilant in the exercise of all his duties as a loyal citizen of the United States, to see that all crime is instantly punished, and that all the laws, and particularly those for the protection of the freedmen are duly executed.

All the greater crimes, such as murder, arson, &c., having since the surrender of General Johnston up to this time been punishable alone by the military, our magistrates and people have fallen into the habit of looking alone to the military for the arrest of offenders, but hereafter this will not be the case. The military have ceased to arrest except upon the warrant of the civil magistrates. I urge the magistrates and people themselves to be prompt to apprehend and punish all violators of the laws, of whatever grade.

I know that our people are loyal, and I feel under no necessity, therefore, of impressing the duty of loyalty upon them, but I wish to warn them particularly against all expressions of impatience which can, by any system of torturing, be construed into utterances of disloyalty. Such expressions are all reported to the North and magnified and made to play an important part in the war upon the President. Every intemperate paragraph in a newspaper is particularly adapted to this purpose—and I here beg leave to say that I think it is high time that the custom which has so long prevailed among our people and newspapers both South and North, and with such dis-

astros results, of speaking evil of each other, should be desisted from—it is a custom certainly much more honored in the breach than in the observance, and is productive of nothing but evil continually. I am sorry to say that some of our Southern newspapers are copying too closely the bad example set by some in the North. The only object of certain journals would seem to be to prejudice one section of the country against the other. So they increase their subscription-lists and enlarge their advertising columns, they appear not to care what becomes of the country. The Northern papers of this class reject as odious all notice of every thing good that is done in the South, and collect with care every instance of lawlessness, great or small, real or imaginary, and parade it in their columns until the minds of their readers are poisoned against us, and they mistake the act of one lawless individual for the uniform conduct of the whole community.

On the other hand, some of our Southern papers notice nothing good in the North, but cull with equal care every instance of elopement, murder, theft, robbery, arson, burglary, starvation, destitution, Mormonism, free-love, etc., etc., until their readers are taught to believe that the North is utterly corrupt. Now, this is all wrong. I have lived all my life in the South, and have been much at the North, and the result of my observations is, while too much vice exists in either section, yet the good in both vastly preponderates. And besides this, we are brethren, and why should brethren strive to blacken the characters of each other? The God of battles has irrevocably decreed that we are one people. We must learn to live together as brethren.

Early in the year, the assistant commissioner reported that the labor system had become settled, that the freedmen were at work diligently on the plantations, and appeared to give satisfaction to their employers. The control and protection of their rights had been transferred, as far as was practicable, to the regularly authorized courts, and in most parts of the State the transfer had been attended with success.

A current of immigration has flowed into the State since the close of the war. The soil, the climate, and the natural productions of the State are enthusiastically described by the Federal officer in charge of the land office at Tallahassee. "There is perhaps no soil in America, that to the eye of the New Englander could look more forbidding than that of Florida; at the same time there is no soil on this continent that will produce more valuable crops to the acre, than can be raised here. The poorest soil will produce two hundred pounds of cotton to the acre, and I have seen land in middle Florida that for seventeen years past has produced one bale of sea-island cotton to the acre. In the southern portion of the peninsula immense sugar crops are grown, while tropical fruits thrive at all seasons. Game is abundant. The rivers and lakes abound with fish. The shores of the gulf on the west and the Atlantic on the east, literally swarm with them in endless variety, of turtle, terrapin, etc., while the soil and climate are of such character that two and in some portions of the State three crops have actually been raised in one year. A more equable climate cannot be found in the world, Italy not ex-

cepted. It is never so warm at midsummer in South Florida as to inconvenience the white laborer in out-door labor, or so cold in winter as to require any additional amount of clothing. The country is yet comparatively new, and I know of none more desirable to that industrial class of which emigrants are chiefly composed. The products of the State are largely in demand. Cotton, Sisal hemp (one ton of the latter can be grown upon an acre of the poorest soil in Florida), sugar, indigo, tobacco of superior quality, arrow-root, the castor-bean, pine-apples, oranges, lemons, limes, coconuts, etc., produce largely, and can be made most profitable for purposes of exportation, while the vegetables of every part of the world can be produced in Florida. There are United States lands in every county in the State subject to entry under the 'homestead law,' of which each actual settler can obtain eighty acres."

FOOT, Hon. SOLOMON, an American statesman, born in Cornwall, Addison County, Vt., November 19, 1802, died at Washington, D. C., March 28, 1866. He graduated at Middlebury College, Vt., in 1826; was for one year principal of Castleton Academy, and for a time tutor in the University of Vermont, and Professor of Natural Philosophy in the Vermont Academy of Medicine. Devoting himself to the study of law, he was admitted to the bar in 1831, and at once entered upon an extensive and successful practice of his profession in Rutland, where he resided until his death. But the appreciation of his fellow-citizens soon called him from his chosen sphere of action and he was elected to the legislature of his State, serving several terms, during three of which he was Speaker of the House. In 1836 he was a member of the Convention for altering the State Constitution, and was a State attorney from 1836 to 1842. After this a wider sphere of duty demanded his presence, and he was a Representative in Congress from 1843 to 1847. Returning to his home in Rutland, after declining reelection, he resumed his legal practice, but was suffered to retain it but four years, being elected United States Senator in 1850, and continuing to serve in that capacity until his death. During this period he was on several important committees. He was particularly active on the Committees of Foreign Affairs, Pacific Railroad, Pensions, and Commerce. He was also chairman of several committees, and through nearly three Congresses was President *pro tem.* of the Senate, in which position he displayed a thorough knowledge of parliamentary law. In 1854 or 1855 Mr. Foot was chosen President of the Brunswick and Florida Railroad Company in Georgia, and during the recess of Congress visited England, negotiated the bonds of the company, and purchased the iron for the railroad, after which he resigned his post as president.

Mr. Foot was known as a man of indisputable integrity and ever faithful to his principles. He was a thorough Whig while that party was in existence, and when the organization was

broken up became as decided a Republican. As a Senator he was distinguished for his practical common sense, conscientious adherence to principle, faithfulness in the discharge of his duty, and uniform candor and courtesy equally toward those who agreed with him and his opponents, while the probity and openness of his character made him especially valuable both as to executive affairs and as an adviser. His private character as well as public career, gave ample evidence of deep and consistent piety.

FRANCE. An empire in Europe. Emperor, Louis Napoleon (Napoleon III.), born April 20, 1808; chosen hereditary emperor by the *plébiscite* of November 21 and November 22, 1852. Heir apparent, Napoléon Eugène Louis Jean Joseph, born March 16, 1856.* The area of France amounts to 207,232 square miles. The quinquennial census taken in 1866, gives 38,064,094 as the number of inhabitants, exclusive of 125,000 employed abroad in Algeria, Mexico, etc. This is an increase of 680,938 over the census of 1861. There are in France 19,014,109 males and 19,052,985 females. The females are therefore in a majority of 38,876. In thirty-one of the eighty-nine departments in France there has been a diminution of the number of inhabitants to the extent of 106,459, which is attributed to emigration and migration from the country districts into the large cities. The population of Paris amounted, in 1861, to 1,696,141; that of the *arrondissement* of St. Denis to 183,434; and that of Soeaux to 122,085. According to the census of 1866, these numbers have severally increased to 1,825,274, 178,859, and 147,283. Thus, in five years, the population has increased 197,256; the increase in Paris being 129,133; in St. Denis, 42,725; and in Soeaux, 25,898. The increase of population has been greatest in the department of the Seine, and the decrease greatest in the department of La Manche. Algeria, which is divided into the three departments of Algiers, Constantine, and Oran, had a population of 2,999,124 inhabitants, of whom, on 31st December, 1864, 235,570 were Europeans.

The colonial possessions of France were increased in 1866 by the acquisition of Adulis and Obock in Africa; but no official statements have yet been published of either area or population of these new possessions.†

The budget for 1867, as voted by the Senate and Legislative body, was as follows:

	Receipts. Francia.	Expenses. Francia.
Ordinary Budget.....	1,862,954,865	1,769,057,169
Extraordinary Budget....	183,104,201	183,054,201
Total.....	1,996,059,066	1,902,111,370

Probable surplus of receipts over 90,000,000 franca. In a financial report published by M. Fould, on December 20th, the minister shows

* For an account of the French Constitution, see ANNUAL CYCLOPEDIA for 1865.

† For a full statement of the colonial possessions, see ANNUAL CYCLOPEDIA for 1865.

that, owing to the increase of 45,000,000 franca in the revenue arising from indirect taxation, the budget for 1866 will be definitively balanced. Relative to the rectified budget for 1867, the minister estimates the surplus revenue yielded by indirect taxes at ninety millions, and points out other resources. He concludes, therefore, that this budget will also be balanced. Notwithstanding the considerable expenditure necessitated by new armaments and the return to France of the troops from Mexico, it will not be necessary to impose new taxes or to appeal to public credit. The minister estimates that the ordinary budget of 1868 will show a surplus of 121,000,000 franca. No credit is demanded in the budget for 1868 in respect of the new organization of the army, the emperor having determined that the necessary expenditures should be provided by special bills on the presentation of the rectified budget for 1868. M. Fould states that the State will then be in possession of more than sufficient resources to meet these requirements.

The total receipts from indirect taxation in France for the year 1866, comprising customs, excise, stamp duties, post-office, government manufactures, etc., amounted to 1,282,268,000 franca, showing an increase of 259,734,000 franca in 1865. The branches of revenue most productive appear to be registration duties and mortgages, which have yielded 345,850,000 franca; stamps, 82,818,000 franca; potable liquor, 240,405,000 franca; and tobacco, 242,022,000 franca. With respect to the direct imposts, the total paid into the treasury in 1866 amounts to 530,569,000 franca, leaving only 494,000 franca outstanding. The law expenses for the same year were in the proportion of 1f. 80c. per thousand franca, which is an increase of two centimes per thousand franca on the year preceding.

According to the budget of the minister of war, for 1867, the army was composed as follows:

	PEACE FOOTING.		WAR FOOTING.	
	Men.	Horses.	Men.	Horses.
Staff.....	1,845	160	1,914
Gendarmes....	24,446	14,769	25,683	15,000
Infantry.....	246,612	402	515,035
Cavalry.....	59,305	42,078	100,321	65,000
Artillery.....	37,790	15,357	66,132	48,000
Engineers.....	8,057	987	15,443	1,400
Military equipments.....	5,590	5,142	15,829	12,000
Administration.	10,113	240	17,536
Total.....	393,758	79,135	757,796	143,228

On April 1, 1865, the army was distributed as follows:

	Men.	Horses.
In France.....	285,806	64,445
" Algeria.....	77,705	16,494
" Rome.....	13,000	1,345
" Mexico.....	28,360	7,545
Total.....	404,871	90,000

The French fleet consisted, on July 1, 1866, of 66 iron-clad screw steamers, together with 1,121 guns, and of 29,425 horse-power; 238 other screw steamers, together with 4,878 guns and 63,883 horse-power; 75 wheel steamers, together with 896 guns and 15,225 horse-power; 126 sailing vessels, with 1,288 guns; together 506 vessels, with an aggregate of 7,683 guns and of 108,533 horse-power. The marine troops were composed as follows:

	Peace Footing.	War Footing.
Officers.....	2,508	3,074
Engineers, hydrographers, commissariat, etc.....	1,560	1,560
Clergymen, physicians, etc.	655	655
Workmen, superintendents.....	4,011	4,011
Machinists, etc.....	40	40
Military equipage.....	32,805	66,000
	41,579	75,840
Workmen in seaports.....	20,929	25,000

The general and special* commerce of France with the countries of America and some of the leading countries of Europe during the year 1864 was as follows (value expressed in millions of francs):

COUNTRIES.	IMPORTS.		EXPORTS.	
	Gen'l Com.	Spec'l Com.	Gen'l Com.	Spec'l Com.
<i>America.</i>				
United States of America	75.1	69.2	100.8	84.1
Mexico.....	6.1	5.7	70.7	57.3
Guatemala.....	1.1	1.0	0.8	0.7
Haiti.....	28.9	31.1	12.8	9.6
Brazil.....	85.9	58.7	129.2	82.0
Argentine Republic.....	41.5	41.6	51.9	39.3

Italy.....	278.3	227.9	409.9	275.1

The total commerce of France† during the year 1864, was (value expressed in millions of francs):

Imports—General commerce.....	3,407.4
Special commerce.....	2,528.2
Exports—General commerce.....	3,921.2
Special commerce.....	2,924.2

The speech of the emperor, on receiving the diplomatic corps on January 1, 1866, con-

tained no remarks of importance. With regard to the future, the emperor said: "We shall be happy if we can, as at present, congratulate ourselves upon having avoided dangers, removed apprehensions, and strengthened the bonds which unite nations and kings; and happy, above all, if the experience of accomplished events enables us to augur a long day of peace and prosperity for the world."

The session of the French Legislature was opened on January 22d, by the emperor, who delivered the following speech:

Messieurs les Sénateurs, Messieurs les Députés:

The opening of the legislative session permits a periodical exposition of the situation of the empire, and the expression to you of my views. As in preceding years, I will examine with you the principal questions which interest our country. Abroad, peace seems assured everywhere, for everywhere the means are sought for of amicably settling difficulties, instead of ending them with the sword. The meeting of the English and French fleets in the same ports has shown that the relations formed on the field of battle have not been weakened; time has only cemented the agreement of the two countries.

In regard to Germany, my intention is to continue to observe a policy of neutrality, which, without preventing us at times from being displeased or satisfied, leaves us, nevertheless, strangers to questions in which our interests are not directly engaged.

Italy, recognized by almost all the powers of Europe, has strengthened its unity by inaugurating its capital in the centre of the peninsula. We may count upon the scrupulous execution of the treaty of the 16th September, and the indispensable maintenance of the power of the Holy Father.

The bonds which attach us to Spain and Portugal are still more strengthened by my late interviews with the sovereigns of those two kingdoms.

The budget of the public works and that of education have not undergone any diminution. It was of use to preserve to the grand enterprises of the State their fertile activity, and to maintain the energetic impulse of public instruction.

Agriculture has made great progress since 1852. At this moment it suffers from the decline of the price of cereals. That depreciation is the necessary consequence of the plenty of the harvests, and not of the suppression of the sliding scale. I have thought it useful to open a serious inquiry into the condition and needs of agriculture. It will, I am convinced, confirm the principles of commercial liberty.

In the midst of always increasing prosperity, unquiet spirits, under pretext of discussing the liberal progress of the government, would hinder it from marching by taking from it all force and initiative. The constitution of 1852, submitted to the acceptance of the people, undertook to establish a system rational, and wisely based on the just equilibrium between the different powers of the State. It is at an equal distance from two extreme situations. With a chamber, mistress of the fate of ministers, the executive is without authority and without spirit. In the same way it is without control if the elective chamber is not independent and in possession of legitimate prerogatives. Our constitutional forms, which have a certain analogy with those of the United States, are not deficient because they differ from those of England. Each people should have institutions conformable to its genius and traditions. Assuredly, every government has its defects; but, casting a look at the past, I rejoice in seeing, at the end of fourteen years, France respected abroad, tranquil within, without political prisoners, without exiles beyond its frontiers. The

* By "special commerce," those imports are understood which are intended for consumption in France, and those parts which are produced in France.

† For latest statistics of the movement of shipping and the merchant navy, see ANNUAL CYCLOPEDIA for 1865.

nation for four score years has amply discussed theories of government. Is it now not more useful to seek the practical means of improving the moral and material condition of the people?

Let us employ ourselves in spreading everywhere intelligence, healthy economic doctrines, the love of what is good, and religious principles. Let us endeavor to solve by the freedom of transactions the difficult problem of the just distribution of productive forces, and let us attempt to ameliorate the condition of labor in the fields as in the workshops. When all Frenchmen invested with political rights shall have been enlightened by education, they will discern the truth without difficulty, and will not suffer themselves to be seduced by plausible theories. When all those who live by daily wages shall have seen increased the benefits which assiduous toil procures, they will be firm supporters of a society which guarantees their welfare and their dignity. Finally, when all shall have received from infancy those principles of faith and morality which elevate man in his own eyes, they will know that above human intelligence, above the efforts of science and reason, there exists a Supreme Will that rules the destinies of individuals as well as of nations.

You have shared with me the general indignation produced by the assassination of President Lincoln; and recently the death of the King of the Belgians has caused unanimous regrets.

In Mexico, the Government, founded by the will of the people, is being consolidated. The opposition, conquered and dispersed, have no longer a chief, the national troops have displayed valor, and the country has founded guarantees of order and security, which developed its resources, and raised its commerce with France alone from 21 to 77 millions. As I expressed the hope last year that our expedition was approaching its termination, I am coming to an understanding with the Emperor Maximilian to fix the epoch for the recall of our troops before their return is effectuated, without compromising the French interests which we have been defending in that remote country.

North America, issuing victoriously from a formidable struggle, has reestablished the Union, and solemnly proclaimed the abolition of slavery. France, which forgets no noble page of her history, offers up sincere wishes for the prosperity of the great American Republic, and for the maintenance of amicable relations, which soon will have had a century's duration. The emotion produced in the United States by the presence of our troops on the Mexican soil will be pacified by the frankness of our declarations. The American people will comprehend that our expedition, to which we invited them, was not opposed to their interests. Two nations equally jealous of their independence ought to avoid every step which might affect their dignity and their honor.

It is in the midst of populations satisfied and confiding that our institutions perform their functions. The municipal elections are conducted with the greatest order and the most entire liberty.

The law upon coalitions, which gave rise to some apprehensions, has been carried out with a strict impartiality on the part of the Government, and with moderation on the part of those interested. The working class, intelligent as it is, has comprehended that the more facility is accorded to it to discuss its interests the more it is bound to respect the liberty of each, and the security of all.

The inquiry into the cooperative societies has come to demonstrate how just were the bases of the law which has been laid before you on this important subject. This law will permit the establishment of numerous associations to the benefit of labor and of industrial development. In order to favor the development of them, I have decided that authorization to meet together shall be accorded to all those who, outside of politics, may desire to deliberate respecting their industrial and commercial interests. This

liberty will not be limited except by the guarantees which public order requires.

The equilibrium of the budget is secured by a surplus of revenue. In order to attain this result it was necessary to effect economy in the greater part of the public services—amongst others, in the war department. The army being on a peace footing, there was only the alternative of reducing either the regimental cadres or the effective; the latter measure was impracticable, since the regiments hardly mustered the necessary strength of men. The good of the service counselled even their augmentation. By suppressing the cadres of 221 companies, 46 squadrons, 4 batteries, but dividing the men among the remaining companies and squadrons, we have rather strengthened than weakened our regiments. Natural guardian of the interests of the army, I would not have consented to these reductions, if they had necessarily altered our military organization, or broken the existence of men whose services and devotion I have been able to appreciate.

The addresses from the Senate and the Legislative body, as usual, expressed an unqualified approval of the imperial speech. In his reply to that from the Senate (February 18th), the emperor thus referred to his design to further develop the political institutions of the empire, and thus to "crown" the edifice of the Napoleonic state:

You desire, as I do, stability, the rational and progressive development of our institutions, the amelioration of the lot of the greater number, and the maintenance intact of the national honor and dignity. This accord is a force in the moral as well as in the physical world, which obeys general laws that cannot be violated without danger. It is not by daily disturbing the basis of an edifice that its completion (*consommation*) is hastened. My Government is not stationary; it is advancing, and wishes to advance, but upon firm ground capable of supporting power and liberty.

The proceedings of the Legislature did not present many points of great interest. That body, in the debate on the German question expressed itself very emphatically against the plans of aggrandizement supposed to be entertained by the Government of Prussia. In the discussion of home politics, a considerable number of members of the imperial party joined the Liberal Opposition in expressing a wish for some liberal reforms, and an amendment to the address to this effect received 63 votes. An amendment to the address, proposed by the protectionist party in the Legislative body, was defeated by 190 votes against 33, after M. Rouher had declared that the Government would take into serious consideration the results of the agricultural inquiry going on at that time.

A great sensation was produced throughout Europe by a brief speech made by the emperor at Auxerre, in May. In reply to an address from the mayor of the city, the emperor said:

I see with pleasure that the memory of the First Empire has not been effaced from your minds. Believe me, for my own part, I have inherited the feelings entertained by the chief of my family for this energetic and patriotic population, who sustained the emperor in good as in evil fortune. I have a debt of gratitude to discharge toward Yonne. This department was the first to give me its suffrages in 1848, because it knew, with the majority of the

French people, that its interests were my interests, and that I detested equally with them those treaties of 1815, which it is now sought to make the sole basis of our foreign policy. I thank you for the sentiments you have expressed toward me. Among you I breathe freely, for it is among the working population both in town and country that I find the real genius of France.

The construction generally put upon this speech was, that the emperor was preparing for a great war.

On May 24th, France, in common with England and Russia, issued a circular to the Governments of Austria, Prussia, and Italy, inviting them to a peace conference, to be held in Paris; but on June 3d, the Government declared that in consequence of the reserve made by the Austrian Government, in its reply, the conference itself had become impossible. On June 11th, the emperor wrote the following letter to M. Rouher concerning the attitude to be observed by France in the impending German-Italian war:

PALACE OF THE TUILERIES, June 11, 1866.

MONSIEUR LE MINISTRE: At a moment when all the hopes of peace which we were induced to entertain from the meeting of the conference seem to have vanished, it is essential to explain by a circular to our diplomatic agents abroad the ideas which my Government proposed to submit to the councils of Europe, and the conduct which it proposes to adopt in presence of the events in preparation. This communication will show our policy in its true light. If the conference had taken place, your language, as you know, was to have been explicit; you were to have declared in my name that I repudiated any idea of territorial aggrandizement, so long as the European equilibrium should not be broken. In fact, we could only think of an extension of our frontiers in case of the map of Europe being modified for the exclusive benefit of a great power, and also in the case of the frontier provinces asking by their votes, freely expressed, to be annexed to France. Excluding such circumstances, I think it more worthy of our country to prefer to acquisitions of territory the precious advantage of living on good terms with our neighbors, while respecting their independence and their nationality. Animated by these sentiments, and having only in view the maintenance of peace, I made an appeal to Russia and England to address words of conciliation to the parties interested. The accord established between the neutral powers will not remain in itself a pledge for the security of Europe. They proved their high impartiality in taking the resolution to confine the discussion in the conference to pending questions. In order to solve these questions, I believe they must be frankly met, stripped of the diplomatic veil which covered them, and asking into serious consideration the legitimate desires of sovereigns and peoples. The present conflict has three causes—the geographical situation of Prussia being ill defined; the wishes of Germany demanding a political reconstitution more conformable to its general necessities; the necessity for Italy to secure its national independence. The neutral powers could not desire to mix themselves up in the internal affairs of other countries. Nevertheless the powers which participated in the constituent acts of the Germanic confederation, had the right to examine whether the changes called for were not of a nature to compromise the established order of Europe. As far as concerns ourselves we should have desired for the secondary states of the confederation a more intimate union, a more powerful organization, a more important part to play; for Prussia, more homogeneity and strength to the north; for Austria, the maintenance

of her great position in Germany. We should moreover have been glad to see Austria cede Venice to Italy for an equitable compensation; for since, in concert with Prussia, and making no account of the treaty of 1862, she made war upon Denmark in the name of German nationality, it appeared to me just that she should recognize the same principle in Italy by completing the independence of the peninsula. Such are the ideas which in the interest of the repose of Europe we should have endeavored to advance. To-day it is to be feared that the fate of arms can alone decide the questions. In the face of these eventualities, what is the attitude of France? Should we manifest our displeasure because Germany finds the treaties of 1815 impotent to satisfy her national tendencies and maintain her tranquillity? In the war which is on the point of breaking out we have but two interests, the maintenance of the balance of power in Europe, and the maintenance of the work to which we contributed in Italy. But is not the moral force of France sufficient for the protection of these two interests? Will she be obliged to draw the sword to make her voice heard? I think not. If, notwithstanding our efforts, the hopes of peace be not realized, we have at least the assurance, from the declarations made by the courts engaged in the conflict, that, whatever be the results of the war, none of the questions in which we are interested will be settled without the concurrence of France. Let us maintain, then, a watchful neutrality, and, strong in our disinterestedness, animated by the sincere desire to see the nations of Europe forget their quarrels, and unite for the advancement of civilization, liberty, and progress, let us wait, confident in our right and calm in our strength.

Hereupon, Monsieur le Ministre, I pray God to have you in His holy keeping.

After the agreement upon the preliminaries of peace between Austria and Prussia, the French Government opened negotiations at Berlin, asking the cession of a part of the Rhine provinces to France, in view of the considerable aggrandizement of Prussia. No official account of those negotiations had been published at the end of the year 1866, but the semi-official *Norddeutsche Allgemeine Zeitung*, of August 11th, contained an article upon the French demand, "by which," it said, "hopes have been raised in France which must be designated as impossible of fulfillment on the part of Germany." "It is difficult," continued the same journal, "to explain the motives for this absurd demand, except by concluding that a total revolution has taken place in the policy of France. Changes in Germany are not questions of an international but purely of a national character, conveying no menace to France, but calculated, on the contrary, to be favorable to the sphere of action of that Power, as by the withdrawal of Austria from the Germanic Confederation, the dimensions of Germany will become considerably narrowed. France cannot possibly look upon changes in the territorial constitution of Germany as a source of danger to her. This thought will assuredly have weight with the French people." A Paris dispatch of August 15th, stated that on that day the emperor received in private audience the Prussian ambassador at Paris, who delivered to the emperor the reply of the Prussian Cabinet to the French note expressing a wish for the rectification of the French fron-

tier. The Prussian Government declared any such rectification to be inadmissible. The emperor, in reply, stated to Count von Goltz that it was in order to satisfy public opinion in France that he had expressed that wish to the Prussian Government. He had considered such a wish just, but acknowledged the fairness of the arguments brought forward by the Prussian Cabinet, and added that the good relations between Prussia and France should in no case be disturbed. In conclusion, the emperor expressed a hope that Prussia would not overstep the line of the Main.

During the peace negotiations between Austria and Italy, the emperor accepted the nominal transfer of Venetia to France, in order to hand it over to Italy subject to the result of a *plébiscite*. The *Moniteur*, of September 1st, gives the following official account of these transactions:

The emperor, in accepting the cession of Venetia, was guided by the desire of contributing to remove one of the principal causes of the late war, and to hasten the suppression of hostilities. As soon as the conclusion of an armistice was decided upon in Italy, the Government of his majesty employed its efforts to prepare the way for the conclusion of peace between the Cabinets of Vienna and Florence. It was necessary to regulate preliminarily the cession made to his majesty by the Emperor Francis Joseph. A treaty to this effect was signed on the 24th of last month between France and Austria, and the ratifications were exchanged to-day (August 31) at Vienna. In virtue of this act, the transfer of the fortresses and territories of the Lombardo-Venetian kingdom will be made by an Austrian commissioner to the French commissioner who is now in Venetia. The delegate of France will then arrange with the Venetian authorities to transfer to them the rights of possession which he will have received, and the populations will be called upon to make their decision on the future destiny of their country. With this reservation his majesty has not hesitated to declare, since the 29th July, that he consented to the union of the provinces ceded by Austria with the kingdom of Italy. The emperor has made known his intentions to H. M. King Victor Emmanuel in the following letter: "MY BROTHER—I have learned with pleasure that your majesty has adhered to the armistice, and the preliminaries of peace signed by the King of Prussia and the Emperor of Austria. It is therefore probable that a new era of tranquillity is about to open for Europe. Your majesty knows that I have accepted the offer of Venetia in order to preserve her from any devastation and prevent useless bloodshed. My intention has always been to restore her to herself, in order that Italy might be free from the Alps to the Adriatic. Mistress of her destinies, Venetia will soon be able to express her wishes by universal suffrage. Your majesty will recognize that in this circumstance the action of France has again been exercised in favor of humanity and the independence of the people. I renew the assurance of the sentiments of high esteem and sincere friendship with which I am your majesty's good brother,"

"NAPOLEON."

"St. Cloud, August 11, 1866."

On September 2d, the emperor accepted the resignation of M. Drouyn de Lhuys as Minister of Foreign Affairs, and appointed as his successor the Marquis de Moustier, French ambassador at Constantinople. Until the arrival of the latter, the Marquis de Lavalette was

charged with the provisional administration of the department. On September 16th, the Marquis de Lavalette issued the following important circular to the diplomatic agents of France, which was regarded as an entire abandonment of a warlike policy in the political questions of continental Europe:

SIR: The emperor's government cannot any longer defer the expression of its views concerning the events which have just been accomplished in Germany. M. de Moustier being necessarily absent for some time longer, his majesty has directed me to explain to his diplomatic agents the motives which actuate his policy. The war which broke out in Central and Southern Europe has destroyed the Germanic Confederation, and has definitely established Italian nationality. Prussia, whose limits have been extended by victory, is predominant on the right bank of the Main. Austria has lost Venetia, and she is separated from Germany. In presence of these considerable changes all States must be alive to a feeling of responsibility; they ask themselves what is the effect of the recently concluded peace—what will be its influence upon European order, and upon the international position of each power?

Public opinion in France has been excited. It wavers doubtfully between the joy of seeing the treaties of 1815 destroyed, and a fear lest the power of Prussia should assume excessive proportions—between a desire for the preservation of peace, and the hope of obtaining by war a territorial extension. It rejoices at the complete enfranchisement of Italy, but wishes to be reassured in respect of dangers which might menace the Holy Father. The perplexities that disturb men's minds, and which also have their effects abroad, impose upon the Government the duty of stating clearly the light in which it regards the subject.

France ought never to have an equivocal policy. If she be affected in her interests or in her strength by the important changes which are taking place in Germany, she ought to declare it frankly, and should take the measures which may be necessary for insuring her security. If she loses nothing by the pending transformations, she ought to state the fact sincerely, and to resist exaggerated apprehensions and ardent views which, by provoking international jealousies, might divert her from the course which she should pursue. In order to dissipate uncertainties and to establish facts it is necessary to look at what has happened and what is likely to happen in all their bearings. What do we find in the past? After 1815 the Holy Alliance united against France all the peoples from the Ural to the Rhine. The Germanic Confederation comprised, with Prussia and Austria, eighty millions of people; it extended from Luxemburg to Trieste, from the Baltic to Trent, and surrounded us with an iron girdle supported by five Federal fortresses; our strategical position was restricted by the most skillful territorial combinations. The slightest difficulty that might occur between us and Holland or with Prussia on the Moselle, with Germany on the Rhine, with Austria in the Tyrol or the Friuli, brought against us the combined forces of the entire Confederation. Austrian Germany, invincible upon the Adige, could advance at a fitting moment to the Alps. Prussian Germany had an advanced guard upon the Rhine in the minor States, incessantly agitated by desires for political transformations, and disposed to regard France as the enemy of their existence and of their aspirations.

If we except Spain, we had no possibility of forming an alliance on the continent. Italy was parcelled out and impotent; she was not to be counted as a nation. Prussia was neither sufficiently compact nor sufficiently independent to detach herself from

traditions. Austria was too much engaged in preserving her possessions in Italy to be able to effect an intimate understanding with us.

Doubtless, the long prevalence of peace has caused the dangers of these territorial organizations and alliances to be forgotten, for they appear to be formidable only at the time when war is about to break out; but this precarious security France has sometimes obtained at the price of foregoing her position (*role*) in the world. It is incontestable that during nearly forty years she has found raised against her the coalition of the three northern courts, united by the recollections of common defeats and victories, by similar principles of government, by solemn treaties, and by sentiments of distrust toward our liberal and civilizing action. If now we examine the future of transformed Europe, what guarantees does it offer to France and to the peace of the world? The coalition of the three northern courts is broken up. The new principle that governs Europe is freedom of alliances. All the great powers are restored to the plenitude of their independence, to the proper development of their destinies. Prussia enlarged, free henceforth in all solidarity, assures the independence of Germany. France should take no umbrage at that. Proud of her admirable unity, of her indestructible nationality, she ought not to oppose or to reject the work of assimilation which has just been accomplished, nor to subordinate to jealous feelings the principles of nationality which she represents and professes in respect of peoples. The national sentiment of Germany being satisfied, her uneasiness is dissipated, her enmities disappear. By imitating France she has taken a step toward and not from us. In the south, Italy, whose long bondage (*servitude*) has not extinguished patriotism, is placed in possession of all her elements of national greatness. Her existence profoundly modifies the political condition of Europe; but, notwithstanding unreflecting susceptibilities or momentary injustice, her ideas, her principles, her interests draw her nearer to the nation which has shed its blood to assist her in conquering her independence.

The interests of the Pontifical throne are assured by the convention of the 15th of September. That convention will be loyally executed. In withdrawing its troops from Rome the emperor will leave in their place as a guaranty for the security of the Holy See rather the protection of France. In the Baltic as in the Mediterranean are growing up navies of the second rank, which are favorable to the freedom of the seas. Austria, released from her German and Italian tendencies, employing no longer her forces in barren rivalries, but concentrating them on Eastern Europe, still represents a power with thirty-five millions of souls, which no hostility or interest separates from France. By what singular reaction of the past upon the future should public opinion see, not the allies, but the enemies of France, in those nations enfranchised from a past which was hostile to us summoned to a new life, governed by principles which are our own, and animated by those sentiments of progress which are the peaceful bond of modern societies? A Europe more strongly constituted, rendered more homogeneous by more precise territorial divisions, is a guaranty for the peace of the Continent, and is neither a danger nor an injury to our nation. This nation with Algeria will shortly reckon more than 4,000,000 of inhabitants; Germany, 37,000,000, of which 29,000,000 are in the Northern Confederation and 8,000,000 in the Southern Confederation; Austria, 35,000,000; Italy, 26,000,000; Spain, 18,000,000. What is there in this distribution of European forces which can disquiet us?

As irresistible power—can it be regretted?—impels peoples to unite themselves in great masses by causing the disappearance of minor States. This tendency arises from a desire to assure to the general interests more efficacious securities. Perhaps it may be inspired by a kind of providential anticipation of

the destinies of the world. While the ancient populations of the continent within their restricted territories increase but slowly, Russia and the United States of America may each before another century have expired contain 100,000,000 of inhabitants. Although the progress of these two great empires cannot be to us a source of uneasiness, and while, on the contrary, we applaud their generous efforts on behalf of oppressed races, it is proper that, with a wise foresight in respect of the future, the nations of Central Europe should not remain parcelled out into so many different States, without strength and without public spirit. Political science should rise above the narrow and paltry prejudices of a past age. The emperor does not believe that the greatness of one country depends upon the weakening of neighboring peoples, and sees no real balance of power, save in the satisfied wishes of the nations of Europe. In that he follows his ancient convictions and the traditions of his race. Napoleon I. foresaw the changes which are now taking place upon the European continent. He planted the germs of new nationalities in the Peninsula by creating the kingdom of Italy; in Germany by causing the disappearance of 253 independent States. If these considerations are well founded and true, the emperor was right in accepting the part of mediator, which has not been devoid of glory, in order to put an end to useless and lamentable bloodshed, to moderate the victor by his friendly intervention, to modify the consequences of reverses, to bring about, despite many obstacles, the restoration of peace. He would, on the other hand, have mistaken his great responsibility if, violating a promised and proclaimed neutrality, he had rushed suddenly into all the risks of a great war, one of those wars which revive the hatreds of races, and in which entire nations are engaged. What really could have been the object of such a contest voluntarily entered upon with Prussia, and necessarily with Italy? A conquest—a territorial aggrandizement. But the Imperial Government has long since applied its principles in respect to an extension of territory. It understands—it has understood—annexations dictated by an absolute necessity uniting to the country populations having the same customs, the same national spirit as ourselves, and it sought for the free consent of Savoy and the county of Nice to the reestablishment of our national frontiers. France can only desire those territorial aggrandizements which will not affect her coherent power; but she must always strive for moral and political aggrandizement by employing her influence for the great interests of civilization.

Her part is to cement the union between all the Powers that desire at the same time to maintain the principle of authority and to favor the cause of progress. The alliance will take from revolution the *prestige* which has been claimed for it of furthering the cause of freedom for the people, and will preserve to great enlightened States the wise direction of the democratic movement which manifests itself throughout Europe.

Nevertheless, there is in the emotion which has been evoked in the country a legitimate sentiment which it is right to acknowledge and to define. The results of the last war contain a grave lesson, and one which has cost nothing to the honor of our arms. They point out to us the necessity, for the defence of our territory, of perfecting without delay our military organization. The nation will not be wanting to this task, which can be a menace to no one; it has a just pride in the valor of its armies; its susceptibilities awakened by the recollections of its military pomps, by the name and the acts of sovereigns who govern it, are but the expressions of its energetic will to maintain against all attempts its rank and its influence in the world.

In short, from the elevated point of view from which the Imperial Government regards the destinies

of Europe, the horizon appears to be cleared of all menacing eventualities; formidable problems which ought to have been resolved because they could not be evaded, pressed upon the destinies of populations; they might have been imposed at a more inopportune period; they have received their natural solution without too violent shocks, and without the dangerous coöperation of revolutionary passions. A peace which reposes upon such bases will be a durable peace.

As to France, in whatever direction she looks, she can perceive nothing which can impede her progress or interrupt her prosperity. Preserving friendly relations with all powers, directed by a policy which has generosity and moderation for its strength, relying upon her imposing unity, with her all extended genius, her treasures, and her credit, which fertilize Europe; with her developed military forces, surrounded henceforth by independent nations, she will appear not less great, she will remain not less respected. Such is the language which you must hold in your communications with the Government to which you are accredited. Accept, etc.,

LAVALETTE.

On December 29th, an imperial decree was published abolishing tonnage dues in French ports on and after January 1, 1867, except for vessels of those nations which, like the United States, impose differential duties upon French vessels in their own ports. The report of M. Behic, Minister of Agriculture, Commerce, and Public Works, which precedes the decree, states that the English Government have undertaken to bring forward in the next session of Parliament a bill for the abolition of local duties of a differential character. By an understanding between the English and French Governments, it was provided that the extradition treaty, which was to have expired on December 4, 1866, should continue in force until the beginning of September, 1867.

On May 26th, the plenipotentiaries of France and Spain signed, at Bayonne, a treaty concerning the definite regulation of the frontier of the Pyrenees.

In September, inundations took place in a large portion of France, causing considerable damage. A report in the *Moniteur* from M. de Forcade la Roquette, President of the Inundation Commission, stated that the number of departments which suffered more or less from the visitation was 31. Not fewer than 1,702 communes were invaded by the floods, and the total loss was estimated at 43,753,234*f*. The commission proposed to distribute at once 3,777,917*f*, and the Government made for the year 1866 remissions of taxation to the amount of 408,678*f*.

In the *Moniteur*, of December 23d, two official reports were published concerning the Government of Algeria. The first refers to the organization of Mussulman civil tribunals in that country, and is followed by an imperial decree, containing dispositions based on the previous document. The second relates to the lands formerly belonging in common to the Arab tribes and which were constituted into individual property by the *Senatus-Consultum* of April 22, 1863. These the minister recommends should not be liable to seizure for debts con-

tracted previously to their repartition. This report is also followed by a decree, ordering the execution of the measure proposed, and also extending the same protection for a period of five years to the stock and product of the lands in question.

Agreeably to an imperial order, a commission was appointed in October, composed of six ministers, and several generals, and presided over by the emperor himself, to inquire into the advisability of modifying the military organization of the empire. The commission was to seek the means of placing the national forces in a condition to insure the defence of the territory, and maintain the political influence of France. The commission terminated its labors, when the *Moniteur* (December 12th) published the following as the principal features of the plan agreed upon:

It is based upon this consideration—that, in order to maintain her rank in Europe, France ought to be able to set on foot an army of 800,000 men. In this figure are included the recruits exercised in the depots, the auxiliary corps, such as the gendarmes, the infirmiry staff, the operatives of the administration, the military equipages, and, finally, the non-available, including the men under condemnation and in the hospitals. An equally evident necessity is, that to these 800,000 men must be added a military force for the protection of internal order, and the defence of the coasts and the fortified places while the army is at the frontiers. The problem to be solved was of the most complicated kind. While preserving, in fact, an organization already tested, means had to be found, under grave circumstances, of augmenting our effective force with experienced men, without involving the finances of the State, or imposing too heavy a charge upon the population. At the same time, while proclaiming as a principle of equality and justice, the obligation of every one to defend the country in case of war, it was of importance not to clash violently with the established customs, or divert in times of peace the avocation of the young men intended for the liberal professions. The plan adopted by the high commission satisfied these various obligations. It classes the military forces of France under three categories: 1, the active army; 2, the reserve; 3, the National Guard Mobile. The duration of service in the army, and in the reserve is fixed at six years. The liberated soldiers count three years in the National Guard Mobile. 1st. The active army is composed of engaged and relegated volunteers, as well as of men called into the ranks by the annual law of the contingent. 2. The reserve is formed of all the young men of the class who have not been drawn to form part of the annual contingent. It is divided into two equal parts determined by the numbers at the drawing. The first, called the "reserve of the first ban," remains at the disposition of the Minister of War, even in time of peace, to reinforce, if necessary, the effective of the regiments; the second, called "the reserve of the second ban," on the other hand, cannot be called out except in time of war, and by a decree of the emperor, as is the case now with the naval conscription. The two reserves are exercised in their turn in the depots of the army for a period of time more or less long. Marriage is permitted in the reserve as soon as the fourth year of service is accomplished. In order to render less irksome the military instruction of the young men called upon to be exercised in the depots, all those who have learned how to handle and fire a musket at home, and who, in a word, know the school of the soldier, will, on examination, be released from the annual exercises. They will

only be called together to take up arms. 3. The National Guard Mobile, formed of the soldiers of the active army, of those of the reserve who have terminated their *congé*, and of the exonerated, will rarely be liable to be called out. It will be only called out by virtue of a special law, and in the absence of the Corps Législatif, by an imperial decree, which will be converted into law the following session. The National Guard Mobile will cost the State little, because it will be composed in great part of men thoroughly exercised, clothed, and equipped. Some few well-chosen *cadres* will suffice to form a compact and disciplined corps. The service in ordinary times will be scarcely any thing, for it will in great part comprehend only old soldiers who will no longer need to be bound to a painful apprenticeship, and will be freed in time of peace from an irksome obligation. The men of the National Guard Mobile will henceforth, in time of peace, be able to consider themselves as liberated from the burden of conscription. Marriage is authorized at any period of the service. Such is the general plan of the measure. Supposing that out of the 326,000 Frenchmen who every year attain the age of twenty, 160,000 of the most valid are taken, 80,000 men will be left for the active army, and as many for the reserve. Deduction made of the legal exemptions, of ordinary losses, and diminutions of all kinds, each class at the end of six years will give the following results:

Active army.....	417,483 soldiers.
Reserve of the 1st ban....	212,873 "
Reserve of the 2d ban....	212,873 "
National Guard Mobile....	389,936 "

Total..... 1,232,215 soldiers.

The publication produced throughout France the greatest dissatisfaction, and many of the most prominent men of the Conservative party demonstrated against it. The Government, to conciliate public opinion, declared that the plan would be considerably modified.

On December 1st the gold medal, purchased in France by subscription for Mrs. Lincoln, was delivered by the committee into the hands of Mr. Bigelow, at the United States legation. Mr. Bigelow was at the same time requested to take charge of the following letter to Mrs. Lincoln:

MADAME: We are charged to present you with the medal struck in honor of the great man whose name we bear, at the desire of upward of 40,000 French citizens, who wish to manifest their sympathy for the American Union by a tribute of respect to the memory of one of its purest and most illustrious representatives. If France possessed the liberties that America enjoys, it is not by thousands but by millions that the admirers of Lincoln would be counted. I may accept, madame, the homage of our profound respect.

The Members of the Committee:—Albert, ancien membre du gouvernement provisoire; Arago (Etienne), ancien représentant du peuple; Barni (J.), professeur à l'Académie de Genève; Blanc (Louis), ancien membre du gouvernement provisoire; Chassagnon (Ch.-L.), homme de lettres; Chauffour-Kestner (Victor), ancien représentant du peuple; Delord (L.), rédacteur de l'*Avenir National*; Despois (G.), professeur libre; Greppo, ancien représentant du peuple; Hugo (Victor), ancien représentant du peuple; Joigneux (Pierre), ancien représentant du peuple; Kneip (Louis), ouvrier en bois; Laurent-Pichat (L.), homme de lettres; Ré, membre de l'Institut; Mangin (Victor), réacteur en chef du *Phare de la Loire*; Michelet, membre de l'Institut; Pelletan (Eugène), député de la Seine; Quinet (Edgar), ancien représentant du

peuple; Schœlcher (Victor), ancien sous-secrétaire d'état au ministère de la marine, ancien représentant; Thomas (A.), ancien directeur du *National*.

In presenting the above letter and medal, M. Albert, member of the Provisional Government of 1848, addressed Mr. Bigelow as follows:

We thank you, sir, for having taken upon yourself to transmit to Mrs. Lincoln the gold medal which French citizens desire to present to her. This medal is a homage rendered to the illustrious President for whom she mourns, a testimony of admiration for the man who immortalized himself in the service of the great Republic of the United States, and a thank-offering due to him from all defenders of liberal and democratic views throughout the world. We are happy to think, sir, that Mrs. Lincoln will receive this medal from your hand, and we beg you to accept the expression of our warm sympathy for the great nation which you have the honor to represent.

Mr. Bigelow warmly thanked the committee for their sympathy with the American Republic. The following is the reply of Mrs. Lincoln:

CHICAGO, January 8, 1867.

GENTLEMEN: I have received the medal you have sent me. I cannot express the emotion with which this proof of the sentiments of so many thousands of your countrymen fills me. So marked a testimony to the memory of my husband, given in honor of his services in the cause of liberty, by those who in another land work for the same great end, touches me profoundly, and I beg you to accept, for yourselves and those whom you represent, my most grateful thanks. I am, with the profoundest respect, your most obedient servant,

MARY LINCOLN.

The most notable features in the foreign policy of France during the year 1866, were the negotiations with the United States, concerning the withdrawal of the French troops from Mexico. The Government of the United States was incessant in urging upon the French emperor a speedy evacuation of Mexico. The French Government, in a note of January 9th, assured the Government of the United States that it hoped that the object of the French expedition would soon be attained, and that it was endeavoring to conclude with the Emperor Maximilian an arrangement which would satisfy the interests and the honor of France, and permit her, at the same time, to regard the mission of the French army in Mexico as terminated. A declaration to the same effect was made by the emperor, on January 22d, in the speech from the throne, on opening the Corps Législatif. On April 5th, the *Moniteur* announced that the emperor had resolved that the return of the French troops should take place in November, 1866, and in May and November, 1867. Subsequently the minister of the United States in France was suddenly informed that the French Government had found it, from military reasons, impossible to withdraw the first instalment of the troops in November, but that it would hasten the evacuation of Mexico, and probably complete it before the time stipulated. In December all the necessary preparations for bringing back the whole of the expeditionary forces were greatly accelerated, and the evacu-

tion of Mexico was expected to take place in the first month of the year 1867. (*See MEXICO.*) In accordance with the Franco-Italian convention of 1864, the withdrawal of the French troops from Rome took place in December, 1866. (*See PAPAL STATES, AND ITALY.*) The execution of several missionaries in Corea led to a naval expedition against that country. (*See COREA.*)

FRANKFORT. Until 1866, Frankfort was one of the four free cities of the German Confederation, with an area of forty-three square miles and a population, in 1864, of 91,180. By a decree of the King of Prussia, dated September 20, 1866, Frankfort (with the exception of the districts of Dortelweil and Nieder-Erlenbach, together with 1237 inhabitants, which were annexed to the grand duchy of Hesse) was annexed to the kingdom of Prussia. On October 8th, the Prussians took formal possession of the city.

FREEDMEN. As was stated in the *ANNUAL CYCLOPEDIA* of last year, Congress in February, 1866, passed an act, amendatory to the act to establish a bureau for the relief of Freedmen and refugees, enlarging its powers and the scope of its operations, which was vetoed by the President and failed to become a law. In consequence, the original bureau continued in force, under the administration of General Howard, as commissioner, with no material change of organization. Business has been facilitated and the many vexed questions that constantly arise, have usually been settled with promptness and equity. The jurisdiction of assistant commissioners coincides generally with department and district commands, and while a wholesome supervision has been exercised over the freedmen, such protection has likewise been extended to them as their peculiar condition imperatively required. The importance of self support, has been urged by proper means upon the laboring classes. Wages have been determined, not arbitrarily by orders of bureau officers, but by circumstances ordinarily affecting the price of labor in different localities. There has been but little uniformity of action in different States in respect to the administration of justice, the officers being guided in their decisions by the exigencies of the various cases presented to them. Assistant commissioners have been instructed to transfer military jurisdiction as rapidly as possible to State judicial tribunals. This has been done completely in some of the States, while in Virginia, Louisiana, and Texas, bureau courts are still in existence. A claim division, instituted in March last, and aided by officers and agents throughout the States, has sought to prevent frauds upon colored soldiers, in their efforts to collect unpaid claims; 195 claims were paid through the office of the commissioner; 723 rejected at his office; 1,582 are in process of adjustment. The aggregate amount collected and paid, is \$10,589.09. Transportation has been furnished to 6,352 destitute freed people and 887 refugees. The number of rations issued between

June 1, 1865, and September 1, 1866, was 18,412,268. The average number per month to refugees and freedmen was 894,569; the average number per day, 29,819. The issue to whites increased until June 30, 1866, when issues to freedmen and refugees were about equal. Since September the number supported of both classes has diminished. Rigid scrutiny has been exercised to prevent issues to any but the absolutely destitute, and parts of the ration not actually needed were cut off. Officers have been directed to hold each plantation, county, parish, and town, responsible for the care of its own poor, but to very little purpose, for with few exceptions the State authorities have failed to contribute to the relief of the class of persons supported by the bureau. Upon the application of State officials, special issues have been made to certain States for the support of their pauper population. Rations are sold to teachers, and agents of benevolent societies, under the same rules that apply to such purchases made by commissioned officers. Bureau hospitals receive the usual freedmen's ration. In order, however, that none might be encouraged in indolence, and to encourage industry and thrift among the freedmen, the issue of rations, except in certain cases, was suspended after the 1st October, 1866, in accordance with the recommendation of General Howard, embodied in the following order of the Secretary of War:

WAR DEPARTMENT, BUREAU OF R. F. AND A. LANDS,
WASHINGTON, August 17, 1866.

Hon. E. M. Stanton, Secretary of War:

SIR: In view of the fact that charges are constantly made by a large number of prominent citizens in the South and elsewhere that persons are fed by the bureau in idleness, and in consideration of the statements made by the Inspectors, Generals Steedman and Fullerton, implying that the people who labor for support are rendered idle by the promise, or hope, of rations from the Government; and further, considering that the crops are sufficiently matured already to prevent actual starvation, I recommend that, on and after the first day of September next, the issue of rations be stopped, except to the sick in regularly organized hospitals, and to the orphan asylums for refugees and freedmen already existing, and that the State officials, who may be responsible for the poor, be carefully notified of this order, so that they may assume the charge of such indigent refugees and freedmen as may not be embraced in the above exceptions.

Very respectfully, your obedient servant,

O. O. HOWARD,

Major-General, Commissioner.

Approved, to take effect 1st October, August 23, 1866.

E. M. STANTON,

Secretary of War.

Official: JAMES ELDRIDGE, A. A. A. General.

Much of the land assigned to the use of the freedmen before the close of the war, has been restored to its original owners. The amount of land still in possession of the bureau is 272,231 acres. The aggregate number of parcels of town property, not included in the above, which have been in possession of the bureau, is 3,724, of which 2,605 have been restored, leaving a balance of 1,119 parcels of town

property. The expenses of managing the freedmen, and providing for the destitute among them, have been quite large. The following tabular statement, from the last report of the commissioner, shows the financial condition of the bureau.

The balance on hand of the freedmen fund is..	\$282,938 52
The balance of district destitute fund.....	18,388 67
The balance of appropriation.....	6,856,269 80
	\$7,156,981 49
The estimated amount due subsistence department is.....	\$297,000 00
The transportation reported unpaid.....	26,015 94
The transportation estimated due.....	20,000 00
Estimated amount due Medical Department.....	100,000 00
Estimated amount due Quartermaster Department.....	200,000 00
	\$643,015 94
Total balance for all purposes of expenditure..	\$6,513,965 55

The commissioner estimates the additional funds necessary for the next fiscal year as follows:

Salaries of Assistant Commissioners, Sub-Assistants, and Agents.....	\$147,500 00
Salaries of clerks.....	82,500 00
Stationery and printing.....	63,000 00
Quarters and fuel.....	200,000 00
Subsistence stores.....	1,500,000 00
Medical Department.....	500,000 00
Transportation.....	800,000 00
School superintendents.....	25,000 00
Buildings for schools and asylums (including construction, rental, and repairs).....	500,000 00
Telegraphing and postage.....	18,000 00
Total.....	\$3,586,500 00

While there are differences of opinion as to the necessity of the bureau and the prudence of its management, it is generally conceded that its large expenditure is not entirely barren of good results. In April, 1866, General Steedman and Fullerton were appointed commissioners by the President to visit the Southern States, and investigate the operations of the freedmen's bureau therein. In accordance with their instructions, they visited all the towns and cities of any importance, and the headquarters of each district of the bureau in several of the States examined, and conversed with representatives of all classes of people, white and black, as well as officers on duty in the military service and in the freedmen's bureau in those States. While the result of their investigations was the disclosure of many irregularities and abuses on the part of officials having the freedmen in charge, it also showed, with equal distinctness, the importance and necessity of some organized provision to meet the wants of this large class of persons, and to put them in the way of providing for themselves. In showing why the negroes need assistance, they report as follows:

A majority of the freedmen to whom assistance has been furnished are undoubtedly able to earn a living if they were removed to localities where labor could be procured. The necessity of issuing rations to this class of persons results from their accumulation in large numbers in certain places where the land is unproductive, and the demand for labor is limited. As long as these people remain in the present localities, the civil authorities refuse to provide for the

able-bodied, and are unable to care for the helpless and destitute among them, owing to their great number, and the fact that very few are residents of the counties in which they have congregated during the war. The necessity for the relief extended to these people, both able-bodied and helpless, by the Government, will continue as long as they remain in their present condition, and while rations are issued to the able-bodied, they will not voluntarily change their localities to seek places where they can procure labor.

The investigations of the commissioners likewise disclosed the fact, that in some instances the freedmen suffered great injustice and wrong at the hands of officers of the bureau, who used their powers and opportunities for their own aggrandizement, and perverted their official prerogatives to selfish ends. The legislation of the various Southern States in reference to the freedmen has greatly enlarged the rights and privileges of that class of persons, and in many respects placed them on an equality with the whites. The marriage relation between persons of color has been recognized and legalized; the right of making contracts, suing and being sued, established, and the criminal laws so extended in their operation as to inflict upon them the same punishment as upon whites. In some of the States the freedmen are allowed to testify as witnesses before the courts in all cases, while in others they can give evidence only against persons of their own color. These are the principal features of legislative action, though there are some minor details, all, however, tending to elevate the condition of the colored people above what it was previous to their emancipation.

Benevolent societies have supplemented to a large extent the efforts of the general government, and the State Legislatures, to improve the moral and social condition of the freedmen. Throughout the Northern States organizations and associations have been established, and are now in active operation, the great object of which is to open schools, employ teachers, give instruction to the freedmen and their children, encourage them in habits of order and industry, render them advice and assistance when requisite, and provide clothing and other comforts for the more destitute. Over 600 schools have been opened, and it is estimated that 150,000 freedmen and their children are now receiving instruction in the Southern States. Of these schools there are 61 in Maryland, 41 in the District of Columbia, 104 in Virginia, 80 in North Carolina, 129 in South Carolina, 31 in Georgia, 29 in Florida, 28 in Alabama, 20 in Mississippi, 6 in Louisiana, 65 in Tennessee, 5 in Kentucky, 8 in Missouri, 10 in Arkansas, and 4 in Kansas, making a total of 609. The teachers in these schools are all supported by the associations, and while they coöperate with the bureau, they do not draw upon its resources. The progress made by the pupils in these schools has been of the most gratifying character, and far more rapid than the most sanguine friends of the system dared to anticipate. Another part of the work of these associations is

obtaining work and homes for dependent freed people, and relieving crowded localities. Much has been accomplished in this direction, provision being made for giving employment to large numbers, who otherwise would have been left in destitution.

In the District of Columbia the freedmen have been invested with the right of suffrage, and they exercised that right, for the first time, on the 25th of February. It was predicted that disturbances would arise on that occasion, but the election passed off in as quiet and orderly a manner as at previous periods.

The present condition of the freedmen, physical and moral, as contracted with their status before their emancipation, is variously esti-

mated. By some it is alleged that suffering, vice, and crime, have fearfully increased among them—that they have been decimated by disease, and are rapidly verging toward extinction; while others assert that in every respect they are greatly improved, and, if allowed, will soon become orderly, industrious, and useful citizens. It is quite evident that the efforts made in their behalf have been as fruitful of good results as any efforts for ameliorating the condition of the ignorant and destitute of other classes; that they have manifested a most promising susceptibility of improvement, and if all that could be desired has not been accomplished among them, enough has been done to renew exertion, and inspire future effort.

G

GEOGRAPHICAL EXPLORATIONS AND DISCOVERIES IN 1866. The progress of Geographical Science during the year was marked not so much by great or startling discoveries as by a steady and almost universal advance of knowledge of all sections of the world, and a clear and satisfactory statement of the discoveries of previous years. Yet, in many respects, the results of the labors of the year are more important in the positive additions made to our knowledge of the earth and its inhabitants than those of some previous years. So complete is the organization of geographical discovery, and so earnest the zeal of the explorers, that though, as in the last year and a half, men, whose names have attained a world-wide reputation, are stricken down by disease, or accident, or fall victims to the ferocity of the savage tribes among whom they have ventured, there is no pause in the work; a new explorer takes up the thread dropped by the dead traveller, and pursues it till the discovery is completed, or he in turn falls a victim to his intrepidity. The loss of men eminent in geographical science since September, 1865, has been remarkably great. Speke, Smythe, Von der Decken, Barth, Siebold, Whewell, Lee, Forchhammer, Hodgkin, Carrasco, Nordenskiöld, the Earl of Donoughmore, Cumming, Schoolcraft, Kupfer, Waterton, and, perhaps, Livingstone, have all completed their career of usefulness and entered upon their reward. Von der Decken and, probably, Livingstone were murdered by the natives of the regions they were attempting to explore, and Du Chaillu and Baker narrowly escaped the same fate. But their places are promptly filled, if not yet in the same field of research, in others of equal interest, and perhaps of still greater peril.

We may as well commence our review of the discoveries and explorations of the year by a statement of a few facts appertaining to general rather than local geography. M. Jules Marcon, a distinguished French geographer and geologist, has undertaken to portray the earth as it existed

in the Jurassic period. His profound attainments in geology, and his capacity for careful generalizations from established data, make this map, which he presented to the *Société de Géographie* of Paris, exceedingly interesting. He finds evidence of the existence of a vast continent deeply indented with bays and gulfs, and dotted with great lakes, surrounded with numerous islands, embracing a considerable portion of the Atlantic and Indian Oceans, and including the Scandinavian countries, the British Isles, considerable portions of Western Europe, the Ural region, part of Asia, Northern and part of Central Africa, a portion of Australia, and the eastern part of North and South America. Beyond it on the west rose a narrow but lofty continent, embracing the Rocky Mountain and Andean ranges, and extending westward to include, though with large lakes between, some of the Polynesian Islands. The Valley of the Mississippi, and the broad savannas on either side of it, the Gulf of Mexico, and the pampas of South America, formed the bed of a mighty ocean. The land was for the most part grouped about the equator, and, except some small tongues of land, lay wholly within the tropical and the two temperate zones. He gives at considerable length his reasons for these conclusions, which seem satisfactory.

Professor A. Grisebach publishes in the February number of Petermann's *Mittheilungen* an elaborate essay on the geographical distribution of the vegetation of the earth into districts. His first district is that of the Arctic-Alpine Flora, and he makes the northern limit of forest-growth in the country of the Sami-edes, 67° N. lat.; in Siberia, from the Yenisei to the Lena, from 69° 30' to 71° 30'; in Kamtschatka, 64°; near Behring's Strait, 60°; at Great Bear Lake, 67°, and on the coast of Hudson's Bay, 60° 30'. His second district, the Continental Flora of the Eastern Hemisphere, he divides into ten subdistricts, viz.: 1. The North European and Siberian Flora; 2. The

Mediterranean Flora; 3. The Flora of the Steppes; 4. The Chino-Japanese Flora; 5. The Flora of the Indian Monsoon Region, which he again subdivides into the Flora of the dry Monsoon Climates with their brief rainy season, the Flora of the moist Monsoon Climates, and the Asiatic Equatorial Flora; 6. The Flora of the Sahara; 7. The Flora of Soudan; 8. The Flora of the Kalaban or South Central Africa; 9. The Flora of the Cape Lands; 10. The Australian Flora. His third district, the American Flora, is also divided into twelve subdistricts, viz.: 1. Flora of the North American Forest Regions; 2. Flora of the Prairies; 3. Californian Flora; 4. Flora of Mexico, which is again subdivided into Flora of the warm moist Eastern Coast of Mexico, Flora of the Mexican Highlands, Flora of the Western Coast of Mexico; 5. The Flora of the West Indies, subdivided into the Flora of the Bahamas and the Eastern Caribbean Islands, and the Flora of the Greater Antilles and the Western Caribbean Islands; 6. Flora of South America, North of the Equator, subdivided into the Flora of the Forest Region of the Northern Coast, and the Flora of the Savannas of Guiana and the Llanos of Venezuela; 7. Flora of Equatorial Brazil; 8. Flora of Southern Brazil, likewise divided into the Coast Flora and the Flora of the Plains; 9. Flora of the Tropical Andes, including Flora of the West Side of the Coast range or Cordillera, the Puna Region, and the Cinchona Region; 10. Flora of the Pampas; 11. Flora of Chili; 12. Flora of the Forest Region of the West Coast of the Southern Extremity of S. America. His last grand district is that of the Oceanic Island Flora, and comprises the products of the Islands of the Pacific, Atlantic, and Indian Oceans, remote from the continents, which possess a character of similarity which is extraordinary. These divisions and subdivisions serve to exhaust the different flora of the earth's surface. Professor Grisebach accompanies his essay with an admirable map, colored to represent the different districts and subdistricts.—The British Board of Trade have recently published a table of the mean average temperature and specific gravity of the principal oceans and larger seas of the globe. It is as follows:

	Specific gravity.	Mean temperature.
North Atlantic Ocean as far as 50° north latitude.....	1.02664	71° 56' F.
South Atlantic Ocean as far as 50° south latitude.....	1.02676	66° 66' "
Northern Pacific Ocean as far as 50° north latitude.....	1.02548	69° 94' "
Southern Pacific Ocean as far as 50° south latitude.....	1.02658	67° 70' "
Indian Ocean, from the Equator to 50° south latitude.....	1.02680	68° 28' "
Mediterranean.....	1.0289	67° 80' "
Black Sea.....	1.0143	56° 80' "
North Sea.....	1.0261	
Baltic Sea.....	1.0086	
Red Sea.....	1.0286	79° 80' "
Red Sea north of 20° north latitude.....	1.0297	77° 40' "
Red Sea south of 20° north latitude.....	1.0272	81° 50' "

The aggregate population of the globe has been the subject of frequent investigation by geographers, and no two authorities, estimating from the data in possession of the scientific, have ever been able to arrive at the same conclusions. The extraordinary discrepancies in their estimates may well excite surprise. In 1787 Busching stated the population of the earth at 1000 millions. This was probably not the result of a careful summing up of the facts then known, but rather a hasty estimate. In 1800, Fabri and Stein estimated it at 900 millions. In 1833, with more abundant data and greater care, Stein and Hörschmann reduced the aggregate to 872,000,000. In 1858, Dieterici, as the result of a detailed investigation, with very full references to the latest censuses of the principal countries of the world, made the aggregate 1,288,000,000 or 416,000,000 more than Stein and Hörschmann. In 1865, Kolb, with equal care and extended investigation, gave the amount as 1,220,000,000. In Behm's "Geographical Year Book" for 1866, the sum total, after a carefully detailed statement, is given as 1,350,000,000. These, according to this authority, are distributed as follows: Europe, 285,000,000; Asia, 798,600,000; Australia and Polynesia, 8,850,000; Africa, 188,000,000; America, 74,550,000. The disturbing elements in these diverse estimates are the populations of the countries of Eastern Asia, and those of the greater part of Africa. It is easy for authorities to differ in these 100 or even 200,000,000. The populations of Europe, America, and Australasia, are pretty definitely ascertained.

We turn now to our usual detailed survey of the progress of geographical discovery and exploration in the different countries of the world in detail, and as usual commence with—
